SUDAN

A PERFECT WINTER RESORT

KHARTOUM, a modern town, at 1,200 feet above sea-level, enjoys an ideal winter climate, constant sunshine tempered by invigorating breezes.

OMDURMAN, the wonderful African Metropolis, lies near by, stretching for seven miles along the shores of the Nile.

BIG GAME SHOOTING.
The Sudan is one of the most easily accessible countries in which Big Game abounds, and its large territory offers a most varied choice of shooting grounds.

Express Steamer and Dining and Sleeping Car Services between Cairo and Khartoum.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Coup d' Etat in Greece.

General Pangalos has lost no time in making good his threat that there would be trouble for the Michalokopoulos Government, if it attempted to take action against the Army for a tendency to interfere in politics. At that precise moment his revolutionary movement must have been in process of organisation; for, when he struck, it was with such overwhelming force—with the support of the Army in all parts of Greece—that opposition was out of the question. M. Michalokopoulos resigned and General Pangalos is now Prime Minister in his stead. The latter prefers that his action should be regarded as in the nature of an ordinary political crisis; but, as he relied on an ultimatum and threats of bombardment, he cannot cavil at the designation given to it in countries where political differences are adjusted on more constitutional lines. The fact that there has been no bloodshed is a strong point in his favour in foreign eyes, and if he has a panacea for Greece's ills that was not known to or employed by his predecessors in office, his advent to power may ultimately be welcomed by his countrymen. At the moment of writing the position is indeterminate. General Pangalos disclaims any intention of becoming a Dictator. He has strong views as to the policy necessary for Greece, and talks of retiring from politics when this policy, which includes the reconciliation of the different parties, is carried through. In the meantime however, he has to meet the Chamber, in which his party is in a minority. If the parties reflect public opinion, they will acquiesce in the *fait accampli* and stand by to see in what way the Government of General Pangalos is better than that of M. Michalokopoulos. They will avoid any provocation that might lead the new Prime Minister to take to himself still more arbitrary powers, and will concentrate upon a continuance, as far as possible, of the comparatively quiet time which Greece has been enjoying and has put to good purpose under the Michalokopoulos régime.

A Greek Revival.

Considerable familiarity with revolutions has probably robbed them, as far as Greece is concerned, not only of the horror with which they are viewed in other countries, but also of their capacity for disorganising the affairs of the country. The Greek Government was just entering upon a number of schemes of great importance for the rehabilitation of Greece, and it is to be hoped that none of these will be prejudiced by General Pangalos's seizure of power. Reports from all parts of the country have been satisfactory, in particular those from Macedonia. Here the worst part of the refugee problem has been successfully weathered. Housing conditions show a material improvement, and the refugees are now anxious to work. Arrangements, it is announced, were concluded by the Michalokopoulos Government, a few days before its fall, with an Anglo-American group for the reclamation of the low-lying parts of the Salonika plain and for the regulation of the Vardar River. The scheme is expected to make available for cultivation nearly three hundred square miles of rich agricultural land—a no mean item in Greece's agricultural economy. It would be a grave misfortune, if this or any other similar plan for the betterment of Greece were allowed to fall through as a result of the change of Government, or if funds earmarked for reproductive works were to be transferred to military expenditure in connexion with General Pangalos's anxiety to make Greece's army equal to a task which it is difficult to see how it can ever hope to fulfil.

Smyrna To-day.

In connection with the recovery of Greece it is of interest to find that for neither country has the exchange of Greeks and Turks had all the dire results anticipated. The tragedy for the people themselves remains; but Greece is evidently destined to benefit from the accession of an industrious population. The immediate evils for Turkey are more apparent. Asia Minor as a whole, there can be little doubt, does feel the lack of its Greek population. It is noticeable, however, that Smyrna refuses to admit that it must necessarily be a declining port as a result of the Greek and Armenian exodus. The Chamber of Commerce has produced statistics to show that, as far as trade is concerned, the town is already on the way to recover from the blow administered to it. The anxiety which arose form the shortage of skilled labour for the upkeep of the vineyards abandoned by the refugees has, it is stated, proved baseless. The replanning of the town may hang fire, but Western Anatolia is beginning gradually to reap the benefit of a more enlightened Turkish Government. Education is being taken seriously; there is now security

Digitized by Google

in the land, and a conscientious effort is being made to adjust taxation so as not to prejudice production—two important considerations for an agricultural country.

Iraq's Financial Problem.

Although it was known that dissension or at least difficulties had arisen in the Iraqi Cabinet, it was hardly expected that the Government of General Yasin Pasha, which came into power only last August, would prove so short-lived. General Yasin had shown promise of being Iraq's strong man, but he has now made way for his own Minister for the Interior, Abdul Mushin Beg, who has succeeded in forming a new Cabinet. The Ministerial crisis coincides with the publication of the Report of the Mission appointed last March to inquire into the financial position and prospects of the country. This document, for which Mr. Hilton Young, M.P., and Mr. R. V. Vernon are responsible, calls attention to the fact, well known for some time in Baghdad, that, although Iraq had been able to show a balanced budget for two years, its financial position was bound to be precarious as soon as the financial clauses of the Treaty with Great Britain became operative, in other words when the country assumed responsibility for its share of the Debt of the Ottoman Empire and for certain charges, notably Army expenditure, previously defrayed, at least in part, by Great Britain. The findings of the Mission are, in brief, that Iraq must be helped from outside, if it is to emerge successfully from its difficulties. The statement that "it is not to be expected that the foreign investor will trust his money into the new country freely and on reasonable terms until, with the passage of time, there is more positive evidence, in the eyes of the world at large, of its stability," has been unmistakably endorsed during the last week by the experience of a British company operating in Iraq and appealing for public funds. Among the suggestions made is that the British Government should guarantee the Iraq Government a loan for railway works and replacements; it is urged that there should be some fresh arrangement which would postpone for Iraq the obligation to meet the Ottoman Debt charge, that the debt charge in respect of certain transferred assets should be cancelled by the British Government, and that Iraq should be enabled to reduce its military expenediture, which is largely regulated by the extent to which Great Britain wishes to divest herself of a burden that she has hitherto borne. Everyone fully acquainted with conditions in Iraq will realise that these or similar recommendations were inevitable. Much of the delay in the ratification of the Anglo-Iraq Treaty was due to the recognition by the Iraq Government that a financial burden was being placed upon it that it could not bear, and it was to facilitate ratification that the promise was given to investigate afresh the financial aspect of the Treaty. Not until the present Government had been in office for some months was it found possible to give effect to this promise by the appointment of Mr. Hilton Young and Mr. Vernon on a mission of investigation.

Yugoslavia and Bulgaria.

It is unfortunate that Bulgaria should have given occasion to the Yugoslav Government to adopt such a drastic measure as the closing of its frontier to Bulgarians. The trouble has arisen over the arrest of a few Yugoslav subjects in connection with the bomb outrage in the Sveta Nedelia Cathedral in Sofia last April. The Bulgarian authorities are charged with having failed to give a satisfactory reply to the first inquiry as to the fate of the Yugoslav prisoners, and a further Note announces that instructions have been sent to the Yugoslav Legation at Sofia to refuse visas to all Bulgarians. As it was found possible by the Bulgarian Government immediately after the receipt of the second Note to obtain the necessary information, it would seem to have been a grave error in tactics to have adopted an unconciliatory attitude in the first instance. If, as is reported, five of the seven Yugoslavs arrested have been liberated, there was all the more reason to state the facts at once unequivocally. Of the other two one is said to be still in a Bulgarian prison, and there is a possibility that the second has been executed. If this should be the case, Bulgaria will have missed an opportunity of laying Yugoslavia under an obligation by consulting the Belgrade Government before sentence was carried out on a Yugoslav prisoner. That Government would probably have raised no objection to having a Yugoslav Communist permanently put out of the way, but it is bound to take exception to a more or less clandestine execution. A clear statement of the facts, it is to be hoped, will enable the incident to be adjusted amicably between the two Governments. Yugoslavia may well complain that lack of candour on the part of the Bulgarian Government in such a case goes far to stultify the satisfactory impression created by the Bulgarian Foreign Minister's recent visit to Belgrade.

Persia and Great Britain.

Further consideration, it may be hoped, will satisfy the Persian Government that it has no need to find fault with the decision of the Geneva Conference on the traffic in arms to make the Persian Gulf a "prohibited area." Persia herself secures exemption from the ruling of the 1919 Convention which made her own territory a prohibited zone, but she cannot seriously maintain that she is yet in a position to police the whole of the Gulf. Unfortunately the common sense of the Conference is made the excuse for a fresh outburst in Persia against Great Britain. Yet Persia has almost as great an interest as the British Government has in checking contraband in arms in the Gulf, for some at least of the weapons find their way among the tribes as well as farther afield to the Indian frontier. At a time when Soviet action is causing considerable uneasiness in Persian official circles it would be thought that the Teheran Government would endeavour to adjust any differences it may have with Great Britain. As things are, it is merely playing into the hands of the Bolshevists and encouraging them to meddle still further in Persian affairs. Deceived by Soviet protestations of friendship, Persia considered it to be to her interest to break with Great Britain and to accept the blandishments of Moscow. The gradual infiltration of Soviet agents and Red troops into Persian territory, no less than the active support given to the Turkoman rebels in the Bujnurd region, has revealed another side to the picture, and sooner or later Teheran may begin to appreciate the necessity of reconsidering a foreign policy which spells merely isolation for Persia.

Mitko Ganeff, a notorious Bulgarian, has been killed in an encounter with soldiery near Haskovo (about 50 miles S.E. of Philippopolis).

The Anti-Slavery and Aborigines Protection Society has issued for publication a copy of a letter upon slavery in the Sudan, addressed to the Society by Major P. G. W. Diggle, until recently in the service of the Sudan Government. This letter has been forwarded to the League of Nations, and will be considered by the Slavery Commission, which is meeting in a few days. Major Diggle offers to appear before the League of Nations Slavery Commission in order to give his personal evidence to the Commission.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor St., W.1.

SCHOOL OF ORIENTAL STUDIES, LONDON INSTITUTION

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

THURSDAY, JULY 2, 1925.

THE GREEK PRONUNCIAMENTO.

Greece has once more passed through one of those revolutionary changes which have become far too frequent of recent years. All that the present one has in its favour would seem to be the fact that it was effected without bloodshed. As far as can be gathered from the reports that have reached England, the Greek people manifested no desire for any political change, still less for a *coup d'état* which is necessarily prejudicial to a country's reputation. All shades of Greek public opinion endorsed the firm stand taken by the Michalokopoulos Government against the Yugoslav demands in connexion with the Ghevgheli-Salonika railway. There was a tendency in some quarters to blame the Ministry for having placed itself in a position to receive such demands; but this was little more than a debating point made by the Opposition from a natural desire to embarrass the Government. Dissatisfaction in military circles on the subject carried with it its own condemnation, for the people as a whole had grown weary of the Army's intervention in politics. M. Michalokopoulos, indeed, considered that he had sufficient public support to take action against this military inclination to kick over the constitutional traces; but General Pangalos was too quick for him. Having secured the support of the Navy under Admiral Hajikyriakos, and having the Army apparently entirely with him, he threw down the gauntlet to the Government. In the early morning of June 25 he placed himself at the head of troops between the Piræus and Athens, and sent an ultimatum to the President of the Republic demanding the resignation of the Michalokopoulos Government. In the meantime strategic points in Athens had been occupied by his soldiers. In the face of this overwhelming show of force the Prime Minister handed in his resignation. The President was also prepared to vacate his office, but was prevailed upon by General Pangalos to remain. He endeavoured to throw a constitutional cloak over the proceedings by asking M. Papanastasiou, who is on friendly terms with General Pangalos, to form a Ministry, but the proposal does not appear to have met with the General's approval. He preferred to take office himself, and is now installed as Prime Minister, with the portfolio of the Ministry for War.

All that has happened in Greece is the concern of the Greeks themselves, and no responsible person in Britain will wish to interfere in their domestic politics. It is permissible, however, to point out how the *coup d'état* is likely to be viewed abroad. There is no need to impugn General Pangalos's patriotism. He appears to have convinced himself that the Government of M. Michalokopoulos was prejudicial to the country, although in his proclamation he is unable to be more specific in his indictment than to call it "erring." His own contribution to the welfare of Greece is to promise "good administration, equality, security, and justice"; the arm of justice is to fall without mercy on peculators who steal the sweat of the people; he will endeavour to organise rapidly a national force by which alone the country's interests can be safeguarded, and he will recoil before no sacrifice to relieve the misery of the refugees in Greece. Although a complete programme is not to be expected in an initial proclamation, a very important subject that would seem to have been overlooked by General Pangalos is that of finance. Now, whatever may have been the shortcomings of the Michalokopoulos Government in regard to matters which seem to weigh with the new Prime Minister, there can be no doubt that it had been very successful in improving Greece's credit abroad. On this point General Pangalos must accept the evidence of foreigners. It is equally certain that a *coup d'état*, such as has now been carried out, is in itself damaging to Greek credit, although not necessarily in a way that is reflected at once in the rate of exchange. Still more prejudicial to Greece will be the resolve foreshadowed in the new Government's proclamation to increase expenditure on the Army and generally to beat the big military drum. An attempt to intimidate Yugoslavia by organising a national force for the purpose of safeguarding the country's interests must be regarded as a very dangerous move, as it may well recoil on Greece's head. Two things stand out in connexion with General Pangalos's *coup d'état*—one is the complete absence of any enthusiasm on the part of the Greek people, the other is the rather ominous effect created in Yugoslavia. It may be that the Belgrade Government will know how to take advantage of the political changes in Greece in order to withdraw from the position previously taken up in connexion with the Salonika railway, and that as a result of General Pangalos's seizure of power an improvement may follow in the relations between the two countries. If there should be a tendency in this direction, we can but hope that it will not be wrecked by General Pangalos's insistence on an ambitious military programme.

If General Pangalos is anxious to reassure Greece's well-wishers abroad, he will be at pains to show conclusively by the acts of his Government that the country was being deprived under the administration of M. Michalokopoulos of something indispensable to its welfare. Otherwise there will be a tendency to see in the *coup d'état* a further proof of the disability under which Greece labours by having substituted a republic for a monarchy. The opinions of M. Venizelos on Greece's internal affairs may not carry much weight nowadays, but it is of interest to recall that, before he went over to the republican camp, he used as an argument for the retention of the monarchy his conviction that Greece as a republic would be the prey of frequent political changes owing to the personal jealousies and petty ambitions of Greek politicians and soldiers. Unless General Pangalos can convince his countrymen that the Michalokopoulos Government was so unutterably bad that only a *coup d'état* could remedy the situation, and that he himself in his action was prompted solely by patriotic motives and neither by pique nor selfish aims, Greece may have reason to view with grave misgiving the complete ascendancy gained by one man over the Army. Under a monarch this would hardly be possible where, as in the present instance, the civilian element remains entirely aloof from the political *coup*. What General Pangalos has accomplished other soldiers may emulate, and Greece is confronted with the prospect of being for the future at the mercy of military pronunciamentos. If General Pangalos is wise, he will try to arrange that Greece relies for her security on a Balkan Federation and the League of Nations rather than on her own strong arm, and he will set about carrying out the scheme that was engaging the attention of his predecessor in the Premiership, the elimination of the Greek Army as an organisation from active interference in Greek politics.

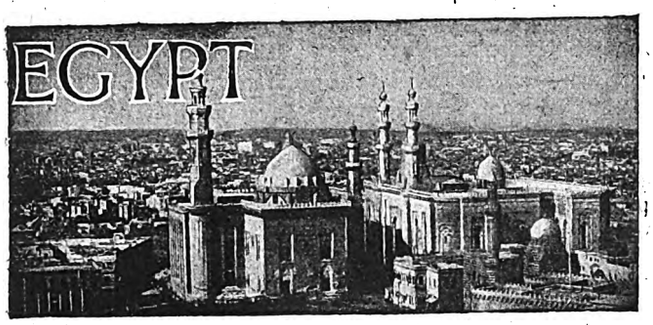
The Near and Middle East*

From Our Own Correspondents.



Cairo, June 22.

M. Canter Cremers.

The death last night of M. Canter Cremers, Chairman of the Nile Water Rights Commission, although not unexpected after his failure during the last few days to make any recovery from the typhoid fever which first attacked him over five weeks ago, has caused a profound impression here. Apart from the personal popularity which M. Canter Cremers had inspired amongst those with whom he had come into contact, the fact that he should have contracted his fatal illness whilst carrying out his mission as neutral chairman of a body dealing with a subject of such intense interest to Egypt as control of Nile waters has given Egyptians such an interest in the personality of the distinguished Dutch engineer as they feel for few foreigners. The funeral takes place this afternoon (June 22) at the British Protestant Cemetery, and despite the fact that Cairo is now suffering from a heat wave which makes the donning of frock-coats and silk hats a trying ordeal, it is certain that there will be a large number of sympathisers at the graveside. Neither of the other members of the Commission will be present, Abdel Hamid Pasha Suliman, the Egyptian delegate, being now in London, while Mr. R. M. MacGregor, the British representative, returned to Khartoum last Friday.

The Nile Commission.

The question now arises of how to complete the work which the Commission began. It is known that the British and Egyptian delegates had nearly finished their part of drawing up the report, but how near M. Canter Cremers was to being ready to sign final conclusions is not known. It remains to be seen whether the two Governments will be able to agree upon some method of continuing the inquiry from the point at which it was left off five weeks ago, or whether the appointment of a new chairman will involve going back and starting again at the beginning. The answer to this question is not likely to be known before the Autumn.

The Basis of Promotion.

Few of the many changes which have taken place in the Government service since February 1922, have done so much to temper the patriotic heat of formerly anti-British Egyptians as the growing disregard for seniority as the basis of promotion. During the Ministry of Zaghloul Pasha favouritism was practised to a scandalous degree. Most unmerited promotions were made, places being found for faithful followers by the expulsion of officials of known anti-Zaghloulist views. If the present Government has been less blameworthy in the latter respect, it has erred almost as much as its predecessor in making promotions with no regard to seniority and, in some cases, little care for ability. Endless examples could be cited. One, which is attracting attention at the present moment is that of a young official who, after only eight years' service, has been jumped over the heads of scores of his seniors into the position of Secretary-General of a Ministry, and now it is said, strenuous endeavours are being made to give him a further upward leap to the Assistant Under Secretaryship of State. From there it would be but a step to the Under-Secretaryship, one of the highest permanent appointments in the Government. However, promotion is for the moment held up. But with his galaxy of influential relatives, it will not be surprising if the young official soon attains the goal at which he is aiming.

The reaction of this sort of irregularity upon officials in general is obvious and inevitable. As an old official, who has seen many years' service under many Ministries, remarked to me the other day: "There are now only two classes of Government officials, those who have powerful relatives or friends, and therefore have no need to work to earn promotion, and those who have no friends and will therefore be passed over, however hard they work."

The Move to Alexandria.

The Court and the Ministry moved to Alexandria last week, and the Residency this morning (June 22). Cairo is, therefore, now fairly launched on its summer dullness which, this year, seems unlikely to be broken by political crises. So benumbing is the torpor that some energetic rumour-mongers find it necessary to invent the most fantastic stories, just to mitigate the monotony. Thus Cairo, last Friday, thrilled to a report of Ziwar Pasha's having been killed in a bomb outrage in Alexandria. Only when urgent inquiries received the telephoned reply that Ziwar Pasha was at that moment eating a very good lunch at the Mohammed Aly Club did the excitement subside. As the heat becomes more and more trying and news ever scarcer, rumours will doubtless multiply; but we have had such a full year or two, and look forward to having such an interesting winter, that few of us who are doomed to spend the summer here will mind very much if, in fact, the only exciting incidents of the next few months prove to be the things that do not happen.

ROUMANIA.

Bucharest, June 18.

Parliament.

The session is at an end, and the Chambers are on vacation until October. The legislative task set itself by

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

Digitized by Google

the Government has been almost completely finished, with the exception of the electoral reform, the discussion of which will take place next autumn, the Bill having already been handed in.

The two most important events of this legislature may be said to be the Administrative Law and the ratification of the conventions between the State and the National Bank. The Administrative Law unifies the internal organisation of the New Roumania in a fairly pronounced spirit of centralisation. This reform was urgent, as the country was living under three different régimes: the Roumanian régime of the Old Kingdom, the Austro-Hungarian régime in Transylvania and the Bukovina, and the Russian régime in Bessarabia. The reproach is brought against the new law, however, of having been over-hastily prepared and of not taking sufficiently into account the local customs in the new provinces. But what reform of this kind is not subjected to similar criticism? The law for the ratification of the conventions between the State and the National Bank was passed without difficulty, the opposition having been reduced to silence by a new regulation of the Chamber introduced for this purpose which allows the majority to suppress any unwelcome discussions. During the debates in the Chamber the various Opposition leaders—with the exception of General Averescu, who still considers himself the chosen successor of the Liberals—manifested their disapproval of the policy of "revalorisation" of the leu and of the advantages accorded to the National Bank at the expense of the producing classes.

The Minister of Finance defended himself against the charge of wishing to apply direct methods of deflation, and explained that the convention marked a new stage in his policy of consolidation of the floating debts, and that its aim was the regulation of the debt of the State to the Bank. He added that the payment of the annual instalments and the economic policy would be arranged according to a rigid programme fixed beforehand.

CYPRUS.

Nicosia, June 9.

The "Tribute."

Cyprus (excepting the Turkish element) continues to grumble over the "Tribute" (of over £92,000 a year), or "share of the Ottoman Debt." It has always done so; and outside critics have often agreed that since the anomalous nature of our tenure forbade the introduction of foreign capital into the poverty-stricken, but once rich, island, it was exceedingly hard that the whole of its surplus revenue should be swallowed up by this annual charge. Moreover, it has generally been held that the Tribute itself was unfairly fixed on the basis of an over-assessment of the average amount which was taken yearly from the island under Ottoman rule. It has been reckoned that under the Turks the cost of administration was about £21,000 a year—or practically less than is often spent by the Public Works Department alone under British rule. The Turks, it is said, never spent anything—certainly not more than £1,000 p.a.—on island needs; so that, assuming that the Tribute paid by Cyprus was really £92,000 on an average, about £80,000 a year went into the pockets of the Sultan and his satellites. Be this as it may, the drain on the island resources is one respecting which no one could fail to sympathise with the Cypriots. There is still a prevalent idea that Britain has made a profit out of the island—an idea which Mr. Joseph Chamberlain, when Colonial Minister, explained in the House of Commons was "an entire and absolute mistake." It must, too, be remembered that Britain has always come to the aid of Cyprus when unable to meet the annual demand, sometimes contributing as much as £60,000 towards a deficiency in a "bad year"; and that since Cyprus became able to pay its way, Britain has given an annual grant-in-aid of £50,000 towards the burden.

Cyprus in Summer.

Summer hours are now observed by the official ranks, and by many others. Every year the transformation or Westernising of Cyprus becomes more striking. Until long after the British occupation, it was a rare event for one or two native families to seek a change, and refuge from midsummer heat, at some village or monastery, at not half the altitude of Mt. Troödos. Now there are crowded hotels and fashionable amusements in the highest villages, and in what were forest solitudes, where Cypriots can meet numerous Greek families from Egypt and other places. Large fairs, with cattle and horse shows, take place, and even on the plains there are new recreations. Regattas on a small scale are carried out at several of the seaside towns and resorts; some of the principal gatherings being held at the annual "Festival of Venus," commonly called the *Cataclysmos*, or anniversary of the Deluge—a festival dating from very early times. At Larnaca and Limassol it is a great occasion. Thousands of villagers flock to the coast, and there is much jollification. It is the correct thing to go for a sail, however short, in boats, many of them carrying musicians. It is an excellent sign that Cypriots have taken so kindly to various forms of physical exercise and recreation. A keen interest is taken in athletic sports. Meetings are held in all districts, and committees exist. Pan-Cypriot, and recently Pan-Hellenic gatherings have taken place. Football is played in the winter, and matches are arranged.

General News.

The departure of Sir Malcolm Stevenson on three months' leave has given rise to various rumours. Reports are persistent as to possible changes among the highest officials, e.g., that the Governor will not return, but will be appointed to Ceylon. Surveys appear in the Press of his administration during nearly five years as High Commissioner.

A Hospital for Consumptives, which has been for some time in contemplation, is to be built at a hilly site not far from Nicosia, at a cost of £5,000. The choice of the spot does not escape criticism by alarmists, who object that it is too near and a danger to the capital.

Mr. Zeno Pierides, of Larnaca, has been appointed German Vice-Consul for Germany.

OMAN.

Muscat, May 16.

The Sultan's Holiday.

The Sultan left for Dhofar on April 18, and will be absent, probably, for seven months. Provisions sufficient for the whole of his retinue were forwarded to Dhofar prior to his departure.

The Chancellor of the Treasury.

Mr. Thomas, the Chancellor of the Sultan's Exchequer, has been promoted to the rank of Captain. Before putting him in charge of his new post, the Sultan summoned a darbar to declare publicly that Captain Thomas was now the Chancellor, and, in addition, that he was to act as Superintendent to the Government. The Sultan has implicit confidence in the ability and trustworthiness of Captain Thomas. This darbar was held early in April.

It appears that there exists a certain dissatisfaction with Captain Thomas, principally, it seems, because he has established M. Iskander, the former Customs official, in the Government service and has promoted him to a higher post. On such a basis is public opinion in the East formed!

The Council and Sayyid Said.

The appointment of Sayyid Said to be Prince Regent of the Sultanate of Oman was made with the consent of the Government of India; it was, however, greatly disapproved of by the President of the State Council and his staff. Sayyid Said was expected to arrive on May 4 at Muscat back from Ajmir College, India, and the State Council were so moved that they wished to prevent any official reception to the Prince Regent. They were, however, prevailed upon to forgo any such foolish step.

The Sultan appointed Sayyid Said to be Superviser of the State Council and regularly to attend the meetings of the Council on Mondays and on Thursdays. The Prince Regent was instructed to resist strenuously any illegal proceedings on the part of the Council, and he appears to be carrying out this duty to the complete satisfaction of the public.

Bombardment of El-Fajirah.

R.I.M. Lawrence, Trade, and Seychelman, led by Colonel Prideaux, British Resident in the Persian Gulf, having anchored near El-Fajirah coast line (El-Fajirah is a town belonging to the Government of Oman, some fifty miles north of Sohar), bombarded the fort and house of Sheikh Ahmed Abdullah el Sharki, the chief Sheikh of that district. This was because the Sheikh had purchased a Baluchi girl, keeping her in his house as a slave. Applications for her recovery were made by her mother, through the British Consulate, to the Sultan's Government, but for six months the Government were unable to make any remedying move. The mother, being helpless, and rather hopeless of recovering her girl through the offices of the Sultan's Government, appealed to the Resident. The Resident thereupon took the only step open to him. It is surprising, however, to learn that in spite of this bombardment, Sheikh Ahmed has refused to return his slave girl; but he paid the fine of 1,500 rupees.

Kidnapping a Bruhman.

An Arab of the Hikman tribe, Jaalan district, Southern Oman, sued a Bruhman of Sur in the Court in an attempt to recover a debt of a thousand Maria Theresa dollars (£100). Owing, however, to lack of evidence, the plaintiff's case was dismissed. On his return home, this Arab kidnapped a Bruhman, Kusandass by name, and aged fifty-five years. The Sultan's Government have failed to recover the kidnapped person, and the kidnapper insists upon receiving a certain amount of money before releasing his victim. It would appear that the only way left for the ransom of this unfortunate man is to pay the money demanded. The Bruhman community has raised a sum of 800 M.T. Dollars towards the redemption of Kusandass. This fund has been handed over to Sheikh Ali bin Abdullah, brother of the Imam of Jaalan, and to Sheikh Rashid bin Uzaiz, Member of the State Council, and both of these Sheikhs have been delegated to Jaalan to see what they can do in the matter.

General News.

Sayyid Said has come through his examinations successfully for this collegiate year. He will return to college at the end of next July.

Ali bin Faisal, brother of the Sultan, has been discharged from the post of Secretary to the State Council.

Colonel Crosthwaite, British Consul at Muscat, has been appointed First Assistant of the Resident in the Persian Gulf. Captain Alban will replace Colonel Crosthwaite as British Consul at Muscat.

Colonel Prideaux, Resident of the Persian Gulf, is proceeding to Great Britain on six months' furlough.

THE NEAR AND MIDDLE EAST ASSOCIATION.

"Palestine" was the subject of the addresses delivered before the Near and Middle East Association on June 17, at 41 Wilton Crescent, which had kindly been placed at the disposal of the Association by Mrs. Romilly. The chief speakers were Captain E. N. Bennett and Mr. E. T. Richmond, who were followed by Mr. Israel Cohen, Mr. St. John Philby, Lord Raglan, Mr. Yusuf Ali and Mr. Basil Worsfold. Lord Edward Gleichen was in the chair, and among those present were Baron Palmistierna, Viscountess Dupplin, Hon. Lady Shelley Rolls, Sir Kynaston and Lady Studd, Sir Arthur Chapman, Sir John and Lady Miller, Sir Henry and Lady Benson, Hon. Margaret Kinnaird, Sir Graham and Lady Bower, Sir Thomas Arnold, Mr. Mitchell Banks, M.P., and many others.

The next meeting of the Association takes place at the Hyde Park Hotel on July 3, at 8.30 p.m., when Major-General Lord Edward Gleichen will speak on the present situation in Egypt, and a paper on the Question of the Jaghbub (Jarabub) Oasis by Captain Dixon-Johnson, will be read. Sir E. Denison Ross will preside.

Arrangements have been made to patrol the Palmyra-Ramadi section of the Damascus-Baghdad motor route across the desert with motor-cars equipped with machine-guns.

Colonel Riazi Khan, head of the Persian Military Mission which has been sent to France, who arrived there on June 23, declared that the excitement that prevailed in Persia after the departure of the Shah for France had now subsided, and that his Majesty would return to Persia in two months time, by way of Syria and Baghdad.

The Duke of Atholl again appeals for support for the Save the Children Fund (26, Gordon Street, Gordon Square, London, W.C.1). The fund arranged recently for Mr. Percy Alden (chairman of council) and Mr. Golden (secretary) to go out to the Near East to examine the situation for themselves, and to report to the committee on their return.

Indian Affairs.

THE NEAR EAST AND INDIA.

The *Englishman* (Calcutta) of June 1 prints a leading article on the change of name of THE NEAR EAST. Our contemporary says that, though the superstitious look upon a change of name as of ill omen—particularly in the case of ships and racehorses—it feels sure that THE NEAR EAST will prove an exception, and that the moment chosen for its change of title is appropriate. People at Home, says the *Englishman*, are apt to forget that the future of India is not only a political problem affecting a relatively small number of British officials, but also a commercial and economic problem that vitally affects British trade and industry as a whole. "Any effort that will stimulate British opinion at Home to a realisation of this vitally important fact, as important economically as the continued retention by India of her membership of the Empire is important imperially, is to be heartily welcomed and supported." These are encouraging words, and we hope that the future will justify them; though we fear that we are unlikely to find similar sentiments in the Extremist papers, whose attitude towards British journalism about India is generally of an entirely different sort. The *Bombay Chronicle* of May 30, for instance, prints a leading article in which the necessity is emphasised of taking steps to counter "mendacious propaganda" in London. "There is great need," says the paper, "for a steady refutation of the lies spread by certain ex-officials who kill pensionary leisure with the vilification of the country whose salt they are avidly eating. . . . In their zest for service recruitment, they malign Indians with ruthless bitterness and hold up for European lads prospects which have no relevancy to the progressive realisation of responsible government. Recruitment to the services is made to be an end in itself and, to suit the abetment of arrogant prejudice imparted to the universities of Britain, the authorities seem inclined to set back the hands of the clock. . . . There is in London a septic cesspool of unscrupulous propaganda against Indians. We cannot reduce it to sanitary conditions, but surely we can provide some source of honest reference to fair-minded people. We should do something to counter the propaganda of interested parties who, by constant reiteration of falsehoods, convert even fair-minded critics into arrant mountebanks."

The above quotations give some idea of the difficulties that confront a newspaper that tries to carry out a programme such as that which THE NEAR EAST AND INDIA has set before itself. To advocate a sound, sane forward policy, based on co-operation with all that is best in Indian thought: to do what one can to advance the legitimate aspirations of educated Indians, while preserving impartiality between their views and those of Europeans in India where they seem to conflict: to support the Government of India in their efforts to the same end: and, in particular, to give expression to the views of the moderate section of British commercial thought, not for any selfish advantage of English trade interests, but with an honest desire to work for the good of India: this is no easy path to follow at the best of times. No one can fail to see how difficult it becomes when one has to take into acount an attitude such as that manifested by the *Bombay Chronicle*. For, unfortunately, it is only too true that this is not an isolated example, but a fair specimen of what passes at present, in India, for political controversy. There is no need to multiply quotations, but a few extracts from an article in the same paper, regarding the attempts made in England to stimulate recruitment for the Indian services, may with advantage be added. "The Secretary of State goes about recruiting young Britishers for service in India. On equal terms, Indians could beat them like nine-pins. . . . The University undergraduate is, unfortunately, not told that he should be actuated by the spirit of service and that he cannot long cling to the pretensions of autocracy whereby the last generation of I.C.S. men damned their reputation and made the path of their successors difficult. The recruits are offered all sorts of bribes and inducements, the Lee loot is dangled before them, and the Secretary of State tearfully implores young Britishers to join up. We notice the manner of vampire infection all round. . . . The 'leaven of Europeans' is not a leaven but a sediment. The stampede for job and cash was never so shamelessly pursued. They seem hardened to the disgrace involved, and discussion of Indian questions is now no better than the clamour for illicit preferments." It is with this kind of voice that the campaign of Swaraj is being preached, through the length and breadth of India. It is, of course, perfectly true that the better class of Indian politician does not subscribe to such sentiments; but he is largely voiceless, and his organs in the Press are few and do not command anything approaching the popularity of those that echo the sentiments of the *Bombay Chronicle*.

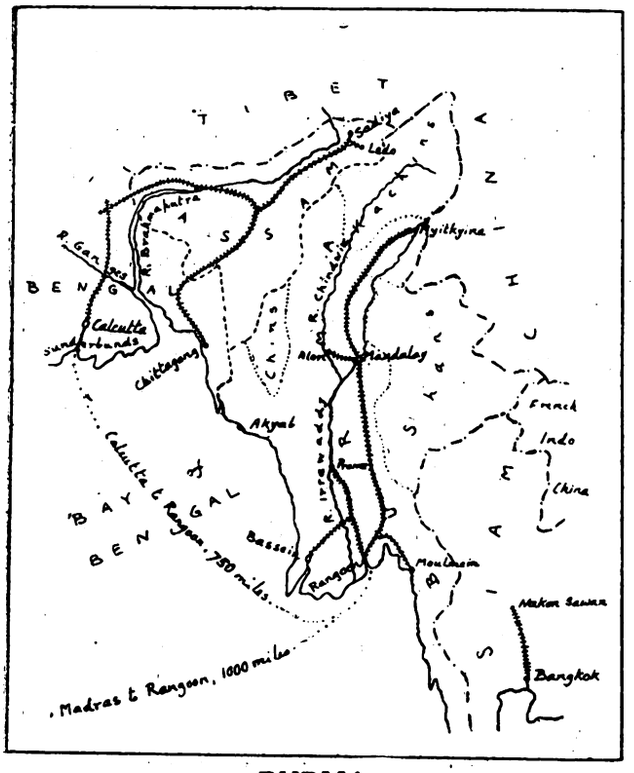
It has frequently been said that, in order to make the Reforms a success, it is necessary to educate the Indian electorate. An important preliminary, in such a campaign of education, is to convince the Indian politician that not only the British Government, but the individual Briton, at Home as well as in India, is honestly endeavouring to give effect to the legitimate aspirations of India. In view of the publication of opinions such as those just quoted, this might well seem an almost hopeless attempt; yet it is one that must be undertaken and that must be persisted in until controversial methods of the *Bombay Chronicle* brand become the exception instead of the rule—as, unfortunately, they now are—in the vernacular and Anglo-vernacular Press of India. It is too much to expect that they will ever disappear altogether, for journalistic experience in all countries forbids any such expectation. To effect even a partial disappearance will be a long and arduous task, the chief part of which will have to be carried out in India; here, in England, our part in it will rather be to try to convince the reading public that the particular brand of newspaper controversy that obtains expression in the extremist papers in India does not really reflect sober Indian opinion, and that the latter is ready to respond to efforts to assist it to become more vocal than it now is. If THE NEAR EAST AND INDIA can aid, be it ever so little, in the fulfilment of this task, it will fully justify the hopes, and fulfil the intentions, with which it starts to-day on its career under the new title.

THE DESTINY OF BURMA.

The future of Burma, in particular whether it should remain linked with India or develop separately, is an interesting speculation. At present its link with India is the accidental one of contiguity—which by no means implies accessibility. By land, it is divided from India by wide tracts of wild country, and by sea by the width of the Bay of Bengal. Whether air transport will ever seriously affect the latter is a matter that only the future can decide; as regards the former, there are three railway projects under consideration, though no serious advance has yet been made to a decision between them, much less to any commencement of work on any of them. The three railway projects are, first the Northern or "Hukong Valley" route, from Sadiya in Assam to Myitkyina ("Michiná"): the Central route from Chittagong in Bengal to Mandalay: and the Southern or Coast route from Chittagong to Bassein, with a cross line from Akyab to Prome. The first and second of these routes would have to cross stretches of wild country, part of which is a tangle of hills that form a succession of steep ridges at

Digitized by Google

right angles to the direction of the railway: and the third would have to be carried over an almost endless series of tidal creeks, the bridging of which would not only be difficult, but also very expensive. The choice really lies between the first and third routes. The second, the mountain difficulties of which are even greater than those of the first, would pass through country of no economic value: and the port of Chittagong is slowly silting up, so that, in a future that is still distant but yet needs consideration, it is likely to have to yield pride of place to some other port on the eastern shore of the Bay of Bengal —very probably Akyab, where there is a good roadstead that is capable of improvement into quite a fine harbour, though the town bears an unenviable reputation for unhealthiness. The northern route would have to cross very difficult hilly country from Ledo up to a point somewhat beyond the Assam boundary; but, after that, the route would be easy and would pass through a fertile tract, at present largely uninhabited but likely to repay development by a railway. The estimated cost of this line is, we believe, about six crores of rupees (about four and a half million pounds), three-fourths of which amount would have to be expended on the hill portion of the line. The southern or coast route would follow the existing land trade route, but, apart from the difficulty of the tidal creeks, would be much longer than either of the others. It will be noticed, from the map, that the railway from



BURMA.

Scale: 250 miles to one inch.

Calcutta to Chittagong has to make a very wide detour in order to avoid the deltas of the Ganges and Brahmaputra, which make a more direct connection impossible; though the actual distance from Calcutta to Rangoon viâ Chittagong, Akyab and Prome would be substantially less than that viâ Sadiya and Myitkyina. Railway connection between India and Burma, therefore, if it ever comes into existence, must necessarily be difficult, expensive, and lengthy.

Burma is, of course, racially totally distinct from India. The Burmese are Buddhists; they have no caste divisions, their womenfolk are not secluded, no religious antagonism exists, such as that between Hindus and Moslems in India. At the same time, the Burman cannot, at any rate at present, get on without the Indian. He cannot—or, at any rate, does not—even reap his own rice crop, but hires Indian labourers to do it for him. Up till quite recently, Rangoon is believed to have been the second immigration port in the world, New York being the first; since the new restrictions on the entry of immigrants into the United States came into force, it seems likely that Rangoon now ranks first. It is true that the majority of immigrants from India undertake a definite temporary job and return to India on its completion; but a fair percentage remain in the country and the Indian population in Burma continues to grow. The Burman does not take kindly to trade, either wholesale or retail, and the trade of Burma is almost exclusively in the hands of non-Burmese —Europeans, Chinese, and Indians. Another thing to which the Burman does not take kindly is military service: the Burma Military Police are recruited almost entirely from India, and the experiments with regular battalions raised from among the various peoples of Burma have almost all ended in failure. At present, therefore, the Burmese are incapable of providing for their own defence or of efficiently carrying on their own agriculture, trade, and commerce. No doubt, among the far-flung components of the British Empire, Burma is not singular in this respect: and, if she should continue to need outside assistance in these matters, it is not necessary to insist that she must for ever look for it from India. The Burmese are a cheerful and careless folk, with their full share of the average Oriental's belief in his ability to "run his own show" without foreign assistance. As a general proposition, it may be said that, in the mass, they admire the Chinese, regard the European as a rather disturbing alien, and despise the Indian; if for no other reason, at any rate to save themselves trouble, they are quite content to leave their commerce in the hands of the Chinese, their governance in the hands of the European, and their manual labour in the hands of the Indian, at any rate until that nebulous moment when they may feel disposed to take on any or all of those duties themselves. On the whole, the Burman's political connection with India sits lightly upon him: the Central Legislatures are far away, and Burma's representation in them is negligible: the Legislative Assembly, with 145 members, includes three Burmese, and the Council of State, with 60 members, none: the representative of Burma, in the latter, being an Indian. In these circumstances, it is perhaps not surprising that the Burmese elector is apathetic: at the last General Election, only an infinitesimal minority—about six per cent.—registered their votes. Also, the Burman is not a politician, and there is not in Burma, as there is in India, a wealthy and leisured middle class from among which men may be found to undertake political duties; the result being that, while Burma's representation at Delhi is minute, the individuals who compose it are not, in any reasonable meaning of the term, representative of Burma. The earnest Indian politicians of the Assembly accept without interest the presence of three amiable gentlemen whose only distinguishing feature, in their eyes, is an eccentric taste in dress.

As was the case in India before the appearance of the "Swarajists," there is, in Burma, a strong "non-co-operating" party, which is not represented in the Burma Legislative Council: and this party is opposed to separation from India. The "co-operating" party, whose representatives sit in the Council, are in favour of separation; though, at present, their view appears to be that the best policy is to acquiesce in the connection with India until India gains "Home Rule," which Burma will necessarily gain at the same time. When India has thus achieved self-government for Burma, it will then be time to take up the question of separation. A movement in that direction will start with the obvious advantages of the complete racial and social, and the practical geographical, division between India and Burma: and the equally great —though not, perhaps, so immediately obvious—disadvantages of Burma's inability to provide for her own defence and for her own commercial individuality. It is, perhaps, a fair inference that, when that time does come, what may be called the theoretical advantages of separation—racial, religious, and geographical—will be found to be gaining weight and the practical disadvantages—military and economic—to be losing it: and that the ultimate probabilities do tend towards the constitution of a Dominion of Burma separate and distinct from the Dominion of India.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 11.

Lie Factories in Great Britain.

The average European resident in India would probably welcome nothing more than a general realisation at Home of the facts as they are in India to-day. The Indian newspapers, which are to-day for the greater part in the hands of the extremists, would be a revelation to the average English reader, and their self-revelation is often startling.

A Madras Nationalist newspaper, which is one of the most influential organs of its party, now demands that the Congress should carry on propaganda in England. It states that "lie factories are at work in Great Britain," that a libellous and pernicious anti-Indian agitation is being carried on there, and that poison is supplied copiously by the correspondents of British newspapers. If the Congress had an efficient bureau in London, it argues, all these machinations could be thwarted. No evidence is offered in support of these statements, but they occasion no surprise when the abuse that is poured out daily by the extremist press in India is considered. The case for a predominantly British administration in India has everything to gain from the truth, and nothing but good can result if the Congress party will accept the Madras suggestion and establish a London bureau.

The Corporation Loan.

The Calcutta Corporation have been warned by Government that they are overstraining their credit; capital is sought to be made of the fact by extremists on both sides, but in fact the question is largely a matter of executive routine and no "party" is responsible one way or the other; the cost of bringing the water supply even into a condition approaching modern town standards is very heavy and the Swarajists have no more relish than their predecessors, who were very largely representative of the landowning classes, for the prospect of having to raise the "Municipal taxes," which is the Indian name for local rates. One may sympathise with the new men in the position in which they find themselves, and a pleasing feature of the meeting which was called to consider the matter was the unanimity displayed by all parties in standing up for the good name of the Corporation. The Mayor, Mr. C. R. Das, was still absent, but his presence could hardly have produced a more pleasing atmosphere; he has a very real personality and his friends are not confined to the Indian community.

Honours.

The knighthood conferred upon Sir Hubert Carr, the president of the European Association, is universally welcomed. He has never concealed his disbelief in the reforms, but he has led the community in a loyal attempt to work them. His commonsense equals his sincerity and singleness of purpose, and Government have done themselves honour in recognising the work of an Englishman, typical of the best qualities of his race, who has never sought publicity for his welldoings.

INDIAN MILITARY SCHOOLS.

(By Our Simla Correspondent).

It is by no means uncommon in certain circles at Home to hear the influence of leading Indian politicians discussed as though that influence extended to all classes and creeds throughout India, and as though these men could speak with authority in the name of the country as a whole. There is of course no doubt that their names are incessantly on the lips of the politically-minded few, and can be found on page after page of any vernacular newspaper, but none of them can claim to have a really loyal following of any size outside the limits of their own particular provinces, and none of them has yet been able to produce a really constructive programme for India's future. They presume certainly to speak in the name of all their countrymen, but in actual fact there are millions of Indians who have never even heard their names, millions again to whom they are names and nothing more, and still further millions, notably among the agricultural classes, who look upon them as representative exclusively of urban interests, that is to say, of the shopkeeper, the lawyer, and other classes for which they have little affection, and therefore as being unsympathetic, if not hostile, to the welfare of the land-owning classes and their dependents. To this last category belong the martial classes, from which alone are drawn the recruits of the fighting units of the Indian Army. Agriculturists almost to a man, and possessing often a larger stake in the country than many of their momentarily wealthier fellows in the towns, they are nevertheless at present with difficulty able to make their point of view known. It is true that the interests of these classes are represented in the legislative assembly and provincial councils by a few nominated members drawn usually from among the best educated ex-Indian officers; but it is difficult for these few men, trained primarily to arms and not words, to hold their own in debate with the trained lawyer politician. Still harder is it often for the less well educated men of these classes to maintain their position in the country districts. They have the Government behind them, a fact which they know full well and for which they are thankful; but were it not for this support they would undoubtedly go to the wall simply and solely through their inability adequately to put forward their own point of view, and to fight with the weapons of peace to maintain it. This state of affairs is due to one cause alone, the lack of education among the martial classes as a whole. Living away from the towns where opportunities for efficient schooling are comparatively few, and hampered frequently by lack of means from sending their sons to the more advanced and consequently more expensive educational establishments, they are seriously handicapped in the matter of education by comparison with the townsmen, from among whom the politicians are at present mainly drawn and whose point of view alone they voice. It is, therefore, a welcome step which is shortly being taken by the military authorities in this country to give special facilities for the education of soldiers' sons by the foundation of special schools for them. Two such schools, which will be called King George's Indian Military Schools, are to be opened in September next in the Punjab, one at Jullundur, and the other near Jhelum, at which the sons of Indian officers and men who have served or are serving in the Indian Army will receive an education on lines approximating rather more to an English than to an Indian school. The boys will be caught young, before they reach the age of twelve, and while they will receive teaching of a nature similar to that given in an ordinary school, it will be given them in an atmosphere of military traditions, which can hardly fail to strengthen the esprit de corps of the whole body and the character of the individual up to a standard which unfortunately is not at present usually attainable in Indian schools. These institutions have been founded as a memorial to those Indian officers and soldiers who fell in the War, and it is difficult to think of a more suitable manner in which to perpetuate the memory of the gallant dead. The cost to the individual of this form of schooling will be very moderate, and there will be few who on the score of expense will be debarred from giving their sons its benefits. The schools are, however, admittedly an experiment. The two which will open in September will cater only for soldiers of the Central and Western Punjab and of the North-West Frontier Province, the one for Moslems and the other for Sikhs and Hindus, and on their success will depend the ultimate decision as to whether or not it will be desirable later on to extend this system of education to cover the martial classes in other parts of India. It is intended that the products of these schools shall, when they pass out, make the army their career in after life, and from the military point of view the great object of the scheme is to provide India with a better educated army, capable of absorbing to the full the more highly technical training required of soldiers in these days. It does not, however, require a very wide

Digitized by Google

stretch of imagination to forecast that, if these schools are run on sound lines and prove a success, the education given in them will in course of time be of inestimable benefit not only to the military, but also to the civil life of India. For through them the general standard of education of the martial classes must inevitably tend to improve, and in due course this section of the population of this country, at present almost inarticulate despite its national importance will, it is to be hoped, be able to stand alone and to champion its own cause without the assistance of the Government. As a consequence of such an improvement the present one-sidedness of Indian politics may well give way to a healthy give and take between the rival interests. Such an event cannot fail to make for the good of India as a whole, for, as was most forcibly pointed out last year by Captain Hira Singh, one of the Indian Army nominees, in the Legislative Assembly, no scheme of Swaraj for India has any hope of success, which does not take into full consideration the point of view of the martial races.

THE INDIAN MAIL.

The Haj.

As soon as the Government of India became aware that, in spite of the official warnings, pilgrim ships had actually started, they did what they could to smoothe the pilgrims' path. They notified King Ali and Ibn Saud of the departure of the ships and impressed on both their responsibilities in the matter: they urged the shipping companies to have the ships well stocked with provisions: and arranged to dispatch a special pilgrim officer to Rabegh, with an Indian doctor and staff, so that, in case of an epidemic, it would at least be possible to make some impromptu arrangements to cope with it. The last pilgrim ship due to sail this year left on June 5. By the last but one, over 500 pilgrims left for Rabegh: among whom one young man was noticed going on board with a large box on his head. The box was examined, and was found to contain an old man: who explained that the young man, having no money to pay his own passage, had prevailed on him to adopt this device to allow the young man to proceed on the pilgrimage. The old man had entrusted his ticket and his money to the young man and had allowed the latter to treat him as baggage. The old man received his ticket and his money and was allowed to proceed; but the young man was put back on shore.

North-Western Railway Strike.

A telegram from Lahore dated June 18 says that the N.W.R. strike collapsed there on that day, after lasting for more than 2½ months. The collapse seems to have been brought about by the exhaustion of the strikers' credit with the local shopkeepers, for their receipt of strike pay appears to have been confined to promises by their "leaders": and the decision of the "baza" to cease giving credit was probably brought about by the issue of a Government communiqué, supporting the view of the railway administration, declining to agree to the creation of a special conciliation board, and refusing to enter into negotiations with the strikers or their leaders. It was evident, when the last mail left India, that the strike was nearing its end: for the "leaders" had then played their last card, by cabling to Messrs. Lansbury and Thomas, and to the Secretary of State, soliciting their intervention in the strike.

The Postal Department.

Sir Geoffrey Clarke, Director-General of Posts and Telegraphs, will leave India in August to attend the Postal Conference at Geneva: after the conclusion of which it is expected that he will take leave pending retirement. With the large amount of extension and improvement still to be done in both the Postal and Telegraph Departments, there is much speculation as to his successor, who will need to be a man of initiative and experience.

The Calcutta Corporation.

The controversy about the burial of the Mohammedan "Saint" in the Calcutta market building has advanced a step further: the Corporation having obtained an authoritative legal opinion that no legal obstacle exists to the exhumation of the body and its removal elsewhere. The Corporation had passed a resolution disapproving of the burial and declaring that it ought not to have taken place: but had deferred taking any action in the matter pending the receipt of the legal opinion that has now been given. The next move in the controversy now lies with the Corporation, and will be awaited with interest. Meanwhile, the Corporation has hit upon a new method of improving its finances. An Indian newspaper of Calcutta says that, in consideration of a payment of fifteen hundred rupees (about £110) it has agreed to rename one of the minor streets: and suggests that this may lead to a sort of auction of street names, in which the highest bidder may get a street named after himself—presumably until another bidder makes a better offer for a further alteration.

Mr. Gandhi as Financier.

Referring to the appeal for funds for "the starving inhabitants of Mecca," the *Times of India* (Bombay) says that many Mohammedan newspapers have expressed doubts whether, in view of the previous financial record of the Central Khilafat Committee, contributions made for this purpose are likely to reach their destination: and that similar doubts have been expressed regarding the accounts of the Swarajist Party. When Mr. Gandhi was in Calcutta recently, four of the Bengali leaders came to him and asked if there were any questions he would like to put to them: he asked them a few questions and expressed himself as so pleased with the truthfulness of their answers that, when they suggested that he might like to throw an eye over the Party accounts, he declined to do so. "In our opinion," says the *Times of India*, "this refusal has raised political finance to a higher level. Book-keeping is all very well for satanic foreign institutions, but the only suitable method of auditing patriotic funds is the insistence on truth which Mr. Gandhi has taught to the world."

Alliance Bank Liquidation.

Considerable interest has been aroused at Cawnpore in a case brought by Boulton Brothers (India), Ltd., against the New Victoria Mills, claiming sixteen lakhs of rupees (about £120,000) damages for wrongful dismissal from their position as managing agents of the Mills. Judgment was declared in favour of the Mills, and the suit was dismissed with costs. It is understood that, if the case had been successful, the damages would have been credited to the Alliance Bank of India (in liquidation) as an offset against claims by the latter against the plaintiff company: and that the costs in the action will fall on the assets of the Bank. The liquidators' last announcement (issued prior to the result of this case) was that the creditors would probably receive about fifteen shillings in the pound when the liquidation was complete: and foreshadowed the early payment of an interim dividend of one anna in the rupee, in addition to the fifty per cent. already paid to depositors shortly after the failure of the Bank.

Trade and the Monsoon.

The improvement in India's internal trade is very slow: and it is generally believed that, if a normal monsoon prevails, there will be a more marked desire to buy and sell. There has been a serious crisis on the Bombay Stock Exchange, due to extensive gambling in non-existent shares, in which the Bull operators have come to grief, and the result of which, while it has brought a lot of money to the Bears, has been the complete disorganisation of the market. One of the biggest Indian flotations of modern days has gone under in the liquidation of the Wadia Woollen Mills, Bombay, the whole of the capital having been lost. The concern had an exclusively Indian directorate and was under Indian management. The Marconi Wireless flotation in India was mostly subscribed by the company, and the scheme does not seem to have found much favour with the local investor. Local prophets forecast an early but light monsoon, with no rain in August, but heavy falls later. The latest report (for the

Digitized by Google

week ending June 24, received by telegram) says that the Arabian Sea monsoon is strong, and that rainfall has been in excess or normal except in Lower Burma, Assam, Bengal, Orissa, Bihar, Sind, Gujarat, and Mysore, where it has been fair, and in Kashmir, where it has been scanty.

Lord Reading.

Letters received by the current mail refer to a belief obtaining in India that Lord Reading's term of office will be extended to enable him to preside over the transfer of the seat of Government from Old to New Delhi. It is suggested that a member of the Royal Family should come to India for the formal inauguration of New Delhi—even perhaps the King himself. It is widely believed that Lord Reading would welcome an extension, and the general opinion is that he will receive one. The *Statesman* has published a forecast (officially challenged at this end) of the result of Lord Reading's conversations with Lord Birkenhead, that there will be no revision of the Reforms scheme before 1929, and that nothing that may happen in India will hasten the date of revision. The Government, it says, will undertake to consider, before the future of the Reforms is finally decided upon, any concrete scheme of Swaraj that may be put forward by responsible bodies in India; but it has been decided that Indianisation has, for the present, gone far enough and that the British element in the Indian services will not be further weakened. The publication of this forecast is said to have caused a sensation in political circles in India, and the Nationalist leaders have been expressing themselves bitterly on it.

INDIAN EXCHANGE.

The firmness which characterised the Rupee market last week received a further fillip from India, where heavy buying of cotton was advised in Bombay by Japan. In order to provide the necessary finance some of the banks strove to effect sales, but buyers were not much in evidence. Fortunately the Government stood up to the demand and are reported to have bought from banks and others to the extent of about £1,500,000 at rates rising to 1/6⅛.

The rise has affected the London market and business was done here up to 1/6 9-64ths for spot rupees, but owing chiefly, it has been reported, to a cessation of activity in the cotton market, rates have softened, and at the end of the week and on Monday nothing better was offered here than 1/ 3-32nds, and quiet at that. Movements in the last Imperial Bank of India return show that the trade demand has again diminished by two crores of rupees, and a rise of 1½ crores is shown in the notes issued, against a corresponding increase in the Banks' holdings of silver rupees. It is not usual to see a spurt of exchange at this time of the year, but the movement appears to have spent itself, and further ease is not improbable.

INDIAN COMMERCIAL NOTES.

India's export trade depends very largely on favourable monsoon conditions; and this is the period of the year when speculation is rife in the Indian bazaars as to the probable strength and duration of the monsoon. During the past four years, 1921 to 1924, the rains have been good on the whole, and this year the question is being raised whether the series is likely to be broken. Certainly, the indications so far are not wholly satisfactory. Little or no rain fell in January, when it is expected and wanted. The hot weather has been, on the whole, mild, and it is more than theory that fierce heat during the summer months, April and May, gives rise to conditions which favour the development and advance of the monsoon. Again, rain fell in May, when it is not usually expected. And, finally, when the monsoon did break it broke about the first of June at Bombay, a week earlier than its usual date. The official forecast announces that "rainfall is likely to be normal or in defect in the Peninsula; normal or in excess in North-East India; and in defect in North-West India." A report of June 17 announced that the monsoon was generally weak; but on the 24th developments were normal, and the Arabian Sea monsoon was reported to be strong. It is too early yet to tell how conditions will develop and whether the rains will have sufficient strength to carry on to the end of September or even early October, when their value is greatest. Sometimes a break in August will give even a weak monsoon time to recover and to finish satisfactorily.

The absence of rain in January has had its effect on the wheat crop, which is below par. The production last year amounted to 9,747,000 tons, but has declined this year to 8,802,000 tons, which does not allow much for export. On the other hand, there has been a heavy yield of rice amounting to as much as 31 million tons, as compared with 28,198,000 tons last year; and the cotton crop has similarly increased from 5,162,000 to 6,058,000 bales.

Of the oil-seeds, the linseed crop has increased from 463,000 to 541,000 tons; sesamum from 441,000 to 501,000 tons; rape and mustard from 1,149,000 to 1,173,000 tons; and ground-nuts from 1,086,000 to 1,407,000 tons. It is too early yet to forecast the jute crop, but it is understood that the sowings are more extensive this year than last; and, if weather conditions continue satisfactory, the crop will probably exceed by a considerable margin last year's output of 8,045,000 bales.

Some interesting statistics have just come in in regard to India's sugar crop. This year's output of sugar-cane is estimated at 2,537,000 tons, a reduction on last year's figure of 3,317,000 tons. Refined sugar is manufactured in India either by factories purchasing and crushing their own cane, or else by refineries operating with gur—unrefined juice extracted by the cultivators and sold to the refineries. The total production by both systems amounted in 1923-24 to 94,796 tons of refined sugar, as compared with 74,052 tons in 1922-23.

Considerable interest attaches just now to India's cotton crop, the cultivation of which has been stimulated by high prices. Before the War the crop amounted to 4 million bales, of which more than half was exported. The Indian cotton mills and the hand-loom industry between them accounted for the balance. Unfortunately, no statistics are available showing the output of Indian hand-looms, but Indian mills produced before the War, on the average 1,100 million yards. During the year 1924-25 the output of cotton exceeded 6 million bales; and exports have now attained some 3½ million bales, of which Japan takes nearly 2 million. The Indian mills have just published their production figures for the year 1924-25, showing an output of 1,970 million yards. They have thus improved considerably on their pre-War position, and their success is not a little due to the fact that the coarser and heavier goods woven from Indian short staple cotton are cheaper, and therefore in greater demand just now, than the finer goods woven from American and Egyptian cotton. Hence, the imports into India, which averaged 2,500 million yards before the War, now amount only to 1,800 million yards. If allowance is made for the cloth woven in Indian mills and exported, the consumption of cotton piece-goods in India may be placed at 3,600 million yards, of which just one-half is produced by the local mills and one-half is imported.

In spite of these tendencies, the Bombay mill industry is reported to be in a most unsatisfactory condition. This is to some extent due to the competition of Japan and the Continent, whose purchases of short staple Indian cotton have forced up the price to a high figure. Indeed, Indian cotton is now only 1½d. short of the price of Middling American. It is surprising that at this price Japanese piece-goods are able to compete successfully with Bombay goods, in India. But it should be remembered that during each of the past four years Japan has taken very high quantities of Indian cotton, the figures for these years being 1,760,000, 1,600,000, 1,719,000, and 1,923,000 bales respectively. It is not unlikely that wise purchases of Indian cotton during these years have strengthened the position of the Japanese mill industry and made it possible now to quote low prices for the manufactured article.

TROUBLE IN THE SECRETARIAT.

BY MUSAFIR.

There was trouble—big trouble—in the Revenue Department of the Delhi Secretariat, and, as almost anyone might have guessed, the Comptroller was at the bottom of it. The incident is not exactly recent, for the trouble occurred in the latter half of the fourteenth century, but Indian offices have changed very little since then, and in essentials the story belongs to the present, or almost any other, day. The King of Delhi was Firoz, a good old man, under whom all the authorities agree that the North of India enjoyed a golden age. Probably the authorities are right, as golden ages go in India, for the King, though he was a saint, was very far from being a fool, and he understood his Hindu subjects tolerably well. There was, for instance, the episode of the Delhi Brahmans' hunger strike. They had for years managed to escape their fair share of taxation, and when the King said that must be stopped, they sat down in front of the palace and began to starve in chorus. Firoz was not impressed by the demonstration. He made it clear that they were free to die if they wanted to, but it was die or pay, and so the banias of the bazaar intervened, and paid the Brahmans' taxes. Everyone was pleased: the King got his money, the Brahmans got their food, and the banias got, we may hope, something to their credit on the spiritual side. Certainly, it was a golden age.

However, the matter in hand is the trouble in the Revenue Department. It began when Firoz appointed as Comptroller a man who name was Malik Shamsuddin Aburaja, but whom he, very sensibly, called Shams for short. It was a thoroughly bad appointment, for Shams had already had a chance of displaying his idiosyncrasies—in fact, he had acted as Governor of two provinces, and had earned dismissal from both, to the very great contentment of the lieges. Possibly the old King thought he would be more useful at headquarters, which needed fresh blood just then; but, whatever the motive, the appointment was made, and Shams duly took his seat at the right hand of the Prime Minister, for the business of the land revenue, which nowadays nobody in Delhi knows anything about, was then considered of sufficient importance to be handled by the Minister himself, though in practice most of the routine was disposed of by one of his deputies. The duties of the Comptroller were mainly to conduct a gentlemanly, bureaucratic sort of war with the spending side of the department, represented by the Musharrif, who sat on the Minister's left; their differences would be argued out at length, then the spoil would be divided equitably, and the Minister would only have to ratify the division—there was no need whatever for haste, or strong language, or anything which could be called inconvenient, or could disturb the prevailing departmental harmony.

Shams, however, took a different view of the position. He was actively on the make, he wanted all the spoil for himself, and to that end he wanted to boss the whole office. So he pushed his nose into everything, interfered in other people's work, and made himself such a nuisance that he got his way, as nuisances commonly do in secretariats. In the course of a very few months his will became law. The Musharrif, who was a gentleman and disinclined to quarrel, stayed away from office, and let Shams do his work, the Minister, also a gentleman, naturally did what his principal subordinate wanted, when there was nobody to put forward conflicting views, the clerks were harried, the Governors were looted, the nobles were squeezed, and Shams was in his element—for him at least it was a golden age.

Unfortunately for him, he wanted more. His heart was set on being Prime Minister, and he began to play tricks intended to discredit his superior with the King. Whether he could have succeeded in doing so is an open question, for his design became prematurely known, and the worm turned; that is to say, the whole Secretariat became united in opposition, and decided that the nuisance must be smashed before it got too big. Then, as now, there were various expedients for eliminating an unpopular officer from the sacred circle, but the most effective of all—it has unfortunately fallen into disuse—was to bring him on to the Exchequer list of the King's debtors, because, once on the list, all presumptions were against the debtor, and the processes of execution were decidedly drastic. So the Secretariat set to work to search the old files, which were kept at least as carefully as now, and at last they found what they wanted, a genuine scandal, which had been hushed up, but never really liquidated, and would now serve their purpose: when acting as Governor of Gujarat, Shams had systematically embezzled elephants, and, with the aid of compound interest, the bill totalled up to a very pretty figure.

The operation had been quite simple. Elephants were always wanted in Delhi, and, when Bengal was recalcitrant as it usually was, and sometimes still is, they had to be brought by sea to the Gujarat harbours. Now an elephant is rather a tight fit in an ordinary coasting boat, and the mortality on the voyage from Ceylon was so heavy that the trade languished, until it was restored by a policy of State insurance, the King paying the value of all the elephants that died on the voyage. Shams had seen money in this business, and had arranged with the local merchants, who have not greatly changed in character, to bring fictitious claims for deceased elephants, which he, as Governor, could sanction, and the proceeds of which could return to his private pocket. Once in possession of the facts, the Secretariat acted. Then, as now, cases could originate at the bottom of the office, and reach nobody in authority till they were ripe for a decision, and the case against Shams followed the ordinary course, until the day came for the usual action designed to safeguard the assets, by securing possession of the debtor's person and property. One day accordingly Shams found himself, quite unexpectedly, in the Nazir's lock-up, while simultaneously his house was raided by the Nazir's peons, all the valuables embezzled, and the rest of the property sold by auction at entirely inadequate prices. Thus the action was launched in the Exchequer.

Once launched, it followed the normal course, and when the Minister next came to office, he found the Comptroller's place vacant, while the Comptroller himself, in the exiguous dress appropriate to a defaulter, was led forward by the Nazir's peons, followed by the usual executioners, the sweepers with the rods. A secretary read the report of the case, a purely formal document: the debt was so much, the interest was so much, the debtor's property was so much less; and all that remained was to take out execution for the balance on his person. A short pause followed, during which it was open to the debtor's friends to come forward and offer security on his behalf. A week before, Shams could have obtained the signatures of all the capitalists in Delhi merely by raising his finger, but to-day he had no friends, or at least none who would face a united Secretariat, so the Minister gave the nod that indicated his approval of the report, and at his nod the sweepers set to work.

According to the usual departmental practice, the bastinado continued until either the debtor fainted or the rods broke, when the sweepers dragged the victim by the feet back to his cell to await the next hearing, ordinarily three days later. Shams must have started with a fairly good constitution, for we are told that in his case the rods were often broken. The case dragged on for six months, with two or three hearings a week, and to the debtor at least the proceedings must have become rather monotonous: the demand for interest was raised from time to time, but in other respects the story of one day was the story of all. At last, after six months, the Minister decided that the debt must be regarded as irrecoverable, and then the case went before the King for final orders. To default to the State was in those days regarded as a serious matter, and not very long before the Governor of the Lower Doab had been flayed for something of the sort; but Firoz took a lenient view, and merely banished the ex-Comptroller to "a waterless desert," a description which, in that golden age, exactly fitted the greater part of the Punjab. The journey therefore was not long, and Shams made it safely in a litter—we are told he was never

Digitized by Google

again able to sit on a horse—while in his absence the Secretariat quickly settled down. The new Comptroller was a gentleman, and transacted business in a gentlemanly way, the Musharrif returned to office, the spoils were equitably divided, the clerks were happy, and, if there were any grumbles, the fact was not thought worthy of the historian's attention. Beyond any question, it was a golden age.

CURRENT TOPICS.

The Round Table.

The Indian item in the June issue of *The Round Table* deals with the Indian rural problem. The writer enumerates a number of disabilities under which rural India labours: the joint family system, under which the workers of a family have to support its idle members and agricultural holdings have to be subdivided and fragmented: early marriage, with its check on mental and physical development and its high rate of infant mortality: the seclusion of women, leading to economic waste of power and faulty upbringing of children: caste prejudices, restricting the free movement of labour: veneration for animal life which entails the retention of useless animals and refusal to destroy harmful ones: the subordination of economic development to religious prejudices; the shortage of good roads and medical service, which lead to uneconomic forms of transport and failure to avoid preventible disease: illegal exactions by landlords and others: indebtedness and the tyranny of the moneylender: illiteracy, which leaves the peasant an easy prey to exaction: the long periods of enforced idleness that are inseparable from the farming of holdings of inadequate size: the lack of effective agricultural tools: the want of properly constructed fences: the persistent use of flimsy materials: and the perennial strife, not only between Hindus and Mahomedans, but between the various castes of Hinduism and the different sects of Mahomedanism. The writer finds the remedy in education: in the establishment of a rural school within reach of every village in India, where the children can be taught on the modern system whose "essence is that the child teaches himself, the teacher's function being to guide," and where practical demonstrations in agriculture and elementary medical knowledge, especially of preventive medicine, can be given.

The article includes an interesting discussion of the cattle problem in India: and gives statistics to prove that approximately 19 per cent. of the 146 million bovine cattle in India are "useless mouths," the feeding of which is estimated to cost something like 130 million pounds a year. This conclusion is particularly interesting when one remembers that one of the most persistent cries of the Indian agitator, of late years, has been raised against the depletion of cattle by the British Government which allows their slaughter for food and for the export trade in hides and skins. The writer does not attempt to estimate the loss incurred by failure on the part of the peasant to defend his crops against destructive animals; but he draws attention to the fact that the annual economic loss estimated to be due to surplus cattle is four times the land revenue of British India. What other country on earth, he asks, pays such a staggering price for the veneration of an animal?

EMBROIDERIES OF YUGOSLAVIA.

At 13, Old Burlington Street, W., a very enterprising Czech, M. Ian Plichta, has made an admirably full collection of the products of loom and needle by peasants of Yugoslavia. He has, in order to make his show complete, been all over the kingdom of the Serbs, Croats, and Slovenes, from Croatia and Slovenia to Dalmatia and Bosnia and all the rest of the Serbian kingdom. His work has, unfortunately, been similar to that of collectors of folk-songs: he is preserving for posterity the remnants of an art doomed to decay. Already in parts of Yugoslavia the peasants no longer practice the arts of their fathers, one difficulty being the procuring of adequate looms. And, of course, as civilisation advances, so the art of weaving ubiquitously declines.

This exhibition of such things as cloaks, aprons, socks, and other garments (in addition to which there are embroideries for purely decorative purposes) is an extremely fascinating one, and certainly should be visited by all lovers of peasant work in general, and of Yugoslavia peasants in particular. One may see the difference between the more sober work of the Croats, and, say, the highly coloured work of the inhabitants of the Banat; or between the free work of the Dalmatians and the "Byzantinised" products of the peasants of Southern Serbia, who, of course, were until recently under Turkish domination. It is interesting to notice, for example, in some embroideries from the region of Bitolj, the efforts, in spite of Turkish vigilance, to insert a representation of the Christian Cross. Some of the most stimulating examples have been brought from between Skoplje and Lake Ochrida.

One can, too, trace the influence of religion upon this art of weaving. The passion for coloured designs of the Orthodox Slovenes, for instance, is easily distinguishable from the milder, if finely ordered, work of the Catholic Croats; and the products of Serbian Macedonia are obviously instinct with the influence of Byzantium.

All the peasants of Yugoslavia, however stubborn and persistent their prejudices, were quick, from the artistic point of view, to take on the forms of their environment, an instance of this fact being the almost riotous joy in colour of the Banat peasants—due, in all probability, to their proximity to the creative Hungarians and the uncreative tsiganes.

It is sad, indeed, to think that so beautiful an industry is fast dying, and that little can be done to arrest the process. An indication of its decline is in the fact that not in the whole of the Triune Kingdom was M. Plichta able to find a complete costume. For those who wish to procure examples of a unique and very lovely craft—or, rather, art, for the peasants who create and modify these designs are artists—this opportunity is a rare one. The exhibition closes on July 7.

It is reported from Moscow that David Oniashvili, a member of the Central Committee of Georgian Menshevists, who was one of the leaders of the Georgian insurrection last August, and who escaped in May from hospital in Tiflis, whither he had been transferred from prison, has been arrested by peasants near the Turkish frontier.

SOME FOOTNOTES TO THE HISTORY OF THE WAR IN ASIA.

By LEONARD STEIN.

I.

Under the title "The Partition of Asiatic Turkey," the Soviet Government has published a further selection of diplomatic correspondence from the archives of the Russian Foreign Office. Most of the three hundred and thirty-five documents are now made public for the first time. They contain no sensational disclosures, but on the assumption that they are authentic, and there is no serious reason to doubt it, they supply some interesting footnotes to the history of the War in Asia. They range in date from November 1914 to August 1917, and they cover a great variety of topics. All that can here be attempted in reasonable limits of space is to extract a few of the more important under the following main headings:

(1) The Jemal Pasha Episode.
(2) Palestine.
(3) Italian claims in Asia.

The Jemal Pasha Episode.—At the end of 1915, the Russian Government conceived the idea of opening secret negotiations, through Armenian intermediaries, with Jemal Pasha, who was believed to be playing for his own hand. Great Britain and France concurred, though their assent was conditional and rather half-hearted. The project came to nothing, but the correspondence throws some interesting side-lights on the divergent interests and policies of the three Entente Powers.

The first document calling for quotation is the following telegram, dated 12/25 December 1915, from M. Sazonov to the Russian Ambassadors in London, Paris, and Rome.

N.6391.

It is reported from Armenian circles in Constantinople that there might be a prospect of inducing Jemal openly to revolt against the Constantinople Government and the Germans, if the Powers were to offer him the following terms:

1. The Powers to guarantee the independence and inviolability of Asiatic Turkey, to consist of the following autonomous provinces under the supreme rule of the Sultan: Syria, Palestine, Mesopotamia, Arabia, Armenia with Cilicia and Kurdistan.
2. Jemal Pasha to be proclaimed Sultan with a hereditary title from father to eldest son.
3. Jemal to declare the Constantinople Government and the Sultan deposed, as being in German captivity, and to embark upon a march against them.
4. During his march on Constantinople the Powers to supply him with arms, provisions and artillery.
5. Jemal to acquiesce in the loss of the Straits and Constantinople.
7. Jemal to pledge himself immediately to take steps for the salvation of the Armenians and their provision with food till the end of the War.

Any internal complication can only weaken the strength of Turkey and be to our advantage. I think we ought to enter, through such Armenians as are devoted to us, into secret negotiations with Jemal. Even if the latter does not succeed in driving out the Germans and bringing down the Constantinople Government, it would still be useful to foment trouble in the Ottoman Empire.

Please confer confidently with the Foreign Minister and wire forthwith.

Sazanov."

On 13/26 December Rome reported that "Sonnino told me that he was in full sympathy with the idea of entering into negotiations with Jemal on the basis of the conditions set forth by you, if there is any prospect of success."

M. Briand was less enthusiastic:—

RUSSIAN AMBASSADOR IN PARIS TO MINISTER OF FOREIGN AFFAIRS.

"N.854. 16/29 Dec. 1915.
Copy to London.
Reference my telegram N.851.

Briand, whom I saw to-day, after the meeting of the Cabinet Council, told me that he fully realises the importance of your scheme regarding the negotiations with Jemal, but that in the form in which it had been presented by you, this scheme raised serious objections on the part of the French Government, for the fulfilment of the terms outlined by you presupposed that Russia would retain Constantinople and the Straits for herself, while France had to resign her claim to the countries assured to her by her agreement with us, i.e., Syria, part of Palestine, and Cilicia. French public opinion would not understand such a resignation, just as Russian public opinion would not have understood the forgoing by Russia of Constantinople and the Straits. Besides, it should not be forgotten that England contemplated the formation of an independent Arab Caliphate and was already negotiating in the matter with the Sherif of Mecca. In conclusion, Briand expressed his doubt as to whether the programme outlined by you could be carried out by Jemal, disposing as he does of only very limited military resources. I answered that, in my conviction, in putting the proposal forward, you first had in mind the enormous benefit which would accrue to all the Allies from internal confusion in the Ottoman Empire; that in so doing, you were of course far from intending to disparage French interests, and that in the working out of your scheme, different combinations were possible which would assure these interests as well as those of Britain. I also added that the main point was (? not) to miss the opportunity which had presented itself to bring about such complications as would bar the way to the realisation of Germany's Eastern schemes. Briand agreed with the latter view and said to me that he was prepared to take up the parleys with Jemal proposed by you, if only the claims of France to parts of Asaitic Turkey, the possession of which is assured to her by the agreement with you, are quite definitely reserved.

Izvolsky."

MINISTER OF FOREIGN AFFAIRS TO RUSSIAN AMBASSADOR IN PARIS.

"N.6459. Telegram 17/30 Dec. 1915.
Urgent to Paris. Communicated to London.
Received your telegrams NN.854 and 855.

Perceiving, as I do, in the negotiations with Jemal, a means towards creating confusion in Turkey, and bring ing about the collapse of the march on Egypt, I have found it necessary to submit the Armenian scheme in all its authenticity to the consideration of the Allies, without entering into the appraisement of its details or supporting Jemal's wishes. It was my intention to consider these points only after the idea itself of entering into negotiations with Jemal should have been accepted, which would not have necessarily presupposed consent to all the points put forward by the Armenians. Jemal's ambitions could perhaps be utilised also on other terms. You may assure Briand that I do not admit even a thought of in any way belittling the rights of our Allies, who share with us the burden of War with so much self-denial. Now that the foreign Minister has given his consent in principle, please ascertain the terms which he considers acceptable to France.

Sazonov."

RUSSIAN AMBASSADOR IN PARIS TO MINISTER OF FOREIGN AFFAIRS.

"N.861 Telegram. 19 Dec. 1915/1 Jan. 1916.
Copies to London and Rome.
Received your telegram N.6459.

Have communicated its contents at once to Briand, who again stated that although the French Government had no special faith in Jemal's capacity to play the rôle assigned to him and even somewhat feared a trap on his part, it was nevertheless prepared to agree that negotiations with him be opened, provided the rights of France to Syria with Cilicia and part of Pales-

Digitized by Google

tine, granted to her by the agreement concluded with us on the subject of Constantinople and the Straits, are quite definitely reserved. I merely asked Briand on my own behalf whether it was his intention by all means to insist on the annexation of the above territories by France, or whether other combinations would be acceptable to him, such as, e.g., a protectorate with the preservation of a nominal sovereignty of the new Sultan. Such a combination, I added, might not only facilitate the negotiations with Jemal, but also prove to be expedient and advantageous for France herself. Briand's answer was that so far he could express no opinion on the question put by me, but if, in the course of the negotiations with Jemal, any such combination came to be discussed, it would have to be submitted to special consideration. On the whole, your telegram has made an admirable impression on Briand, and, apparently, calmed him. Izvolsky."

The British Government also had its misgivings:—

RUSSIAN AMBASSADOR IN LONDON TO MINISTER OF FOREIGN AFFAIRS.

"N.886 Telegram 17/30 Dec. 1915.
Copy to Paris.
Received your N.6391.

Grey told me that he had become convinced of the importance of breaking Turkish resistance by means of internal complications and that, if Jemal had sufficient means at his disposal, he was far from intending to rob this plan of a hope for success. However, he was in a position to formulate two reservations. The first concerned Basra. Without expressing any view as to its future, Britain, having once occupied this city, could not consent to its return to Turkish rule and would have to assure herself special rights there. The second reservation concerned Arabia. Arabs had applied to the British Government requesting it to found an independent Arab State of which Arabia and the (Moslem) Holy Places should be a part. In so far as this matter concerned the British Government, it has agreed with this request on the condition, first, that Arabia should declare its hostility to Turkey and that Syria should be excluded from the composition of the new State on account of the obligations assumed towards France. Basra and Baghdad were not to be excluded from this future Arabia, except, however, a special region to be assigned to Britain. When the Arabs attempted to make it clear, whether England intended to take part in the creation of a Mecca Caliphate, the British Government answered in the negative, holding that this question ought to be settled by the Moslems themselves. Consequently, Britain was bound by her promise, which was conditional upon a rupture between Arabia and Turkey. I asked Grey how the Arab scheme could be reconciled with the scheme concerning Jemal. He declared that in any case Jemal would not be able to achieve anything so long as he stood in opposition to the Arabs, and that the only way for him to fight was by means of an agreement with them. It is extremely important that the Anglo-Arab agreement should remain secret and by no means reach Jemal. Benckendorff."

At this stage it was suggested that the British Government should open negotiations with Jemal, parallel to those on which it was already conducting with the Sherif of Mecca. This suggestion was, however, declined.

RUSSIAN AMBASSADOR IN LONDON TO MINISTER OF FOREIGN AFFAIRS.

"N.906. 28 Dec. 1915/10 Jan. 1916.
Received N.6518.

Grey told me that, being unable simultaneously to conduct negotiations with the Armenians and the Arabs, he would prefer that the negotiations with the Armenians be taken up by France. Admitting the fact that England is negotiating with the Arabs regarding Arabia and Mesopotamia, Grey foresees difficulties in the parleys with the Armenians and the Arabs concerning Syria and Asia Minor, where French interests predominate. He said that if the Armenians prefer that the negotiations take place in Egypt, Zavriev might place them in touch with the French representative in Cairo. Nicolson told me that Jemal has always taken up a strongly hostile attitude towards the Arabs and that this will mean a difficulty. Benckendorff."

RUSSIAN AMBASSADOR IN LONDON TO MINISTER OF FOREIGN AFFAIRS.

"N.17. 10/23 Jan. 1916.
Copy to Paris.
Received telegram N.85.

Nicolson told me that the British Government, after having again considered the matter, prefers to stand aside of the relations with Jemal's mediator and that its relations with the Arabs make it impossible for it to enter into parallel negotiations without prejudicing the former. In reply to my question, he added that the London Cabinet sees no objection to the negotiations with the mediator referred to above being conducted by Russia or France. Benckendorff."

There is here a gap in the correspondence, and the next document is a discouraging telegram from Paris to Petrograd.

RUSSIAN AMBASSADOR IN PARIS TO MINISTER OF FOREIGN AFFAIRS.

"N.196. 9/22 March 1916.
Copy to London.

Zavriev arrived here some time ago. Following your previous instructions, I helped him to see Briand, to whom he communicated the plan of the negotiations with Jemal through the medium of accredited persons, whom he proposed sending to Egypt. Briand accorded Zavriev an attentive reception, but gave him an evasive answer, referring to the vagueness of the information available about Jemal's position and his fitness for the rôle assigned to him. Briand did not conceal from me that he finds it awkward to enter into any negotiations to be incompatible with the Anglo-French scheme regarding the organisation of Asiatic-Turkey, as to which negotiations are now in progress in Petrograd. I informed Zavriev of Briand's negative answer and he is leaving these days for Petrograd. Izvolsky."

The series closes with a telegram dated 2/15 June 1916, in which the Russian Minister in Berne transmits to M. Sazonov information which has reached him with regard to the reign of terror in Syria, and concludes:—

"It is worth noting that the main part in these transactions is taken by Jemal Pasha, who has apparently abandoned all intentions of a rapprochement with the Entente Powers."

THE WEEK AT HOME.

London, Tuesday Morning.

The Security Pact.

In the House of Commons last week the Foreign Secretary had the opportunity of showing to what heights he is capable of rising: he had to explain exactly what he meant by his whole-hearted support of the Germanic Security Pact. On the whole, it cannot be said that he made a notable impression, and this despite the fact that the opposition from Labour and Liberal members was not very damning.

In the debating sense, undoubtedly, the honours were with the Government. Mr. Ramsay MacDonald could adduce against the Pact no argument that could not equally be brought against the Protocol; and Mr. Lloyd George on the subject of such things as Poland and France—well, he is Mr. Lloyd George. Over the more considerable body of "isolationists," also—the folk who take their foreign politics from the *Daily Express*—Mr. Chamberlain was able to score an easy vistory: it is so demonstrably true that Britain is now a Continental Power, with Continental responsibilities and duties. And yet—something was lacking. Perhaps it was that the Pact represents too much the old idea (rather than the new ideal) of compromise between Germany and France. Certainly on those students who see Europe whole, who think the eastern frontier as important as Germany's western frontier, who, particularly, envisage the next big alliance as one between Moscow and Berlin (with the implication of Warsaw's enforced decease), a feeling descended of disappointment at the Foreign Secretary's readiness to let the Polish-German frontier take care of itself. How is it that our Government can so consistently plead their belief in the good intentions of Berlin when Cologne is still occupied by our troops as a sign that Germany has yet to fulfil her charge?

As far as one can judge, the Security Pact has been ill received in the country, but mainly on the ground that it may drag the country into an unwanted war. So much of this sort of criticism is puerile that the Government may well neglect it. But even among supporters of the Conservative Administration there are many who deplore the unsatisfactory nature of Mr. Chamberlain's compromise. One need by no means glow with pride at the great potentialities of the thrifty German nation, as Mr. MacDonald does, nor need one feel qualms at the military prowess or ambitions of the French or Poles, as Mr. Lloyd George does, to point to weak and illogical parts in the Pact.

Safeguarding Steel and Wool.

How remote were the Government's intentions from the imposition of real Protection upon the country can be seen from the fact that the Cabinet has had to refuse the request of the Steel Trade for an inquiry under the Safeguarding of Industries Act. The remission of this question, which admittedly involves the whole problem of a general traiff, to the Industrial Defence Committee, means in fact that the demand has been put on the shelf. The so-called "Protection" of the Government is thus seen to be a very mild affair after all.

Whether the application made by the Bradford Wool Trade will meet with any luckier response remains to be seen; the application of the lace trade got through all right. But it can scarcely be believed that the salvation of our national industries will come about through such piecemeal treatment as this.

Bolshevism.

There is at the moment a most unhappy tendency to label any and everything in the world around us which we do not like as "Bolshevism." The creakings in our industrial machinery, the dining together of Labour Members of Parliament, the happenings in China—all these things are commonly, ignorantly, and lazily ascribed to Bolshevism. It is, moveover, an ascription of which even Cabinent Ministers do not hesitate, when the occasion serves, to avail themselves. Nothing, however, could so blind us to the real dangers either of real Bolshevism—a virus wholly of Asiatic growth, which thrives best in grounds of incipient or incompletely trained Nationalism—or of other things that are but incidentally connected with or abetted by the principles of Moscow.

It would be the greatest folly to suppose, *à propos* of these two subjects, which are the chief matters of the moment, that without the existence of Bolshevism the condition of our industrial system or of China would be eminently satisfactory. What is important to us is that if anything has to be rooted up and substituted by something different, it should be ourselves and not the Bolshevists who do it. But blindly to assert the malevolence of Moscow's emissaries and crudely to attempt to stop their activities are very poor substitutes for an endeavour to destroy their *raison d'être* either here or in China.

The Oldham Election.

The victory of the Liberal over the Labour candidate at the Oldham by-election appears to have pleased no one but the Conservatives. Genuine Liberals are furious about the pact with the Tories which ensured the return of Mr. Wiggins. They feel betrayed by this Mr. Wiggins, who seems to have been sufficiently opportunist not, in such a fine show of independence as the *Daily News* would have liked to see, to discard the Conservatives assistance that was showered upon him. "A few more Oldhams and the Liberal Party will be dead," says this organ of "straight" Liberalism. In other words, Liberalism is alive only in defeat: when it touches reality closely enough to provoke the return to Parliament of a Liberal member, it immediately becomes moribund!

On Democracy.

It is very strange to find what confused thought there is upon the subject of democracy. In the *Morning Post*, for example, two eminent men, Dean Inge and Mr. William Graham, respective opponent and supporter of democracy, have just been arguing about the subject. Neither, of course, is convinced; and both, of course, are right. The pessimistic Dean extols its social virtues at the expense of its political aspect: and the optimistic Mr. Graham exhibits academically its power of continuous adjustment. It would not be difficult for one man to take up both these standpoints.

But as a contribution to current political thought, as a discussion related to everyday matters, this duel had little value. For it surely is obvious to all but the politician or the doctrinaire that what Britain is suffering from at the moment is not democracy but plutocracy. No one has yet upset the truth that an economic democracy must precede a political democracy, and we are so far from being an economic democracy as to be a perfect example of a plutocracy. And from this plutocracy it is increasingly manifest that no "democracy" can save us, but only a reassertion of monarchical power. That, of course, is one of the reasons that Fascism, about whose nature and

peculiar pertinence, incidentally, Signor Mussolini knows rather more than *The Times*, though the latter would not appear to think so, should be so important a study of political students to-day.

The R.A.F. Show.

By far the best aerial display yet seen in this country was, according to general consent, given at Harrow on Saturday. The Royal Air Force may not yet hold the public imagination as does the Navy, but the 100,000 people who were present at this show came away amazed at the perfect efficiency of the R.A.F. men and of their machines. Probably the most useful work was done in the section devoted to Army co-operation, but what chiefly delighted the crowd was the set piece with the story. Here there was an enemy cruiser, simply waiting, of course, to be bombed. After five ship planes had cleared the decks of the foe, twelve huge bombers came along and finished off the job, amid all the bangings and the explosions so beloved of the civilian ears. Certainly the whole exhibition was a most impressive indication of what Britain's Air Force might, and ought to, become.

Los Angeles and Southampton.

It was bound to happen at last, although we have, possibly, been too disgustingly shamed. But after giving civic honours, official receptions, and the rest of it to that strange brood from America known as pugilists, moviemen, and so on, we perhaps deserve it. Last week, at Southampton, some American film-men so "put it over" us as to get detailed, for the purpose of guarding one of the world's most priceless possessions—a film—a detachment of Territorial troops. Further degradation of the King's uniform there surely could not be.

One wonders where all this passion for "publicity," these "stunts" of the cinema-world, will end. Naturally, there is to be an inquiry at the War Office, and questions are being asked in the House of Commons.

The London Group.

Of all the rebel artists who before the War used to love to form coteries and with the stentorian air of unauthoritativeness to proclaim their rude merits, the London Group, which is now holding an exhibition at the R.W.S. Galleries, Pall Mall East, is the worthiest and most persistent. Although it is to some extent overweighted (or, rather, shown up) by examples of men like Sickert, Roger Fry, Meninsky, or Ethelbert White, there is a considerable amount of interesting stuff to the credit of less well-known painters. Of those which may be of peculiar interest here, one may mention "Charcoal Biscuits," of Sophia Fedorovitch (a most vivid scheme in black, white, and blue), Jean Varda's impressionistic and bold "The Greek," a strikingly ancient-modern "Rabbi's Wife," by William Roberts, and the crudely designed "Leda and the Swan," of S. Popovitch.

For those who wish to see how modern British art is developing, few exhibitions could be better than this. Using their own technique and ideas such men (apart from those first mentioned) as Wyndham Tryon, Charles Ginner, Richard and Sydney Carline, and J. W. Power have produced work which is not only intrinsically interesting, even fascinating, but beautiful.

The Season.

To all intents and purposes the London season is over. The last Court at Buckingham Palace has been held; opera at Covent Garden is drawing to a close; the concert world is practically dead. It appears to be generally agreed that it was the most brilliant time of the post-War years, enormously helped, of course, by the fine weather in the first three weeks of June—weather which the last week has done its best to make us forget.

On the theatres, however, the closing of the season seems to be having but little effect, and it is said that producers will be as busy in July as they have been in June. Mr. Galsworthy's new play, for example, "The Show," is coming on to-morrow at the St. Martin's, and during this week three new plays, "The Gorilla," and "The Gentleman-in-Waiting," and Mr. Harold Chapin's "The New Morality," are being produced.

Sport.

The fact that an American, Mr. Jim Barnes, won the golfing championship last week does not seem to have upset anybody's equilibrium very much, although it is rather pathetic to observe how certain people take comfort in Mr. Barnes' once having been an inhabitant of Cornwall.

Nor has there been much to console us at Wimbledon, where Englishmen have put up gallant but unavailing fights. The manifest wish of the Wimbledon public is that the Australian, Mr. Anderson, may pull off the singles: if he can beat the Frenchmen, the championship should certainly be his.

Most of the fun has come out of cricket, where most curious form is being displayed by first-class men. Middlesex and Surrey, who last week achieved two very good (the first an extraordinary record) victories, are hopelessly inconsistent: they seem either to be great or to be grovelling. Without any doubt, Yorkshire is the side of the year. Of the actual result of the 'Varsity match it would be foolish to speak, but there is no question that Cambridge have an infinitely better side than Oxford this year. The Light Blues' batting is very strong, and though their bowling is weakish, it at least looks as good as Oxford's. But at Lords, of course, anything may happen.

Brilliant Art.

One does not often come across in a small exhibition so much brilliant and stimulating art as is to be found in the Summer Exhibition of the Goupil Galleries, Regent Street. No doubt the magnificence of the show is due to the dominating presence of men like Mark Gertler (whose coarse vigour, whether in the representation of his favourite Jewish types or in his still life, finally and completely overcomes one), Sickert (of whose works it may be said, as was said of the poetry of Francis Thompson, that you can work infinitely out and infinitely in), and James Pryde, whose remote individuality is a thing that haunts one. But there is other and less "arresting" work, done by more reticent souls such as the gentle Greaves, the charming Vera Cross, and the very stylish Gilbert Spencer. And, for those who like this kind of thing, there are William Nicholson's fascinating designs for costumes which are being worn in the Hogarth ballet of the popular Pavilion *revue*, "On with the Dance."

The examples in this show of Mr. Arnold-Foster's brush should particularly appeal to readers of this journal. His two water-colours, "Towards Parnassus" and "A Greek Bay," are delightful in their suggestion of a faëry land where it is always afternoon, where the sea is always translucently blue and the rocks are a gleaming white. And his management of ethereal blues is beautifully firm in his two oils, "Sea Mists," and "Kandili."

ALTER EGO.

OBITUARY.

Paymaster-Captain Denham Robert Kelsey, R.N., retired, died on June 23, at Hilliers, Carshalton, Surrey, aged 71. Mr. Kelsey served as assistant paymaster in charge of the Cockatrice during the Egyptian War of 1882. The normal duty of this river gunboat was to represent Great Britain on the Danube Commission set up by the Treaty of Paris. While in her, on June 10, 1883, Mr. Kelsey won the bronze medal of the Royal Humane Society for assisting to save a man from drowning at Galatz.

Mr. Alfred Denis Godley, Public Orator at Oxford, died in Oxford last Saturday, at the age of 69. Mr. Godley visited Greece and Egypt more than once. It was a recent visit to the Near East which, it is believed, brought about his fatal illness. He went with Mrs. Godley in April last for a cruise, starting from Venice and proceeding by the Adriatic to Greece and on across the Ægean to the Dardanelles and Constantinople.

An exhibition of the principal results of last season's excavations on the site of Ur of the Chaldees is being arranged in the British Museum, and will be open to the public on July 7.

The Crown Princess of Roumania, Princess Irene of Greece, and Prince Paul of Greece visited the King and Queen at Buckingham Palace last Thursday and remained to luncheon.

Admiral Sir Osmond de Beauvoir Brock (upon relinquishing his appointment as Commander-in-Chief, Mediterranean) had the honour of being received by the King at Buckingham Palace last Saturday.

The Secretary of State for India and the Countess of Birkenhead will hold a reception to meet the Earl and Countess of Reading at the India Office to-morrow evening at half-past nine o'clock.

The Roumanian Minister and Mme. Titulesco left London last week for Geneva, and M. C. M. Laptew, Counsellor to the Roumanian Legation, is acting as Charge d'Affairés during the Roumanian Minister's absence.

The Patriach Photios, of Alexandria, arrived last week in London to attend the commemoration of the 16th centenary of the Council of Nicæa at Westminster Abbey on June 29. He was accompanied by the Bishop of Nubia and other ecclesiastics.

The engagement is announced between Robert Henry Hadow, M.C., Second Secretary at the British Legation, Teheran, Persia, eldest son of Mr. and Mrs. C. M. Hadow, Srinagar, Kashmir, India, and Elizabeth Lindsay, daughter of Mr. and Mrs. Waddy B. Wood (Lomax Place), Warrenton, Virginia, U.S.A.

Mr. Elias Meyer, of Pollock Street, Calcutta, and of Grosvenor Square, London, S.W., merchant, who died on April 17, domiciled in India, left property sworn for the purposes of the English grant at £670,113 gross, with net personalty £388,246. The duties on the property at this valuation will amount to about £185,000.

On June 20, at the British Embassy Chapel, Constantinople, by the Rev. Canon Whitehouse, the marriage was solemnised of Alexander Telford Waugh, C.M.G., H.B.M.'s Consul-General, to Gwendda Kate, daughter of the late A. C. Hugh-Jones, I.C.S., and of Mrs. Hugh-Jones, 13, University Mansions, Putney.

The Crown Princess of Roumania honoured Sir Walter and Lady Gibbons with her presence at luncheon on June 23 at 1, Carlton Gardens. Other guests included Princess Irene of Greece, Major-General Lord and Lady Cheylesmore, Miss Selby Lowndes, Captain the Hon. F. E. Guest, Colonel the Hon. Henry Guest, and Sir John Latta.

The Countess of Reading has kindly promised to be present at a concert to be given at 4.30 p.m. on July 6, by permission of the Hon. Dame Margaret Greville, at 16, Charles Street, Berkeley Square, in aid of the Strangers Home for Asiatics. Tickets may be obtained by applying to the Honorary Secretary, care of Colonel Bannerman, India Office, S.W.1.

Prior to the Court held by the King and Queen at Buckingham Palace last Thursday the King received his Highness the Maharaja of Jodhpur, accompanied by Maharaj Ajit Singh, and his Highness Aga Sultan Sir Mahomed Shah, Agan Khan. His Majesty invested his Highness the Maharaja of Jodhpur with the Insignia of a Knight Commander of the Most Exalted Order of the Star of India. Colonel A. D. Bannerman, Political Aide-de-Camp to the Secretary of State for India, was in attendance.

Book Reviews and Notes.

THE INDIAN PEASANT.

"THE PUNJAB PEASANT IN PROSPERITY AND DEBT," By M. L. Darling I.C.S. (Oxford University Press, 14s.)

This publication is an interesting and stimulating book. The reader learns from it that there are 40,000 moneylenders in the Punjab, and that over 80 per cent. of the peasantry are in debt. The author takes the land revenue as the basis from which he calculates the incidence of debt, and arrives at the conclusion that the Punjab peasantry's total debt is about 15½ times the land revenue, which itself amounts to about one-fifth of the net income from the land; so that the peasant's debt averages about three years' net income. About half of the total is secured on mortgage and jewellery, the rest being unsecured. The annual interest charge on the debt amounts to nearly three times the total land revenue of the Province. The average holding is 8 acres and the average debt Rs. 463. Forty per cent. of the holdings are 8 acres or less, with an average debt of Rs. 310 which is about 27 times their land revenue: sixty per cent. are of more than 8 acres, with an average debt of Rs. 570 which is about ten times their land revenue; thus the larger holders are more highly in debt, the smaller more heavily. The individual holdings of the small holders are often "fragmented" to an almost incredible degree—the author quotes the case of a village in the Jullundur district where the total acreage of 12,800 was split up into 63,000 fields, the individual holdings consisting of a number of these fields at widely scattered intervals. This arises from the Indian family custom that ordains that, on the death of an owner, his sons shall not only each receive an equal share of their father's land, but shall also share equally in each kind of soil of which the total is made up. The author gives an interesting account of the Canal Colonies and their remarkable prosperity: they contain five million acres of cultivated land, more than one-sixth of the cultivated area of the Punjab. In 1921-22 Government made a profit of a million sterling on the canals, equal to 22 per cent. on the capital expenditure, and it is calculated that the Colonies produced crops worth twenty million pounds, of which about five millions was net profit to the cultivator. The author traces, as one of the chief reasons for the success of the Colonies, the fact that no cultivator starts with a holding smaller than 12½ acres, and that this holding is compact and consists of a single field. The incidence of debt, in the Canal Colonies, is only four times the land revenue. The author, however, propounds the maxim that "prosperity and debt are only less intimately connected than poverty and debt." He finds the main causes of India's poverty to lie in over-population, improvidence and disease. In those parts of the Punjab that are agriculturally secure, such as the Canal Colonies, over-population has not yet become a problem, though the author foresees a time, not very far distant, when it will do so: and disease, especially cattle disease, is minimised; but improvidence exists everywhere. As prosperity increases, so does debt, because the security becomes greater and the people are improvident. When questioned as to why he is in debt, the peasant invariably blames the incidence of the land revenue; though all expert inquiry, including that of the author of this book, concludes that indebtedness is never due to this cause and that, on the contrary, reduction in land revenue actually increases poverty because it favours improvidence. In those parts of the Punjab that are agriculturally insecure, that insecurity is the root cause of debt; but Mr. Darling says, "In the South, insecurity is more allied to famine than to plenty: in the West it is the other way round. In both, the harvest is a gamble in rain, but in the South the gambler loses more often than he wins, while in the West he wins more often than he loses. This condition is the more demoralising of the two, for the reaction of the former is thrift and of the latter improvidence." Mr. Darling gives, as the basic factors that compel the peasant proprietor to borrow, the smallness of the ordinary holding and its grotesque fragmentation: the insecurity of agricultural conditions in a considerable part of the Province: universal improvidence: the constantly recurring loss of cattle by disease and drought: and extravagant expenditure on marriages and domestic ceremonial. And, as the main causes that facilitate borrowing, facile credit and the vicious system of the professional moneylender. He cites a case in which a moneylender lent Rs. 8 and, "after a time-honoured custom," entered it as Rs. 10: the interest was fixed at two annas per rupee monthly and was charged on the ten rupees nominally borrowed, so that it actually worked out at 187½ per cent. per annum. He explains how, though the Punjab Land Alienation Act has clipped the claws of the moneylender caste, since it forbids the alienation of land to a person not of an agricultural tribe, it has led to the appearance of the "amateur" moneylender who is himself an agriculturist, and fully as grasping and rapacious as his professional brother.

Mr. Darling then proceeds to discuss the true remedy for the condition of affairs that he has described, and makes out for it a convincing case. In the economic development of India in the nineteenth century, he says, "the spoils fell to the astute and the strong rather than to the simple and weak": there was a rapid growth of large urban centres, and the administration of justice fell into the hands of the "town-bred man of the desk": and the peasant found himself "at the mercy of the moneylender, lawyer and trader. The first tempted him to borrow, the second to quarrel, the third to waste." The first Co-operative Societies Act was passed in 1904; to begin with, it had to contend with active opposition from the moneylender, passive opposition from the lawyer, and suspicion on the part of the peasant; but there are now ten thousand co-operative Societies, with a membership of a quarter of a million, in the Punjab alone. Some of these are badly, even corruptly, managed; but the greater number are admirably managed. Mr. Darling says, "In the Punjab the peasant of to-day regards the Land Alienation Act as the Magna Charta of his freedom, but his descendant is more likely to give that title to the Co-operative Societies Act which, more than any other, has made progress possible to the village." Its object is, to raise the peasant on to a higher plane of wealth and culture, and to prove that the "poor illiterate peasant" need be neither poor nor illiterate and that the "stupid cultivator" will respond to efforts to make him intelligent. When properly managed, co-operative banks provide a check on improvidence, as they enquire into the object of a loan, and will not give it unless the object is worthy; whereas the moneylender never inquired about the object, but only about the security. In addition to co-operative banks, co-operative societies have been started with the object of consolidating holdings and removing the "fragmentation" evil, and for arbitration instead of going to law. Both of these have produced valuable results, and the latter achieved great popularity: two arbitration societies were opened, after much initial difficulty, in 1920, and by 1922 there were 148, with 16,000 members; when they

A Novel of the Near East.

COUNT BLITSKI'S DAUGHTER

By

LELAND BUXTON

Author of "The Devil's River."

"The author is well qualified to be particularly convincing in his local colour."—*Times.*

"Nobody can mix genuine excitement with chilling humour quite like Mr. Buxton."—*Daily News.*

"Genuine entertainment and some veritable thrills."—*Time and Tide.*

7/6 *net.*

CHRISTOPHERS: 22 Berner St. W.1.

Digitized by Google

were all closed by ministerial order—doubtless, as Mr. Darling says, for good and valid reasons, but with the result of leaving their members "merely bewildered by an order in which they saw nothing but the urban mind's ignorance of rural conditions." Mr. Darling sums up the case as follows: "The very essence of co-operation is that men should help themselves and rely as little as possible upon Government. All good co-operators therefore ardently desire to see education brought to every village. This will take time and, meanwhile, for the illiterate cultivator there is no better school than the village bank. Here even the humblest peasant may take his diploma, learning to look to himself instead of always to Government, to help his neighbours as he would be helped by them, to spend wisely and repay faithfully, to eschew extravagance and, above all, to deal straight. For a country that is entering upon the perilous path of self-government, these lessons are invaluable."

The book includes some maps and illustrations, an index, and a foreword by Sir Edward Maclagan, late Governor of the Punjab, who says that it makes "a notable contribution to the economic literature of India." This claim is well grounded and the book can confidently be recommended to all interested in Indian economic problems.

KOMITAJI DAYS AND WAYS.

"Count Blitski's Daughter." By Leland Buxton. (London: Christophers 7s. 6d. net.)

The reader of this second novel by the author of *The Devil's River* may be warned at the outset that it will be of no use to try to fit all the caps that are so tantalisingly dangled in front of him. In this matter Mr. Buxton plays with him most unfairly. Zothenia ought to be Slovenia, but its history is not; Marishka ought to be—at least, she ought to have gone to Sussex, but there presumably the author's courage or, shall we say, adherence to facts, forsook him. And so throughout the book; characters are boldly familiar enough in parts, but for safety's sake seem to be given a composite entity. Where the author of *The Black Sheep of the Balkans* makes no attempt at disguise is in his Ba-lams (of Balamia). He has evidently enjoyed writing the book with his tongue in his cheek, and the reader will be prepared to share that enjoyment. The more so, as the interest is maintained to the end, the characters are one and all convincing in their actual setting, and the descriptive parts do justice to Balkan scenery. More true to life than *Ruritania* and a lighter effort than *Le Roi des Montagnes*, *Count Blitski's Daughter* does throw some light on *Komitaji* mentality.

PICTURES OF TUNISIA.

The artist always finds Tunisia to be one of the happiest hunting grounds in the Near East; it would be difficult, indeed, to discover London exhibitions at any time without some representations of Tunisian life and scenery.

At the moment there are two prominent shows in which Tunis occupies a large part—that of Baron Rodolphe d'Erlanger at the Alpine Club Gallery, Conduit Street, W., and that of Mr. Knighton Hammond at the Gallery of the Fine Art Society, Bond Street, W. Of Baron d'Erlanger's ability in depicting the Moslem life of N. Africa there is, of course, no question; he has for years been known as a keen student of the artistic side of the Arab's life. This ability and knowledge, however, do not prevent the entrance of a certain monotony into his pictures as if, in fact, the eternal blossoming of Tunisian flowers and the eternal blueness of Tunisian waters had entered into his soul. But apart from this defect there is abundant interest in his landscapes and portraits—particularly in the smaller landscapes. Of his portraits, that called "Ben Murad, the Bey's Architect," is the most striking, and, incidentally, the most reticent. There is a world of Moslem jollity in this kindly old man's face, with its silver beard and eyes alive with intelligence. Other considerable works are a portrait entitled "Abyssinian," in which the dusky tones are put in with great technical mastery, and "The Sharia," depicting three very old and very wise Moslems listening and pondering. For those who like their East no further afield than Tunisia, this exhibition should prove of some attraction.

Mr. Knighton Hammond's water-colours, on the other hand, possess greater significance, more "bite" and sense of atmosphere than do Baron d'Erlanger's oils. This artist brings almost the touch of a Sargent to his vigorous pictures, and whether he is representing the "suqs" or the mosques or merely the types (such as mendicants or jolly beggars) of Tunis, his imagination is always at its exciting work. These water-colours are full of light and colour, and are really of gladsome excellence.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA

EX-KING HUSSEIN.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—A small point is raised in your review of "The Statesman's Year-Book" which perhaps demands a word of explanation from the culprit. It is true that ex-King Hussein went from Jeddah to Aqaba. From Aqaba he went, however, to Maan, where he was when the text of the article was dispatched from Jeddah. From Maan he subsequently returned to Aqaba, which more recently he has left for Cyprus. The text as published represented the actual state of affairs at the time it was written, and the aim of the "Year-Book" is, I take it, to represent matters as they are as nearly as possible at the beginning of the year to which it refers.

It is convenient and fashionable to depict ex-King Hussein as spending the early period of his exile on his yacht off Aqaba, but the "Year-Book" deals with prosaic facts only, and in this case, as so often, "fact is stranger than fiction."—I am, etc., H. ST. J. B. PHILBY.

18, Acol Road, N.W.6, June 28.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Commercial and Financial Section.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

Bulgarian Bonds.

It is satisfactory to be able to record the fact that a settlement has at last been arrived at in regard to the service of the Bulgarian external debt. On another page will be found particulars of the arrangement which has been approved by the committees representing the British, French, and Dutch bondholders. The scheme provides for the payment of interest for three years from April 1, 1924, at rates ranging from 30 per cent. in the case of the 1909 Loan to 42 per cent. in the case of the Loans of 1902, 1904, and 1907. It will be noted that payment of interest is to be made in the most appreciated currency in which the bonds are expressed, which means that where the coupons are payable in London payments must be made on a sterling basis. As regards the question of amortisation during the remainder of the three years, this can be effected by tenders or purchases in the market or suspended altogether.

Developments in Greece.

Whatever may have been the prospects of a further Greek Loan in the early future before the latest political development it can safely be said that there is now no possible chance of further financial assistance until there is some assurance of settled conditions in Greece. It is, unfortunately, much easier to destroy confidence in a country than to restore it, and the effect of General Pangalos' *coup d'état* is to discount the very favourable impression created by the economic progress made by Greece in recent years. In Greece political changes may make little difference to the life of the country, but it would be difficult to persuade financiers of the stability of conditions in a State whose politics are so obviously unstable. If there ever was a time when the world required a prolonged period of freedom from changes of any description it is now, and it may be hoped that out of the present development it may be possible for Greece to establish a régime which offers solid assurances of permanence.

The Kassala Cotton Company.

At the meeting of the Kassala Cotton Company, the chairman, the Hon. A. M. Asquith, dealt at length with the progress of the development work. The Magauda canal, he pointed out, was completed before the flood came, but only 1,500 acres received sufficient water from it instead of the larger area that had been anticipated. This was due to two causes. One was that the Gash gave a low and steady flow, never exceeding a depth of 1½ metres, instead of the usual flushes three metres deep at Magauda. The other cause was that in one section of the canal the substratum of soil dissolved under the influence of the water, and the depth of the bed of the canal was somewhat diminished by the addition of clay from the subsidence of the banks. The banks have since been protected with stonepitching for a length of about 2½ kilometres west of the head regulator and the design of the canal has been modified so that it should operate with a one-metre flow. During the current season a further canal 22 kilometres long, known as the Metateib canal, has been constructed, about 20 kilometres north of the Magauda canal and 10 kilometres south of the Hadaliya canal. In addition various minor improvements of other existing irrigation works have been carried out. The problem of drinking water, the chairman remarked, affects the company at every turn. During the current season water has had to be brought by canal from increasing distances for the use of 800 Egyptian labourers and for all the company's building operations. Mr. Asquith added that a place called Aroma, some 35 miles north of Kassala, appeared destined to become headquarters of the company. "Here," he said, "the Sudan Government have bored for water to a depth of 250 feet, but so far without result. Mr. Beeby Thompson, the water expert, and Mr. Grabham, the Sudan Government's geologist, after visiting the Gash Delta this spring to advise the Sudan Government on the question of wells and of drinking-water, concurred in advocating a pipeline from existing wells in the southern part of the Delta as being the best means of obtaining immediate requirements. We propose to begin rather tentatively with the installation of pumps and a pipeline from the wells at Mekali to supply domestic water for some of our areas."

The Progress of Cotton Cultivation.

The total crop of the current season, Mr. Asquith stated, is estimated to be about 27,500 kantars. Nearly 19,000 acres were sown, but between three and four thousand failed to carry a full crop to maturity. The cotton is Sakellarides, of grades generally somewhat better than Fully Good Fair, and some 13,300 kantars have been sold by public auction at Port Sudan. It is hoped largely to increase the area under cotton for the next season. In this connection it is interesting to note that applications for tenancies have been made more than sufficient for any area which it can reasonably be expected to irrigate with the coming flood. Mr. Asquith dealt with the question of the abstraction of water in Eritrea. According to figures given by the Italian Government of Eritrea to the Sudan Government 800 million cubic metres of water passed Tesenei in Eritrea last season, while only 456 million cubic metres of water arrived at Kassala. "On the data available at present," said Mr. Asquith, "we believe that this loss of water between these two points, only 25 miles apart, is due practically entirely to the sponge-like action of the river channel; that this intervening sponge or sand requires a certain quantity of water to fill it, and that consequently any water abstracted in Eritrea at Tesenei and so failing to enter the sponge will have to be made good by a similar amount of the water which is allowed to pass Tesenei. Thus, in our

opinion, any water abstracted in Eritrea will be a net loss to Kassala, and, to an extent which it is difficult to estimate accurately, it will reduce the area eventually capable of irrigation in the Delta. Estimates in this connection are difficult. I told you last year that we do not know yet exactly what dose of water the land requires, one aspect of the question being that the water requirements of new land are probably higher than those of land irrigated in the preceding season."

The Imperial Bank of Persia.

A satisfactory report is forthcoming from the Imperial Bank of Persia for the year ended March 20. The profits amounted to £90,439, and £34,552 was brought forward, and deducting £5,426 due to the Persian Government under the terms of the concession the balance is £119,566. The six months' interim dividend of 4s. per share free of tax absorbed £20,000, and it is now proposed to pay a final dividend of 5s. per share free of tax, to place £30,000 to the reserve and £10,000 to the bank premises account, and to carry forward £34,566.

Dooloogram Tea Company.

At the meeting of the Dooloogram Tea Company, the Chairman, Sir Frederic Painter referred to the satisfactory record of the working of the company during the past season. He pointed out, however, that the result was not quite up to that of the previous year. This was due to the increase in expenditure. An important factor in this connection has been the rise in the exchange, while the Chairman explained that the cost of the labour force is increasing. The crop was somewhat larger than that of the previous year, and realised a good average of prices.

The Bank of British West Africa.

A substantial increase in net profits is shown in the report of the Bank of British West Africa, the figures being £112,352, at which they are more than £16,000 above the total for the previous year. The proposed final dividend of 3 per cent. maintains the distribution at 5 per cent. It is further proposed to allocate £25,000 to contingency reserve, £25,000 to writing down premises, etc., and to carry forward £38,032.

COMMENTATOR.

The Civil Court of Appeal in Bulgaria has decreed the confiscation in favour of the State of all the property acquired by the late M. Stambolisky, the Agrarian Premier, and the former deputy, M. Boyadieff, during the Agrarian régime, which lasted from 1919 to 1923.

A telegram received in London at the end of last week announced the arrival at the Hejaz port of Rabegh of three pilgrim ships from India. The pilgrims have landed, and the caravan arrangements for the journey to Mecca appear to be satisfactory.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT,

48, FENCHURCH STREET, LONDON, E.C.3.

BULGARIAN DEBT ARRANGEMENT.

The Council of Foreign Bondholders has received information that the Bulgarian Government has signed an arrangement relative to the service of the external debt which has been approved by the committees representing the British, French, and Dutch bondholders. This arrangement provides for :—

1. Payment of interest on the debt for three years from April 1, 1924, to be made in the most appreciated money in which the bonds are expressed at the following rates: Loan of 1909, 30 per cent.; loans of 1892 and 1896, 32 per cent.; loans of 1902, 1904, and 1907, 42 per cent.
2. Bonds drawn during the period April, 1924, to April, 1925, to be paid at the above rates.
3. Amortisation during the remainder of the three years to be effected by tenders or purchases on the market or to be suspended altogether.
4. The Bulgarian Government undertakes to raise no objection in future with regard to the origin of bonds acquired before July 1, 1922, under normal conditions on a regular market.

SHIPPING INTELLIGENCE.

NEW BIBBY LINE MOTOR SHIP.

It is announced that Messrs. Bibby Bros. and Co., Liverpool, have placed an order with the Fairfield Shipbuilding and Engineering Co., Ltd., Govan, for a twin screw motor ship of about 7,500 tons.

The vessel, which is intended for cargo service between London, Liverpool, Colombo and Rangoon, will be somewhat similar in design to several which have been built within recent years for the same owners, by Messrs. Harland and Woolff, Ltd., of Belfast, who have constructed all the Bibby Line vessels for a considerable time past.

EXPANSION OF BRATISLAVA'S TRADE.

(From a Correspondent.)

The amount of traffic passing through Bratislava is making a steady advance. In 1922 the figure for 56,000 tons, in 1923, 131,000 tons, last year 354,000 tons and in the current year to date 500,000. Leading Slovak commercial organisations are urging a speedy extension of the port facilities, notably a grain storage, transit storage, and the construction of further railway lines.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Castalia for Bombay (Liverpool, July 4). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Matheran for Port Said, Colombo, Madras, and Calcutta (London, July 11).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (Birkenhead, July 15).

British India Line.—S.s. Matiana for Colombo, Madras, and Calcutta (London, July 4); s.s. Nalgora for Bombay and Karachi (London, July 11).

Cunard Line.—S.s. Tyria for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Brindisi, Bari, Gruz, Ancona, Venice, Fiume, and Trieste (Liverpool, July 9).

Ellerman "City" Line.—S.s. City of Lahore for Calcutta (Birkenhead, July 6).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 4); s.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 11).

P. and O. Line.—S.s. Nore for Colombo, Madras, and Calcutta (London, July 9); s.s. Morea for Bombay (London, July 24).

Prince Line.—S.s. Cyprian Prince for Tunis, Malta, Alexandria, Syrian Coast, and Cyprus (London, July 1).

PRODUCTION OF MINERALS FROM THE DEAD SEA.

The dependence of Palestine solely on agriculture is a feature which is bound to give rise to some misgiving among those who have the interests of the country at heart and in the last few years the most determined and praiseworthy efforts have been made to endow Palestine with a number of industries. To the success of these efforts the exhibits in the Palestine Pavilion at Wembley bear abundant tribute. But while a good deal has already been accomplished, it is obvious that much more is necessary if the country is to be placed on a sound economic basis, and among the possible openings for development to which attention has been paid has been the question of the practicability of producing minerals from the waters of the Dead Sea. Reports of the various experiments and investigations that have been carried out in this connection in Palestine and in this country together with a summary of the conclusions of a Committee appointed by the Secretary of State for the Colonies to report on the matter have now been published in the form of a brochure*, together with a series of maps and plans in a separate container.

Rather more than half the publication consists of extracts from reports by the Geological Adviser to the Government of Palestine in 1923. He points out that with increased evaporation and decreased rainfall the limits of the lake gradually retreated to its present shores and the soluble salts concentrated in its waters. At the north end of the Dead Sea there is a storm beach stretching along the whole length of the shore; and behind it is an area suitable for the formation of evaporating pans. The quantities of salts in the Dead Sea are estimated approximately as follows (in millions of metric tons):—potassium chloride 2,000, magnesium bromide 980, sodium chloride 11,900, magnesium chloride 22,000, and calcium chloride 6,000. For practical purposes, it is stated, the supply of potash may be considered inexhaustible.

The question of communications is, of course, a vital matter, for any development work would necessitate the transport of considerable quantities of material. The railway runs to Beisan and Jerusalem, but while there is no road from Beisan to the Dead Sea, the Jerusalem-Jericho main road, which is mainly in first-class condition, is 8,000 yards from the Dead Sea beach at the point where the road issues from the limestone hills, and allowing for a further stretch of road along the beach it is estimated that it would be necessary to construct 6 miles of road. On the grounds of the cost and the expenses that would be entailed in gaining a footing in the potash market, it is stated that in the development of the industry anything outside the ordinary salt pan construction and methods are not to be contemplated.

Considerable attention is devoted to describing the operations for the production of salts. It is pointed out that it is unlikely that carnallite would be exported owing to the high freight charges, and that either of the methods adopted in Germany for the production of potash salts might be applied at the Dead Sea, but the later German method is advocated. It is estimated that for every ton of 80 per cent. potash five tons of salt will be produced, so that if 100,000 tons production is ever reached for potash the disposal of 500,000 tons of salt will have to be considered. The two possible methods of disposal are marketing, which depends on cheap transport, and washing back into the Dead Sea.

The question of living conditions in the neighbourhood of the Dead Sea is a very important matter. Various reports are given on malarial conditions in the area, and it is pointed out that the logical site for any works of a commercial nature is west of the Dead Sea Post on the west shore, at any place further than three kilometres north of Ain Feshkah.

The summary of the conclusions of the Committee to which reference has already been made is on the whole not very encouraging. It is stated that from the technical standpoint, as distinguished from the commercial, no insuperable difficulties are likely to be met with in connection with the extraction of potash from the Dead Sea in quantities of the order of 100,000 tons of potassium chloride per annum. It is further pointed out that a product containing over 70 per cent of potassium chloride can be obtained by natural evaporation, that practically unlimited quantities of common salt and magnesium chloride could be produced, that adequate land is available for the evaporating tanks, and that the area could be rendered habitable by suitable precautions. On the other hand no reliable estimate can be formed at the present time as to the cost of construction of the evaporating pans or in connection with the cost of the operation of the process on a larger scale. Further, transport charges would absorb a considerable proportion of the market value of the potassium chloride, and would, to a large extent, render the common salt and magnesium chloride unsaleable. It is also stated that in view of the uncertain conditions of the markets and the future production in Europe, the Committee is not in a position to forecast the commercial prospects of potash recovery from the Dead Sea. Finally, as long as the market for bromide remains relatively small and variable, it can probably be supplied adequately from other sources. It is emphasised in conclusion that a large scale trial would form a necessary preliminary to an enterprise which, in any case, must be speculative.

* "Production of Minerals from the Dead Sea." (Crown Agents for the Colonies, 4, Millbank, S.W.1. £1 1s.)

BRITISH OVERSEAS SHIPPERS.

British Overseas Shippers, Ltd., has been registered as a private company with a nominal capital of £30,000 in £1 shares to trade especially with British East Africa. The first directors are: Sir Harold Bowden, Bt. (director Raleigh Cycle Co.); J. L. Dickinson Worthing (managing director); J. F. Thomasson, merchant banker; H. B. Alder (managing-director, Fenner and Alder); J. D. Barnsdale (director, Raleigh Cycle Co.); F. C. Bush (director of same company). The registered office is at 4, Lloyd's Avenue, E.C.3.

The Egyptian State Railways have accepted the tenders of J. Cookson, Ltd., for 150 tons of coloured cotton waste, and of Silvertown Lubricants, Ltd., London, for 700 tons of engine oil.

An estimate of the Sudan cotton crop of the ensuing season puts it at about 100,000 bales.

ENGINEERING TOPICS.

The Railway Centenary.

The Railway Centenary falls at anything but a fortunate period in the history of this country's railways, for it finds them faced with the need for drastic economies as a result of the adverse trade situation. But the existing conditions are happily transient, while the railways are a permanent factor in the world's economy. Since the world's first line was opened in Great Britain, and especially since 1914, the advance in other methods of communication has been surprisingly rapid, but the need for railways remains as great as ever it was and it seems exceedingly doubtful whether any other medium will ever be found satisfactorily to take their place. Great Britain has had the distinction of leading the world in railway construction, and it may be hoped that one result of the celebrations will be to draw attention to the fact that the British engineering industry is second to none in its capacity for supplying everything that is necessary for the construction of railways and rolling stock. Present conditions militate against the expansion of railways abroad, but a good deal of construction is going on in the Near East and elsewhere, and it may be hoped that in the carrying out of future programmes British enterprise will play its full part.

A Centenary Medal.

An interesting point in connection with the railway Centenary Celebrations is the striking of a very beautiful bronze commemorative medal. This medal, which has been designed and modelled by Mr. Gilbert Bayes, F.R.S.B.S., shows on the obverse, portraits of Edward Pease, chairman of the first public railway, and of George Stephenson, who built the first engine on the railway and drove it on its historic journey on September 27, 1825. There are also shown the coats-of-arms of Stockton and Darlington, the two towns between which the world's first passenger train ran. On the reverse are shown a figure of Vulcan holding in his hand "Locomotion No. 1," the first engine to be employed on a public railway, with, in the background one of the L. and N. E. Railway Company's famous 1925 type "Pacific" express locomotives.

Low Temperature Distillation Plant.

International Combustion Ltd., announce that information has just been received to the effect that its associated company, International Combustion Engineering Corporation, of New York, U.S.A., has secured the contract for installing a large low temperature distillation plant for the Milwaukee Electric Light and Power Company.

The plant is to the designs and specification of Dr. Runge, consulting engineer to the International Combustion Engineering Corporation, who has been experimenting for many years with this important subject and has now developed and perfected a plant upon which very important guarantees have been given.

In view of the widespread interest in this important subject, Mr. G. E. Learnard, accompanied by Dr. Runge and Mr. G. G. Hunter, arrived in England on the 19th inst., with the object of conferring with numerous interested parties, and to place the latest information before the British organisation for the benefit of its many clients.

COMMERCIAL CORRESPONDENCE.

"THE COMMERCIAL POSSIBILITIES OF AZERBAIJAN."

To the Editor of The Near East and India.

Sir,—In The Near East of June 11 I find a letter to the Editor by Mr. E. Luboff, who refers to my article, "The Commercial Possibilities of Azerbaijan," published in The Near East on June 4, and asks how, in my opinion, the commercial possibilities of Azerbaijan could become a reality under the existing conditions of the economic system of the Soviets.

My opinion is that whoever reads the daily papers must know that unless the present Soviet system is entirely abandoned there can be no question about any commercial possibilities either in Azerbaijan or Russia, and I therefore omitted to refer to this in my article.—I am, etc.,

The Author.

THE PORT OF SALONIKA.

To the Editor of The Near East and India.

Sir,—Owing to the rupture of the Græco-Yugoslav negotiations the port of Salonika has become the centre of considerable interest in British commercial and political circles. This being so, I have no doubt that the following brief exposition of the case will be of interest to your readers.

Before the War, when the Customs dispute between Austria and Serbia was in full swing, the Serbs first turned their attention to Salonika. In those days 70 per cent. of the trade of the port was Serbian. Owing to the War, during the years immediately following the Armistice, the volume decreased, but it has since been gaining again very considerably, and at present the Yugoslav trade passing through Salonika is considerably greater than that of Greece. Southern Serbia is the natural hinterland of Salonika, and a great volume of export trade passes down the Vardar Valley, through Salonika to Egypt and the East as well as to the Levant and Western Europe. The granting to Yugoslavia of her demands would materially increase the volume of British shipping trade in those parts.

The above is an important aspect of the question which appears to have been overlooked in the various articles and correspondence I have read on the subject up to the present.—I am, etc.,

T. Mahoney-Shealawler.

7, Stanhope Terrace, N.W.1. June 27.

ROUMANIAN LETTER.

(From Our Own Correspondent.)

Bucharest, June 18.

The New Cereal Regime.

After the unfortunate experiments of last year, when two totally opposed policies were tried, i.e., freedom of export without any restriction except a large export tax, and export prohibition, the question of the right policy to be adopted is naturally the subject of much uncertainty.

During the year just past it was with the greatest difficulty that the necessary supply of wheat was secured by measures which included the importation of wheat from America and then requisition pure and simple. For the coming year it is hoped that a suitable solution has been found by adopting the quota method, which has been applied on former occasions with varying results.

Freedom of export will be established after the necessary quota has been set aside for home consumption and for reserves. The quantity of wheat necessary for each town will first be determined and then purchased by means of a fund of 200 millions appropriated for this purpose by the National Bank. This system seems to have gained the approval of the producers and the consumers. It is hoped by these measures to encourage agriculturists to intensify their production, which has been poor since the War.

Though the reports received from the provinces of the state of the crops are much less favourable, a fair harvest is expected which will ensure a sufficiency for home consumption and a small surplus for export.

Petroleum Production.

The production on the various fields is rapidly developing in a very satisfactory manner. It has already appreciably exceeded the pre-War figure, owing especially to the large production obtained in the beginning of the year.

During the first three months of 1925, the petroleum production reached 528,274 tons as against 392,452 tons during the same period in 1924. This increase of 135,000 tons is equivalent to 35 per cent. The monthly average has been 175,000 tons as against 137,000 tons last year.

New regions upon which wells have been sunk have justified the hopes reposed in them, and the Roumanian petroleum industry seems now on a fair way to prosperity at least so far as production is concerned.

A Transport Convention.

After many meetings held recently at Belgrade, between Roumanian, Yugoslav, and Polish delegates, an agreement has been arrived at with regard to communications and transit.

Besides an arrangement concerning the direct goods tariffs between Roumania and Yugoslavia, an agreement has been come to between these two States for the opening of three new lines on July 15, which have considerable importance for the traffic of Transylvania. Nothing definite was arranged regarding the question of the construction of a new bridge over the Danube.

Motor Touring Competition.

During the first week of this month the fourth motor touring competition in Roumania took place. This race, in which amateur motorists took part, was arranged to show the suppleness, consumption, speed and reliability of the different machines. The Crown Prince took part as in former years. The course covered a distance of about 2,100 km. starting from Bucharest and going through Chisinau, Sovata, Reshitza and back to Bucharest in seven stages. The machines which showed the greatest efficiency were the American Buick and Chrysler, which are well suited to the requirements of Roumanian roads.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended June 27 states:—

During the past week the market all round may be said to have been under the influence of the continued political troubles in China and the general trade gloom. The Board of Trade returns regarding textile exports have not helped to dispel the feeling of depression, and at the moment the only encouraging feature is the favourable news regarding the progress of the monsoon in India, and the hopes of an increased demand from that quarter a little later on.

Yarn.—Conditions in the yarn market continue to be discouraging. The general feeling can best be indicated by mentioning that suggestions for a short period of all-round closing down of the mills are being made with a view to effecting a clearance of the accumulating stocks. Such business as is actually transacted is said to be usually on the basis of concessions on the part of the seller, and, even so, the quantities changing hands are almost retail in character. At the moment no single overseas market can be signalised as tending to relieve the depression.

Cloth.—The continuance of the disturbed conditions in China are seriously effecting the market generally, as buyers for other centres are quick to take advantage of the unsatisfactory situation in order to obtain reduced quotations for such business as they have to place. Hesitation on the part of buyers themselves is not so much due to expectation of cheaper cotton as to the known difficulties of spinners and manufacturers and the possibility of their having to accept lower prices in order to keep spindles and looms working. Cases are even reported of weaving sheds actually closing down in some districts next week. A little inquiry from India based on the encouraging monsoon news is virtually the only overseas feature worth recording. Buying for the Home Trade is more active, but only to a very moderate extent.

Raw Cotton.—Minor fluctuations have occurred from day to day during the past week, but on balance there is little change. Imports have remained comparatively small, whilst on the other hand "spot" sales have perhaps slightly more than balanced them, thus effecting a small reduction in local stocks. The next official Bureau report regarding the American crop is due on Thursday next, and opinions are divided concerning the probable estimate of the crop condition, which is, however, expected to show little change. Shipments of American cotton to Great Britain this season have been 2,507,000 bales as compared with 1,640,000 bales at the same period last year. Closing quotations yesterday were as follows:—American middling, 13.53; Egyptian Fully Good Fair, 32.05.

INQUIRIES ON OVERSEAS COMMERCIAL MATTERS.

The Department of Overseas Trade desires to remind United Kingdom exporters requiring information on overseas commercial matters that it is desirable to approach the Department rather than to write directly to the Department's representative posted in the market concerned. It is frequently the case that the information desired is already available in the Department, and direct application to the Department thus results in the saving of much time. Where the information is not so available, the Department takes immediate steps to secure it and to forward it to the inquirer.

It is particularly emphasised that the method adopted by some inquirers of addressing the same inquiry simultaneously to the Department and its overseas officers leads to unnecessary duplication of work and to delay. Inquirers will therefore find it to their advantage to proceed in the manner suggested above.

Company Meetings.

KASSALA COTTON COMPANY.

Extension of Irrigation Works.

The second ordinary general meeting of the Kassala Cotton Company, Limited, was held on June 25 at Winchester House, Old Broad Street, E.C. The Hon. Arthur M. Asquith (the Chairman of the company) presided.

The Secretary having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—Turning to the balance-sheet, on the liabilities side you will observe little change since last year. During the year we called up a further 4s. on our preference shares.

On the assets side, the total expenditure in the Sudan on development, canalisation, etc., has risen from about £16,563 at the end of 1923, to £118,736 at the end of 1924.

As explained in the report, we have thought it right to include in this figure the amount of debenture interest paid and accrued, less interest earned, for this period of construction during which, in the nature of things, there could be no revenue.

Turning to the profit and loss account, you will see that, after making the adjustments which I have mentioned about debenture interest, and after charging preliminary expenses, we carry forward a loss of £15,499 1s. It is satisfactory to have left behind us the period during which, of necessity, there were no incomings from crops to set against our outgoings.

Turning to the report, I gave you last year a general idea of the terms of our concession, of the problems of irrigation engineering which we have undertaken, and of various other aspects of our task. I described the difficulties with which our local staff had to deal in digging the new Magauda canal, in transporting 500 Egyptian labourers, and all cement, tools, etc., by camel, for more than 200 miles from the railway, and in maintaining an adequate supply of drinking water for this labour force by camel transport from somewhat distant wells. Some particulars of this canal are given in the report.

I said last year that the greatest credit would be due to our local management if, in addition to the extension and improvement of existing irrigation works, they succeeded in completing this large new canal.

Well, gentlemen, I am glad to be able to tell you that all these difficulties were overcome, and that this canal was completed before the flood arrived. It was therefore very disappointing that only about 1,500 acres received sufficient water from it, instead of the larger area which we had anticipated.

There were two causes for this. One was the fact that, instead of the usual flushes three metres deep, at Magauda, which would have given sufficient depth in our canal for all our pipe regulators to discharge sufficient water on to the land, the Gash gave us a low and steady flow, never exceeding a depth of 1½ metres.

The other cause was that in the section of the canal which I have mentioned, the substratum of soil, which had been like iron to the pick, dissolved under the influence of the water, and the depth of the bed of the canal was somewhat diminished by the addition of the liquid clay from the subsidence of the banks.

In an endeavour to provide against a recurrence of this mishap this season, we have since protected the banks with stonepitching for a length of about 2½ kilometres west of its head-regulator, and we have modified the design of the canal so that it should operate with a one metre flow.

Whilst on the subject of development work, I will mention that during the current season we have constructed a further canal known as the Metateib Canal—about 20 kilometres north of the Magauda Canal and 10 kilometres south of the Hadaliya Canal. I must try, as soon as our staff are less busily engaged on actual development work, to give you, with the report, some sort of map, to give you an idea of the lie of the land.

Now, regarding the current season's crop, nearly 19,000 acres were sown, but between three and four thousand, for various reasons, but chiefly owing to their having received too little water, failed to carry a full crop to maturity. Picking is now at an end, and the total crop is estimated to be about 27,500 kantars.

We hope to make a good step forward during the coming season in extending our acreage under crop. How far we shall succeed in this depends largely, of course, upon that rather uncertain factor—the nature of the Gash flood, and partly upon climatic conditions, but, granted a good flood, we shall be very much disappointed if we do not succeed in largely increasing our crop.

We have heard this week from our manager, Mr. Gray, that all canals will be ready to-day (June 25) against the arrival of the flood, and that applications for tenancies have reached him more than sufficient for any area which we can reasonably expect to irrigate with the coming flood. I think the fact that tenants are forthcoming in such numbers is a sign that our administration there and our scheme generally meet with the support of the inhabitants.

The completion of the railway, of course, helps us at every turn in dealing with our problems, and perhaps I may be allowed to offer this company's most sincere congratulations to the staff of the Sudan Government Railways Department, so long and so efficiently presided over by Captain Midwinter, for the rapidity with which this line was constructed.

Now regarding the abstraction of water in Eritrea. We have tried in the report to give you all the significant facts. You will observe that, according to figures given by the Italian Government of Eritrea to the Sudan Government, 800 million cubic metres of water passed Tesenei in Eritrea last season—whilst according to gauge readings at Kassala, some 25 miles downstream, only 456 million cubic metres of water arrived there. On the data available at present, we believe that this loss of water between these two points, only 25 miles apart, is due practically entirely to the sponge-like action of the river channel; that this intervening sponge of sand requires a certain quantity of water to fill it, and that consequently any water abstracted at Tesenei and so failing to enter the sponge will have to be made good by a similar amount of the water which is allowed to pass Tesenei. Thus, in our opinion, any water abstracted in Eritrea will be a net loss to Kassala, and, to an extent which it is difficult to estimate accurately, it will reduce the area eventually capable of irrigation in the Delta.

Estimates in this connexion are difficult. I told you last year, we do not know yet exactly what dose of water the land requires, one aspect of the question being that the water requirements of new land are probably higher than those of land irrigated in the preceding season.

The agreement with the Government of Eritrea was, of course, arrived at by the Government of the Sudan on technical advice and on its own responsibility. We appreciate the fact that the Sudan Government endeavoured—by giving to Eritrea a percentage of its profits—to set limits to the amount of water to be taken in Eritrea, and that Eritrea has agreed to restrict itself to a single scheme, and we welcome the fact that Eritrea has now an interest in the success of the crops to be grown under our supervision in the Gash Delta.

To sum up, all that one can say at the moment is that we believe that practically the whole of any water that Eritrea abstracts will be a net loss to us; that no such abstraction entered into the calculations of either negotiating party in framing the terms of our Concession Agreement, and that while the Sudan Government does not admit any legal liability to us in this connexion, and we still hope that abstraction of water on any considerable scale may not take place, if and when any serious abstraction does take place to our detriment, we shall expect to receive due consideration from the Sudan Government, upon whose fairness from past experience we believe we can rely.

Finally, gentlemen, I told you last year that I thought we were exceptionally fortunate in our staff. My visit, at the end of last year, confirmed me in this opinion. I was deeply impressed by the wonderful progress which had been made under the direction of our managing director, Mr. Alexander MacIntyre, and of his deputy, Mr. Poyntz-Wright; by our local manager, Mr. Gray; Mr. Fleming, his assistant; our chief engineer, Mr. Telford; and the other officers and engineers of our local staff, in this trying climate, and over this extensive area. Good brick bungalows have now been erected for their use, assistants have been sent out to reinforce them, and the railway has arrived; so that I hope conditions may now be somewhat easier. The directors have voted a bonus of £1,000 to Mr. Gray and his assistants, who have borne the burden and the heat of the pioneer work, and I feel confident that our action in this matter has your hearty approval.

Mr. F. Eckstein, in seconding the resolution, said:—I wish first of all to associate myself fully with the tribute paid by the chairman to our staff in Kassala. Towards the end of January I revisited all our areas in that district, and I was perfectly amazed to see the work which had been done since my visit just 12 months before. From the managing director downwards, they have all performed wonders, and have used their energy and their brains to make our undertaking a success. They thoroughly deserve a bonus, and, although we cannot show a profit in our books this year, I am quite sure

you will approve what we have done in this respect and that we should show our gratitude and appreciation.

At the time of my visit our cotton was in full growth, and it looked extremely well; and what was still more pleasing to me was the fact that it was entirely free from pests of any kind. I made there and then a rough calculation as to the probable financial result of our crop, and I have come to the conclusion that in this our first year we shall make all our expenses, we shall make our debenture interest, and have a bit in hand. We have not yet brought in all the cotton from the field to our depots, and consequently we have not ginned and disposed of the whole of our crop, but we have sold about half of it, at very satisfactory prices, and I feel quite sure that if present prices hold my forecast will prove correct. Considering that we are essentially an agricultural undertaking, the results are highly satisfactory, both to your board and, I think, to you.

As regards the difficulties which have arisen with reference to the water of the Gash, both the directors' report and the chairman in his speech have dealt so frankly and so fully with the subject that I need add nothing; but I have every confidence in a bright future for our company.

The Chairman having replied to questions, the resolution was put and carried unanimously.

DOOLOOGRAM TEA COMPANY.

A Satisfactory Year.

Increased Expenditure.

The fifteenth ordinary general meeting of the shareholders of the Dooloogram Tea Company, Ltd., was held at the offices of the company, 50-51, Lime Street, E.C., on June 24, Sir Frederic G. Painter (the chairman) presiding.

Mr. A. M. Halls, the representative of the Secretaries (Messrs. McLeod, Russel and Co.), having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—As the report and accounts have been in your hands for some time, with your permission, I will, as usual, take them as read. It gives me great pleasure to come before you again with quite a satisfactory record of the working of this company for the past season. The result is not up to that of the previous season, and I will explain very shortly why this is so.

Increasing Cost of Labour Force.

You will notice a considerable increase both in the revenue and in the expenditure. The former does not, however, balance with the latter, which is accounted for by several causes, some beyond the control of your directors, principally the rise in exchange. This increased the expenditure by no less a sum than £1,700. Several items of machinery had to be replaced. It has been found necessary to enter on a programme of manuring. This is an expensive item, but will amply repay in due course the expenditure. Buildings have undergone an extensive course of repair.

In addition there is the yearly increasing cost of our labour force. The latter, though burdensome, is one that neither you nor we would wish to avoid, as so much depends on the comfort and contentment of our employees on the gardens. There is no great augmentation in our coolie force; it remains much about the same. We could do with a larger settled force, and thus avoid the expensive employment of village labour. Strong efforts are being made to this end. The question of recruiting, more especially after a good monsoon, is one of great difficulty, and in the meantime no opportunity will be lost.

The Crop.

The outturn was somewhat ahead of the previous year, and realised quite a good average on the London market. The quality was satisfactory, and though some of our gardens do not manufacture teas of high quality, owing to situation, they have the redeeming feature of being carefully manufactured. Our managers have been strictly warned that serious notice will be taken of any falling away in the quality of their manufacture. Estimates have been based accordingly, and up to the present the outturn is about the same level as last year.

I need not say more, as the report and accounts speak for themselves with no unfavourable voice, but if any shareholder wishes for further information I shall be glad to reply to any question to the best of my ability.

I will now move "That the published report and accounts as issued to the shareholders be and are hereby received and adopted; that a final ordinary dividend of 15 per cent., less tax, making 30 per cent., less tax, for the year, be paid forthwith; and that the balance remaining at credit of profit and loss account be disposed of according to the proposals as set forth in the report."

Major Norman McLeod seconded the motion, which was unanimously adopted.

The Chairman next proposed the re-election of Major Norman McLeod as a director of the company.

The motion was seconded by Mr. J. E. Humphrey and unanimously agreed to.

The auditors (Messrs. Tribe, Clarke, Painter Darton and Co.) were re-appointed, and a vote of thanks to the Chairman and directors and the staff in India concluded the proceedings.

COMPANY NOTES AND REPORTS.

BANK OF BRITISH WEST AFRICA.

The report of the Bank of British West Africa, Ltd., for the year ended March 31 last states that, after providing for current charges (including the contribution of the staff profit-sharing fund), rebate on bills, and for all bad and doubtful debts, there remains £112,352, which, with £35,680 brought forward, makes £148,032. The directors recommend a final dividend of 3 per cent., making a distrubution for the year of 5 per cent., less tax. They also recommend a transfer of £25,000 to contingency fund and £25,000 to writing down premises and furniture, leaving £38,032 to be carried forward. The investments held stand in the balance sheet at less than their market value as at March 31, 1925. In view of the close association which exists between the bank and Lloyds Bank Ltd., the branches at Alexandria and Cairo have been closed, and the business conducted there has been amalgamated with that of Lloyds Bank Ltd., in Egypt, as from June 1, 1925. Two of the directors have joined the Egyptian Committee of Lloyds Bank Ltd.

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

41 LOTHBURY, LONDON, E.C.2

G.I.P. RAILWAY.

The report of the Great Indian Peninsula Railway for the year ended March 31, 1925, states that the gross earnings (including State lines) were Rs.15,69,27,914, against Rs.14,84,41,758 in 1924; and expenditure Rs.9,41,58,067, against Rs.9,94,58,187. The net revenue was thus Rs.6,27,69,847, against Rs.4,89,83,571. There was an increase of Rs.84,86,156, or 5.72 per cent., in the gross earnings and a decrease of Rs. 53,00,120, or 5.33 per cent., in expenditure, the result being an increase in the net earnings amounting to Rs.1,37,86,276, or 28.14 per cent. The revenue for year (excluding State lines) was Rs.5,80,69,038, against Rs.4,53,52,603, and the total interest charges, Rs.3,69,81,269, against Rs.3,64,34,703, leaving a surplus of Rs.2,10,87,769, as compared with Rs.89,17,900. The company's proportion of surplus profits is Rs.10,54,388, but of this amount the Government withheld Rs.1,50,000, pending the result of certain inquiries. The amount available is therefore Rs.9,04,388, which, after deductions of Indian income-tax and super-tax, leaves Rs.7,66,203, which has been remitted to England at the exchange of 1s. 5 31-32d., producing £57,365, which, with £12,245, the balance at March 31, 1925, makes £69,610. Out of this the directors propose a dividend of £2 per cent., amounting to £51,500, in addition to the £1 10s. per cent. for the half-year guaranteed by the Secretary of State for India. Resolutions are to be moved by stockholders and by the directors with reference to the general business of the company, and the settling up of its affairs on the termination of the working contract with the Secretary of State on June 30. It is proposed that the chairman, managing director, and directors be awarded out of surplus profits account as compensation for loss of office a sum not exceeding £2,750, to be distributed as they may decide, and that the present directors be empowered to grant out of the surplus profits account sums by way of compensation for loss of employment to all or any of the members of the staff not exceeding £7,500. Further, it is proposed to distribute out of the surplus of the past year by way of final dividend among the holders of the 3 per cent. stock registered in the books of the company on June 17, 1925, a dividend to the highest available 1d. per cent. and the remainder transferred to the Great Indian Peninsula Railway Annuity Trustees.

CYPRUS ASBESTOS.

The report of the Cyprus Asbestos Company for 1924 states that the aerial railway from the mines to Limassol is in operation. A large warehouse and pier at Limassol have been completed, and the company is in an unequalled position regarding transport facilities. The construction of the new mills is making excellent progress. The buildings for the new mills and central power station have been completed; the whole of the plant has been shipped from England; practically the whole has already arrived in Cyprus. The erection of the machinery is making good progress, and it is expected that the new installations will be completed by August 6 next. The sales of fibre are very satisfactory. The fibre is being shipped as fast as it is manufactured and stocks are practically nil. Orders on company's books amount to about £100,000, and no difficulty is anticipated in selling the contemplated output of 20,000 tons of fibre when the second series of mills has been completed. The fibre in the mines may be regarded for all practical purposes as inexhaustible, and technical difficulties having now been finally overcome, it would seem to be only a question of the erection of the necessary installations to put the company in an unrivalled position in the asbestos industry. On April 27 last authorised capital was increased to £600,000 by creation of 292,500 preferred shares of £1 each and 150,000 deferred shares of 1s. each, ranking pari passu with existing shares. It is proposed shortly to issue a portion of the new capital, and shareholders will be given an opportunity of subscribing.

TEA RESULTS.

The report of the Jokai (Assam) Tea Company for the year 1924, states that the outturn was 9,087,037 lb., an increase of 848,628 lb. The area of mature plant plucked was 11,362 acres, showing an average yield of 800 lb. per acre, as against 727 lb. in the previous year. The crop profit is £252,710, and the total profit, with interest, etc., received, less sundry subscriptions, £11,118, is £263,828. It is proposed to transfer to income-tax liability account £20,000, leaving £243,828; adding £52,037 brought forward, the total is £295,865. The board recommends a final dividend of 30 per cent., less tax, on the ordinary shares, making 45 per cent. for the year; the transfer to the reserve fund of £36,758; to renewals and replacements fund £25,000, and staff provident fund £2,500, leaving to carry forward £52,155.

The Scottish Tea and Rubber Trust announces a final dividend of 9½ per cent., less tax, making 12½ per cent.

The profit of the Tingri Tea Company for 1924 was £43,391, subject to corporation tax. The balance available is £46,444, less transfer to reserve of £10,000. A final dividend of 15 per cent., less tax, is proposed, making 30 per cent., carrying forward £6,210.

The profit of the Bargang Tea Company for 1924 was £16,760, subject to corporation tax. A final dividend is proposed of 15 per cent., less tax, which makes 25 per cent, leaving to be carried forward, subject to corporation tax, £1,331.

The report of the Jorehaut Tea Company for 1924 states that the

Safety First!

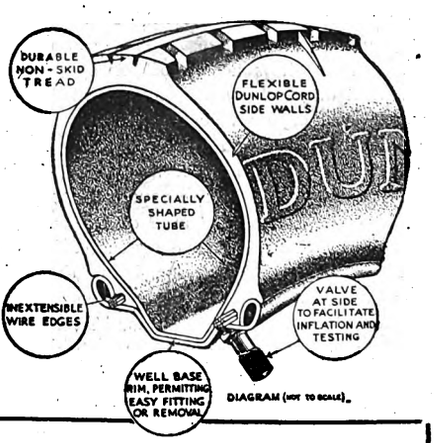
One of the big virtues of the

DUNLOP

CORD BALLOON TYRE

(Wired or straight side type)

is that it is absolutely *safe*. In principle, it is a *Straight Side Tyre*, and cannot accidentally leave the rim—even when the inflation pressure falls. It is independent of air pressure for its hold upon the rim and is the *safest* Balloon tyre in the world—just as pre-eminent as the normal pressure Dunlop Cord.



DURABLE NON-SKID TREAD
FLEXIBLE DUNLOP CORD SIDE WALLS
SPECIALLY SHAPED TUBE
INEXTENSIBLE WIRE EDGES
VALVE AT SIDE TO FACILITATE INFLATION AND TESTING
WELL BASE RIM, PERMITTING EASY FITTING OR REMOVAL
DIAGRAM (NOT TO SCALE).

There are Dunlop factories all over the World, and chassis makers anywhere will fit Dunlop Balloon Tyres (Wired or Straight Side type) and well-base rims as original equipment.

DUNLOP—THE STANDARD *by which* ALL TYRES *are* JUDGED

Digitized by Google

crop of tea produced amounted to 6,231,576 lb., an increase of 284,167 lb. over 1923. The gross profit is £227,573. Deducting commissions £25,064, directors' extra fees, £8,448, and £1,250 written off estates, leaves a net profit of £192,811. The sum of £9,833 was brought forward, after adjustment of 1923 crop account and payment of corporation profits tax, so that the balance available, subject to corporation profits tax, is £202,644. The reserve fund of £125,000 has been increased to £130,000 by placing to it the par value of 5,000 bonus shares of £1 each received from Butler's Wharf, Ltd., and the directors have decided to allocate out of the profits on the year a sum of £20,000, bringing the reserve fund up to £150,000. The directors recommend a final dividend of 30 per cent., less tax, making for the year 50 per cent., less tax, leaving £11,894 to be carried forward.

The outturn of the Empire of India and Ceylon Tea Company for 1924 was 3,449,841 lb., compared with 5,167,315 lb. in 1923. The net profit was £161,031, plus £12,670 brought forward and £4,342 additional proceeds on account of 1923. The directors recommend a balance dividend of 25 per cent., transferring £1,000 to provident fund, carrying forward £26,269, subject to corporation tax and Indian income-tax.

NATIONAL BANK OF EGYPT.

Position at April 30, 1925, published in conformity with Article 8 of the Statutes. Banking Department. Liabilities: Share capital (300,000 fully paid shares of £10 each) £E2,925,000, reserve fund: statutory reserve £E1,462,500, special reserve £E901,875, current, deposit, and other accounts £E14,347,288, Egyptian Government £E19,249,982, Sudan Government £E432,873, Mixed Tribunals £E1,655,351, bankers accounts £E463,877, cheques and bills payable £E258,474, sundry other accounts £E562,428—£E42,259,648. CHESS.

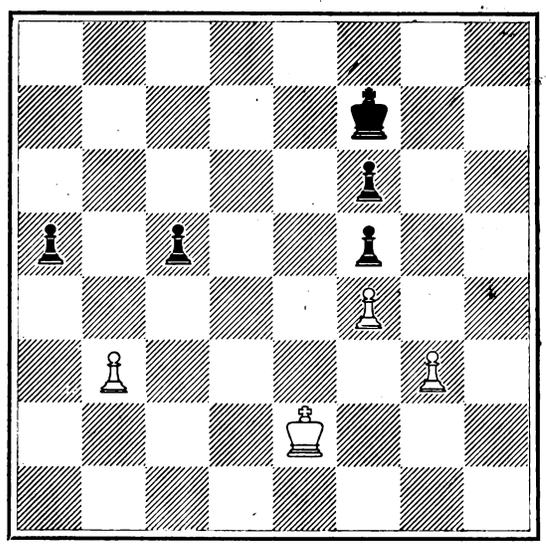
By "CARO-KANN."



White to play—What result?

The termination of the position I gave last week was as follows:—1, R—B3, K—K2; 2, R—K3, B—Q2; 3, RxB, PxR; 4, RxP, resigns. If 1 . . . BxR; 2, RxR, QxR; 3, QxP (ch), BxQ; 4, BxB mate. If 1 . . . BxP (ch); 2, KxB; RxR; 3, R—KR3 and wins.

In my previous notes I merely touched briefly on the main aspects of the Caro-Kann Defence, and I now propose to deal with it in fuller detail. I shall not repeat the initial moves of 1, P—K4, P—QB3; 2, P—Q4, P—Q4 in each variation, but will leave them to be understood.

Taking the exchange variation first, 3, PxP, PxP, as I have already pointed out White, in my opinion, should continue with 4, P—QB4. Black should reply with Kt—KB3 and if 5, Kt—QB3, Kt—B3; 6 PxP, KtxP; 7, Kt—B3, B—Kt 5; 8, B—QKt5 with an excellent game. A very different type of opening is forthcoming if White at the fourth move plays P—QB3. The reply is Kt—KB3, after which might follow 5, B—Q3, B—Kt5; 6, Kt—B3 (best; if P—B3, B—R4, and if Q—Kt3, Q—B2) Q—B2 followed by Kt—B3 and the Black position is to be preferred.

3, P—K5 is not to be recommended. Black plays B—B4, and there would probably follow 4, B—Q3, BxB; 5, QxB, P—K3; 6, Kt—B3, P—QB4; 7, P—QB3 (best) and again Black has rather the better of it, the White centre being very liable to attack.

There remain the positions arising from 3, Kt—QB3. Black is compelled to play PxP, and there follows 4, KtxP, Kt—KB3. If 5, Kt—Kt3, P—K4 and Black has the better of it. If 5, KtxKt (1) KtPxKt; 6, B—QB4, B—B4; 7, Kt—B3, P—K3; 8, B—B4, B—Q3 and there is little in it. If (2) KPxP; 6, B—QB4, and if B—Q3 a possible combination is 7, Q—K2 (ch), Q—K2; 8, QxQ, KxQ; and again there is not much to choose.

In addition to the grants made after reference to the Hebdomadal Council, Magdalen College has also voted sums to the British schools at Athens, Rome, and Jerusalem, to chemical research and Oriental research, and to exploration in Asia Minor.

Mr. A. J. K. Clark Kerr, Counsellor to the Residency in Cairo, has been appointed Counsellor in Tokyo. Mr. Clark Kerr was appointed to Cairo in 1922, having held appointments, among other places, at Teheran and Tangier.

The late Greek Government signed a contract with an Anglo-American group, represented by Mr. Franklin Remington, of the Foundation Co. of New York (says a Reuter message). The contract provides for the reclamation of lakes and swamps in the Salonika plain and the regulation and control of the Vardar river. It is estimated that the proposed works will render 280 square miles of rich agricultural land fit for cultivation, and will also benefit by protection from floods some 800 square miles. The contract amounts to over 26,000,000 dollars, and the financial arrangements have been made through London and New York bankers.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The New Greek Government.

It is all to the good that General Pangalos has secured without difficulty a vote of confidence in the Greek Chamber; for the last thing that Greece wants to-day is any hiatus in the peaceful administration of the country, with the menace of civil war lurking in the background. As things are, M. Michalokopoulos has done well to bow to the *force majeure* that General Pangalos brought to bear on the political situation, and he will be the first to realise that acceptance of the new order in existing circumstances does not necessarily imply a vote of censure on the painstaking efforts of the late Government to set Greece's house in order. At the same time it is acknowledged on all sides that General Pangalos in office is shaping better than his threatening attitude when in opposition promised. The change of Government has been effected with much less bitterness than might have been expected. An experienced and tactful diplomatist, M. Rendis, has been appointed Minister for Foreign Affairs, and General Pangalos's programme contains nothing to cause alarm. The Constitution is to be revised, the Constituent Assembly will come to an end, and during the parliamentary recess the Cabinet requires authority to issue decrees on certain subjects, if occasion requires. M. Rendis has subsequently repudiated any imperialistic views for the new Government, as well as any desire to embark upon "adventures." There are to be no excessive military preparations. Twelve Greek generals have at once been placed on the retired list, four of them members of the National Assembly. Whether an attempt is made to create political feeling out of this step will depend largely on the control that the Prime Minister is able to keep on the general situation. He has struck the right note in advocating a reconciliation between the parties, for the Greek people is manifestly wearied of political strife.

Palestine Under the Mandate.

British policy in Palestine has been criticised on the political side; but it would not be an unfair summary of the results obtained during the last five years in the economic sphere to say that there are to-day two blades of grass growing where only one, sometimes none, grew before the War. Sir Herbert Samuel, the out-going High Commissioner, is, therefore, entitled to the optimism of his farewell message to the people of Palestine. The country, he holds, shows every sign of growing prosperity. Agriculture, industry, and commerce are developing. The population is rapidly increasing. There is an accumulated balance of revenue over expenditure of over £600,000. It has been possible to reduce the taxation that lay heavily upon the cultivator. The railway and postal services are sufficient and are remunerative to the State. More than six hundred miles of new roads have been built, public security has been completely maintained, and progress has been made in elimination of malaria and other diseases that affected the population. Nearly two hundred new village schools have been opened, and antiquities of the country of the deepest interest to the world at large have been safeguarded. The Government has taken every opportunity to promote a greater spirit of harmony between the many religious communities comprised within this varied population, which efforts have had results. Sir Herbert Samuel admits that very much remains to be done, but claims that the work of these five years has not been unfruitful. The picture that he draws, it will be readily admitted by those who can dissociate themselves from political controversy, is worthy of British administration. The fact that here and there holes can be picked and flaws found does not materially detract from the merit of the achievement. The task before the new High Commissioner will be to increase the harmony between the different sections of

Digitized by Google

the community until it achieves a practical result in co-operation.

Turkey and the Kurds.

Sheikh Said, the leader of the recent revolt among the Kurds in Asia Minor, has paid the penalty for his unsuccessful rising. Together with a number of his compatriots he was sentenced to death by a military court, and the executions followed shortly afterwards. The Turkish Press has remained faithful to the anti-British lead officially given to it at the outbreak of the revolt, and records as among the last words uttered by the Sheikh his answer to a question put to him by the Turkish Commander as to who was the greatest enemy of Turkey. The reply, needless to say, was "The British," but the Turkish Press does not state whether this "disclosure" is to be regarded as contradicting the allegation that the Sheikh had received encouragement from the British or as confirming it. As an execution-ground repentance it deserved the more dramatic *dénouement* that a commutation of the death sentence would have provided; but these apparently are heights of propaganda to which the Turkish authorities cannot yet soar. The importance given to the Sheikh's opinion suggests that the Dervish leader succeeded in convincing the court that tried him of the purely religious aspect of his rising, and his statement is intended to mark the solidarity of Turkish public opinion, whether loyal or rebellious, in its hostility to Great Britain. As Ahmed Ferid Bey, Turkish Ambassador to the Court of St. James's, presented his Letters of Credence to the King last Saturday, there is evidently "bad staff work" somewhere in the official circles in Angora.

Political Rapprochement in Yugoslavia.

After many vicissitudes, a working agreement between the Radicals in Yugoslavia under M. Pashitch and the Raditch Party, it is reported, is on the point of being consummated. During the period while M. Pashitch is under treatment for his illness, the leadership of the Radical Party is in the hands of M. Juritchitch, the Acting Prime Minister, M. Trifkovitch, President of the Skupshtina, and M. Zivkovitch, President of the Radical Club. One of the first acts of this Triumvirate was to enter into negotiations with M. Paul Raditch as a result of a Memorandum addressed by the latter to M. Pashitch. Joint sessions of the representatives of the two parties have been held, and the favourable tenour of the *communiqués* issued by the conference is regarded as foreshadowing an early settlement. The formation of a new Cabinet under M. Pashitch is expected, in which a number of seats will be given to members of the Raditch Party, who have agreed to accept the existing Constitution and certain Bills already submitted to Parliament. Various reforms in the Administration, however, will be introduced as a concession to Croatian opinion, and M. Stefan Raditch will be liberated and pardoned. An agreement of this nature is clearly in the interests of Yugoslavia; it should not only create in the country a feeling of greater stability, but should also inspire confidence abroad and facilitate the granting of much-needed loans.

Excavations at Athens.

From the United States comes the announcement that a concession for archæological excavation in the centre of Athens has been granted by the Greek Government to the American School of Classical Studies. More than forty American Universities and Colleges will participate in the work. The concession, which covers a large portion of the city lying immediately north and east of the Acropolis, is likely to entail the removal of some hundred thousand inhabitants for whom accommodation will have to be found elsewhere at the expense of the concessionaires. The potential value of this site for archæological research has long been known to the Greeks and to all interested in the subject. Frequently during the last generation, when in the course of rebuilding it has been necessary to carry the new foundations to a lower level, archæological discoveries have been made, such as a burial ground in Stadium Street, and a fine Praxitilean female head in what used to be called the Rue des Muses. But the cost of excavations on an organised scale has hitherto been regarded as prohibitive. The quarter of the city involved would seem to stretch from the Acropolis to Museum Station and Hermes Street; part of it is occupied by small houses and shops, and there are in it, apart from the site of the Agora, such familiar landmarks as the "Tower of the Winds," the Keramicos, and the Stoa of Hadrian.

THE NEAR AND MIDDLE EAST ASSOCIATION.

A meeting of the Near and Middle East Association on Egypt, was held at the Hyde Park Hotel on Friday evening last, Sir Denison Ross being in the chair. During an address on Egypt by Lord Edward Gleichen, exception was taken to some of the speaker's remarks by the representatives of the Egyptian Legation in London, who left the room by way of protest. (On the presentation next day of an apology by General Gleichen to the Egyptian Legation, the incident was closed.) Subsequently a paper on the question of the Jaghbub Oasis, written by Captain Dixon Johnson, was read (extracts from which will appear in another issue). Among those present were: Lord Hemington, Lord Headley, Prince Arasteh, Princess Kropotkine, General Sir George Macauley, Sir Gerald Stricland, M.P., The Countess Paoli de St. Georges, Sir Harry Lamb, Sir John Fraser, Sir Henry and Lady Penson, Lady Sprigge, Lady Downes, Madame Yovanovitch, Mr. E. Nelky, Major F. F. Rynd, Mrs. L. Cobham, Mr. and Mrs. E. N. Bennett, Mr. and Mrs. Leland Buxton, Mr. A. H. Hooker, Dr. Thomas Gann, Mr. and Mrs. Hugh Spender, Mr. and Mrs. James Conchie, Mr. and Mrs. Bruce Dick, Mr. St. John Philby, Rev. Gordon Ponsonby, Mrs. Charlotte Mansfield, Miss Durham, Captain Russell Sidebotham, Colonel and Mrs. St. John Cooke, Mr. Yusuf Ali, and Mrs. Charles Hancock.

THE PATRIARCH OF JERUSALEM.

Mgr. Damianos, Patriarch of Jerusalem, attended by the Archbishop of the Jordan, on July 1, visited St. John's Gate, the headquarters of the Grand Priory of the Order of the Hospital of St. John of Jerusalem in England. His Beatitude was received by Major-General Sir Percival Wilkinson, the Secretary-General, Colonel Cameron of Lundavra, the secretary, and other members of the Order, one of whom, Mr. H. C. Luke, who was at one time Assistant-Governor of Jerusalem, acted as interpreter. In visiting the adjoining Church of St. John, Clerkenwell, which was originally built by the Order, Mgr. Damianos was interested to learn that it had been first consecrated in 1147 by the Latin Patriarch of Jerusalem during the period when the Throne of the Orthodox Patriarchate of Jerusalem was, for political reasons, vacant.

The Bulgarian Sobranye concluded its sittings last Thursday. It will reassemble on September 1.

Recent arrivals in Peshawar from Afghanistan state that six Soviet aeroplanes, which are flying from Moscow to Pekin, were expected at Kabul from Tarmez, Bokhara, on June 20. The Ameer and his Court turned out to witness the arrival, but the aeroplanes did not appear and had not arrived when the informants left.

THURSDAY, JULY 9, 1925.

THE PROBLEM OF IRAQ.

Both in respect of responsibility incurred for, and her actual position in, Iraq and Palestine, Great Britain has been subjected to a considerable amount of promiscuous criticism. However convincingly the challenge may have been met, an impression is left that the acceptance of the Mandates was a mistake, if only because there is no immediate profit to be derived from them and any chance of ultimate gain is remote. Against this line of reasoning the moral argument carries little weight; but in view of the interest that the controversy arouses it is at least the duty of those who are opposed to the Mandates to give to official or to strictly impartial statements of conditions in the territories in question as much attention as they are prepared to devote to the prejudiced versions of partially informed and possibly disappointed critics. During the past week or so Iraq has been brought to public notice on two occasions by the publication of the Report on the Financial Mission appointed by the Secretary of State for the Colonies to inquire into the financial position and prospects of the Government of Iraq, and again in a speech delivered by Mr. L. S. Amery at the Annual Dinner of the Central Asian Society. The Secretary of State for the Colonies, it may be objected, was merely speaking to his brief; but there was one part in his interesting speech to which reference may here be made. He paid a well deserved tribute to the British officials who over a period of years have been responsible for the introduction of civil government and for the gradual establishment of order, law and progress in a country which for centuries had had a distant and dubious acquaintance with the first two and had been a complete stranger to the third. In the controversy over Great Britain's position in Iraq the sterling and unobtrusive work done by the British official is apt to be overlooked; he is identified with the British Government's policy, and the merits of his services as interpreter to the Middle East of all that Great Britain stands for in her relations with Eastern peoples are ignored. Mr. Amery paid to British achievement in Iraq the high compliment of comparing it with the British achievement in Egypt, and it is of interest to bear his tribute in mind when we come to read the critical analysis to which the position in Iraq to-day is subjected in the Report issued by Mr. E. Hilton Young, M.P., and Mr. R. V. Vernon.

The authors of the Report are not concerned with the wisdom of unwisdom of the Mandate, nor have they any motive in making the worse appear the better cause. Their own reputation stands or falls by the accuracy of their diagnosis of the actual position and by the soundness and practicability of their recommendations. It is merely in the course of their dispassionate review of existing conditions that the reader gleans here and there a point which throws light on the larger question, the moral aspect of Great Britain's responsiblity in Iraq. The authors would not subscribe to the contention put forward with such assurance by some critics in regard to Palestine, on the strength of Arab dissatisfaction with the Balfour Declaration, that the Arabs were better off under Turkey than they are under the British Mandate. "Comparing the best statistics available for the collection of Land Revenue in Turkish times (1910-11) and now (1922-24), we find that the reduction in its burdens may be considered as a very substantial offset to the apparent increases of Customs burdens. That the taxpayer gets better value for his money in security and public services is certain. Perhaps the greatest improvement from his point of view, next to security for life and property, is equality in the collection of taxation, in contrast with the Turkish method of compelling the law-abiding to make up for the deficiencies of the lawless. In general, the burden of taxation is undoubtedly less now than it was in Turkish times. Nor is it high on any absolute standard." Elsewhere we read: "The country has suffered from centuries of educational starvation, and it stands at a point in its career as a nation when the development of knowledge and understanding in its future citizens is almost the greatest need of the moment. We are glad to learn that there has already been substantial progress beyond the Turkish standard, that this is especially visible in the increased number of teachers and pupils, and that the necessity of training Iraqis for the work of teachers is realised and already to some extent met." Or again, in a country "where a number of fell diseases are endemic, where the perils of plague and cholera epidemics are imminent, and where typhus is a regular visitor . . . , where great pilgrimage centres constitute inevitable foci of infection," it is satisfactory to learn that in the opinion of these observers the Health Services of Iraq does bring home to the people the lesson that 'peace, order and good government' do contribute some tangible benefits, and the service "is probably unique in a Muslim country." Iraq, however, sees financial difficulties looming ahead. "It lacks much of the apparatus essential for a developed State. It started life without a financial balance. As an independent State it has to support an administration which is necessarily far more expensive than its former one, with all the institutions of self-government, and those higher standards in the discharge of State services which are inevitably required of a progressive Government. In these circumstances, the present scale of expenditure on social development and on the apparatus and organs of Government is not more in general than the country requires. It may be more than is possible, and indeed we recommend reductions in view of the financial circumstances; but it is not more than desirable."

With this caveat in defence of those who laid the foundations of the new Iraq and now find the country overtaken with a world-wide stagnation of trade, the Mission indicates how, in its opinion, Iraq should set about cutting its coat according to its cloth. The salaries of civil servants, police salaries and military pay account together for over forty-four per cent. of the total estimated expenditure. Clearly economies must be affected here, but the problem is too complicated to be dealt with from within; and the Report recommends the appointment of a committee, embodying preferably Egyptian experience and including some responsible member of the commercial community of Baghdad. Substantial reductions are urged in the departments of Agriculture, Irrigation and Public Works. It is not denied that the money which it is proposed to spend will serve useful purposes, with the promise of yielding good returns on the outlay, but the overriding consideration that has to be faced is that funds cannot be spared from revenue for the investment, nor in the present state of the country's credit can the funds be borrowed. In the matter of Irrigation works it is pointed out that postponement will enable in some instances essential hydraulic and soil surveys to be made, the absence of which in the past have militated against the success of certain works undertaken prematurely. Finally, the Report provides evidence that the British Government has not been unmindful of the British taxpayer in its dealings with Iraq. The authors do not hesitate to urge the cancellation of some of the harsher bargains imposed on the Iraqis, and suggest that in negotiations over Iraq's share of the Ottoman Debt, His Majesty's Government should lend assistance to Iraq and not feel under any obligation to regard themselves as trustees for the bondholders. Whether she was right or wrong to do so, the fact remains that in Iraq as in Palestine, Great Britain has put her hand to a plough which cannot suddenly be abandoned. Common interests are at stake, and she must stand by the people until the common goal in view is reached.

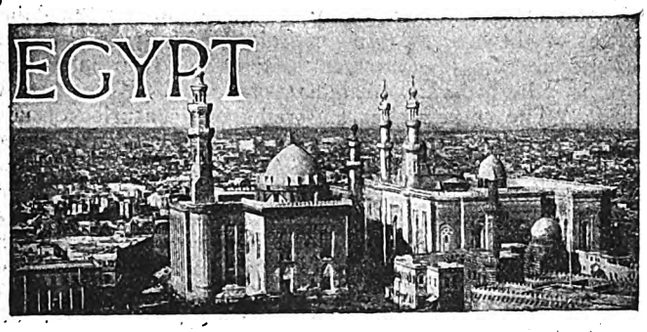
The Near and Middle East*

From Our Own Correspondents.



Cairo, June 28.

A Dull Period.

Rumours of a minor Cabinet crisis and of the resignation of the Minister of Justice, which were current towards the end of the week, have been officially denied, and outwardly the local political world is as dull as it has been now for many weeks. The Prime Minister is preparing to go on leave to Europe, his visit to include, it is said, a short private stay in London, and during his absence everything is likely to be quieter than ever. The acting Premier will be Yehia Pasha Ibrahim, who is due back from Europe on July 7. The only possible source of excitement during the next few months appears to be the cleavage between the Liberal Constitutional and Unionist parties, a division which has already caused tension between the two groups which form the present Coalition Ministry, and which may one day involve a Ministerial crisis of importance, although that day does not yet seem to be near at hand.

Party Politics.

Nevertheless, the Liberal Constitutional Party watches with a jealous eye the very strenuous efforts now being made to popularise the Unionist party in the provinces. Just as, during the Ministry of Sarwat Pasha, the administrative machine was used to press provincial notables into the ranks of the Liberal Constitutionals, and to enrol subscribers to the party's newspaper, *Al Siyassa*, while under Zaghloul Pasha's Ministry officials were used as a part of the Wafd's organisation, so now provincial officials have been enrolled as propagandists for the Unionists. Delegations from the party's central organisation in Cairo tour the provinces, stirring Mudirs to action in behalf of the cause, urging officials to use their influence on the side of the party of Unity, collecting money for the party funds, and boosting the circulation of the *Ittehad*. These tactics are meeting with a good deal of success, and deplorable as is this utilisation of the Administration to serve party ends, it has now been practised by three Governments, representing three different parties, and must therefore be considered as being, at least in the present stage of Egyptian political development, a general and inevitable feature.

The Liberal Constitutionals, indulging in the complete inactivity which is their constant rôle, excepting on the eve of an election, are temporarily eclipsed by their much more active allies and are beginning to feel that the co-operation of friends can be more dangerous than the hostility of enemies. This sentiment applies perhaps more as between the parties than where the two groups in the Cabinet are concerned, for Ziwar Pasha has more than once declared that his colleagues, Liberal Constitutionals and Unionists, are pulling together as one united team, and hitherto there has been no visible sign of Ministerial discord, although it is known that one or two of the Ministers have had some little difficulty in giving their assent to certain recent decisions, particularly that relating to the Government's remarkable exchange of 2,700 feddans of fertile Delta land for a palace at Abbassia of somewhat limited utility. Up to the present time there has been nothing which in itself deserves great attention, but activities and tendencies along the lines indicated are worth watching now as possible symptoms of future developments.

Syrian Medical Officers.

Twenty-eight Syrian medical officers of the Egyptian Army have recently been placed on pension in circumstances which have aroused surprise and sympathy in Egyptian circles, which usually waste little solicitude on Christians in general and Syrian officials in particular. Informed by the Government that the withdrawal of the Egyptian Army from the Sudan makes their services superfluous, these medical officers have, from June 24, been compulsorily retired, all long before reaching the age-limit, and some at ages when their pensions are very small, without compensation of any kind. Adding to their discontent, the Ministry of War has made the retirement effective from June 24, when the majority of them have still before them several weeks of leave granted them on full pay. What makes these doctors' case all the harder is that, while they are all pensionable and entitled, as is every permanent official, to be kept in the service, failing misconduct on his part, or other good reason for his discharge, until attaining the age-limit, or, if prematurely dispensed with, to be indemnified for the lost years of service and loss of the normal pension, yet the Government has retained many Egyptian doctors on yearly contract who are entitled to no pension or compensation and whose services the Government could dispense with at the end of any year. The Syrian doctors were, for the most part, engaged for service in the Sudan at a period when Egyptian medical men refused to go to that country, and the excellent service they have rendered is testified to by both their Egyptian and British superior officers. It will be remembered that two Syrian medical men were murdered by mutineers at Khartoum last Autumn. In the circumstances it is but natural that the Residency, as it has done, should occupy itself with their case, and it is generally hoped that through this intervention justice may be secured for these men, who will otherwise be turned adrift with very inadequate pensions at an age when it is most difficult to start out in civilian practice in competition with other medical men who have established during the fifteen to twenty years that most of the discharged army doctors have spent in the Sudan.

ALBANIA.

Tirana, July 1.

The Bank Concession.

The Bill granting a Concession to the Italian Bank "Il Credito Italiano" with a view to establishing a National

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

Digitized by Google

Albanian Issue and Credit Bank, has been passed by Parliament and has received the President's assent.

The Concession provides for the immediate creation of a National Bank with a capital of 12,000,000 gold lire (approximately £480,000). Fifty per cent. of the capital will be subscribed in Albania, and this money has already been guaranteed. The remaining 50 per cent will be found by the Credito Italiano in Italy, with or without the co-operation of other groups.

Opening Up Albania.

The Bank will have its headquarters at Tirana, and will be the Government Bank and State Treasury. It will possess, moreover, a monopoly for the issue of all token moneys whether in notes or in coin. The nature of the business it will transact will be restricted to pure banking —that is, it will have nothing directly to do with the promotion of industrial concerns involving the locking up of its capital. Simultaneously, however, with the creation of the Bank, a Development Company is to be formed with an initial capital of 15,000,000 paper lire (approx. £115,000) having as its object the promotion of the industrial development of the country. The Credito Italiano has underwritten the subscriptions of the capital, 50 per cent of which is open to subscription by Albanian subjects. One of its first tasks will be to carry out an industrial survey of Albania, with a view to gauging the potential resources of the country, which is supposed to possess considerable mineral wealth—and to formulate proposals for developing them. The Company will have the option on equal terms of any new State concessions to be granted, and will naturally have the backing of the Bank.

A preliminary loan to be expended under the direction of the Bank for the improvement of communications (roads, bridges and portual facilities) has been promised by the Concessionaires.

Albanians and Foreign Enterprise.

The credit for these measures, which should result in great benefits to Albania, is due to Mufid Bey Lipohova, Minister of Foreign Affairs, and ad interim Minister of Finance, and to his brother the newly-appointed Minister in Rome. These men are to be congratulated on their sense of realities and on their firmness in resisting the attacks of a large and uniformed (but not for that matter the less menacing, because intensely patriotic) body of opinion. Sacrifices, however, have got to be made, if a beginning is to be made at all. Albania cannot be developed without foreign capital, so that if development is wanted (which is the same as saying that if Albania is to emerge from its actual primitive conditions in order to become a well-to-do modern State) sufficient inducements must be held out to tempt foreign capital to flow into the country. This the brothers Lipohova have done, and they are likely thereby to earn the gratitude of posterity.

Sofia, June 30.

Relations With Yugoslavia.

Among the many thousand persons arrested in Bulgaria after the Cathedral outrage were seven or eight Yugoslavs. It appears that on several occasions the Yugoslav Government asked for information regarding the accusations levelled against its subjects, at the same time requesting that they should be speedily brought to trial or, failing that, expelled from the country. Having, so it is said, found the Bulgarian Government explanations unsatisfactory, Yugoslavia decided to close its frontier to all persons holding Bulgarian passports. As soon as this had been done the Bulgarian Government made an inquiry into the position of the Yugoslavs who had been arrested. It was ascertained that five had been liberated, one was still in prison, and one was missing. It is understood that the Yugoslav Government was made acquainted with these facts, and it was hoped that the incident would be considered more or less closed. Yesterday, however, Yugoslavia addressed another Note to Sofia, wherein, besides referring to her arrested subjects, complaints were made that armed Bulgarian bands had been causing trouble along the South-Eastern frontier of Yugoslavia. Much speculation has been aroused by the Yugoslav attitude regarding the above mentioned matters. It seems that the bands in question are alleged to have caused trouble about a month ago, and it is asked why diplomatic representations were not then made. It is felt that Yugoslavia is acting in a somewhat curious manner. All the same, there is no question that if a Yugoslav subject is found to be missing, which is to-day almost equivalent to being killed, the matter cannot rest there. Further inquiries will have to be made and those responsible for this occurrence will have to be punished.

The Sobranye.

To-morrow the Sobranye ends its session, and the deputies disperse for their summer vacation. Owing to political disturbances there has not been very much constructive legislation passed during the recent session. The Pernik coal-mine has become autonomous, and there is a plan to put the State Printing Works on the same basis. Indemnities have been voted for families and relatives of victims in the Cathedral explosion. Several insurance measures have been discussed and a certain amount of routine administrative matters put through.

There has been much talk regarding a reconstruction of the Cabinet, but so far nothing definite has transpired. It may, however, be said that there is a quite strong current of opinion which believes that some kind of reconstruction is very necessary. Those people who favour a reconstruction do not yet seem to be in a position to enforce it, so it is probable that until the autumn the Cabinet will remain as at present constituted.

Refugees from Greece.

The influx of refugees, or, correctly speaking, *emigrés*, from Greece continues. The majority enter Bulgaria by way of Svilengrad, although a few cross on foot into Petritch. Practically all those that come in *via* Svilengrad have handed in declarations to the League of Nations Greek-Bulgarian Commission. The latter has valued their properties, houses, and belongings and the *emigrés* should in time receive compensation. Meanwhile they are distributed between various towns and villages in Southern and South-Eastern Bulgaria. Most of them are agriculturists and are only too ready to work. Land has been granted to the majority of these *emigrés*, but there is a serious lack of agricultural machinery and implements. Nearly every family has four, five, or more children, and their condition is far from satisfactory. Macedonian and

Thracian organisations, the Bulgarian Red Cross, and in a few isolated cases private initiative are doing their best to aid these unhappy people, but there is a gradually growing belief that a more comprehensive scheme will be required to put the refugees on their feet. During the winter much hardship is to be anticipated, while the conditions under which the refugees live is readily calculated to breed discontent which may easily be fanned by Communist and other agitators.

News in Brief.

M. Stanislas Baronovsky, the new Polish Minister, has presented his Letters of Credence to King Boris.

It is reported that Ilia Pandursky, a well known Macedonian *Komitaji* belonging to the Federalist section of the Macedonians, has been assassinated in Macedonia.

On Sunday, the 28th, a new double line of tramways connecting Sofia with Kniajevo, was opened. Kniajevo is some five miles out of Sofia, and has hitherto been served by a single line which proved very unsatisfactory to travellers.

GREECE.

Athens, June 26.

The "Revolution."

The discontent which has been smouldering for some weeks among the officers of the Army broke out last night, and Athens awoke this morning to find a revolution a *fait accompli*—or almost so. Troops were guarding the Parliament House, National Bank, Telegraph Office, and so on, but it was not quite clear whose troops they were. It is even reported that troops of both factions were guarding the same building. The adherence of the fleet to the movement was secured during the night, and Admiral Hajikyriakos has assumed command. The movement has also the support of the garrisons in Salonika and Patras. The protagonists on either side are Generals Pangalos and Kondylis respectively; what principles are involved is not so clear. There is no disturbance, and though most shops in the centre of the town are closed this morning, the streets are full of people going about their business. M. Michalokopoulos has resigned, and it was at first stated that M. Papanastasiou was to form a coalition Government. (It will be remembered that he was the first Prime Minister of the Republic, fifteen months ago. Since that time there have been, including M. Michalokopoulos' resignation and return to office a week ago, six changes of government.) This morning's papers, however, bring the news that General Pangalos himself is Prime Minister and Minister of War.

Calcutta, Delhi, Simla, Lahore, Rawal Pindi and Murree.

Aeroplane Work at Phaleron.

Work on the new British aeroplane factory at Phaleron is proceeding quickly, and the plant is reported to be ready. According to the terms of the agreement, six aeroplanes will be completed and handed over to the Government within three months from July 1.

Drainage Works in Macedonia.

It was proposed to lay before Parliament for approval the contract between the Greek Government and the Anglo-American Company "Foundation," for the drainage works in Macedonia. Whether this will now be held up remains to be seen, but the final stage of the negotiations had been reached. Objections had been raised that the profits the company would realise were excessive. A long article in the *Eleftheros Typos* for June 21 points out that the system on which the agreement is based excludes the possibility of excessive profit or of indifferent work, and the scale of profit is considerably smaller than that allowed to the Eulen Company, which is undertaking the water supply of Athens, while the risks are considerably greater. The "Foundation" Company undertakes to drain and have ready for cultivation within 18 months from the date of signature of the agreement, 100,000 stremmata—and in five years to have the whole plain round Salonika available for agriculture. This area includes the swamps round the mouths of the Vardar, Haliakmon, and Galliko rivers, as well as the three lakes of Ardzan, Amatoro, and Yénitze, districts at present notorious for malaria. The advantages to be gained for Greece by this undertaking are incalculable. With a refugee population already settled on the spot, for the most part agriculturists, market gardeners, and tobacco-growers, it is clear that this part of Macedonia has a great future before it, and in a few years Greece may well become self-supporting.

A Bronze of the Fourth Century B.C.

The discovery by fishermen near Marathon of an almost complete bronze statue of the late 4th century B.C. has aroused great interest. It lay, according to the reports, at a depth of forty fathoms. It represents a boy of about fifteen years old, upright, holding some flat object in his left hand, and with his right hand upraised. The statue is in excellent condition. The toes of the right foot, and the object he holds, alone are missing. The style closely resembles that of the statue found off the island of Cerigotto in 1901, but the present statue is smaller, being only four feet high.

This and the statue recently found by the British School at Sparta are the chief archæological sensations of the year.

The Schliemann House.

It is announced that the fine house of Mrs. Schliemann in University Street may become the property of the Government, and be used as a Byzantine Museum. Everyone who has visited Athens knows the Schliemann House with its elegant facade. It is much to be hoped that the project will be realised, as the Byzantine Museum is quite inadequately housed in its present quarters.

Constantinople, June 30.

The Last of the Kurds.

The curtain has been rung down on the last act of the Kurdish insurrection and Sheikh Said, and forty-six of his co-revolutionists have paid the heaviest penalty for

Digitized by Google

their indiscretions. Yesterday's papers contained repulsive detailed accounts by eye witnesses of the last moments of these traitors, including a vivid description of the actual execution which took place to the accompaniment of joyful applause from the public amassed to witness the looked-forward-to spectacle. At the last moment Sheikh Said contributed additional satisfaction by repeating the allegation that the English are Turkey's greatest enemy.

Now that this last important chastisement of the instigators and active participators in the insurrectional movement has been administered preventive measures are constituting the question of prime importance to be considered by the Tribunal of Independence. One very effective measure which has already been decided upon and put into execution is the closing of all *tekkés*. The latter are a sort of small chapel similar to Dervish retreats which were used by sheikhs for the practising of sorcery and which are stated to have served during the recent troubles as meeting places for the misguided exponents on Kurdish independence. There are, however, many points still to be cleared up regarding various and vast organisations which are said to have been connected with the insurrection, and investigations are yet being pursued during which incriminating documents continue faithfully to roll in.

Officialdom and Religion.

The fête of Kourban Bairam commences to-morrow, but although official departments will close for the four days as usual, no official receptions are to be held this year. It is becoming increasingly evident that the present Government intends that in future religion shall have no connection or bearing whatsoever on Turkey's official side of life. The arrival here of only 10,000 sheep as compared with 20,000 last year for the celebration of Bairam would also appear to be evidence of the falling off of numbers now keeping the ancient custom.

General News.

Amongst the modifications in Turkish legislation made by the Special Commission for the Amendment of Laws formed under the presidency of the Minister of Justice, appears that of the right of heritage. Women will, in future enjoy all advantages which up to the present have been enjoyed by men. In addition monogamy will be decreed and the notarial registration of all marriages becomes obligatory.

The *Echo de Turquie*, a bilingual periodical (French and Turkish) edited by Réchad Noury Bey makes its first appearance to-morrow at Angora. This will be the first publication in a foreign language which has yet been edited in the interior of Anatolia, and it is reported that the *Echo de Turquie* will, later on, also possess an English section. The first edition deals primarily, with political, public, social and economic life, Occidental art and finance and agriculture.

Since the death of the *Orient News*, Constantinople has been deprived of its only English newspaper. This has been a cause of constant complaint on the part of the small British colony here, which certainly requires some medium of communication and advertisement other than the existing French Press. It is, however, impossible to publish an English paper in Constantinople without some serious subsistence being guaranteed, as a circulation of only three hundred does not pay for the paper used.

IRAQ.

Baghdad, June 24.

The Cabinet.

The Cabinet has fallen, owing to disagreement between the Prime Minister and his Minister of Interior, Abdul Muhsin Beg as Sa'dun. Yasin Pasha handed his resignation to the King on June 21.

Except in Mosul, Suleimaniyeh, and Arbil, the elections by secondary electors of deputies for Parliament were held all over Iraq on June 8. It is noteworthy that the leaders of the two chief political parties in Baghdad have both failed in the elections. Jaafar Pasha al Askari holds two seats, so that in view of his London appointment a by-election may be necessary. It is reported that the Baghdad Election Committee is not satisfied that the voting in the districts of Samawah and Kadhimain was conducted without interference.

Suleimaniyeh.

Since the attack on the Levies, reported in my last letter, the situation round Suleimaniyeh has been comparatively quiet, and no opposition was shown to a mixed column which marched to Halebja and back. The decision to occupy the town of Choartah, thus carrying the war into the very heart of the enemy's country, involved the construction of a strong post near the Amin Pass, between Suleimaniyeh and Choartah. It was in the defence of this post that Captain Coffey lost his life. Choartah was occupied without opposition on June 6, although Sheikh Mahmoud with a large body of followers was known to be in the neighbourhood.

Turkish Severities.

Bishop Timotheus of Zakho has telegraphed to King Faisal for help for the Christian inhabitants of the Goyan district, whose villages have been occupied by the Turks. A priest and his son have been carried off to Constantinople, and the people are, according to the Bishop, in grave danger of "annihilation." The inhabitants of this district, with some of the neighbouring Kurds, appealed to the Mosul Frontier Commission for inclusion in Iraq. Later reports state that the Muslims as well as the Christians are being treated with great severity. Many villages have been burned, and a number of headmen shot. As the Goyan district lies just north of the Brussels line, no action can be taken by Iraq officials on the frontier, in spite of numerous appeals for protection.

Mosul.

Reports from Mosul of impending famine, owing partly to the severity of the winter and partly to the depredations of locusts, are so serious that it has been decided to inaugurate a relief measure. Preliminary work on the new Mosul-Kirkuk railway line, which would not otherwise have been begun for some months, is to be put in hand at once, and it is hoped that employment for about 1,000 men may be provided.

General.

His Majesty King Faisal is taking a short holiday at his farm at Khanikin.

The two men of the Dulaim tribe who, after a cross-desert pursuit, were arrested by the Iraq police in connection with the attack on a convoy of the Eastern Transport Company on March 5, have been condemned to death by the Baghdad Court of Sessions. They were found guilty of robbery and of the murder of Mme. Maillard, wife of the French Vice-Consul in Baghdad, who was killed by a shot intended for the driver of the car. Great satisfaction is felt here that the full penalty of the law is to be exacted, for apart from popular indignation and sympathy, the feeling is very general that on the security of the desert routes depends to a great extent the future prosperity of Iraq.

The report of the Financial Commission has now been translated into Arabic, and has been circulated to the Ministries, with a request from the Prime Minister for comments by each on such recommendations as affect its own sphere of work.

Baghdad is eagerly discussing how best to use the Maude Memorial Fund, which amounts to about one and

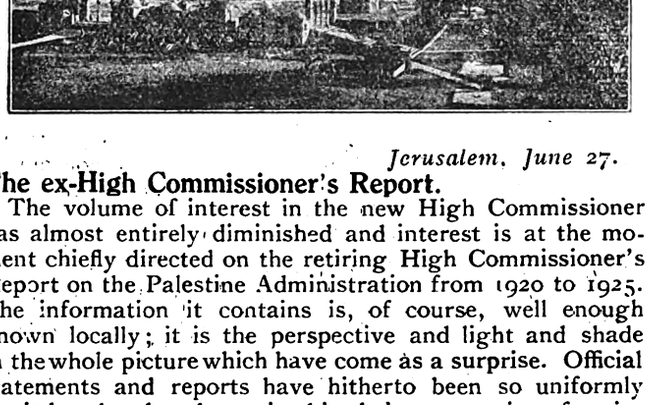
a half lakhs of rupees. The High Commissioner has asked for suggestions from the public as to the purpose to which the money shall be devoted. The columns of the *Baghdad Times* are open to suggestions, which have ranged so far from an Aviation School to a Lunatic Asylum. The fund was originally intended for a memorial gateway outside the north gate of the city, but it was later decided that the money might more wisely be used for something which, while still commemorative of the great General, might also be useful to the citizens.



Jerusalem, June 27.

The ex-High Commissioner's Report.

The volume of interest in the new High Commissioner has almost entirely diminished and interest is at the moment chiefly directed on the retiring High Commissioner's Report on the Palestine Administration from 1920 to 1925. The information it contains is, of course, well enough known locally; it is the perspective and light and shade in the whole picture which have come as a surprise. Official statements and reports have hitherto been so uniformly strait-laced and so determined in their suppression of praise or condemnation of Arab or Jew, that Palestinians, and especially the Jews, are left slightly breathless at the outspokenness of this new document. Up to the present very little Arab comment has appeared: it cannot be expected to be anything but vigorously condemnatory. The Arab Press and politicians have a much higher esteem of their methods and worth than has Sir Herbert. But the shock to the Jews has been most marked. The retiring High Commissioner's references, almost panegyrical, to their efforts in the re-invigoration of Palestinian life, trade and agriculture, have almost reconciled them to what they had believed to be his deliberate aloofness towards their hopes and aspirations during the past five years. On second thoughts they are rather resenting his statement (intended for praise) that what the Jews have done, they have done with virtually no assistance from Government. The Jews admit the truth of this, but they are greatly afraid (a) that this will be used as an argument that they can get along quite well in the future without material Government aid, and (b) that this may make a dead-letter of the clause in the Mandate which requires certain material help to be given to them in the shape of state-owned land.

Archæological Discoveries.

It must be a very long time since Palestine unearthed such interesting archæological relics as have recently been announced. The "Tabgha Skull," discovered by Mr. Turville-Petre of the British School of Archæology in Jerusalem, bids fair to become as famous as "the Heidelberg Jaw," "the Pitdown Skull," or the "Neanderthal Man" to the student of proto-archæology.

The discovery of "the Third Wall" of Jerusalem by the Jewish Palestine Exploration Society is quite the most interesting piece of evidence produced for a long time towards solving the vexed question of Jerusalem topography in the first century. It is taken for granted by the discoverers that it actually is Josephus's "Third Wall," but a certain amount of scepticism is now being aroused. There are perfectly sound reasons for thinking that it is not one of the town walls at all, but only part of the circumvallation built round the besieged city by Titus to render his blockade more effective. There is also the curious fact which needs explanation that, though the foundations of the wall are there obviously enough (the natural rock groved to receive the huge stones, and two courses of Roman masonry in situ), there is simply no trace whatever within the neighbourhood of the great mass of debris which might have been expected from the destruction of the rest of the wall. The inference can only be that this is a wall (dating any time up to the Second Revolt in 135 A.D.) begun but never finished.

Jerusalem's Water Famine.

An interesting situation has arisen out of Jerusalem's water famine. Owing to the dangerous situation that is threatening, the Government issued an Ordinance empowering the Jerusalem Municipality to utilize the Urtas spring (a few miles south of Jerusalem). The people of Urtas have successfully challenged the legality of this Ordinance, the High Court ruling that the Government action is a breach of the Mandate and the Palestine Order in Council. Although one welcomes the episode as a demonstration of the Mandatory Power's sense of justice, it makes the water situation still more grave. It is going to prove an expensive and collossal business to bring by train from Lydda sufficient water for the seventy or eighty thousand inhabitants of Jerusalem, and to keep up this supply at least four months.

CYPRUS.

Nicosia, June 23.

The Colonial Secretary.

The weather has been exceptionally cool. The Government offices are to move up to Mt. Troödos on June 27. Mr. Fenn is acting as Governor during Sir Malcolm Stevenson's absence. It is understood that he will not remain as Colonial Secretary, but will be appointed to another Colony.

The Greek Protest.

A reply from the Colonial Secretary to the Greek Archbishop relative to the protest against the new Constitution of Cyprus as a Colony has been published. It states that the Secretary of State for the Colonies has requested H.E. the Governor to intimate that, as already pointed out on more than one occasion, the question of union with Greece has been finally closed, and cannot be reopened. That such a protest should have been launched after so many fruitless Greek petitions, deputations, special missions, etc., must be surprising to all who are not fully acquainted with the situation.

The Agricultural Bank.

A *Cyprus Gazette* (extraordinary) of June 17, publishes the agreement between the Government and the Agricultural Bank of Cyprus, Ltd. Advances must not exceed £50,000. It is provided that if the profits of the bank shall be less than a sum equal to 4 per cent. of the average amount of advances—during the accounting period—the Government will pay to the Bank on demand the amount of such deficiency. But if in any subsequent year the net profits should exceed the guaranteed minimum, the amount of such excess shall be paid by the Bank to the Government until recouped for sums so paid. After five years the Government may give notice to determine the agreement.

Depression.

The general state of depression continues, and anxiety is expressed in view of the economic situation. In the first quarter of 1925 imports exceeded exports by over £92,000. For the present no remedy is suggested beyond that of raising considerably the duties on articles of luxury. The papers point out, what is quite true, that many articles.

THE PERSIA SOCIETY.

of native manufacture are of excellent quality, and should not be neglected, as they are, in favour of foreign goods.

General News.

Tht Chief Justice, Sir Sydney Nettleton, has taken leave from June 23. Mr. B. Dickenson, P.D.C., Puisne Judge, will act for him.

Mr. T. Greenwood, Commissioner of Larnaca, has been made a C.I.S.O.

[The correspondence referred to in the above letter between the Archbishop of Cyprus and the Colonial Secretary is thus published in the *Cyprus Gazette* of June 12:

No. 360.

NOTIFICATION.

In accordance with instructions received from the Right Honourable the Secretary of State for the Colonies, His Excellency the Governor directs that a copy of the following correspondence be published for general information:—

(*a*) Memorial from His Beatitude the Archbishop of Cyprus to the Right Honourable the Secretary of State for the Colonies.

(*b*) Reply thereto.

Archbishopric of Cyprus,
Nicosia, 1st May, 1925.

Right Honourable Sir,

On the occasion of to-day's official pronouncement of the declaration of the Island of Cyprus as a Colony, We, the Archbishop of Cyprus, President of the Holy Synod of the Autocephalous Church of Cyprus and National Leader of the Hellenic population of Cyprus, express in the name of the clergy and people, their very deep grief, and lay an emphatic protest against the renewed ignoring by this political action of the indefeasible historic national rights of the Hellenic people of the Island to their national restoration, which it was expecting soon to receive from the Liberal English Nation; and we declare that the burning and unalterable desire of the Hellenic people of the Island was, is, and will always be, its union with its mother Hellas.

We remain,
With the deepest respect and honour,
(Signed) ✠ KYRILLOS.
Archbishop of Cyprus.

To the Right Honourable,
The Secretary of State for the Colonies, London.

Colonial Secretary's Office, Cyprus.
12th June, 1925.

Most Reverend Sir,

With reference to Your Beatitude's letter of the 1st of May, 1925, enclosing a memorial addressed to the Right Honourable the Secretary of State for the Colonies in which you protest against the retention of Cyprus as part of His Majesty's dominions, I am directed by the Governor to inform you that your memorial was duly transmitted to the Secretary of State who has requested His Excellency to intimate to you in reply that he has received your memorial, and desires that you should be informed that you must clearly understand that, as has already been pointed out to you on more than one occasion, the question of the Union of Cyprus with Greece has been finally closed and cannot be reopened.

I have the honour to be,
Most Reverend Sir,
Your Beatitude's obedient Servant,
C. D. FENN,
Colonial Secretary.

His Beatitude
The Archbishop of Cyprus,
Nicosia. (M.P.624/25).]

OMAN.

Muscat, May 30.

The Return of Sayyid Said.

Sayyid Said, Prince Regent of the Sultanate of Oman, returned to Muscat from India on April 29, being received with a salute of fifteen guns. The next day he paid an offical visit to the British Consul at Muscat, and also to Commander Inglis, head of the British-Indian expedition stationed at Beit al-Falaj, twelve miles north of Muscat. There, also, he received a salute of fifteen guns.

The Sultan at Dhofar.

News has reached Muscat of the Sultan's arrival in Dhofar. It is semi-officially stated that the main object of his visit is to convert this remote town into a suitable traffic centre. At any rate, forts are now being erected in Dhofar, and roads opened up.

Discontent of the Omanese.

The Arabs of Oman, being extremely dissatisfied with the conduct of the State Council, filed complaints against its proceedings to the Sultan and to the Government of India and its representatives in Muscat and Bushire, protesting against the tyrannical nature of its acts. Since this course has been of little avail, the Omanese have become inclined to revolt against their own Government. But the installing of Sayyid Said in charge of the Government of Oman and the discharging of the Council will, probably, check the insurrectionary tendencies of the Arabs, for public opinion in Oman is very favourable to the young Prince, who has, indeed, proved his ability as an administrator on several occasions.

The Position of Captain Thomas.

Those who listened to the Sultan's speech in the durbar in regard to the position of Captain Thomas gained a false impression that this English officer was authorised to represent His Highness during his absence from Muscat. In order to contradict this erroneous impression, Captain Thomas has explained that his exact position in the Government of Oman is strictly limited to being that of Chancellor of the Exchequer, and that, because his powers were confined to this post, the belief that he would institute reforms in all the Government Departments was based on a complete misconception.

Captain Thomas is proposing to impose new taxes on the traders in Oman, and the State Council, before whom this proposal was laid, is in favour of the idea. The traders, however, have already raised protests against such a step, asserting that it would paralyse trade in Oman. It appears to be generally thought that the economic situation does not warrant the imposition of such taxes.

The Massira Oilfields.

Mr. Mackie, Agent of the Anglo-Persian Oil Company at Abadan, Persia, who has been in Muscat for some time, has been successful in concluding negotiations with the Sultan's Government in connection with a concession for the oilfields in Massira Island, in the Indian Ocean. The concession is for two years—for which the Company has agreed to advance to the Oman Government a sum of Rs.30,000 (£2,000).

General News.

Captain Alban, ex-Commander of the British Indian Forces at Beit Al-Falaj, has arrived in Muscat to act for four months as British Consul. His knowledge of the local languages and his experience of Oman generally adapt him admirably for the post.

Kersandass, the kidnapped Brahman trader of Jaalan District, has been released by his captors on their receipt of Rs.1,100 (£73).

Complaints have been lodged by fifty Baluchis of Burka (a town forty miles north of Muscat) to the State Council concerning the conduct of the Governor of Burka, Sayyid Shihab, a brother of the Sultan.

A truce, which binds the parties to keep the peace for one year, has been concluded between the Arabs of the Beni Abou Hassan Tribe of Jaalan and the Governor of Sur, Sheikh Rashid bin Uziaz, a member of the State Council, having been chiefly instrumental in this transaction.

PERSONAL AND GENERAL

TO-DAY

July 9, 1925 (New Style).
June 26, 1925 (Old Style).
Dulheggia 17, 1343, A.H. of the Moslem Calendar.
Tammuz 17, 5685, of the Jewish Calendar.

Lady Wilson, wife of Sir Leslie Wilson, Governor of Bombay, is leaving India for England on Saturday.

M. N. Vouluvitch, Secretary at the Yugoslav Legation, returned to London last Thursday from leave in Serbia.

The Yuvaraja of Mysore arrived at Claridge's Hotel last week from Paris.

M. Smodlaka, of the Yugoslav Legation, and Mme. Smodlaka left London, on July 1 for Belgrade on leave.

Dame Louise Samuel has returned from Palestine and has now taken up her residence at 4A, Symons Street, Sloane Square.

Lady Stavridi gave a reception last Sunday at 33, Lennox Gardens to meet the Patriarchs of Alexandria and Jerusalem.

Mr. Sheldon Crosby, Counsellor at the United States Embassy in Turkey, who has been on a visit to London, left England on June 30 for his post.

Colonel Ion Antonesco, Military Attaché at the Roumanian Legation, has left London for Norway on leave. He will be absent about two weeks.

The Hon. Sir Ronald Lindsay (His Majesty's Ambassador-Extraordinary and Plenipotentiary at Constantinople) had an audience of the King at Buckingham Palace last Saturday.

Sir Herbert Samuel, High Commissioner for Palestine, has left Jerusalem on the termination of his period of office, and, with Lady Samuel and Miss Samuel, will be travelling for some time.

The Queen of Roumania arrived in London last Saturday from Paris. Her Majesty, who visited the King and Queen at Buckingham Palace last Sunday, will be in England for about a month, and is staying with the Infanta Beatrice at Esher.

Field-Marshal Viscount Allenby will take the chair at the luncheon to meet the Baroness Ernest de la Grange, on France's Day, July 14, at the Hotel Cecil. Tickets may be obtained on written application to Mrs. Aubrey Le Blond, 134, Whitehall Court, S.W.1.

Princess Mohamed Ali Hassan, daughter of the Egyptian Minister, and her brother, Mohamed Izzet Bey, who is the Master of Ceremonies at the Court of King Fuad of Egypt, arrived in London last Saturday from Zurich on a visit to the Minister and Mme. Izzet Pasha.

Under the auspices of the East India Association, Sir Montagu De P. Webb will, on July 13, at 3.30 p.m., read a paper entitled "Recent Progress in India." The meeting, which will take place at the Caxton Hall, Westminster, will be presided over by Sir Charles Armstrong.

The marriage arranged between Mr. A. Shuldham Redfern, Sudan Political Service, elder son of Dr. and Mrs. J. Redfern, of Croydon, and Ruth Marion, younger daughter of Mr. and Mrs. O'Donnell Grimshaw, of Newlands, Guildford, will take place at Guildford, on July 21.

Air Vice-Marshal Sir Edward Ellington, Air Officer Commanding Royal Air Force, India, left India on July 1 on four months' leave, travelling via Baghdad and thence to Egypt by air. Group-Captain J. A. Chamier, Chief Air Staff Officer in India, will command the Royal Air Force in India during Sir Edward Ellington's absence.

The War Office announces that General Sir G. F. Milne, G.C.M.G., K.C.B., D.S.O., A.D.C., will succeed General Lord Cavan, K.P., G.C.M.G., G.C.V.O. K.C.B., as Chief of the Imperial General Staff on February 19, 1926.

The Egyptian Minister and Mme. Izzet Pasha entertained at luncheon at Claridge's Motel on July 1, Field-Marshal Viscount Allenby and Viscountess Allenby, Sir Geoffrey and Lady Archer, Sir Edward Goschen, Sir Arthur and Lady Downes and Miss Downes, Harari Pasha and Mme. Harari Pasha, Mrs. Fanshawe, Mr. and Mrs. Worsfold, Abdul Hamid Soliman Pasha and Mme. Soliman Pasha, Mr. and Mrs. and Miss Guest, and Sesostris Sidarouss Bey, Counsellor of the Legation.

The King received at Buckingham Palace last Saturday morning Ahmed Ferid Bey, who has been appointed to represent the Turkish Government at the Court of St. James's. His Excellency attended, accompanied by members of his staff, in order to present to His Majesty his Letters of Credence as Ambassador. In accordance with custom, carriages were sent from Buckingham Palace to convey the new Ambassador and his staff from the Embassy to the Palace, and from the Palace back to the Embassy. His Excellency was accompanied by the following members of the Turkish Embassy, who had the honour of being presented to His Majesty: Moukbil Bey (Comsellor of Embassy), Shevky Pasha (First Secretary of Embassy), Orhan Halid Bey (Second Secretary of Embassy), and A. Zekiai Bey (Third Secretary of Embassy).

Indian Affairs.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 17.

Mr. C. R. Das.

"With dramatic and awful suddenness death has called the tribune of Bengal"; thus the *Statesman*. Indian Calcutta is actually stunned and the death of Mr. C. R. Das will shock the whole of educated India. He has been spared the bitter fate of most Indian political leaders, and he may be counted fortunate, politically speaking, for he has died young. All parties unite to-day in paying tribute to one whose leadership has been conspicuously successful, apart from the question of its wisdom or its desirability; he had, however, lived to discover that the lot of the revolutionary leader is in the end to run after his followers, and it is quite probable that a realisation of the results of his campaign has shortened his life. His remarkable personal influence and charm, his courtesy and his culture, are universally admitted by those who have met him; coupled with the sacrifice of his legal career and his eloquence, they have made him a hero to Bengal. Possibly the greatest tribute to his powers is the fact that his sudden death has left his party completely leaderless; he was the party, and he had established a personal autocracy which is without precedent in Indian politics.

"The King is Dead: . . ."

It is too early to make any estimate of the consequences to Indian nationalism of so stupendous a loss; the whole of the recent career of Mr. C. R. Das has been a striking example of the fact that here it is not politics that count but men. He had established himself as elected representative of the national spirit, and as such the whole country seemed to be content to accept his personal decision upon any matter, no matter whether he was consistent or eccentric. Important matters in the Corporation which were purely executive were held up for his personal orders as Mayor, and the whole policy of the Congress Party has been swayed by him to an extent which is almost incredible to Western minds; the position he had achieved gave him no petty kingdom; his was an absolute monarchy.

Disruption?

The loss of such a man is bound to have a profound effect upon the future of the extremist party, and it will certainly be some weeks before his lieutenants are able to gather up the strings and make some assessment of the position. Where so much was left to the decision of an individual, where methods were almost entirely personal and casual and based upon the inspiration of the moment, it is inevitable that there should be feelings of dismay in regard to the future. Recent happenings indicate the existence of tendencies to break apart amongst the sections which have made up the extremist coalition, and there is every possibility that there will be a separate Mohammedan party, and also that the more extreme sections of the Hindus will again find their leaders lacking in daring and recklessness. It is a great opportunity for the Liberal Party, which has recently become increasingly active and is showing a sound appreciation of political realities.

The Corporation Loan.

A disquieting feature of this matter has been made public during the last week: it appears that amongst the expert opinions taken by the Corporation in regard to the discussion with Government on the new loan proposal was one of a retired Accountant-General of Bengal. His views were not favourable to the Corporation, but although they were printed, they were suppressed from the papers which were circulated to members, while favourable opinions of other experts were sent out. The matter will not be allowed to rest here, but it is an interesting commentary on the mentality of the party in power.

The Moribund Reforms.

The announcement is officially made that the Governor-General in Council, with the sanction of the Secretary of State, is pleased to direct that the transfer of all Transferred Subjects in Bengal shall be suspended with effect from the 13th of the current month to January 21, 1927, the date on which the term of the existing Bengal Legislative Council will expire: so for the time being ends the experiment of the Reforms in Bengal. No one will pretend that they have been successful, and in fact it is a proud boast of the extremists that they have killed a Scheme that neither they nor anyone else ever wanted. Certain it is that the force behind the attempt to give it a fair trial in Bengal has been almost entirely from Europeans; the few moderate Indians who co-operated with them have incurred an obloquy from their own countrymen that it will take them very long to live down, and one of the bitterest gibes they have to swallow is that Government itself has "let them down," by giving way to the agitators. At present the most eagerly awaited event is the forthcoming statement of the Secretary of State following the conclusion of his interviews with Lord Reading.

Racial Talk.

The European Association had a meeting at the end of last week to consider the present political situation, and a resolution was carried almost unanimously urging that Government should pay no attention to clamour and should decline to re-open the question of the Reforms before 1929, having regard to the refusal to co-operate in working the present scheme. This decision has provoked hostile comments in practically all the Indian Press and even some of the more moderate papers use immoderate language on the matter. The *Amrita Bazar Patrika* promises "a bumper crop of racial hatred" as a result of this policy, and it suggests that Europeans should realise that whatever they may do, they cannot stem the "tide of progress and of freedom." It is difficult to know what it all means; Sir Henry Wheeler's plea at the Calcutta Dinner for a definition of terms is opportune; self-determination, Indianisation, freedom, slavery, what do they all mean? In terms of personal happiness the majority of the inhabitants of Bengal are far better off than the average factory hand in the industrial nations.

Markets.

The piece-goods market continues unsatisfactory, and in the opinion of a prominent operator, things are about as bad as they can be. There is little doing in stocks and shares, and the small brokers are having a very thin time. The jute position is interesting; there are very few buyers for the new crop, as operators are holding out for high prices; the probability appears to be that new jute will open dear in any case, no matter whether it is a large or small crop. Most of the local mills are in a position to hold out until the arrivals are heavy, and there will be no urgency to buy until September, but others are short, and it is considered that if foreign mills are not to close there will have to be a heavy August shipment. The anticipation is that the market will open at about Rs. 16. In the meantime gunnies are in the trough of the wave, and at present it is impossible to buy jute and turn it into fabric at a profit. Tea remains satisfactory, and steady; current returns indicate increased output, but the market is well in hand and prices should not fall.

THE INDIAN MAIL.

Public Services Commission.

It is announced that the Public Services Commission will be constituted in October. Its immediate appointment was recommended by the Lee Commission, which characterised it as one of the vital points in its report: the recommendation being that it should consist of five members, who should be of the highest possible standing and whose duties should include the safeguarding of the interests of the Services, the laying down of conditions

Digitized by Google

for recruitment to, and the enforcing of discipline in, the Indian Services. The *Statesman* (Calcutta) says that the delay in appointing the Commission appears to have been due to divergence of opinion whether the Government of India should devolve some of its powers to the Commission or whether the Commission's functions should be merely advisory: and concludes that the decision has resulted in favour of the latter alternative.

The *Bombay Chronicle*, while characterising the announcement as "a direct insult to the Legislative Assembly which had declared itself against a Commission, and open defiance of public opinion voiced throughout the country," says that it was at first believed that the "Commission to protect the Steel-Frame Service" would consist of a President and two members: but that it is now becoming increasingly clear that there will be a President and four members: the President will probably be an Englishman to be brought specially from England, two of the members will be Europeans, one a Civilian and the other a non-official, and two will be Indians—one Hindu and one Mohammedan.

The Non-Official European.

Much interest has been excited by a letter to the Calcutta *Statesman* from a gentleman signing himself "Covenant," in which he exhorts the British commercial man to assert himself in the matter of the future government of India. The writer says that, when the Montagu-Chelmsford reforms were first proposed, non-official Europeans were content to leave matters to the Secretary of State and his advisers and to confine themselves to criticism. Let them not repeat the mistake. The British official is but a passing visitor—he is a good and faithful servant to India until he has earned his pension, after which the country knows him no more. Not so the man of trade, industry, and commerce. In interest, if not in person, he is a permanence in India: he commits his fortunes to the country, he depends on her welfare for his daily bread and for the maintenance of his family, and he not uncommonly remains at work in India twenty years and more after his official contemporaries have disappeared. "It was not the official who won India for the Crown; it is not the official who has developed her resources, created her industries, built her railways, constructed her harbours, brought her into line with European civilisation: it is not the official whose capital is sunk in the country or whose vital interests depend on her good government." More than any other man, the British non-official is concerned to see that India is peaceful and well-governed, that her finances are wisely administered, her commerce nurtured and her safety assured: it is his right to determine the form and character of her administration and, if he shrinks from asserting it, he is not only blind to his manifest interests but neglectful of his duty.

"Covenant" goes on to say that the real "steel framework" should be the laying down of the essential conditions that must be preserved intact in any constitution conferred upon India. These he sees to be, that provision for the external and internal safety of the country shall be made a first charge upon Indian revenues, that no anti-European or discriminative legislation shall be permitted, that the control of posts, telegraphs, railways, canals and other all-India services shall remain in British hands, and that the administration of the great sea-ports created by his predecessors, wherein the Indian has no historic interests, shall be entrusted to the men who understand their needs. Subject to these and a few other restrictions, it should be possible to commit the government of the country to Indians, and the enormous field of responsibility thus thrown open to him should do more than satisfy the most ardent aspirations of the Nationalist. He holds that the Reforms are unsuited to India—"the scheme sits as grotesquely on Indian antiquity as a Homburg hat and cutaway coat on a venerable pundit"—and that it is a mistake to suppose, because some of its manifestations have failed, that opposition to them is diminishing: those movements were the symptoms, not the cause, of the underlying trouble. The European in India appears to be hypnotised by the fact that a revision of the Reforms is to be undertaken in 1929, a date formally laid down by Act of Parliament, so that it is supposed that consistency requires adherence to it. But the writer holds that it is not fair either to Indians or Englishmen that an ill-advised experiment should be continued for a day longer than can be avoided. "Every informed person knows that, for the immense majority of India's inhabitants, paternal government is, and must remain, an absolute necessity. The men who are discontented with the present ordering of their affairs are the many well-educated and trustworthy Indians trained by our system of administration. It will not be denied that the educated Indian is every whit as competent to look after his own affairs as the educated Englishman or Scotsman: and it is into his hands—not to India as a whole, for there is no India as a whole—that the duties so long and ably discharged by British hands should now be transferred. The proper remedy for his dissatisfaction is not to foster political corruption by subordinating him to an ignorant electorate, but to leave him to manage his own affairs in his own way, on the principle laid down by Mr. Jorrocks—"the seat as is most comfortable for the man will in all humane probability be the most comfortable for the 'oss": when the Nationalist will be found not only to make an excellent job of his administration, but to dwell in peace and harmony with his European friends. "In any case, it is his affair and not ours and, provided the essentials of the British connection be preserved, the Indian should be left to work out his own salvation according to his lights. But it is for the non-official European—the banker, the commercial man, the trader, the shopkeeper—to see that the essentials *are* preserved and are not frittered away on doctrinaire experiments in self-determination."

The Indian Electorate.

The *Pioneer* (Allahabad) has an interesting article on party politics in India: which, as understood in England, are non-existent there. The report of the Muddiman Committee included evidence on this point from all the Provincial Governments, who were unanimous in declaring that the close touch between representatives and electors, that constitutes the vitality of a representative system, was altogether non-existent. The representative practically never addressed his constitutents or canvassed their view on any legislative project: electioneering was, as a rule, confined to the issue of handbills containing exhortations to electors to record their vote for a special candidate or for a special colour. Owing to the prevalence of illiteracy, the candidates' voting boxes were distinctively coloured: it is on record that, in a case where a Swarajist candidate's box was green and his opponent's white, the former was recommended because it was of the colour of the peasant's crops, and voters were warned against the latter on the ground that he who voted in it should beware of white leprosy. A large proportion of the electors did not know the name of the candidate whom they were voting for, but had merely been told the colour of his box: many thought that Mr. Gandhi was a candidate, and many believed that the subject on which they were voting was whether the local taxes were to be paid to Government or to Mr. Gandhi. The Swaraj party, though it claimed to have received a mandate from the electors to abolish dyarchy, made no attempt to explain their creed to the electors—the majority of whom admittedly did not know the meaning of the word. Time and education, says the *Pioneer*, may change all this and enable electors even of the most backward type to realise at all events the implication of the vote: but on the larger issues, especially in view of the present intensification of communal differences, it cannot be said that there is any near prospect of political parties developing in India in the manner in which they organise themselves in Western countries. There are, no doubt, simple-minded Members of the British Parliament who sympathise with the Indian Swaraj Party because they believe that conditions in India are analogous to those prevailing in England: but they would probably be surprised to learn that, though agriculture is India's life blood, none of the Indian political "parties" has even suggested a policy for the solution of agricultural problems.

Burma Railway Development.

A correspondent of the *Statesman* (Calcutta) writes that, when the Chief Commissioner for Indian Railways recently visited Burma, he announced that the Indian Railway Board was prepared to sanction funds for the development of railway construction in Burma, comprising a thousand miles of new line to be constructed over a period of five years. That offer was immediately accepted, and the Chief Commissioner took back with him to India an ambitious scheme for railway development in Burma, totalling altogether over 1,850 miles of line. There is already a main line from Bangkok, in Siam, to the Federated Malay States, giving direct connection with Penang and Singapore: and one of the proposals is to carry a line to the extreme south of Burma, one point of which will be only fifteen miles from the Siamese line, so that it may reasonably be expected that Siam will complete the connection. The first part of this important line has already been constructed, but its further extension involves difficulties in bridging mountain torrents and in clearing dense jungle, while the country through which it would pass is rugged and mountainous. It is also proposed to continue an existing line to the Chinese frontier, though there is no prospect of connection there with a Chinese line: its object is merely to improve the trans-frontier traffic in that direction. Railway connection between India and Burma, says the correspondent, still seems remote, though the scheme includes a line eastward from Akyab, on the Bay of Bengal, to link up with the main Burma system. If these ambitious schemes materialise—if sanctioned, most of the lines are to be begun next year—Burma will, within the next ten years, have a system of railway connection second to none in the East. All parts of the Province will be linked together by a network of lines, some of which will be extended to its Eastern and Southern frontiers, there to be connected with the railways of Siam and the Federated Malay States.

The first railway in Burma was opened in 1877, and the total mileage of the Province is now about 1,700, so that the proposed scheme, if sanctioned in its entirety, will more than double the existing mileage. The War brought into prominence the lack of roads and railways necessary for the trade in wolfram and timber, and considerable work was done, in the matter of roads, to meet these difficulties: and it may be hoped that the complementary railway construction, impossible at the time, is now in a fair way to be undertaken.

Alwar Disturbances.

The "extremist" Indian newspapers have lately been full of highly-coloured reports on disturbances that have occurred in Alwar State, in Rajputana. The State has now issued an authoritative account of the real facts, which shows that the trouble was brought about by methods already familiar in British India. Dissatisfaction appears to have been expressed at the terms of the latest land settlement, and professional agitators, from outside the State, were quick to seize the opportunity to make capital out of this feeling. Inflammatory meetings were held and a self-constituted body calling itself the Rajput Committee telegraphed a report of them to the State authorities, who deputed a commission to make inquiries on the spot. The agitators refused to appear before the Commission, and also refused an invitation to come to Alwar and state their case in person, but continued to hold meetings, to which cultivators were enjoined to come in large numbers and carrying arms, were threatened with caste excommunication and violence if they failed to attend, and were openly instructed that any action on the part of the State should be resisted by force of arms. On this, State officials, with a detachment of State troops, were sent to arrest the ringleaders, but were met by a large mob armed with guns, swords, and other weapons, who refused to listen to argument and declared that they were prepared to kill or be killed. Attempts were made to persuade them to disperse quietly, with the promise that any person who desired to represent a grievance would receive a sympathetic hearing if he was prepared to put it forward in a constitutional manner; but the only result was a threatening advance by the mob, some of whom fired their guns at the officials. There was then no alternative but for the State troops to fire, which they did, two of the malcontents being killed and four wounded, one fatally. Some huts also caught fire—this being falsely represented as having been done deliberately by the troops: who, in fact, rendered prompt help to the wounded, while compensation was paid to the villagers whose huts had been burnt. The Editor of a vernacular paper who visited the scene of the incident and published a grossly and maliciously false account of the facts, afterwards admitted that he had been wrongly informed and promised the State officials to contradict the allegations made in his paper. It is almost needless to add that he has not done so.

Sikh Shrines.

The Select Committee on the "Gurdwara" Bill has completed its sittings and agreement has been reached on all the main points. Minor differences that still remain to be settled will not, it is hoped, present serious difficulty when the Bill comes up for discussion in the Punjab Legislative Council; though the central "Akali"—hitherto irreconcileable—body seems disposed to insist on all the amendments proposed by it and to recede from its approval of the Bill unless these are all accepted.

One of the chief difficulties that the framers have had to face is that of the definition of a "Gurdwara," or Sikh shrine. Orthodox Sikhs acknowledge ten "Gurus," or saints: the first of whom, Guru Nanak, preached a reformed Hindu religion, purged of the superstition and grossness with which it had become overlaid. The next eight Gurus followed in Nanak's footsteps, and it was only the tenth, Guru Gobind Singh, who originated the Sikh brotherhood, all of whose members bear the affix Singh (lion) to their name, and of which the Akali Sikhs are the chief representatives. There are many other sects calling themselves Sikhs who do not accept the whole of the Akali creed: prominent among whom are the Udasi Sikhs, who do not take the title of Singh and from whom the majority of the "Mahants," or keepers of the shrines, have been drawn in the past. The shrines instituted by Guru Nanak and his first eight successors were shrines of the reformed Hindu faith that Nanak preached, in which Hindu and Sikh religious observances were carried on side by side: it is only the shrines instituted by Guru Gobind Singh that are solely Sikh to the exclusion of Hindu observances. The Udasis argue that they ought to be left in control of all shrines instituted by the first nine Gurus: while the Akalis argue that, on the constitution of the Sikh "nation" by Guru Gobind Singh, all the shrines instituted by his predecessors became exclusively Sikh and should therefore be all under the control of the Akali sect.

The Haj.

The news, that the first pilgrim steamer destined for Rabegh had been held up at Port Sudan owing to King Ali's blockade and bombardment of Rabegh, reached India in mail week: and, as was of course certain, Shaukat Ali and his Khilafat Committee have immediately thrown the blame on Government. Shaukat Ali inquires, "Where is the British mastery of the seas? What is the British Navy doing?" Other indignant supporters of Shaukat Ali call upon Government to "take effective steps against Amir Ali's obstacles": suggest that the detention of the pilgrims at Port Sudan was deliberately done, without any real cause, in order to show that Government's warning against the pilgrimage was justified and Shaukat Ali's confidence of Ibn Saud was not: or write, "Who is this Amir Ali? The nominee of the King's Government. What is the King's pledge to his people? Defender of Faith. What is the faith of the Hajis? To visit Mecca and Medina. Who obstructs the way? The King's nominee. Is the King's Government unable to ensure the safe landing of the Hajis at Rabegh? No responsible man will assert it." The Government is warned that "India is indignant" and that they are faced with "grave danger."

The Amir's Metaphor.

The Amir of Afghanistan, in a recent speech delivered to his troops after the successful suppression of the rebellion in the province of Khost, announced that the War Ministry would depute an officer to go to the villages and distribute medals, in order that solders might be held in reverence and esteem. "This," said the Amir, "I consider to be an excellent method, because there is a saymg in the Afghan language that the value of a carrot is not estimated so much by its food value as by the crackling that it makes in the mouth."

CURRENT TOPICS.

Secretary of State's Indian Speech.

Owing to the exigencies of printing, it is unfortunately impossible to notice, in the current issue, Lord Birkenhead's statement on Indian constitutional questions due to be delivered on Tuesday in the House of Lords.

The Bombay Cotton Industry.

A *Times* telegram says that Sir Basil Blackett, the Indian Finance Member, met the representatives of the Millowners' Association at Bombay on his way back to Simla from England, on July 2. The Association asked for Government assistance to tide over the present period of depression, suggesting the abolition of the excise duty. Sir Basil pointed out the world-wide existence of trade depression, from which India had not suffered more than other countries, and said that there were other causes, than those mentioned by the Association, tending to depression: for example, "the pernicious agency system of buying and selling materials." He, however, promised early discussion and consideration of the question of possible Government assistance to the industry.

D.U.K. Railway.

The Government of India have decided not to exercise their option, under the terms of the contract, to take over the Delhi-Umballa-Kalka Railway next year. Some surprise has been expressed at the Government having given notice of its intention six months before it was necessary to do so: and it is thought possible that this portends an attempt on the part of Government to come to some other arrangement with the company than that provided for by the terms of the contract: which would have entailed the payment by Government of over £400 for every £100 of ordinary stock. The price now stands at about 280; and, on the present dividend of 16 per cent. which, owing to a rebate of income-tax, is equivalent to 18 per cent., the investment now returns over 6 per cent. It is not unlikely that many people have bought the stock on the expectation of Government taking over the line on the contract terms: and a drop in the present price has resulted from the Government announcement.

Bakr-Id Celebrations.

The fears that have been exercising the authorities in India regarding the celebration of the Mohammedan festival of the Bakr-Id have happily been dispelled. Communal disturbances between Hindus and Mohammedans were expected in a number of places, and special precautions were taken to guard against them. These precautions have evidently been successful, for a telegram from India reports that the festival passed off quietly throughout Northern India. A riot occurred in the outskirts of Calcutta, but this was fortunately not serious, though 36 persons, mostly Mohammedans, are reported to have received injuries.

Passage Concessions for Indian Marine Officers.

The Secretary of State announces that the passage concessions which were recently introduced for officers of the Indian Military Service with effect from February 14, 1925, have now been extended to officers of the Royal Indian Marine. Detailed rules are being drawn up, but the provisional arrangements which have been approved are being communicated by the India Office to all officers concerned who are now in this country.

INDIAN EXCHANGE.

There was little variation last week in Rupee Exchange in the London market, except that rates showed no tendency to fall away. The holidays in Calcutta and Bombay, no doubt, affected the market inasmuch as business was compressed into a shorter week, and towards the end of the week much activity was shown in both spot and forward in India, operations having been put through in Calcutta for the end of the year up to 1/6¼ for telegraphic.

It is reported that Government came to the assistance of the market and bought a considerable amount from Banks on Saturday at 1/6⅛ and they were in the market again at the same rate on Monday last.

Exports from India must have been fairly brisk to have caused this demand for Exchange; but the rate here seems now inclined to become a little easier.

The outlook depends entirely upon the prospects of the monsoon, which so far seems to be taking its normal course.

Last week's Return of the Imperial Bank of India shows that the trade demand has again fallen off to a very considerable extent, so that a further drop in the Bank rate to 4 per cent. was not altogether unlooked for. The factors which conspire to bring the rate down may have been hastened by the imminence of the Government Conversion Scheme in connection with their outstanding Rupee loans.

The first jute forecast by the Government may be expected about the middle of this month, when it is usually issued, and it is to be hoped that the expectations of a much larger crop than usual will be justified.

July 6.

INDIANISATION OF THE ARMY.

(By Our Simla Correspondent).

Simla, June 17.

It stands to reason that the promise of the grant of self-government to India carries with it a promise to Indians of the opportunity of being trained to defend their country, not only as the rank and file, but also as the officers of a national army. The interpretation of this implied promise varies. At one end of the scale there are some Indians who appear to believe that such a national army can be formed almost at once by the filling of the commissioned ranks of the Indian Army from top to bottom with students from Indian universities, who will make efficient officers merely by reason of their education. At the other end are the military advisers of the Indian Government who counsel caution and a modest beginning. The setting aside of ten vacancies at Sandhurst for Indian cadets and the decision to Indianise eight Indian Army units as an experiment are the outward and visible sign of this modest beginning, but they are not sufficient for the Indian politicians who demand that the army shall keep pace with the civil services in the matter of Indianisation. Little heed they the fact that in the British Army a period of twenty years' service is rarely considered sufficient in peace time to fit an officer to become a really efficient commander of a regiment. Barely do they realise that in war time an inefficient officer may easily be the cause of the unnecessary loss of many lives. They desire to see the British officer giving place to the Indian with greater celerity, and in this desire they overlook almost to a man the real military needs of their country.

For a hundred and fifty years the Indian Army has been officered in the higher ranks by British officers, and it is through their impartiality and aloofness in questions of religion, caste and the like, which have riven the civil life of India, that this army has attained its present high standard of efficiency. Though it is a small army, it

Digitized by Google

is nevertheless only just sufficient together with the British garrison for the defence of India, but at the same time it is all that the Indian taxpayer will for some time to come be able to afford. If its British officers are removed too hastily, or if, when removed, they are replaced injudiciously by Indians who have been brought up in the controversial atmosphere of this country and are not imbued with the spirit of fair play which is the outstanding characteristic of the British officer, then there is a danger, nay a certainty ,that this antagonism of caste and creed, which to-day finds no place in the army, will disrupt its units and destroy its efficiency with disastrous results to the security of the country. This is one of the paramount reasons for training the Indian cadets who are to officer India's army of the future at Sandhurst, where, brought up in the same atmosphere as English boys, they can acquire that breadth of mind and sense of tolerance which alone can fit them for the task of commanding Indian troops with success. There is another reason too, why at present the training of Indian cadets at Sandhurst is insisted on. If an Indian is to hold the King's Commission and by virtue thereof to be in a position to exercise command over British troops, he must be trained in the same school as the officers to whom those troops are accustomed, or else he cannot hope to command their respect. Such training they can only obtain at Sandhurst.

But why not, argues the Indian politician, inaugurate a Sandhurst in India? Or, if that is not feasible at present, why not allot more vacancies to Indian cadets at the English Sandhurst? After all, ten vacancies a year is a very small number, and, if the Indian Army which has a cadre of officers totalling between three and four thousand, is ever to be completely Indianised, the process at this rate will take centuries. This is the most crucial point of all. Although ten places are allotted to Indian cadets at Sandhurst, it is a very difficult matter at present to fill up with suitable candidates even this small number. The number of applicants for them has never been great, and among those who do apply there are few who can pass both the educational and physical tests required for the Royal Military College. For the son of the educated Indian of to-day does not as a rule approach the necessary physical standard easily attained by the British boy of similiar age, although he may be well able to pass the required educational tests, and the sons of fighting classes, though their physique may be satisfactory enough, have rarely the necessary education to enable them to pass the entrance examination. Other difficulties present themselves in actual practice. Far too many of those Indian lads who have actually passed through Sandhurst have found the drudgery of a military life unpalatable, and have resigned their commissions before they have had time to benefit the Army. Again the fathers of many likely boys, particularly those who themselves made the army their career, cannot face the cost of the education necessary to enable their sons to obtain the King's Commission. The former category are of little use as recruits to the commissioned ranks, but the loss of the latter is a serious one which might be prevented if scholarships or cadetships were found to get them their initial training at a cost suitable to their parents' means. This, however, would prove an expensive matter for the Government.

There is every reason to suppose that the education at an Indian Sandhurst could be made cheaper for the parents than the present course at the Royal Military College, and this would enable a number of boys of the right type, whose fathers cannot afford the cost of the Sandhurst training, to enter the army. It would perhaps be possible as well to reduce the standards of education and physique at such institutions, and so admit further boys who are at present debarred from obtaining commissions. In this manner it might be possible to obtain the desired number of cadets to officer the Indian Army throughout within a comparatively short space of time. But in this manner, even if a Sandhurst in India could be made as efficient as the one in England, which is very doubtful, it is obvious that India would only obtain the second best and, seeing how limited is the amount which she can afford to pay for her defence, can she with her vast area and lengthy frontiers afford to have anything but the best in her small army? The truth is that the solution of the problem lies in the earlier education of the Indian boy. The sons of the educated classes must be trained from their earliest youth, so that their bodies are fit for a military life, and their minds and characters prepared to stand the downs as well as the ups of an army career, while those of the present fighting men must be educated mentally to an extent which will allow of their attaining the standard required of an officer in the higher ranks. Only when this process is well advanced will sufficient cadets be obtained who will satisfy the standards which India must demand of the future officers of her Army, and until then the speedy Indianisation of her military forces would be a dangerous experiment to attempt.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

THE PROBLEM OF INDIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—It is gratifying to most of us out here, who take an interest in Near East happenings, to note that you have at last recognised the very real link that the Near East forms between England and India. It is to be hoped that your growing attention to affairs Indian will be appreciated among the public at home—whose positive duty it is to recognise the acuteness of the problem that now lies with the Secretary of State and his colleagues at Whitehall and in Parliament. In this connection I draw your attention to an extract from a report given by the *Civil and Military Gazette* of Lahore, Punjab, of a recent Amritsar Municipal Board meeting There are many and divergent views regarding the problems of control in India, but of all of them two specially stand out:—the one represented, shall I say, by the recent exhortations of the Secretary of State who pointed to the opportunities offered to the youth of Great Britain by the I.C.S., and the other in the contention of those who state that we have commenced to "reform" India at the wrong end; that, in short, we have taken for granted the capacity of the Indian to legislate in the higher spheres before training him morally and mentally in the ethics of Municipal and District government.

Does not the action of the Amritsar Municipality justify one's asking the Secretary of State what is likely to happen in "the dry tree" (when British control still further decreases), if such things can happen to European public servants "in the green tree" (when we are said to be in control)? The other party, too, is surely nonplussed, for we have, in this by no means solitary case, an example of what Indian Municipal responsibility means.—I am, etc., "A Passenger."

Simla, June 18.

The first general sitting of the newly constituted Municipal Committee of Amritsar was held on Tuesday morning in the Town Hall A discussion raged on the question of granting leave to Mr. Taylor, Superintendent, head waterworks, who has attained the age of 65. He has served the Committee with distinction, as the members declared, during the past fourteen years without any leave. There was a storm of opposition to this "wastage of public money" and Sodhi Charan Singh, a new member dressed in Akali garments, and some of his colleagues declared that the officer was absolutely unfit and thus no extension in service should be granted to him. It was pointed out that leave had been due to him for two years under the rules and that he was entitled to six months' leave on full pay, but that it could not be sanctioned unless he was granted an extension in service which would expire in August next. While some members praised his work, others condemned him for his old age. Ultimately when the question was put to votes it was rejected by 14 to 11. Thus an officer was deprived of all privileges to which he had been legally entitled merely on account of the Committee's whims.

SOME FOOTNOTES TO THE HISTORY OF THE WAR IN ASIA.

By LEONARD STEIN.

II.
PALESTINE.

The selection of diplomatic correspondence from the Archives of the Russian Foreign Office, recently published by the Soviet Government, contains numerous allusions to Palestine.

The documents relative to the Sykes-Picot Agreement add little of material importance to what is already common knowledge, and need not here be reproduced. The earlier papers deal mainly with the French claim to Palestine, and illustrate the solicitude of the Russian Government for the interests of the Orthodox Church.

On 3/16 March, 1915, M. Sazonov telegraphed as follows to the Russian Ambassador in Paris:—

"N.119. G. H. Q. 3/16 March, 1915.

The French Ambassador arrived at G. H. Q. and communicated to me the contents of Delcassé's telegram, in which the consent of Russia is sought to the acquisition by France of Syria and Cilicia. On this occasion Paléologue explained that in his opinion the French Government meant the word Syria to cover also Palestine. Palestine, however, being not mentioned in the aforesaid telegram, it would be desirable to ascertain whether the extensive interpretation of the Ambassador really corresponds to the views of the French Government. This question appears to be essential, for while the Imperial Government is prepared amply to satisfy the wishes of France in regard to Syria proper and Cilicia, the question of the Holy Places will have to be reserved for more careful consideration.

Sazonov."

On 4/17 March, 1915, M. Izvolsky replied as follows:—

"N.140. 4/17 March, 1915.

Received your telegram, No. 119. Have discussed its contents with Delcassé, who is very satisfied with your reply with regard to Syria and Cilicia. As to Palestine, he will perhaps insist on possessing this or that place which is a part of it, but he fully agrees with you that the question of the Holy Places requires a special and more careful consideration."

The previous article in this series contains the text of M. Izvolsky's telegram of December 19, 1915/1 Jan. 1916, in which he reports M. Briand's assent to the proposed negotiations with Jemal Pasha,—

"provided that the rights of France to Syria with Cilicia and part of Palestine, granted to her by the Agreement concluded with us on the subject of Constantinople and the Straits, are quite definitely reserved."

On March 4/17 1916, in the course of negotiations leading up to the Sykes-Picot Agreement, M. Sazonov, summarising the Russian view, stated in a Note addressed to the British and French Ambassadors that,—

"As regards Palestine, the Russian Government will agree to any scheme guaranteeing to all Orthodox institutions existing in Palestine the free exercise of their cult, as well as the preservation of their former rights and privileges, and will put forward no objections in principle to the settlement of Jewish colonists in this country."

The reference at this stage to Jewish Colonisation is noteworthy.

Then follows a letter, dated March 26, 1916, from the French Ambassador to M. Sazonov:—

"In the course of the conversation with which you honoured me to-day, you were good enough to state, at my request, that 'should the Government of the Republic obtain the consent of the British Government to the inclusion of Palestine into French Syria, the Imperial Government would not object thereto.'

"Expressing to you my gratitude for the statement quoted, the significance of which will be fully appreciated by the Government of the Republic, I assure you, that, whatever the régime that will be applied with regard to Palestine, the reservations indicated in your aide-memoire of 4/17 March, 1916, concerning the Holy Places and privileges or religious rites, will be strictly observed."

In his reply, dated 15/28 March, M. Sazonov confirms the statement referred to by M. Paléologue, but adds:

"I nevertheless consider it my duty to add to it that it naturally does not refer to the Holy Places and territories where there are religious Orthodox institutions. Such cities and localities must receive an internal régime with the preservation of a free access to Mediterranean harbours.

For reasons not unknown to you, the Russian Government would not deem it possible to recognise here the exclusive sovereign rights of any single Power."

Mention has already been made of the reference to Jewish colonisation in Palestine in M. Sazonov's Note of March 17, 1916. This subject is more fully dealt with in the following memorandum, dated March 13, 1916, addressed by the British Embassy in Petrograd to the Russian Minister of Foreign Affairs:—

"A telegram has been received from Sir Edward Grey stating that the attention of His Majesty's Government had recently been drawn to the question of Jewish colonisation in Palestine.

"Although, as it is known, many Jews are indifferent to the idea of Zionism, a numerous and most influential section of Jewry in all countries would highly appreciate the proposal of an agreement concerning Palestine, which would fully satisfy Jewish aspirations.

"If the point of view set forth is correct, it will be clear that by means of utilising the Zionist idea important political results might be achieved. One of these would be the conversion to the side of the Allies of Jewish elements in the East, in the U.S.A., and other places, whose attitude to the cause of the Allies is, to a considerable extent, hostile.

"Mr. Lucien Wolf has defined Jewish aspirations in Palestine in the following manner:—

"'If, as a result of the War, Palestine should fall within the sphere of French and British interests, the French and British Governments will not fail to take into consideration the historic interests of Jewry in this country. Both Governments would assure to the Jewish population equal political rights with other inhabitants, religious and civil freedom, such municipal privileges in colonies and towns as would appear necessary, as well as reasonable facilities for colonisation and immigration.'

"Sir Edward Grey has no objection to the formula quoted above, but in reply he simply informed Mr. Wolf that he must discuss this question with the Allied Governments and that this matter will meet with a sympathetic attitude on the part of His Majesty's Government.

The only object of His Majesty's Government is to devise some such agreement, sufficiently attractive for the majority of Jews, as would facilitate the conclusion of a transaction securing Jewish support. Having this consideration in view, it appears to His Majesty's Government that if the scheme provided for enabling the Jews, when their colonists in Palestine are strong enough to be able to compete with the Arab population, to take in hand the administration of the internal affairs of this region (excluding Jerusalem and the Holy Places), then the agreement would have been (sic) much more attractive to the majority of Jews. His Majesty's Government would not wish to express a preference for this or some other solution of the question. It is, however, informed that an international protectorate would meet with opposition on the part of influential Jewish circles.

"Communicating all this telegraphically, Sir Edward Grey instructs Sir George Buchanan to solicit from the Russian Government a serious consideration of this

Digitized by Google

question, and to favour him at the earliest possible date with the communication of the Russian point of view.

13 March, 1916."

A year later the Zionist Movement is found engaging the active interest of the Russian Government.

RUSSIAN AMBASSADOR IN ROME TO MINISTER OF FOREIGN AFFAIRS.

"N.284 20 April/3 May 1917.

A representative of the Jewish Association, Sokolow, has arrived here in order to ascertain the attitude of the Italian Government towards Jewish aspirations, which have, according to what he says, met with the full sympathies of the British and French Governments. These aspirations amount to the recognition of the Jews as a Nationality in Palestine, their being granted an autonomy, not interfering with the political status of Palestine and of other nationalities, and permission for Jewish immigration. This question is known to the Provisional Government from Dr. Bazarov's report to the Minister-President, Prince Lvov. Please advise me as to our position in the matter. Greis."

RUSSIAN AMBASSADOR IN ROME TO MINISTER OF FOREIGN AFFAIRS.

"N.339 6/19 May 1917.

Reference my N.284. Sokolow was received by the Pope and the Prime Minister. He says that both at the Vatican and the Consulate sympathy was expressed with Jewish aspirations in Palestine. Greis."

This is followed by a telegram, dated 13/26 May 1917, in which the Russian Chargé d'Affaires in London supplies detailed information on the Zionist Movement to the Foreign Minister, M. Tereshtchenko.

In the course of his report, which is too long to quote in full, M. Nabokov remarks that:

"During the War the influence of the Zionists here has grown considerably. Besides the immigrants, they have been joined by such representatives of the high Jewish circles as Lord Rothschild, Robert Herbert Samuel, the Chief Rabbi of the Empire and others. English Press takes Zionism seriously and treats it as an essential factor in the Eastern question, which is subject to decision at the Peace Conference. Some organs have, from the very beginning of the War, been actually advocating an energetic campaign in Palestine, and the creation there of a separate Jewish State. The Zionists are in close touch with the British Government and have access to its highest members. The aim of this Movement is to get the Peace Conference to hand over the administration of Palestine to a Jewish Company, to be given a special Charter for the colonisation of the country, and the re-creation there of a Jewish National Centre. According to this programme, the Company should be organised on a democratic basis, representing as it were, the Parliament of the Jews of the whole world. The Zionists admit that the rights of the local population should be internationally guaranteed, and the Holy Places altogether internationalised. In case the Peace Conference finds it necessary simultaneously with the establishment of the Jewish Company to set up over Palestine a Protectorate of any one Great Power, Zionists here would decidedly express their preference for Britain."

After explaining that the Zionists are strongly opposed to a condominium in Palestine, M. Nabokov proceeds:

"In some quarters of English Jewry, an opposition to Zionism is noticeable. Judging, however, by the recent public utterances of these circles—*The Times* of May 24—this opposition is not concerned with the essential part of the question, declaring itself, as it does, in favour of the re-establishment of the Jewish Nationality in Palestine, but differing from the Zionists in the question of the Company, to which they apparently prefer a simple British or French annexation."

On 1/14 June 1917, the Russian Chargé d'Affairs in Paris reports to Petrograd as follows:—

"N.643. 1/14 June, 1917.

Received your telegram, N.2082.

Inquiries in accordance with the contents of this telegram were immediately made at the Foreign Ministry here, which, however, has not, so far, supplied the information asked for. Apparently, sympathies with the idea of establishing a Jewish State in Palestine have cooled down considerably. So far as the Embassy has been able to ascertain, the only practicable realisation of Zionism appears to be at present the activify of the Jewish Colonisation Association (Management in London, Branch in Paris). It has a capital of 300,000,000 francs, and is engaged in colonisation work in South America and Palestine, without aiming, however, at creating there a separate Jewish State.

Sebastopoulo."

One further document which calls for notice is a copy of the long instructions issued to M. Picot in Paris on April 2, 1917, on his departure for Palestine. The following passages may be quoted:—

"The obligation which is being laid on you is thus a quite definite one. On the one hand you will have to organise the Occupied Territories, assuring to France in all relations with the natives a status equal to that which Britain will occupy. On the other hand, while our troops join the British Army in an offensive against the Turks, you will have to use all means of propaganda among the Arabs, which you have at your disposal, to facilitate the advance of the Allied troops, creating menaces to the hostile army and thus undermining its morale.

"A fact obvious to all—the presence of our flag by the side of the British—will be a clear indication to all of the complete agreement between France and Britain.

"Therefore, wherever an occupation takes place owing to the action of one contingent or another, you will have to see that the national flags of both Governments are immediately hoisted. . . . You will endeavour as far as possible to assure the re-opening of our schools and hospitals, so that the first result for the population of the advance of our troops should be the resumption of France's charitable and educational activity, which has temporarily ceased on account of military operations."

At the same time, M. Picot was instructed to do his best to conciliate the Arab Moslems, and to take full advantage of this opportunity for France "to appear in their eyes in the role of Liberator." The instructions then proceed:

"The agreements recently signed indicate for you the general outline of the policy by which you must abide in your relations with the Arabs in other respects. What we want to do is to free a people, for long past enslaved by the Turks, granting it such privileges as it is entitled to. In contrast to the Constantinople rulers, who have persecuted the most famous among the Arabs and tried to banish their language even from the sacred books, our activity must aim at renewing the lustre of a civilisation which has not been lacking in grandeur. You will have to take account of these feelings in an appeal, which you will have to address to them. You will lay a special stress on the point that it is not a question of imposing foreign rulers upon them, but only of assisting them in the creation of national institutions, capable of assuring to them a proper system of government."

ANNUAL DINNER OF THE CENTRAL ASIAN SOCIETY.

Mr. L. S. Amery on Iraq.

The annual dinner of the Central Asian Society was held in the Edward VII. Rooms, Hotel Victoria, on June 30. Lord Peel, First Commissioner of Works, and President of the Society, presided; the Secretaries of State for India and for the Colonies were the principal guests, and the general company numbered more than two hundred. After the toast of the King-Emperor had been honoured, Lord Birkenhead proposed the toast of the Central Asian Society. He expressed the opinion that we are approaching a time when we shall have to re-examine the whole basis of the relationship of the East to the West. An obvious illustration of this need was the present condition of affairs in China, where he said the students, instead of imbibing the doctrines of Confucius, were throwing themselves into armed crusades against the foreign "devils." He drew attention to the consideration that throughout the Eastern world the principal enemies of the British nation were the student classes. Whether they took Egypt or India or China, it was always the students who were most certain that the British Empire was not only doomed but damned, and that they had been happily appointed to be the instruments of its immediate execution. Confessing his inability to explain this circumstance, he said that it might not be unrelated to such things as the name of the proprietor of some hairdresser's establishment in any large town in India being followed by the words, "Calcutta B.A., failed." Dealing with British responsibility for the welfare of India, Lord Birkenhead said that the situation might easily be rendered dangerous either by the eyes of blindness or the language of optimism. The fundamental fact of the Indian situation was that we went there centuries ago composing, if he might put the case paradoxically, by the sharp edge of the sword differences which would have submerged and destroyed the ancient civilisation of the sub-continent. We went there upon that basis and we hold our trust upon that charter still. It was true to say to-day in the year 1925 that, if we left India to-morrow, it would be submerged by the same anarchical and murderous disturbances as those which devastated it in the days when the names of Clive and Warren Hastings became illustrious. There was not in his judgment reason for supposing that any man entitled to speak as representing our trusteeship for India, whether belonging to the Labour Party, the Liberal Party, or the Conservative Party, would find himself in a position in which it would be possible for him to liquidate the obligations which were imposed upon us both by history and by honour. He knew in this connection appreciatively that Mr. Ramsay MacDonald, who was Prime Minister of this country last year, and was exposed to influences which neither he nor his colleague the Colonial Secretary had to meet, spoke plain and manful words which might have come from the lips of a Conservative Prime Minister. Mr. Ramsay MacDonald spoke of the irrational and dangerous claims which were made by many elements in Indian politics.

Viscount Peel made play of the fact that Mr. Amery was present in a three-fold capacity—as Secretary of State for the Colonies, as Secretary of State for the Dominions under the newly adopted division of functions, and as Minister for the Mandated Territories. He remarked that he did not know in which manifestation or incarnation (they were familiar with these matters in Asia) Mr. Amery would appear before them that evening.

The Secretary for the Colonies.

Mr. L. S. Amery said that if he went over all the ground suggested in the speech of their Chairman, they would have an all-night sitting. Lord Peel had spoken of the remarkable versatility of his colleague Lord Birkenhead: but he would rather speak about his modesty. He had said nothing about a certain expedition into the heart of Asia Minor which they took together nearly thirty years ago, or of the fortitude and the many sufferings they voluntarily endured until they emerged at Constantinople primed with an immense mass of information which Lord Birkenhead had not yet given to the world, but which he could produce in the form of a work of six or seven volumes in a very short time. He (Mr. Amery) would tell them of only one incident when they were benighted in the wilds of Southern Asia Minor and in their extremity at last discovered a hut occupied by some villainous-looking brigands. The only accommodation they could offer was on the floor of the hut, and, exhausted by their long journey, they sank into a deep sleep. But he was awakened soon after by the low-pitched conversation of their hosts sitting round the fire and discussing something which seemed to be of tremendous importance. He heard one of them say, "I think we had better kill the little one first." While anxiously fumbling for his revolver and indulging in indignant reflections on the unfairness of this preference, he gathered from further remarks that it was only a question as to which chicken was to be sacrificed for the breakfast of the visitors.

Since those adventurous days he had occasionally visited Eastern lands, and only the other day he was able to obtain a bird's eye glimpse of the Middle East. It was literally a bird's eye view, thanks to the help received from the Air Force. After a picturesque description of the varying phrases of life and scenery observable from the air during the journey, Mr. Amery said that he could do no more on that occasion than give them a few of the chief impressions which he derived from that short tour. One of the first was that of the wonderful efficiency of the Air Service and its value in the protection and control of a great remote and undeveloped country. When Mr. Churchill decided in 1921 to entrust the whole of the defence of Iraq to the Air Force and to make a vast reduction in the armed forces occupying that country, he was running a tremendous risk. At that time we were still at war with Turkey; we had to face the possibility not only of a Turkish invasion of the frontier, but also of attack all along our right flank, and a general rising behind us in a country which only a few months before had been in open rebellion and which, though reduced to peace, had never been disarmed. We were confronted with difficulty in coming to this decision, but even more difficult would it have been to withdraw, for that would at once have invited an advance of the Turkish forces and the Kurds of the frontier to insurrection. To stay where we were despite the difficulties and dangers was on the whole the safest course.

The result had been the efficient protection and peace of the whole of that vast country with the exception of perhaps a few inaccessible valleys in the highlands. The country was more completely at peace than it had ever been since the days of Haroun al Raschid. To-day as taxpayers we were reaping the fruits of that policy. In 1921 we were spending in Iraq nearly £21,000,000 a year for the upkeeping of a great force which included 33 battalions of infantry, 6 cavalry regiments, and 15 or 16 batteries of artillery. To-day we were spending less than £4,000,000 on 8 squadrons of the Air Force and 4 battalions of infantry, with a few local troops, and he hoped that even that force could be still further reduced when the frontier question had been finally settled by the League of Nations. We should soon be in a position in which Iraq would be able to find the cost of purely local defences, and any Imperial money spent in the country would be spent not so much on Iraq, but only in Iraq in connection with the general purposes of our Imperial Defence organisation. He did not think that any person who had not been in Iraq could understand what a splendid training ground it was for the Air Force. In his judgment, for all-round efficiency the Air Force in that country could not be equalled in the world.

A second thing that impressed him even more deeply than the work of the Air Force, was the splendid work done by the English in the years since the War in creating out of chaos such as the country had known for centuries the framework of a good administration. This had been accomplished not by the easy methods of direct authority, but by the method of enlisting the support and co-operation of the people of the country themselves. The principle on which we had worked ever since Mr. Churchill took over the affairs of the Middle East had been to encourage and co-operate with the national sentiment of the country. It had its own Arab Government with its

Digitized by Google

own King, its own Constitution, its own Administration, subject only in return for the support we had given to accepting a certain measure of advice and guidance from the British High Commissioner on matters vital to the welfare of the country, and to the help in the district local administration of a certain number of British advisers. That policy had been a real success. It had not been, as so many of them had feared, a mere pretence of responsible government, a mere facade from behind which British officials settled everything. It had been a real co-operation and partnership, to which the Arabs had contributed something of great value. At headquarters there were men with such profound knowledge of the Eastern mind as Sir Percy Cox, whom he was glad to see there that night—(cheers)—and Sir Henry Dobbs. They had succeeding in inspiring both King Faisal and his Ministers with complete confidence in the sincerity of the British Government in wishing to build up a healthy and prosperous Arab State. In the districts nothing struck him so much as the real spirit of comradeship between the District officers and the British officers who were appointed to assist and advise them. He noted with great pleasure that the British officers habitually bore testimony to the great sense, loyalty, and goodwill of their Iraq colleagues, and to the resulting smoothness of the working of the machinery of Government. This achievement was due to years of strenuous, patient, and sympathetic effort on the part of devoted Englishmen of whom very little had been heard in this country, and who had received even less recognition than attention, of whose work we could well be proud. The work was exactly of the same kind as that which was done in the early days in Egypt. He only wished that there was someone to-day with the power of expression and the gift of description which Lord Milner had as a young man to describe in a detailed volume the work of the Englishman in Iraq during and since the War.

Another impression he formed was that in Iraq, though the financial situation might be difficult, there was every reason to anticipate that the country, once the richest and most powerful in the world, could be brought back by its own Government and with the co-operation we could give to something of its past greatness. But there was one thing essential there, and that was to get rid of existing uncertainties. Any uncertainty as to the frontier should be removed by the decisions of the League of Nations. As regards any uncertainty that might seem to attach to future relations with this country, he had no doubt that we could before long arrive at a satisfactory permanent arrangement. We were in Iraq now not under mandate, but under a treaty of co-operation which was effected only for a short period of years because it would have been impossible for us three years ago to make sure of the co-operation to which he had referred. All he need say on the matter of a fresh agreement was that it must be on the basis of not requiring the people of the country to sacrifice their legitimate aspirations, nor requiring the people of this country to sacrifice hard-won revenue. He believed an arrangement could be made for a system of co-operation by which both Iraq and the British Empire would be gainers.

He would like to answer the question of those who asked what was the justification of this country in being there at all, and devoting itself to the hard toil of the work of reconstruction. We had more than one justification. He could say with perfect truth that he believed that before many years were past this country would see there, in actual commercial development, a very reasonable and indeed substantial return for what it had done for Iraq. He was convinced that the whole of the Middle East was about to go through a period of great development, and if this country had given a lead there and acquired a position in the trade of Iraq, it would gain not a little from the subsequent trade development of adjoining countries.

He could give another reason as a justification of our work in Iraq. This was from the point of view of the defensive communications of the British Empire both in future railway developments and still more in the development of air communication. There were very great advantages in having at so central a point for future world communications, as Iraq would be, a strong, prosperous, and friendly Government which looked to the British Empire as a protector and an ally. But he thought the main justification was even stronger than those to which he had alluded. We could not, either with decency or with honour, ever withdraw from a country which we had succoured in the War and liberated from the Turkish yoke. The obligation to remain was embodied in more than one definite pledge during the War, and was confirmed by humanity and our treaty obligations—obligations not suddenly and thoughtlessly undertaken. Our connection with the country, our special position in the Persian Gulf and Mesopotamia went back at least two centuries, and just as in India, as Lord Birkenhead had told them, we began two hundred years ago to bring peace and order out of chaos, and the responsibility thus incurred had been maintained, so we had similar obligations in respect to Iraq. What might be the ultimate result of that responsibility, what great advantages it might or might not bring, no one could say with certainty, but we could say and recognise that we should be false to our whole traditions if we threw up our hands and abandoned those who had placed their confidence in us.

Among those present were: Viscount Peel and the Hon. Doris Peel, the Earl and Countess of Birkenhead, Mr. and Mrs. L. S. Amery, Lord Lamington, Susan Countess of Malmesbury, Lord Raglan, Sir Maurice de Bunsen, the Hon. Evelyn and Mrs. Hubbard, Field-Marshal Sir Arthur Barrett, Sir Percy Cox, Sir Charles and Lady Yate, General Sir Alexander Coobe, V.C., and Lady Cobbe, General Sir Edmund and Lady Barrow, Admiral Sir Edmond Slade, Major-General Sir Neill and Lady Malcolm, Sir Michael and Lady O'Dwyer, Sir George Barnes, Sir Aurel Stein, Sir Hugh and Lady Barnes, Sir Edgar Bonham-Carter, Sir John Cadman, General Sir Raleigh and Lady Egerton, Sir George and Lady Forbes, Sir William Geary, Colonel Sir Wolseley and Lady Haig, Lady Joynson-Hicks, Lieut.-General Sir Aylmer and Lady Hunter-Weston, Colonel Sir Cecil and Lady Kaye, Sir Harry Lamb, Sir Edward Penton, Sir William Sheppard, Brig.-General Sir Percy Sykes, Miss Ella Sykes, and Colonel Sir William Willcox.

THE WEEK AT HOME.

London, Tuesday Morning.

The Mining Crisis.

It cannot be disguised that the possibility exists of a very serious crisis in the mining industry. The mine-owners have put forward certain suggestions in the interests, they say, of saving the industry, and the miners, moderates and extremists alike, have summarily rejected them. Since, if this crisis develops into a fight, it is the public which, through the Government, will have to resolve the matter, it may be worth while to examine these proposals of the mine-owners.

The position of British coal-mining, the owners begin, is uneconomic. At the present time no capital exists either for the sinking of new pits or for the development of old. The scheme, as it now obtains, of a minimum wage and of a seven-hour day, is a luxurious one. Obviously, there-

Digitized by Google

fore, a way out of this stagnation, which would imply the collapse of many other industries, must be found.

On broad theoretical grounds, there may be little amiss with the owners' position. But when they come to concrete suggestions, one is positively startled by their severity and cynicism. For what they propose is virtually that profits be the first charge on the industry, that the men be given smaller wages than they now receive, and that the chief reductions take place in the poorest districts. If the men choose by district agreement to attempt to preserve the minimum wage and the subsistence wage—well, there is 87 per cent. of the proceeds of the industry for them to do it with. But, whatever happens, thirteen per cent of the proceeds is to go to the owners. To take a concrete case of the effect of these proposals: if they had been applied in the Northumberland area for the quarter ending last April, the owners, instead of losing £136,605 would have made a profit of £170,637, and the miners would have lost £307,243.

It is difficult, indeed, to understand the spirit in which the owners have preferred these terms. Possibly the Mining Association wishes to bring the matter quickly to a head; possibly it wishes Government's intervention; possibly it is prepared, were the miners to renounce their seven-hour day, to show more reason on the basis of an eight-hour day. Of course, no one can say that the wages of some miners ought not to be reduced: at least there may be a case for their reduction. But to put it forward in this manner, at a time when the atmosphere is thick with talk of the "Truce of God" and of Mr. Baldwin's harmonious Co-operation between Capital and Labour, is a course which will certainly not prompt the public hastily to condemn the miners' rejection of these terms.

The Government and Criticism.

It must be admitted that this Government is singularly open to criticism, but also that it rides on with dignity under this criticism. The Prime Minister, unlike his immediate predecessor, is too broad-shouldered and human a man not to see that his larger hopes must from time to time cause irritation with that section of the community which believes in quick measures and remedies. As I have often said before, Mr. Baldwin is at his best when he is not discussing politics, for in defining these he is necessarily general and verbose. And it is largely because he seems to prefer exposition (and the subsequent shaping by humanity of circumstance) to definite Governmental action, that the more opportunist and impatient school of politicians, of whom Mr. Lloyd George used to dazzle most strongly, feels impelled to call his Administration "a Government of slosh." But what the cheapjacks call "slosh," the normal man calls "inactivity" or (if he be a good party man) "benevolent supervision." It is so easy to suppose that "security" is synonymous with "slumbering," and, in time, no doubt, this Government will sufficiently identify the two to ensure its downfall. But even then it will not be Mr. Lloyd George who will succeed.

The Oxford Chancellorship.

It probably is not possible for one who is of the other place, to understand the workings of the mind of Oxford, so that it remains only, and in a sense of respectful ignorance, to sympathise with those of her sons who have been denied by their more passionate and remoter brothers the presence of Lord Oxford as their Chancellor. It was in those last hectic days that so stirring a *caveat* went out against the ex-Prime Minister; and it must have been the warning against Lord Oxford that was uppermost in the minds of the votors as they recorded their suffrages for the successful candidate.

However, it is all their affair; and one must not suppose that the wickets of the Dark Blues will be any easier to capture because a Chancellor has been chosen for them more worthy than illustrious. The undergraduate, after all, is more often than not ignorant who the Chancellor of his University is.

Derangement in London Streets.

One does not know who the imp in authority is who so superbly synchronises the efforts of the workmen on the roads to prevent the traffic from running freely, but it is to his credit that all the fuss which has been made in the newspapers over him has not yet gone to his head: he still in perfect serenity pursues his chipped path of mis-rule. The latest instance of his genius is priceless. Last week Waterloo Bridge was re-opened to traffic. No sooner had this presumptuous step been taken than the Westminster City Council ordered their men to frustrate the petty plan by tearing up the road at the corner of the Strand and Wellington Street. The stratagem worked admirably. Double traffic was rendered impossible; the Bridge became a one-way highway; and the traffic from the south—the owners of which had so foolishly looked forward for many weeks for the official re-opening of the Bridge—was diverted, to be blocked at Blackfriars Bridge.

It is all so very simple, could people but realise it. The official departments which so order the derangement of things are really paid anti-Bolshevists, whose duty (to which they show unswerving loyalty) it is to show the incompetence, the slackness, the utter lack of co-ordination, and the indifference of municipal and State authorities.

France at Tennis.

Whatever may be said about the collective virtues of English men and women at Lawn Tennis, there is little question that at the present time France, from the point of view of individual players, has us beaten to a frazzle. In Mlle. Suzanne Lenglen and in M. Lacoste, who won their respective Single Championships at Wimbledon, they have geniuses far beyond anything that we can show, and in the case of Mlle. Lenglen, far beyond anything that the world can, or is likely to be able to, show. Lawn Tennis has become so much a social game that the comparative success of Miss Joan Fry raised very wide enthusiasm here, but, after all, the question remains: where are our young men champions? And in the sunless, airless, air of Wimbledon, the stifled echo came: Where? *Les neiges d'antan* are falling now on Continental and trans-Atlantic hills.

NOTES AND NEWS.

170, *Strand, London, W.C.2,*
Tuesday Morning,

Conditions in Greece.

It is too early to speak with any certainty, of course, but there now seem to be grounds for hoping that the latest change in the political life of Greece will not have the adverse consequences that at first seemed probable. After all, it is no slight thing that a revolutionary change of Government should have been accomplished without any disturbances, and the London market was prompt to interpret this fact as a bull point, the Greek Refugee Loan making a quick recovery in price. If the position remains as it is at present, it will perhaps not be long before confidence in Greece is restored, for her economic development since the War in the most disadvantageous circumstances has been very notable, and when the refugees have settled down and are really able to make their influence felt in the economic sphere the country should go rapidly ahead. In this connection it is interesting to note that Sir Arthur Salter speaking at the Congress of the International Chamber of Commerce at Brussels last week, gave a most encouraging report of the enterprise and industry of the new immigrants. "From every side," he declared, "came the evidence of competent observers that the refugees are rapidly and unmistakably 'making good.'" This only confirms the reports that have been forthcoming from other quarters, and it is to be hoped that it will be found possible to negotiate the further loan that is required to complete the settlement at an early date.

Lake Copais Company.

A very satisfactory report is forthcoming from the Lake Copais Company for the year ended December 31 last, the net profit in Greece being £31,900 as compared with £23,600 for the previous year. The area cultivated was 31,107 acres, an increase of 4,424 acres, and the area from which crops were harvested was 29,690 acres, an increase of 5,022 acres. During the current season the company has broken up and sown with oats about 4,375 acres of land with promising results. Progress is being made with the new drainge works, the excavating operations being facilitated by the employment of steam dragline excavators. The capital expenditure during the year amounted to £36,735 13s. 4d., the principal items being work upon the drainage scheme, the purchase and erection of buildings, including grain stores and hay barns, the addition of nine caterpillar tractors and accessories, and the installation of two new drainage pumps.

Egyptian Promotion Association.

The definite recognition accorded to the Egyptian Promotion Association by the Egyptian Government, which has decided to grant the Association an annual subsidy, is a timely acknowledgement of the excellent work done by the Association in keeping Egypt's claims as a tourist resort to the fore. The Association has been handicapped by limited resources, and the action of the Government will enable it to render more effective aid in securing for Egypt her quota of tourists. One might think that the endless charms of Egypt, with the delightful trips on the Nile, and the many unique objects of interest that are to be seen would ensure to the country a leading claim on the traveller's attentions. But it is not so, and as with a business so with a country, publicity brings success.

Egyptian Hotels.

At the general meeting of the Egyptian Hotels, Sir William B. Peat was able to give a highly satisfactory review of the company's position. The past year was very successful, though the profits were not quite up to the level of the previous year. The available balance was £54, 704, and the ordinary dividend has been maintained at 35 per cent., £8,870 being carried forward. The proposals for the amalgamation of the company and the Société Grands Hôtels d'Egypte fell through, but an alternative arrangement has been made by which the Egyptian Hotels acquired the lease for 25 years as from May 1 last, of the four hotels of the Société Grands Hôtels d'Egypte, and also the furniture and effects of these hotels.

British or American Films.

The news that the authorities are considering what steps can be taken to assist the British film industry is very welcome. On all sides there is a general recognition that something must be done if this country is to have any share in the industry which is not only important in itself, but has a wider bearing from the national and Imperial point of view. It has in short now become a question whether American views and ideals are to predominate, whether the world is to be Americanised in sentiment. If anyone thinks this is too strong a way to put it, let him or her go to the nearest cinema, and note the origin of the films that are shown. It will then be seen what an unimportant part the British film plays. The fact is, of course, that in the face of foreign competition the British film industry is totally unable to hold its ground even in this country, while competition abroad is almost out of the question. It is a ridiculous and humiliating position. Apart from the political aspect of this American penetration the economic aspect alone would demand that some measures should be taken to redress the balance in favour of the British industry. At this time of all times we are least in a position to spend huge

sums of money on foreign luxuries, but each year America draws from these shores a very large amount as a result of her domination in the industry. If ever there was a case for a substantial tax on imports surely it is here?

Ridiculous Films.

I have not dealt above with the actual subject matter of the average American film. It is difficult indeed to write calmly on this question. If one is to judge American films by those we see over here, then it would seem indeed that the film industry is at a low ebb. With the foolish presentation of scenes in America we are not concerned. If Americans choose to give the impression abroad that their country is peopled with the most curious inhabitants it is their business. But the enterprising American film makers are not content to confine their ingenuity to their own country. They also give "representations" of British scenes and British life of the most monstrously weird description, and while it may not matter so much in this country it cannot be a matter of indifference to us that these misrepresentations of British life are shown abroad, particularly in the Empire, where in some parts they may very easily give a quite erroneous view of conditions in this country, and of the general standard of conduct. It would not be impossible for the uneducated to gain the idea from the films that a large proportion of the inhabitants of this country are villains and an equally large proportion buffoons. It is the duty of the Government to see that this contingency is counteracted in the only possible way by the development of a strong British film industry which will give to the Empire and to foreign countries adequate representations of British ideals of life and conduct.

Commentator.

COMING NEAR EASTERN EXHIBITIONS.

A general and sample exhibition is to be held at Chisinau from August 15 to September 30. A special group is to be set apart for the exhibits of foreign industrials, and British firms having representatives in Roumania are invited to participate.

An International Fair is to be held under Government auspices at Salonika during October. A stand of four square metres may be rented for 1,200 drachmæ. Interested firms can obtain further information on application to the Department of Overseas Trade.

Parcels for India and Aden weighing up to 20 lb. will in future be accepted at Post Offices authorised to accept heavy parcels for abroad. The rate of postage will be 8s. 6d. Full particulars of the new service may be obtained at any Post Office.

COMMISSION FOR THE ASSESSMENT OF DAMAGE SUFFERED IN TURKEY.

BRITISH DELEGATION.

NOTICE.

British claimants are reminded that the last date for the acceptance of claims by this Commission is the 5th of August, 1925, and those who have not already notified their claims and received an acknowledgment should communicate at once with the British Delegation at 66, Rue Boissiere, Paris (XVI)

H. E. Garle,

June 30th, 1925 *British Delegate.*

COMMERCIAL CORRESPONDENCE.

THE PORT OF SALONIKA.

To the Editor of The Near East and India.

Sir,—Some of your readers might, I think, be grateful if Mr. Mahoney Shea-Lawler would amplify a little the argument contained in his letter of June 27.

He says therein that "Southern Serbia is the natural hinterland of Salonika," which is, of course, incontestable, but he passes at once from that to the assertion that, "the granting to Yugoslavia of her demands would materially increase the volume of British shipping trade in those parts."

So far as I know, the only Yugoslavian demand which Greece has refused to accept is the demand that the Serb Government should be granted control over the working of the short section of the railway between Ghevgheli and the sea. Now the control of a railway line, however short, in the territory of one independent state by the government of another presents certain obvious disadvantages for the former and it is not difficult to understand the reluctance of the Greeks to accept it in the case in point.

What therefore we should like to have explained is why the increase in the railway traffic, which Mr. Shea-Lawler says would follow on acceptance of the Serb demand, should not be equally well obtainable by means of an ordinary commercial convention reposing on a less abnormal basis. I am, Sir, yours etc., Harry H. Lamb.

52, Morpeth Mansions, S.W.1., July 6.

EGYPT PROMOTION ASSOCIATION.

The report of the General Committee of the Egypt Promotion Association states that it has now definitely secured the official recognition of the Egyptian Government. Last year the committee rightly took its share of the credit for the success of the preceding season, which had been a record one for Egypt, at any rate from the point of view of the actual number of tourists visiting the country. At the beginning of the last season, the prospects were such that it was confidently anticipated that all previous records would be broken. Unhappily, however, the political events of last November had the effect of deterring a large number of people from visiting Egypt, and in spite of the Committee's efforts to restore confidence in the country's conditions, numerous cancellations were received by the hotels. It is fortunate that the large cruises were not affected to the same extent and the large quota of visitors brought by the steamers compensated in a measure for the disastrous effects on the independent tourist traffic.

It is very gratifying to be able to record that the Egyptian Government has decided to grant the association an annual subsidy not exceeding £5,000. This action of the Government, endorsing, as it does its approval of the work of the association, should act as a powerful incentive to firms to give the association more whole-hearted support than in the past. The Government having undertaken to grant a sum equal to the total amount of members' subscriptions during the year, the necessity for such increased support is made manifest. Already, it is satisfactory to note, several of the bigger subscribers have agreed to increase their subscription by fifty per cent., and it is hoped that this example will be generally followed.

In anticipation of the much larger funds that will be at its disposal during the coming season the Committee have prepared an elaborate scheme of publicity which, it is hoped, will do much to counteract the intensive campaign annually undertaken by rival resorts. Advertising, by means of newspapers, booklets, luminous signs, etc., is to be undertaken not only in England and America, but in Germany, Holland, France, and the Riviera.

The Committee have to record the retirement from the position of Chairman of the Executive Committee of Mr. H. W. Tite. His resignation was necessitated by his departure from this country, but Mr. Tite has placed his services at the disposal of the Committee in London. At a meeting of the Executive Committee held on November 12, 1924, H. E. Abdul Hamid Pasha Soliman, the Vice-President of the Association, was unanimously elected Chairman of the Committee.

PROGRESS IN PALESTINE.

A Record of Achievement.

In the report of the High Commissioner on the administration of Palestine for 1920-25,* which has recently been issued and reference to which has already been made in these columns, we have a survey of the work that has been accomplished under Sir Herbert Samuel whose term of office has covered that period. Broadly speaking, the years have been a seed-time in which the ground has been prepared, so far as might be for the development that will, it is hoped, ultimately make the country not only a self-supporting but also a prosperous community. It is a process that was bound to take time, and if Sir Herbert Samuel has not been fated to see the work come to fruition he has at any rate the abiding satisfaction that during his period of office the advance that has been made leaves no shadow of doubt as to the future, given that all sections in Palestine work together for the common end—the economic progress of the country.

Finance is the keynote of a country's administration, and it is on the financial aspect that the British Mandate in Palestine has been subject to almost unceasing attacks until recently in a section of the Press. As it happens, on this question of finance the Palestine Administration now stands on firm ground. It was out of the question to expect immediate results considering the condition of the country when we assumed responsibility for its government. No one can make a Budget balance when it is a matter of restoring order out of chaos, of, in fact, building things up from the beginning. From the first it was obvious that time would be required before Palestine could justify the faith that was reposed in her, and it speaks volumes for the work that has been done that in what is relatively such a short space of time such excellent results have been achieved.

The report is most illuminating on the nature of the task that had to be undertaken. It was necessary to establish an efficient organisation for the collection of revenues and the control of expenditure, and to train the staffs. This has gradually been done, and the corruption among the officials, traditional in Turkish times, has "in the main" been stamped out. It has not been thought desirable to make rapid changes in the systems of administration, and the Turkish taxes have, in general, been continued, but those that were irritating or vexatious have been repealed or amended. The practice of farming out the collection of agricultural tithes has been abolished. As Palestine's revenue is mainly derived from customs and tithes on an *ad valorem* basis it follows that the financial situation has been greatly affected by the fluctuations in prices. The fall in agricultural prices in 1922 and 1923 meant a heavy loss of revenue, and because of this and of the economic depression there was a deficit for 1922-23 of £E.73,000, which, by improved administration coupled with the growth of prosperity in the country, was changed into a surplus for 1924-25 of approximately £E.263,000. This satisfactory development, which redounds to the credit of the authorities, has made it possible to reduce the rate of tithe from 12½ per cent. to 10 per cent.; in other words, to relieve the agriculturist of one-fifth of his taxation. Further it is interesting to note that the Budget has begun to provide for the annuity in respect of that part of the Ottoman Debt allocated to the country under the Treaty of Lausanne. The railway system showed a profit on 1924-25 of £E.168,000, on a revenue of £E.558,000. The Post Office also proved remunerative, the net profit on the year's working being £E.33,000. The main line of railway and certain other works were constructed by the British Army during the War. The report states that it will not be disputed that interest and sinking fund should be paid in respect of these works as soon as the financial situation of the country permits. Notable work has been done in the improvement and extension of roads. Since the establishment of the Civil Administration, 280 kilometres of main roads have been newly constructed or rebuilt, and 600 kilometres of secondary roads, serving 177 villages. The result has been a notable development of motor traffic. There was a single motor car in Palestine in 1914, while now there are more than 1,000, some of which ply for hire between the towns. This extension of the use of the motor indicates very plainly the great improvement that has taken place in conditions in Palestine, and suggests that British motor manufacturers would now do well to keep a very careful eye on this market, for as the country is gradually opened up and prosperity increases the tendency will be more and more to utilise the motor as a means of communication.

The most interesting section of the report is that devoted to future developments. Palestine's principal requirement at present, it is pointed out is the construction of a harbour. Consideration is now being given to plans for the construction of a deep water harbour at Haifa and for several minor works to improve the facilities at Jaffa. Railway improvements are also necessary. One project in view is to divert the main line from Haifa to the Syrian frontier, where it will join a line which the French authorities propose to construct from the frontier to Beyrout and onward to connect with the Turkish and European systems. Plans are also in train for the development of the country's natural resources. One scheme, reference to which was made in these columns last week, is for the exploitation of the minerals in the waters of the Dead Sea. Another plan is for the development of the use of the hot springs at Tiberias. Other schemes provide for the improvement of the water supplies and drainage systems of several of the towns, and for water conservation and irrigation in the agricultural districts. To enable the carrying out of various works of development and for the funding of the Administration's temporary borrowings a Government Loan is contemplated. It would have made its appearance long since but for unfavourable conditions, and no doubt its issue will not be very long delayed. So long as the country's revenue and expenditure failed to balance it was difficult to invite a further outlay of British capital, but the financial results of the past year have removed that obstacle to a Loan, and the way would now seem clear for a forward policy. In the record of the past five years Palestine may be said to have proved herself, and if the country lacks the natural resources of other regions such as oil and coal, it is now abundantly certain that she can attain a great measure of prosperity through the adequate development of agriculture and her growing industries.

* Report of the High Commissioner on the Administration of Palestine, 1920-1925. (H.M. Stationery Office, Adastral House, Kingsway. 2s. net.)

The annual exhibition of the discoveries by the British School of Archæology in Egypt is being held at University College, Gower Street (admission free, without ticket), from July 6 to 25 (hours ten-five) and on July 15 and 25 (6.30-8.30). This season the remains of the earliest known civilisation are shown; this is dated, by the levels of the Nile, to about 12,000 B.C.

THE FOREIGN TRADE OF YUGOSLAVIA.

In 1924 the commercial balance of Yugoslavia was as follows:—Imports, 578,588,568 gold dinars (Swiss francs); Exports, 671,271,951 gold dinars; excess of exports over imports, 92,683,383 gold dinars, or 16.02 per cent.

I. Exports and Imports during the first quarter in 1925.

During the first quarter of 1924 and 1925 Yugoslav exports and imports were as follows, value in gold dinars in brackets:—

	Imports in Tons.	Exports in Tons.
1924	219,680 (132.339.303 g.d.)	715,264 (142,359,551 g.d)
1925	305,763 (177.959 472 g.d.)	1,015.968 (189,816.626 g.d.)
Excess.	39.18% (33.46%)	42.18% (32 87%)

The chief articles of export during the first quarter were maize, wood (both timber and for fuel), eggs, raw copper, meat and meat products, flour and wheat; and then follow agricultural, forest and mining products, and, considerably less, industrial articles.

The chief countries to which export was directed were, with percentages:—Italy, 29.15; Austria, 18.59; Czecho-Slovakia, 11.01; Greece, 7.28; Germany, 6.23; Hungary, 6.09.

The chief articles of import and the countries from which they came, were as follows:—

	Dinars.	Percentage
Italy—	423,376.322	19.89
Cotton fabrics	150,749.090	
Cotton yarn	51,047,275	
Flour	34,512.592	
Woollen fabrics ...	27,434,015	
Czecho-Slovakia—	407,996,887	19.17
Cotton fabrics	172,940.026	
Woollen fabrics ...	48,428,880	
Hardware	13,654,964	
Sacks	11,621,665	
Austria—	380,823,033	17.89
Cotton fabrics	48,889.980	
Hardware ...	35,508 991	
Woollen fabrics ...	17,244.725	
Machinery and apparata	15,008,211	
England—	233,137.644	10.95
Raw Coffee	65,004,655	
Coal	48.936,936	
Cotton yarn	34.066,586	
Cotton fabrics	31,477,170	
Germany—	181,257,552	8.52
Machinery and apparatus	25,827,593	
Electro-technical articles	9,443,751	
Hardware...	19,355,893	
Gloves and hosiery ...	6,419,398	
Hungary—	86,512,234	4.07
Coal	10,759,632	
Electro-technical articles	9,443,751	
Sole Leather	4,717,335	
Copper sulphate ...	3,796,300	
United States America—	76,344,902	3 59
Petroleum	13,250,663	
Skins of domestic animals	9,007,360	
Lard	8,923,053	
Lubricating oil ...	4,322,557	
Roumania—	66,130,262	3,11
Petrol	22,372,722	
Rock Salt	15,874,250	
Benzine	9,130,665	
Wood for fuel	6,694,280	
Greece—	64,667,325	3.04
Cotton fabrics	8,417,230	
Vegetable oils	3,150,285	
Skins of domestic animals	3,097,400	
Woollen fabrics ...	2,217,510	
France—	57,847,342	2.72
Woollen fabrics ...	7,173,730	
Cotton Fabrics	4,914.790	
Skins of domestic animals	3,089,000	
Vegetable oils	2,560,850	

II. Exports during the first four months of 1925.

Exports from Yugoslavia during April, 1924 and 1925, were:—

	Tons	Gold dinars
April 1924 ...	60,920	51,099,012
April 1925	320,836	54,960,602
Excess in 1925 ...	59 916	3,861,590
	or	
	22.96%	7 55%

Exports during the period January to April of the same two years were as follows:—

	Tons	Gold dinars
Jan.—April 1924	976,184	193,958,563
Jan. - April 1925	1,337,804	244,777,228
Excess in 1925	361,620	50,818,665
	or	
	37 04%	26.20%

NEW COMPANY.

ESTATES AND AGENCY.

The Estates and Agency Company has been registered as a public company with a nominal capital of £500,000, in £1 shares, to acquire certain estates in India and Ceylon; to adopt agreements (1) with the Dunsinane Tea Company, (2) Seaforth Plantations, (3) Yemmegundi Estates Company, (4) J. B. Adkins and F. W. A. Pett, and (5) with J. B. Adkins, and to carry on the business of planters of tea, rubber, etc. The amount borrowed by the directors is not to exceed the nominal amount of the capital without the sanction of a general meeting. Registered office, 3, Throgmorton Avenue, E.C.

NEWS IN BRIEF.

Zekkiai Bey, the new Turkish Ambassador to Soviet Russia, has arrived in Moscow.

On July 1 a drifting mine, believed to be Turkish, exploded on a breakwater at Alexandria, near the site of ancient Pharos. No damage was done. This is the third such incident within the past year.

Precautions aginst cholera have been imposed on arrivals at Italian ports from the ports of the Presidencies of Madras and Bengal, and from Burma. Precautions against plague have been imposed on arrivals from the Island of Syra (Greek Archipelago).

The "Commonwealth of India" Bill, which Mrs. Besant is bringing to England, has been drafted by forty Indian politicians, including Mr. Srinivasa Sastri, Sir Tej Bahadur Sapru, Shaukat Ali, and Mrs. Besant, all of whom have signed a memorandum urging the necessity of its being passed.

The manœuvres in Northern India will be held towards the end of November between Rawalpindi and Nowshera. General Sir Claud Jacob will direct them, and the two commanders of the opposing sides will be Major-Generals Sir Louis Vaughan and R. A. Cassels, commanding respectively at Rawalpindi and Peshawar.

According to the Meshed correspondent of the *Pioneer*, the aeroplane which had been sent to chastise the raiding Turkomans along the Teheran road, reported that they had taken to the hills. After the return of the aeroplane the Turkomans re-emerged, and the Meshed-Teheran road is now closed to traffic in the affected areas.

After a six months' search in the desert near Heluan, the Cairo police have discovered what are believed to be the remains of an ex-police officer, who was stated by Shafik Mansur, one of the prisoners in the Sirdar trial, to have blown out his brains in the desert while practising bomb-throwing.

ENGINEERING TOPICS.

(By Our Engineering Representative.)

Cigarette Making Machinery.

I often wonder how many cigarette smokers give a thought to the mechanical marvels which render possible the mass production of their particular form of the "weed that soothes." Very few, I suppose. It is probably taken for granted that cigarettes simply appear in the shops by some providential dispensation and that they will always continue to be there, and so the subject is dismissed in the same way that one does not waste words about anything else which is quite definite. Actually, of course, but for the development of the machinery side of the tobacco trade the cigarette would be a comparatively rare luxury, and the practice of making one's own cigarettes would be universal instead of being the tedious function of the few. For the production of cigarettes by hand in adequate quantities to meet the requirements of even a small market would be quite impossible for any organisation. The smoker owes his supply of cigarettes, in fact, to the development of the marvellous machinery now in use, which not only enables the markets to be constantly supplied, but has made it possible for the cigarette to be sold at the relatively cheap price at which it can be obtained to-day.

It may be not without interest to give some account of the cigarette machinery that is in use to-day. Cigarette making by machinery commenced about fifty years ago at Lynchburg, Virginia, when the first machine which enabled the manufacture of cigarettes by machinery was introduced by the founders of what is now the United Cigarette Machine Co. The success of the innovation was so great that a number of cigarette machine factories were established by various concerns both in America and Europe. In the closing years of the last century the pioneer company was able to bring about an amalgamation with the leading rival concerns, and by the utilisation in its own models of the best features of the various designs it has been able to place on the market machines which have been unsurpassed in design and workmanship and have a remarkable output capacity consistent with the maintenance of the highest quality. At the present time, whether it be cigarette or tobacco machinery, the United Cigarette Machine Co. occupies the first place in the field.

In the half-century that has passed since the introduction of the first machine, developments have been little short of marvellous, and the machines in use to-day would compare very strangely with their ancestor. One of the best-known products of the firm is the Triumph Cigarette Machine, which embodies all the latest improvements. It has an automatic feed for automatically distributing the tobacco in a mechanical manner to ensure a regular feed. Other features are the printing apparatus for reproducing any trade mark on the cigarettes; the steel garniture or filler-forming device for making various shapes and sizes of cigarettes; the tipping device for automatically tipping the cigarettes with gold, silk, cork, or straw, with a special device for paraffin tipping; the latest type of cut off; the crimping device for making the crimped type of cigarettes; and finally an infinitely variable speed gear, enabling the production of cigarettes at rates between 300 and 800 per minute. It is quite an education to watch this machine in operation. With a quantity of loose tobacco placed in the hopper and with a roll of paper it will produce cigarettes perfectly made and printed with the name and device of the manufacturer at a simply incredible speed. And the wonder is not lessened by the number of processes that the tobacco undergoes before it emerges in the finished form.

In the hopper the tobacco is automatically spread at a uniform thickness, and is then carried along on an endless belt, to be placed on a travelling tape which takes it to the point at which it meets the paper. It is then transferred to the paper, and goes on through a former to emerge in the shape of a finished cigarette, the difference between it and the cigarettes we know being that it is then in the form of a long unbroken chain. On the way through the former the edge of the paper has deposited on it, by a small revolving wheel, a small line of gum or paste, and as it leaves the former the gummed edge is dried by an electric or gas heating device. The cigarette—if one may properly apply the word to the long chain—moves on to the cut off, which, as its name implies, cuts the cigarettes to the correct length, and they are then deposited on two moving bands. It should be added that the paper is printed with whatever devices are required before it comes into contact with the tobacco. Occasionally a few defective cigarettes come from the machine, and these are dealt with by the attendants who are collecting the produced cigarettes and are placed in an attachment of the machine. They fall into a chute, the paper is automatically stripped off the tobacco, and the tobacco is sifted into a special box and can be returned to the hopper for another journey. There are two or three other devices of this wonderful machine of which mention should be made. Before the tobacco reaches the paper it passes over powerful magnets, which extract any particles of metal that may be there, while powerful suction tubes draw off any dust there may be in the tobacco, while any superfluous gold dust on the paper is also dealt with by a suction tube.

The machine is operated by a mechanic, who sees to the running of the machine, and two girls who are known as "catchers," who take the finished cigarettes and stack them into trays, and also, as already indicated, look out for defective cigarettes, and in addition every now and then weigh the cigarettes to see that they are of the correct weight.

The products of the company are not confined to cigarette machines, but include cigarette and tobacco knife grinders, tobacco cutting machines, and box-making machines. Cigarette making machines are produced in a variety of types, ranging from the Piccolo Cigarette Machine, which can be worked either by power or hand and produces 180 cigarettes per minute, to the Triumph, which has been described in these notes.

Company Meetings.

EGYPTIAN HOTELS.

A Successful Year.

The twenty-eighth annual general meeting of the Egyptian Hotels, Ltd., was held on June 30 at the registered offices of the company, 11, Ironmonger Lane, E.C., Sir William B. Peat, C.V.O., presiding

The notice convening the meeting and the report of the auditors having been read,

The Chairman said: The director's report and accounts for the year to April 30, 1925, have been circulated, and I presume you will agree to take them as read.

It is with very great regret that the directors have to announce the death of Lord Claud Hamilton, which occurred in January of this year. He occupied the position of Chairman from the incorporation of the company, and his colleagues deeply depore his loss. His services were of great value to the company, and he never failed to give ample consideration and the benefit of his wise judgment to all its interests.

The company has again enjoyed a successful year, although the profits are not quite so good as those recorded for the year ended April 30, 1924. The Semiramis Hotel also shows satisfactory results, although not quite so good as the preceding year.

After providing for all expenses in London and Cairo, and taking into account interest and dividends received, we are left with a profit of £54,784, which, after providing £5,000 for depreciation, is sufficient to enable us to pay the preference dividend for the year; to maintain the ordinary dividend of 35 per cent.; and to carry forward into the next year's accounts a sum of £8,867 15s. 6d., against £8,583 10s. 8d. brought in from last year.

The balance-sheet does not show any important changes as compared with last year. The item freehold land and buildings remains unaltered. Plant, fixtures, and furniture show a small decrease after taking into account additions during the year and depreciation written off. Our interest in the Societe Suisse Egyptienne des Hotels is higher at £8,181, as compared with £4,466 last year.

The market value of our investments in Egyptian Government securities at the date of the balance-sheet was £49,875, against a book value of £39,001 6s. 1d., an appreciation of £10,773 13s. 11d., which is in the nature of an additional reserve.

The cash at bankers and in hand stands at £122,702 19s. 2d.—£1,620 higher than last year. Our special reserve account now stands at £50,000, as compared with £35,000 in last year's accounts, the difference being due to the £15,000 carried to reserve out of last year's profits.

Societe Grands Hotels d'Egypte.

You will observe that in the directors' report, reference is made to the negotiations with the Societe Grands Hotels d'Egypte. When our annual meeting was held on June 30 last the Chairman told you that discussions were still proceeding between the Boards of the two companies. Ultimately, the proposals for amalgamation fell through and an alternative scheme was put forward which has now been carried into effect and approved by general meetings of both companies held in Egypt in April, 1925. Under this arrangement, Egyptian Hotels, Ltd., acquires the lease for 25 years of the four hotels of the Societe Grands Hotels d'Egypte—namely, Hotel Continental Savoy, Mena House Hotel, Grand Hotel, Helouan, and Bath Establishment and Hotel Cassino, San Stefano—and also acquires the furniture and effects of those hotels.

These arrangements operate as from May 1 and are not reflected in the accounts for the past year. The local Board, who negotiated these arrangements, are of opinion that the results should prove advantageous to your company.

The Board in Egypt state that they regard the prospects of the current season as satisfactory, if, as they hope, conditions in Egypt remain normal. We desire to express our appreciation of the actions of the Board in Egypt and especially of the admirable organisation and administration of our managing director Mr. Charles Baehler, whom we have the pleasure to welcome here to-day.

I now beg to move: "That the directors' report and accounts for the year ended April 30, 1925, as submitted to the shareholders, be received and adopted," and I will ask Mr. Baehler to second it.

Mr. Charles Baehler (managing director) seconded the resolution, which was carried unanimously.

The payment of a dividend of 5 per cent. per annum on the preference shares for the year to April 30, 1925, was approved, as also was the payment of a dividend on the ordinary shares of 35 per cent. for the year.

The retiring director (Mr. H. M. Snow, M.V.O.) was re-elected, and the auditors (Messrs. Turquand Youngs and Co.) were re-appointed.

Mr. Baehler said that he would like to propose a vote of thanks to Sir William Peat for taking the chair, and would like to take the opportunity of thanking him for all he had done for the company since its foundation. He had devoted a great deal of time to its welfare, and it was to him that they owed to-day the prosperity of the company.

The vote was unanimously accorded, and the Chairman having briefly acknowledged the compliment, the proceedings terminated

IMPERIAL BANK OF PERSIA.

Sir Hugh Barnes's Speech.

The thirty-sixth ordinary general meeting of the members of the Imperial Bank of Persia was held on July 7 at the Cannon Street Hotel, E.C. Sir Hugh S. Barnes, K.C.S.I., K.C.V.O., the chairman, presided.

The Manager and Secretary (Mr. Sydney Rogers) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said:—As the report discussed at our last general meeting a year ago was for six months only, the accounts now before you should be compared with those dealt with at our meeting in December, 1923. You will probably have noticed already that the figures of the two years differ very little, and will have rightly concluded that so far as the bank is concerned the past year has been one of ordinary steady and progressive business, about which there is little to remark, except that our profits have been well maintained, that the financial position of the bank is strong, and that the final dividend we propose to pay makes the total dividend for the year the same as before, viz., 9s. per share, free of tax. This, I trust, you will consider satisfactory.

But while the business and progress of the bank have been comparatively uneventful, the year has been an interesting one for Persia, owing to the growing power and popularity of the Prime Minister and Commander-in-Chief of the Army, Reza Khan Pehlevi, by whom, in the absence of H.M. the Shah, the Government has been carried on with increased strength and efficiency. You will remember that this remarkable officer became Minister of War in the summer of 1921, when the Ghavam-us-Saltaneh was Prime Minister, and that in spite of several changes of government he continued to hold this post undisturbed until he was also appointed Prime Minister in October, 1923. Since that date he has remained in power and has governed the country with a firm hand. During the past twelve months his great achievement has been his successful assertion of the authority of the Central Government over such semi-autonomous chiefs as the Sheikh of Mohammerah, the Wali of Pusht-i-Kuh, and the Bakhtiari and Luristan Khans. At one time it looked as if there might be serious fighting in Arabistan—or Khuzistan, as it is called by the Persians—but the determination displayed by the Commander-in-Chief and his prompt movement of troops to the South enabled him to overcome all opposition with little more than a show of force. He himself proceeded to Mohammerah and Ahwaz to arrange matters with the Sheikh, and he took the opportunity to pay a visit to the oilfields and the Anglo-Persian

Oil Company's refinery at Abadan, by which we are told he was very favourably impressed. One result of his operations has been the opening up of the direct route from Ahwaz to Khurumabad through Luristan. This road has been closed for years as unsafe for traffic, but last April for the first time we were able to send a caravan of specie from Ahwaz to Sultanabad by this route without mishap.

We continue to receive satisfactory reports of the trade of the country which, year by year, shows expansion. The latest figures are imports Ts. 77,000,000, exports Ts. 100,000,000, just received by telegram, as against the figures I mentioned last year of Ts. 69,400,000 and Ts. 76,700,000 respectively.

I think we may accept this as mainly the result of the improvement that has taken place in the government of the country and the safer conditions that exist for carrying on trade. It is needless to remind you that good trade has an important relation to the well-being of Persia and incidentally of the bank and, given security and the continuance of sound financial administration, the volume of trade can hardly fail to increase.

There is one branch of the administration which has hitherto been rather neglected—better communications are sorely needed, so that quick transport facilities may be at the disposal not only of merchants and traders, but also of the Government, for the preservation of peace by the necessary movement of troops to outlying districts, and for the prevention of famine by timely transfer of foodstuffs from a district where crops are good to one where famine conditions prevail, which is almost impossible to accomplish with the slow methods of the caravan—mule or camel. In this respect the Prime Minister is credited with a far-seeing policy; being a military man, he recognises the value of a mobile army, and as a good administrator he knows well the needs of his country and the good temper engendered by a well-fed population.

The question of railway construction stands well in the foreground of his views, and I understand that all the recent plans for pushing on the various schemes suggested for linking up the capital with the sea emanate from him. The main roads have of late years received attention, and with the advent of the motor-car, they are serving their purpose fairly well, but there is still much room for improvement, and I understand the Government is contemplating special taxation for this purpose. Persia is to-day seeking eagerly for avenues by which to progress, and it is strange that the country should possess motors and aeroplanes before a mile of railway track has been built. This state of affairs we confidently hope may now be changed, as a serious beginning has been made to provide means for railway construction.

The resolution was carried unanimously.

COMPANY NOTES AND REPORTS.

P. AND O. BANKING CORPORATION.

The net profit for the year to March 31, 1925, was £136,214 18s. 10d. (last year, £136,382 6s. 5d.). The directors have placed to reserve £25,000 (last year £20,000) and have written £5,000 off premises account as against nil last year. They propose to pay a dividend of 5 per cent. as against 5½ per cent. last year, carrying forward £17,584 os. 3d. as against £17,567 9s. 11d. The increases to reserve and premises account have no doubt been made as a matter of prudence in view of the unsettled conditions prevailing in the Far East. The annual general meeting will be held at the company's head office on July 10 at 3 p.m.

LAKE COPAIS.

The report of the Lake Copais Company states that the net profit for 1924 was £31,909, compared with £23,606 in the previous year. The revenue was aproximately the same in drachmæ, but the exchange remained more stable. The expenses were exceptionally heavy, due, among other causes, to the amount of development work carried out during the year. The balance of profit after adding interest and other receipts in London, deducting London expenses, making provision for taxation and transferring £2,000 to capital reserve, is £25,291. Of this balance £11,127 falls to be appropriated to the credit of "A" debenture stockholders' interest account, and £14,164 to the credit of "B" debenture stockholders' interest account, which added to balance of £135 brought forward makes £14,299 at the credit of the latter account. The directors recommend the distribution from the "A" debenture account of interest at the rate of 5 per cent. per annum, less tax, on "A" debenture stock issued prior to July 31, 1924, in respect of the year 1924, and on the "A" debenture stock issued as at that date in respect of the half-year to December 31, 1924. The directors further recommend the distribution from "B" debenture account of interest at the rate of 6 per cent. per annum, less tax, on the "B" debenture stock in respect of 1924. The above interest will be payable in fully-paid Five per Cent. "A" debenture stock of the company at par. Meeting, Winchester House, July 16, 3 p.m.

DELHI, UMBALLA, KALKA RAILWAY.

The report for the year ended March 31 states that the net earnings were £188,308, gainst £172,282 for the previous year. The actual rates of exchange were above book rate, viz., 1s. 4d., and, after adding the gain in remittance, viz., £11,702, and making minor adjustments, the net earnings are £199,048. An ad interim dividend for the half-year ended September 20, 1924, of 6 per cent., plus a bonus of 1 per cent., on the ordinary stock, was paid on January 26. After bringing forward the balance from last year of £22,955, providing for corporation and income taxes, interest on debenture and preference stocks, the interim dividend and bonus, interest on capital advances, and making other adjustments, the amount to be dealt with is £98,537. The directors recommend a final dividend of £6 per cent., together with a bonus of 3 per cent., on the ordinary stock, subject to tax at 2s. 5d. in the £, absorbing £63,300, leaving £35,237 to be carried forward.

BENGAL-NAGPUR RAILWAY.

The actual returns for the year ended March 31, 1925, have not yet been received from India, but the company's share of the surplus profits Rs.5,77,220, has been paid to the company's credit by the Government of India. This has realised £43,215. An interim half-yearly dividend in respect of the year ended March 31, 1925, at the rate of 15s. per cent. has been declared, making, with the guaranteed interest, a distribution of £2 10s. per cent. The balance on the basis of existing market rates of the reserves (including accrued interest on investments) at the disposal of the company as on July 1 is estimated at £112,000 after providing for the present interim dividend.

TEA RESULTS.

The Craighead Tea Company has declared an interim dividend of 5 per cent. on the ordinary shares, less tax.

The Anglo-Ceylon and General Estates Company recommends a final dividend of 10 per cent., less tax, making 15 per cent.

The report of the Derby Tea Company for the year ended December 31 states that the crop for 1924 was 518,986 lb., a decrease of 183,714 lb. as compared with preceding year. The revenue account shows a profit of £13,581, plus £16,386 brought in and income from investments £1,200, making £31,167. The directors recommend a final dividend of 15 per cent., less tax, making 35 per cent. for the year, carrying forward £15,062.

The profit of the Majuli Tea Company for 1924 was £49,538, subject to corporation tax. The amount available is £56,257, less income-tax account balance written off £2,512, and transfer to reserve £5,000. A final dividend of 20 per cent., less tax, is proposed, making 40 per cent., leaving to be carried forward, subject to corporation tax, £9,156.

The profit of the Attaree Khat Tea Company for 1924 was £18,080, subject to corporation tax. The amount available is £21,436, less interest on debenture stock £424 and income-tax written off £850. A final dividend of 2½ per cent., less tax, is proposed, making 10 per cent., leaving to be carried forward, subject to corporation tax, £8,042.

The report of the Dekhari Tea Company for the year ended December 31 states that the outturn for the year was 335,746 lb. The crop account shows a profit of £38,118, plus £42,144, bought in and £2,120 transferred from the hail insurance fund, which together with the additional profit on the 1923 crop, £204, makes £82,586, less corporation profits tax for 1923 £1,457, Indian income-tax £1,351, an appropriation to share capital in terms of a resolution passed on December 10, 1924, by the issue of 10,000 shares of £1 each as fully paid, £10,000. The directors recommend a final dividend of 55 per cent., less tax, on 50,000 shares, making 65 per cent. for the year, carrying forward, subject to corporation profit tax, £37,277.

The net profit of the Rajmai Tea Company for the year ended December 31, 1924, was £45,914, plus £4,244 brought in and £728 interest, making £50,886. The directors recommend a final dividend of 30 per cent., less tax, making 75 per cent. for the year, carrying forward, subject to corporation profits tax, £8,744.

The report of the Doloo Tea Company for the year to December 31, 1924, states that the net profit was £30,799, plus £958 brought in. The directors recommend a final dividend of 17½ per cent., less tax, making 25 per cent. for the year.

The report of the Jalinga Tea Company for the year to December 31, 1924, states that the revenue account shows a net profit of £8,381, plus £115 brought in, and difference in estimate in respect of rubber sales, season 1923, £267. The directors recommend a final dividend of 17½ per cent., less tax, making 25 per cent. for the year.

The Upper Assam Tea Company proposes a final dividend of 20 per cent., less tax at 3s. 8d. in the £, making 30 per cent. for 1924.

The report of the Assam Company for the past year states that the quantity of tea invoiced for 1924 amounted to 9,420,613 lb. The net profit amounted to £300,072.

The Lethenty Tea Estates Association announces an interim dividend of 2½ per cent., less tax, payable July 17.

The outturn of the Chandpore Tea Company for 1924 amounted to 845,600 lb. compared with 781,280 lb. in 1923. The revenue was £54,600 and profit £19,092. After providing for debenture interest, corporation tax and Indian tax, transferring £2,000 to machinery renewals account, £5,000 to general reserve and £2,000 to income-tax reserve, a balance of £14,110 remains. The directors recommend a final dividend of 10 per cent. and a bonus of 5 per cent., both less tax, making 22½ per cent., carrying forward £6,910.

The outturn of the Rungajaun Tea Company for 1924 was 1,028,935 lb., against an estimate of 1,072,000 lb. The profit amounted to £27,332. Adding £14,017 brought forward and £558 interest on investments, and deducting £9,190 debenture interest, income-tax, Indian super-tax, corporation tax, duty, etc., on increase of capital and directors' commission, there is £32,717. The directors recommend a final ordinary dividend of 20 per cent., less tax, making 40 per cent., bonus of 5 per cent., less tax, transfer to reserve £5,000, carrying forward £13,785.

The outturn of the Upper Assam Tea Company for 1924 was 2,929,230 lb., compared with 2,873,681 lb. in 1923. The average price obtained was 1s. 7.58d. per pound, compared with 1s. 6.42d. The profit on the crop was £81,079. Adding sundry receipts and deducting interest, there remains £78.684. The sum of £15,000 has been transferred to taxation reserve. The directors recommend a final dividend of 20 per cent. (4s. per share), less tax at 3s. 8d., making 30 per cent., leaving £38,529. The current season's crop is estimated at 3,088,000 lb. of fine quality tea. The directors propose to offer to existing shareholders 13,649 unissued shares of £1 each at £2 per share, and shareholders will be entitled to take up their proportion of one share for every 14 shares (or part thereof) now held. A circular to this effect will accompany the dividend warrants to be issued on July 18, and the list of applications will remain open until July 27. The proceeds of the above issue will be applied entirely to repayment of the present outstanding debentures.

The outturn of the Limbuguri Tea Company for 1924 was 545,741 lb., against an estimate of 504,000 lb. The total cost per pound was 11.91d., against 10.89d. The profit was £18,895, plus interest, etc., and additional profit on unsold stock £1,156, making £20,051, less corporation tax (1923) £610. A final dividend of 20 per cent., less tax, is proposed, making 40 per cent., leaving to be carried forward £13,600, against £11,760 brought in. The estimate for current season is 516,000 lb. of tea.

EGYPTIAN AGRICULTURAL.

The report of the Egyptian Agricultural Company for the year to March 31, 1925, states that there has been no opportunity during the year of selling Dekerness estate en bloc, but about 140 feddans of uncultivated land in Hod I. have been sold for about £2,800. Sales amounting to £4,137 have been made of "assets in suspense." "Assets in suspense" previous to this sale stood in the books at £1,857 only, and the directors have accordingly transferred £5,000 from "realised deficit" account to "assets in suspense," leaving the balance of the latter at £2,719, which they believe to be a fair estimate of the amount which the remainder of these assets may be expected to realise. Meeting, 36, New Broad Street, E.C.2, July 14, noon.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

EGYPT.

Steam Engines.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection of two 80 B.H.P. semi-fixed superheated condensing steam engines at Beni Saleh, Beni Suef Province. August 18.

Pumps.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection of two belt-driven centrifugal turbine, or screw pumps at Beni Saleh, Beni Suef Province. August 18.

Steel Index Cabinets.—The Survey of Egypt (Ministry of Finance) invites tenders for the supply of 18 steel card index cabinets. September 8. (D.O.T.)

Paper and Boards.—The Egyptian Government Press invites tenders for the supply of smooth surface writing paper, calendar printings for common forms, buff tinted paper, newsprint, millboard (thickness 1.1 mm. and 2.2 mm.), strawboard (1.1 mm. and 2.2 mm). July 25. (D.O.T.)

Paper.—The Superintendent, Government Press, Bulaq, Cairo, invites tenders for the supply of paper, bristol board, and millboard. July 25.

Vessel for Coastguard Duties.—The Director-General, Coastguards and Fisheries Services, Alexandria, invites tenders for the construction of a sea-going vessel for Coastguard duties. August 1.

Nails and Shoes.—The War Department of the Egyptian Government invites tenders for shoes, horse and mule, about 5,400 pairs. Nails, horse and mule, about 150,000. July 21.

Timber, Etc.—The Director of Stores, Ministry of Education, Sharia Kasr el Aini, Cairo, invites tenders for the supply of raw materials, i.e., timber, leather, iron bars, paints, tools, etc., for the year 1925-26. August 1.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended July 4 states:—

The outstanding feature of the past week was the publication on Thursday morning of the American Agricultural Bureau's second report on the growing crop. This gave an estimated acreage of 46,348,000, a figure which compares with 42,641,000 acres last year. The condition of the crop on June 25 was given as 75.9 per cent., as against 76.6 per cent. on May 25. The prospective crop is estimated at 14,339,000 bales. This report was very much better than had been anticipated either in the United States or this country and resulted in a fairly sharp fall in prices. Reports will be issued from now onwards fortnightly, and doubtless there will be the fluctuations in price usual at this time of the year until the size of the crop is finally determined.

Yarn.—The result of the recent ballot of spinners of American cotton shows that over 84 per cent. voted in favour of continuing curtailment of production to the extent of 8¾ hours per week. Whilst there has been, perhaps, a slightly improved tone during the past week in this section, business is still only in a poor way, and it appears doubtful whether short time to the extent mentioned will be sufficient. As regards Egyptian spinnings there is nothing new to report and business continues to be very quiet.

Cloth.—Inquiry this week has been slightly larger and the tone is a little more cheerful. The fall in raw cotton prices above referred to enabled a number of transactions to be completed, but in view of the character of the Bureau Report it would not be surprising if buyers were to hold off as long as possible in anticipation of lower prices for raw cotton later. None of the foreign markets calls for special mention and, as usual at this time of the year, the Home Trade is stagnant.

Raw Cotton.—The Bureau Report has already been fully referred to. Saturday morning of last week brought a fairly substantial advance in prices; fluctuations on succeeding days were small, but the fall yesterday was nearly ½d. per lb., and on balance prices are therefore a little lower on the week. Closing quotations yesterday were as follows:—American Middling, 13.35; Egyptian Fully Good Fair, 31.85.

SUDAN LIGHT AND POWER.

A trust deed, dated June 20, 1925, to secure £400,000 debenture stock and all sums paid by the guarantors thereof, charged on the benefit of two agreements dated January 10, 1925, with Lieut.-Colonel Schuster, M.C., and moneys payable thereunder and the Sudan Light and Power Company's undertaking and property, present and future, including uncalled capital, has been registered. The trustees are the Debenture Corporation, 4, Walbrook, E.C., and the guarantors the Commissioners of H.M. Treasury.

The export of bones from Roumania is prohibited.

The traffic receipts of the Suez Canal from June 13 to June 19 amounted to 2,980,000 francs, against 2,950,000 francs for the corresponding period of last year.

The Export Credits Department of the Department of Overseas Trade has been transferred from its premises at 73, Basinghall Street, E.C.2, to 30-31, King Street, Cheapside, E.C.2. The telephone number and telegraphic address remain unchanged.

The area under cultivation in Roumania as at May 25 is stated to be as follows (in hectares):—Wheat 3,065,781, rye 233,318, barley 1,407,037, rape 50,845, oats 884,146, sugar beet 51,356, potatoes 113,446, maize 2,286,148, beans 90,437; total, 8,182,514. The sowings of maize, oats, and barley were not finished, so the large diminution in the area under cultivation may be considerably reduced, if not entirely made good.

SHIPPING INTELLIGENCE.

CUNARD LINE ANNIVERSARY.

Saturday was the 85th birthday of the Cunard Line. The Mauretania, which left Southampton for New York on that day, is a vivid reminder of the great development in Transatlantic travel since 1840. The line's first steamer, the Britannia, of 1,154 tons, with her speed of 8½ knots took 14½ days for the passage, while the Mauretania, the fastest liner in the world, can do practically three trips in this time.

On July 4, 1840, there were 63 Cunard passengers at sea, all in the Britannia; to-day there are over 10,000 in Cunard ships crossing either to or from America. The luxurious passenger accommodation of the modern Cunarder is emphasised when Charles Dickens' preposterous box in the Britannia is compared with the suite of rooms with its flower-decked verandah occupied by the Prince of Wales in the Berengaria last summer. In 1840 the total Cunard tonnage was 4,616, and to-day, with its associate lines, it has reached a total of over a million.

FORTHCOMING SAILINGS.

Anchor Line.—S.s. Tarantia for Bombay (Liverpool, July 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Matheran for Port Said, Colombo, Madras, and Calcutta (London, July 11).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (Birkenhead, July 15).

British India Line.—S.s. Malda for Colombo, Madras, and Calcutta (London, July 18); s.s. Nalgora for Bombay and Karachi (London, July 18).

Cunard Line.—S.s. Cypria for Oran, Algiers, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, August 1).

Ellerman "City" Line.—S.s. City of Canton for Calcutta (Birkenhead, July 20).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, July 11); m.v. Sycamore for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 8).

P. and O. Line.—S.s. Nore for Colombo, Madras, and Calcutta (London, July 9); s.s. Morea for Bombay (London, July 24).

Roumania's imports in 1924 amounted to 802,539 tons, of a value of 26,291,000,000 lei, while the exports totalled 4,725,560 tons valued at 27,829,000,000 lei, there being thus a balance in Roumania's favour of about 1,500 million lei.

The amalgamation of the Imperial Mineral Resources Bureau with the Imperial Institute took effect as from July 1, and it will now be known as the Mineral Resources Department of the Imperial Institute. All inquiries and correspondence in connection with the work of the Bureau should be addressed to the Imperial Institute (Mineral Resources Department), South Kensington, London, S.W.7.

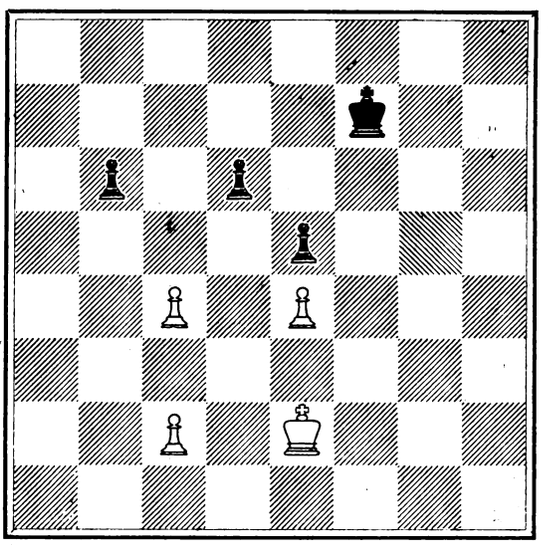
CHESS.

By "CARO-KANN."



END GAME NO. 5.

White to play.—What result?

Solution to end game No. 4:—1, K—Q3, K—K3; 2, K—B4, K—Q3; 3, K—Kt5, K—Q4; 4, KxP, P—B5; 5, PxP, KxP; 6, K—Kt6, K—Q4; 7, K—B7, K—K5; 8, K—Q6, K—B6; 9, K—K6, KxP; 10, KxP (B5), K—B6 draws. It is interesting to note that Black would win with the first move by 1. . . P—B5 (!); 2, PxP, K—K3; 3, K—Q3, K—Q3; 4, K—Q4, K—B3; 5, P—B5, P—R5; 6, K—B4, P—R6; 7, K—Kt3, KxP; 8, KxP, K—Q5 and wins. The problem illustrates most aptly the resources of end game play.

It is in the nature of a new departure in chess columns to give end games instead of problems, and I should be glad if my readers will let me know their views on the subject. Personally, I feel strongly that not nearly enough attention is paid to end-game play, the main reason being, I suppose that even in the principal tournaments in this country the majority of the encounters terminate in the middle game, and when they are prolonged the position is not infrequently one where the result is a foregone conclusion. But every now and again positions do occur that give scope for brilliant end-game play, and it is surprising to see sometimes how indifferently the players rise to the occasion. It results simply from lack of practice of that branch of the game, and I have often thought it would be a good idea if the leading clubs now and again arranged end-game tournaments. Positions would be prepared by a committee for each game in the tournament, and if the players were of varying strengths the positions could be adjusted accordingly. Of course, it would entail a good deal of work, but the results would be worth it, and I think it would prove a very popular innovation.

The East Indian Coal Company recommends a dividend of 10 per cent., less tax, for the half-year ended April 30, 1925.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended June 10 amounted to £E7,450, making the total from April 1 £E50,571.

The traffic receipts of the South Indian Railway Company for the week ended June 6 amounted to Rs.10,71,412, making the total from April 1 Rs.99,78,251.

Mr. Arthur Law Mathewson, formerly manager of the business of Harrisons and Crosfield, Ltd., in Sumatra, has been appointed a director of the company.

London Office: 39, LOMBARD STREET, E.C.

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen & Co., The North-West Tannery, The Empire Engineering Co., and the Nani Tal M.T. Co. These Firms, by pooling their resources and centralising control, form a corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots and all kinds of equipment of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LALIMLI PURE WOOL
Makers of the famous Lalimli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Greatcoat Cloths. All requirements in Wool at lowest prices consistent with quality.
CAWNPORE WOOLLEN MILLS CO., CAWNPORE

Kakomi Cawnpore
These Mills produce the well-known Kakomi Cotton Goods.
The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.
CAWNPORE COTTON MILLS CO., CAWNPORE.

COOPER, ALLEN AND COMPANY
This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.
Everything in Leather.
COOPER, ALLEN & CO. CAWNPORE

Dhariwal
Manufacturers of Dhariwal "Long Life Wool Wear."
Productions include:
Serges, Tweeds, Broadcloths, Blankets, Rugs, Worsteds, and Woollen goods of all kinds.
The New Egerton Woollen Mill Co. DHARIWAL

BUSINESS DIRECTORY.

ASHWELL & NESBIT, LTD.
Barkby Lane, Leicester.
Makers of the RUNWELL SEMI-ROTARY PUMP.

CANVAS, PAINTS,
MANILLA AND WIRE ROPES, Etc.
J. McMillan & Bolton, Ltd., Dashwood House, London, E.C.

EMERY STONE.
The Levant Mineral Co., Ltd. Largest Importors in United Kingdom.
Open to receive offers of high-class qualities.
Address: 29-30 Broad Street Avenue, London, E.C.2.

HYDRO-ELECTRIC INSTALLATIONS.
WATER TURBINES, PIPE LINES.
Sir W. G. ARMSTRONG, WHITWORTH & Co., Ltd.
Hydro-Electric Dept., 51 Victoria Street, London, S.W.1

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Conditions in Bulgaria.

In a letter published elsewhere in this issue the Chairman and Vice-Chairman of the Balkan Committee rightly emphasise the point repeatedly insisted upon in these columns, that the welfare of the Balkan Peninsula as a whole is bound up with the welfare of each individual State. It is for this reason that present conditions in Bulgaria have an interest both for her immediate neighbours and for Europe as a whole. Recent occurrences in the country, it would be thought, had served to bring home the significance of this fact to the exclusion of all other considerations; but there is a tendency in many quarters to devote attention to the question of responsibility in Bulgaria for existing conditions rather than to introduce remedial measures. Judged by Western standards, it is possible that the Tsankoff Government has laid undue stress on the virtue of the heavy hand, and in dealing with the antagonism of a few desperate characters has lost sight of the necessity for constructive legislation designed to promote the welfare of the country as a whole. Yet its argument that Bulgaria is the victim of circumstances imposed from without is endorsed by every shade of opinion in the country, and even if a new Government were to introduce conciliation as its internal policy, it would hold out no hopes of being able to bring about a radical improvement in Bulgaria's position until certain onerous burdens placed upon her had been removed. With the attempt to determine whether those burdens are as heavy as the Bulgarians make out we have no patience. In a matter of this nature relativity has little practical value. The danger from conditions as they are is a real one, and the one thing essential is to eliminate that danger. When a whole nation has worked itself into a certain attitude of mind, reasoning, however logical, has little effect on it. For the outside world there is only one of two courses to adopt: to remedy the conditions, if it stands to lose from things as they are, or to do nothing, if it can afford to be indifferent to the menace to peace.

The Root of the Trouble.

The Balkan Committee supports the view that responsibility for existing conditions in Bulgaria rests neither with the Government nor with its opponents, but that these conditions are primarily the outcome of the Treaty of Neuilly and the policy pursued by the Great Powers. It points out that nearly thirty per cent. of the Bulgarian Budget is spent in facing obligations directly derived from the Treaty. As a result, the cost of living is high, the salaries of all public officials are low, and discontent is thereby caused among those classes with fixed incomes among whom the Government would naturally look for support. Owing to the frontiers drawn at the Paris Conference refugees have poured into Bulgaria from Macedonia, Thrace and the Dobruja, and as the country has no means of satisfying them, they become the easy prey of disaffection. Other causes of discontent are the non-fulfilment of the promise of an economic outlet to the Aegean Sea and the failure on the part of the Allied Powers to secure protection of Bulgarian Minorities in neighbouring States. Each point urged is, no doubt, susceptible of argument tending to minimise its importance; but the cumulative effect remains, and it is certain that, until a genuine attempt has been made by the Powers to meet at least some of the Bulgarian contentions, there will be no permanent improvement in the situation in the Balkan Peninsula. There would seem to be a general consensus of opinion as to the accuracy of this point of view; but the months pass and nothing is done, for the reason, perhaps, that of the three Great Powers primarily concerned none wishes to incur the onus of admitting that a mistake was made in the Treaty of Neuilly. Here is a case for action on the part of the League of Nations, and it would be well if Belgium or a neutral State were

Digitized by Google

to assume responsibility for calling upon the League to introduce remedial measures into a situation that constitutes a danger to European peace.

The Point of View.

The need for generosity in international relations is now being urged in Yugoslavia as the result of requests from the British and American Governments that definite arrangements should be made for the payment of Yugoslav debts. It is pointed out that, if Yugoslavia is to meet her foreign indebtedness at this stage, she must subject herself to a serious increase in taxation, with the consequent set-back to her economic development. The critics of Yugoslavia will, no doubt, at this stage get busy with an analysis of the current Budget and prove to their own satisfaction that a country which can spend a fifth of its income on its Army and can maintain seventeen different Ministries is quite well able to begin to pay its War Debts, particularly as it is receiving a share of German reparations. Here again is a line of argument, as specious as that applied to the case of Bulgaria, which ought not to be adopted until its has been subjected to critical and dispassionate examination. In the present state of trade stagnation throughout the world it is most necessary that a country with the potentialities of Yugoslavia should be given every possible encouragement to develop her resources and to increase her production and purchasing power. To penalise her at this point might in the long run prove less remunerative to the Powers now suggesting that she should pay her debts than to allow her a longer period of grace. In this matter, however, we should prefer to see the Balkan States treated as a whole instead of as separate units. Quite apart from any bearing that this plea for generosity urged by Yugoslavia should have on her own attitude towards her neighbour Bulgaria, who is meeting her debts even to the extent of one third of her Budget total, an impartial investigation, which would enquire into the relation between Yugoslavia's military expenditure and existing conditions in South-Eastern Europe, might suggest arrangements conducive to the amelioration of those conditions and to the reduction in the outlay in the different States on military services.

The New Greek Government.

Any respite that the Government of General Pangalos may obtain from the prorogation of the Greek Chamber will be more than counterbalanced by the multiplicity of problems awaiting early solution. The sudden visit of the Prime Minister to Salonika has given rise to rumours of dissatisfaction among his military supporters; but even if the reports have some foundation in fact, there is no reason at present to doubt General Pangalos's ability to deal with his critics. In the domain of foreign affairs no time has been lost in an attempt to reassure Yugoslavia of the pacific intentions of the new Cabinet, soundings for a better understanding with Italy are being inaugurated, and the publication of a Law passed by the late Government authorising the drafting of provisional agreements with France and Great Britain regarding the payment of War Debts suggests that no effort will be spared to keep Greece's credit abroad on the highest plane possible. In the sphere of home politics there is to be a drastic attempt to lower the cost of living by a reduction of duties, involving a loss of revenue estimated at forty million drachmae. This salutary measure, however, may render the task of balancing revenue and expenditure the more difficult, if the expectations of those who wish to see Greek's military prestige restored are to be realised in full. For the rest, the very clear indications that General Pangalos "means business" appear to receive wide approval in democratic Greece.

Excavations in Athens.

Further information contained in a telegram from Athens to *The Times* regarding the concession for archæological excavation in the centre of the Greek capital points out that no actual concession has yet been granted. The American School of Archæology has, however, the assurance of the Greek Ministry of Education that, provided that it can raise the necessary capital, it will be accorded permission to carry out the excavations. It is to be hoped that the scheme rests on a surer foundation than the announcement once made by an enthusiast that he had arranged with the Greek Government of the day for the statue of Hermes, now at Olympia, to undertake a lecture tour in America as a means of raising revenue for Greece. Public opinion on that occasion refused to countenance the suggestion and the Government denied that any such undertaking had been given. In the present instance it is satisfactory to learn that, whatever demolition of existing houses may be entailed by the proposed excavations, there will be no wholesale transfer of a section of the inhabitants of Athens. The work, it is now pointed out, will be undertaken very gradually and should entail the expropriation of not more than four or five houses at a time. The first step in the interesting enterprise is that the necessary funds should be forthcoming from the United States, where the only estimate of expenditure so far given mentions a sum of two hundred thousand pounds for compensation and an annual outlay of £10,000. The publicity given to the proposal has had the satisfactory result of enabling attention to be called to the pride of the Greeks in their archæological treasures and the steady work in connection with them that has been in progress for many years at the expense of the Greek Exchequer.

"ARSHIN-MAL-ALAN."

The Persian musical comedy known as "The Street-Hawker" was given its first performance in London on July 9, at the Philharmonic Hall. It was played by the Persian Operatic Company under the patronage of Prince Nadir Mirza Arasteh, Persian Chargé d'Affaires, and of Lord Lamington, and was under the personal supervision of M. Harout, of the National Theatre L'Odéon.

This amusing piece was played and sung entirely in Persian, to the accompaniment of Persian music, the only compromise with Western ideas being the occasional use of the pianoforte. On the Persian fiddle, M. Abgar was indefatigable, and played with remarkable skill. It was the music as much as anything, perhaps, which brought so forcibly to the Occidental mind the repetitions and ornamentations of Persia, its melancholy and its jollity, its longings and its ardours.

In this story, which, beginning with the simple yet necessary devices of which four pairs of lovers make such excellent use, ends in a blissful consummation of four weddings, all the eight actors did worthy work. As those who employed the truest and most unaffected art one might pick out Mlle. Badal (an Armenian born in Teheran) as Gulchora, Mlle. George as Assia, Mlle. Ankine as Telli, and M. N. Gulessarian as Sultan Beg, and M. Kessedjian as Velli. But the whole of the acting was greatly to the liking of the audience, which, incidentally, appeared to include most of the Persian colony in London. Especially was the dancing (said, curiously enough, on the programme to be Caucasian) of Mlle. George and Mlle. Badal to the satisfaction of the audience.

A word should be said on the courage of the promoters of this play in putting on to an English stage something really and not pseudo-Oriental. The whole setting, from the costumes of the ladies to the rugs and carpets (the men, of course, on occasions adopted the frock coat) was correctly in keeping with the spirit of the comedy, and it is something that in a capital whose ideas of the East are largely and falsely derived from such monstrosities as "Chu Chin Chow" and "Cairo," the reception of "Arshin-Mal Alan" should have been so hearty.

The Palestine Pavilion was honoured by a visit of the Queen on July 3. Her Majesty was received by Major R. T. Little, the Commissioner, and Mr. A. Sefi, and was presented by Mrs. Little with a sheaf of lilies of the valley. In the course of the tour of the building the Queen had occasion to admire the interior decoration, and was much interested in the various exhibits, particularly in the model in mother-of-pearl of the Dome of the Rock and in the work of the Yemenite craftsman, from whom Her Majesty purchased a Menorah.

THURSDAY, JULY 16, 1925.

BRITAIN AND EASTERN CHRISTENDOM.

It is more, we suppose, as a recognition of the present political strength of Great Britain, and particularly of the position in the East that she has won as a result of the world-War, than as an acknowledgement of this country's religious situation between the Roman Catholic and the Orthodox Churches, that the visit of the Orthodox Patriarchs in celebration of the sixteen hundredth anniversary of the Council of Nicaea has been arranged. Certainly it is possible to extract from this visit, so well staged and worthily conducted, a religious significance; with that, however, we are not for the moment concerned. Equally it is possible to discover a political importance in the sojourning here of ecclesiastical prelates from lands directly or indirectly under Britain's charge. But the one large question which this visit provokes is: What is Great Britain's attitude towards the Christians of the East? Are these eminent holders of ancient offices here on a definite errand; or is their long journey prompted only by fraternal feelings for a Church whose Orders they are prepared to recognise? If their recollection of the unhappy lot of other Christians in the East—Armenians, Assyrians, Greeks, and so on—has not yet dimmed, they would, we think, be wise to confine their thoughts and words here to spiritual and social converse. There was a time, it must be admitted, during and after the War, when the Eastern Christians were promised (or at least were led to believe in) support from Great Britain against Moslem enemies mainly because they were Christians; but it was an exceedingly dangerous promise, the falsification of which caused the deaths of thousands and the misery of more, and one not likely to be repeated in our generation. In the long consideration, Great Britain's attitude towards that part of Christendom which lies in the East is exactly the same as towards Islam: it is governed by material, or, as one says, practical, reasons alone. Disraeli's dicta may not still be held in their entirety, but neither do Gladstone's convictions yet command general consent. If the Patriarchs are given any other interpretation of our official attitude than this, disillusionment will surely follow in Eastern Europe and Western Asia. Sympathy with Orthodox Christians this country may have in abundance, but, although sympathy may cause battles, it never yet won one. The more readily the student of Near Eastern history accords honour to those who are striving for the reunion of Christendom, the more suspiciously should he look on all purely political manifestations of this worthiest of objects.

Just as assessment is impossible of the water that has flowed down the Jordan and the Nile—to take the homes of the highest of the dignitaries now in England—since that Council was assembled which was to consider and to expose the heresy of Arianism, so no one can measure the gulf which divides a Christendom upon which could be imposed a universal and unescapable doctrine from one in which the three great rifts of Roman Catholic, Orthodox, and Protestant Churches obscure the vision of all but the dreamer who yet hopes for a re-domination of "the pale Galilaean." But there are, perhaps, one or two points of resemblance. And of these the capital, from our present point of view, is the fact that, broadly speaking, where Rome stood now Britain stands. Whether the Church in our modern times goes more or less in awe of the temporal power than it did in the earlier centuries of our era may be a matter of opinion, but perhaps it is not wholly an accident that, whereas the Patriarchs of Jerusalem and of Alexandria and the Archbishop of Transjordan (together, of course, with many other prelates of Eastern and South-Eastern Europe whose friendship with the Anglican Church dates from long before the War,) come with evident interest to see the people under whose political aegis they now are, the Patriarch from mandated Syria was unable to visit Great Britain. It is true, of course, that France's primary interest in Eastern Christendom is rather with the Roman Catholic communities there than with the Orthodox, but the impression that this commemoration of the Council of Nicaea is, not designed to show, indeed, but at least indicative of, Great Britain's dominant power in the East is difficult to avoid. All those hungry Russians, deprived for eight years now of spiritual sustenance by rulers who pride themselves upon their non-Christian race or beliefs, those menaced Assyrians, those wilted Armenians, those disappointed Greeks, look now more than, or as much as, ever to London for the restoration or the establishment of their desires. It is to be feared, however, that in this matter Whitehall is of more account than Canterbury, and that in a material age it is the temporal which is more visibly important than the spiritual power.

Is there, then, no hope that this unique visitation—no Patriarchs have ever before sojourned purposefully in our land—will produce something worthy of its cause? Have the glories of a united Christendom decayed, indeed, never to revive? Shall the Cross no more equally encompass a man's life, whether he be in Birmingham or Beyrout, Alexandria or Athens, Odessa or Otranto? We cannot tell. But at least it is folly to suppose that our present separations are inevitably permanent. The Church, after all, was united for at least as long as it has been divided into East and West; and Protestantism is, of course, of comparatively recent growth. In a certain section of the Anglican Church, moreover, signs are not wanting of a desire for a grand reunion—signs, which, by a happy coincidence, the Orthodox prelates were last week enabled to witness. At an anniversary meeting of the Anglo-Catholic Congress at the Albert Hall, these prelates could see the sincerity with which men in the Church of England are striving for a closer union, both with their own Church and with that of Rome. What they thought of such attempts at re-union we have no means of knowing: it is possible, of course, that new difficulties were thereby created. But in all probability their estimate of the Anglican Church has determined them still more vigorously to press for the union of our Church with that of the East. In all probability, too, it is wiser to take the smaller step before the greater. The greater question—the reunion of East and West—is perhaps outside the immediate subject of the Patriarch's visit to Great Britain, however much and continually it may exercise their minds. It is enough for the moment that they will return to their charges refreshed by the sympathy with which they have everywhere met and the knowledge which they have gained. One can but trust that in due time their visit will produce some result worthy of the ringing faith of Christendom, and that in this producing the British Empire may have played a mediatory and directing part. At no time in the history of the British Nation has there before been the privilege of a personal greeting from the Church of the Holy Sepulchre and the sacred spot of Calvary, and, surely, in the recollection thus prompted by the Patriarch of Jerusalem of that "lorn Syrian town," the impulses of Christians here will be quickened in a resolve to forget the accretions and the local differences that have, sometimes justifiably, sometimes accidentally, grown, in an attempt to concentrate upon the essential unity of the members of the Christian Faith.

The Near and Middle East*

From Our Own Correspondents.

GREECE.

Athens, July 8.

The Greeks and Constitutionalism.

Though the internal politics of other countries, and especially of small countries, are not always of interest to British readers, the present movement in Greece and the methods by which it is being carried out deserve description in some detail for the light they throw on the mentality of the Greek people. The unconstitutional character of these movements does not count for much with the Greeks; in fact, *praxikopemata*, as such, command their sympathy. Their attitude is that, though the late Government was doing well, and there was no necessity for a change, still—who knows?—the new Government may do better—or it may do worse. In this spirit they accept it, and will be quite ready for the next change—when it comes. The strongest point in favour of the new Director (he can hardly be called Prime Minister) is, that he is known to be a man of his word—a rare type here and not always appreciated— and that, as long as he is in power he will carry out his programme, of which the outlines are simple and straightforward. i.e., to create an efficient Army, to restore order and security (there has been a bad spell of brigandage lately in Greece), and to economise. The Greeks no doubt feel that, though the late Government was right to break off the negotiatrons with Yugoslavia, the Yugoslav demands would never have been made had Greece been more respected. The prospect of a strong Army, therefore, appeals to them, and that every effort will be made to create one is guaranteed by the appointment of General Neider, Greece's most brilliant staff-officer, as Under-Secretary for War. They also feel that their prestige has been injured by the frequent cases of brigandage that have occurred lately, e.g., that in Epirus, when an American student was killed, that in the Mt. Olympus district, when two prominent Athenians were attacked, and the recent *coup* of the Yayades brothers in Samos, all of which have so far gone unpunished. Here again, the name of Pangalos is a guarantee that this kind of thing, the recrudescence of which is always, in Greece, the mark of a Government internally weak, will be checked, for it was by him that the numerous brigands in the district round Salonika two years ago were brought to justice. Finally, he earned a great reputation, when Minister of Law and Order, for repressing profiteering and reducing prices. The measures which he then passed have already been revived, and economies in many directions have also been put into force. The effect of the Pangalos régime will, in fact, be that of a moral tonic, and, although Greece may for the moment suffer a loss of credit abroad, and her commercial interests may be temporarily retarded, internal government will be improved and she will gain in independence and self-respect. It is indisputable that under the revolutionary government of Plastiras, unrecognised as it was by the Great Powers, Greece enjoyed better internal government than ever before. These considerations explain why thoughtful Greeks do not regard the abrupt overthrow of the Michalokopoulos Government as an unmitigated disaster.

The Government's Access to Power.

The steps by which that overthrow was completed are instructive: the initial stages were described in my last letter. The day following the *coup d'état*, General Pangalos with the members of his Cabinet took the oath, and announced that he would meet the National Assembly on the following Tuesday. For the next few days there were much excitement and speculation on the attitude of the various party-leaders and their followers. However, the ground had been carefully prepared, for everything passed off according to plan, and the Government received the confidence of the Assembly by 185 votes to 14. The late Prime Minister and his party abstained from all part in the proceedings, and M. Sophoulis, another ex-Prime Minister, refused his support in a dignified speech. The others were more accommodating, and M. Papanastasiou, leader of the Republican Union and first Prime Minister of the Republic, and General Kondylis, leader of the Republican Nationalists and Minister under the late Government, agreed to sacrifice their principles and support the new régime. They were followed by the Independent Refugee Party and the Royalists. Most of the speakers paid a tribute to the honest motives of General Pangalos.

The Government's Plans.

The National Assembly will not meet again till November 1, when it will be dissolved, and resume the character of a Chamber of Deputies. It may, however, be prorogued for another three months.

In the interval, Government will be carried on by the Cabinet, assisted by Parliamentary Committees, of which one consisting of thirty members will immediately draw up and publish a Constitution Chart, which will have the force of law, but will be submitted to Parliament at the next session, during which General Elections will take place. On other questions the Government will pass decrees, after taking the advice of another Parliamentary Committee consisting of twenty-five members, appointed by the President of the Chamber. On questions affecting refugees the existing *ad hoc* Committee will advise the Government. In case of urgent necessity, e.g., questions affecting the Army or the Fleet, suppression of brigandage, and so on, the consent of all the members of the Cabinet is sufficient, without resort to the Parliamentary Committees.

Proportional Representation, approved in principle by the late Government, will become law, and be adopted at the General Elections.

It is clear from the above provision that a Directorate with a mildly constitutional flavour has been established.

Macedonia.

Meanwhile, the most urgent necessity for Greece is that the Vardar drainage scheme should not be interfered with, and of this, happily, there is no danger.

Some interesting statistics, lately published by M. Pallis, show that 88 per cent. of the population in Greek Macedonia and Western Thrace is now Greek. The significance of this is immense. With a population homogeneous and prosperous (as it will be when the drainage is completed)

in Macedonia, the position of Greece in the Balkans will be enormously strengthened.

Racing in Athens.

Political events have absorbed all other interests in Athens of late, and there is little else to report. The last races of the season took place on Sunday, June 28. These race-meetings have been an unqualified success.

ROUMANIA.

Bucharest, July 7.

The Opposition Leaders and the King.

At the end of the Parliamentary session the leaders of the Opposition obtained in turn of H.M. the King private audiences, which have been the subject of much discussion in the Opposition Press. The Opposition leaders had a double object in view in taking this step. They wished on the one hand to lay before the King their views on the present situation in the country, which in their opinion is critical, and on the other to throw light on the question of the succession to the Government. The views they wished to set forth, the merits of which need not be discussed here, were the following:—

After three and a half years of Liberal Government, they maintained, the economic situation appeared to have gone from bad to worse; successive moderate or bad harvests, under various export régimes all based upon too heavy taxation, had tended to discourage agricultural production, and the total sowings had actually declined. As regards petroleum, they said, that in spite of brilliant successes from the point of view of production, the companies were handicapped on the one hand by exorbitant taxation imposed by both State and Communes under various headings amounting, they understood, to as much as 80 per cent. of the gross profits, and on the other by the restrictive Government measures which have made it impossible or at least an exceedingly delicate matter to obtain the necessary foreign capital for the prospecting and development even of the most promising areas. This young industry they represented as struggling against the money crisis, reducing production, finding selling markets more and more precariously, and capitalists more and more reluctant to risk their money under the prevailing conditions, and finally the value of the currency was daily depreciating and the demand declining.

From the Constitutional point of view, the Parliament, they averred, was elected by irregular methods, and the National Assembly irregularly constituted; legislation, a complex of laws calculated to benefit one party only, a parliamentary order having suppressed debates.

From the point of view of internal administration they maintained that the police régime was derogatory to private interests and personal liberty, members of the Opposition having been molested and even struck (i.e. the Halippa case.) The Opposition leaders laid these grievances before the King. They appear to have gone to these audiences with their minds very decidedly made up to alter the state of affairs in their own favour, and even in a menacing mood. The King, however, received them very cordially and with careful diplomacy succeeded in satisfying them without committing himself on fundamentals. The impression left by the above interviews is that the Liberal Government will probably come to an end before long, the Opposition leaders apparently hoping that the change of Government will come before the vote is taken on the next Budget. The Liberals, however have circulated the report that they will call an extraordinary session for the customary date for the purpose of passing several measures not yet dealt with, in order to complete definitely their legislative programme, and possibly to pass the 1926 Budget.

But the Opposition will have none of this and will use all the means in its power, to take the vote on the Budget into their own hands. Should they come into power, they will adopt the system of budgetary 12ths according to the French precedent, and during the financial year 1925-26 a Budget will be presented conforming with the financial and economic programme of the party actually in power.

The Next Government.

It is very difficult to hazard any prognostication as to the Government which is likely to suceed to power. It would appear, however, that the new National Party stands the best chance. Should it come into power in the autumn, it is generally believed that it will give several portfolios to the Tsaranists.

The Kishineff Election.

At Kishineff last Sunday a by-election took place for a seat in the Senate, which had become vacant through the death of M. Sanielevici. Two candidates came forward, a Tsaranist (Peasant Party) and a member of General Averescu's Party, who was backed by the Liberal Government with all its administrative machinery. Nevertheless the Tsaranist was elected by a good majority of votes, i.e., 12,000 against 6,000. This by-election would appear to be significant.

The Navigability of the Danube.

Maritime agents and exporters are complaining bitterly of the inability of the European Commission of the Danube to maintain a sufficient depth of water in the Sulina mouth. Although the Commission, they say, is strict in the collection of the gold taxes levied on the tonnage entering the river it appears to be unable to maintain a constant depth in the navigable channel. According to recent soundings this depth was stated to be less than 19 ft., so that certain ships were unable to enter without unloading or trans-shipping, for which no provision was made in their documents. This deplorable situation is stated by interested parties, and notably by the Galatz Chamber of Commerce, to be entirely due to the incapacity of the European Commission, and protestations have recently been growing louder owing to the approach of the busy shipping season. A complaint has even been addressed to Major Somerweld of the League of Nations.

It will be remembered that the European Commission includes Roumania as a riverain State, and representatives of three of the other States through whose territories the river flows. The suppression of the European Commission has long been urged by the Roumanians who consider that its attributes should either be transferred to them, as the people directly interested in free traffic at the river mouths, or to the International Danube Commission, Roumania being asked to undertake the upkeep of the channels and mouths. This important question ought soon to be settled on account of the very considerable interests at stake and the damage involved to Roumania in particular.

International Chemistry Congress.

On June 22, the Sixth International Chemistry Congress was opened at Bucharest. The opening ceremony

ROYAL EXCHANGE ASSURANCE
Incorporated A.D. 1720.

FIRE, LIFE, SEA, ACCIDENT, MOTOR CAR, PLATE GLASS, ANNUITIES, BURGLARY, FIDELITY, GUARANTEES, EMPLOYERS' LIABILITY, THIRD PARTY, LIFT, BOILER, MACHINERY, TRUSTEE AND EXECUTOR.

was held under the Chairmanship of H.R.H. Prince Carol and over 150 foreign delegates were present, including some of the most illustrious representatives of the science of chemistry.

The work of the Congress was pleasantly varied by banquets in the various scientific institutions, and after the conference the delegates were taken to visit various factories and the oilfields.

CYPRUS.

Nicosia, June 30.

Ex-King Hussein in Cyprus.

The ex-King of the Hejaz, with his harem, including two daughters, and General Jemil Pasha—altogether over 30 persons—arrived in Cyprus on June 22, and have gone temporarily to the "Palace Hotel" at Nicosia. This must not be imagined to resemble in luxury similarly named hotels in some other cities. He has received visitors of both the Turkish, Greek, and other communities, amongst others the proprietor and Editor of the *Phoné tes Kyprou*, which publishes an acount of the interview. The first impression of King Hussein respecting the climate of Nicosia is a favourable one. His long residence in Mecca, together with the troubles and worries of late years, has injured his health, but he hopes that a sojourn in the island will soon restore him.

Replying to a question regarding the Caliphate, he said that, after the late Turkish crises, various competent chiefs in Arabia, Syria, and Palestine proclaimed him as Caliph. Personally he was disinclined to assume the title, but finally he yielded to strong persuasion on the part of the chiefs and others, and consented. Consequently he could not at present do otherwise than consider himself as Caliph. The ex-King said that he was glad to be in a country which contained the tomb of a saintly person of the Mussulman faith. (This is the Um Haram, wife of a general of the Caliph Othman, who broke her neck from a fall from a mule near Larnaca, and was buried there. There are other Moslem tombs and mosques, much revered, at Nicosia.)

The Question of Tithe.

The plight of the agricultural classes, who are to a large extent in straits, again brings the problem of relief into discussion. Many properties of debtors are sold at much less than their fair value. It is fortunate that the mines—asbestos and copper—of Mt. Troödos, and Skouriatissa, in the north of the island, give employment to some thousands of villagers, but there is a good deal of unemployment, and no dole, in Cyprus! Emigration now offers comparatively few attractions, as contrasted with the past. Hopes are again expressed that means may be devised for bringing about abrogation of the system of tithes on cereal produce. The British Government very soon set itself to rectify the abuses of the old system, which for countless centuries had been an iniquitous cause of abuses and oppression. The farming out of tithes to the highest, or at any rate to successful, bidders, was abolished, and the assessment and collection of tithes were entrusted to separate and distinct bodies of officials. Tithe is taken by the Government, and stored and sold by them under proper supervision. Nevertheless, the peasantry have come to regard the system as a grievance, and unsuited to modern times. The chief complaint is that there is often too much delay on the part of the assessing official (too few subordinate employés being taken on, with a view to economy), and that the grain therefore remains too long on the threshing floors, exposed to vicissitudes of climate. The question of abolishing tithes has often been on the *tapis*, but so far no satisfactory solution has offered itself of substituting other taxes for this important item of revenue. It is hoped that the subject will come up again for serious consideration, and that it may perhaps be discussed by H.E. the Governor —now on his way to England—in London.

The Elections.

The elections to the new Legislative Council, which is to have an increase of six members, will probably not take place until October. Although active canvassing is not yet taking place, several Greeks of influence are touring some of the districts, enlightening villagers as to the outlook and their duties. When the elections take place, there should be some keen competition. Leading Greeks are not likely to repeat the folly of abstention from the polls. Greek papers continue to make severe remarks on the present members, whom they regard as incompetent to represent island interests, stigmatizing the present Council as a sham.

General News.

Measures are being taken for a stricter observance of the law as to the covering of wells, reservoirs, etc., with a view to checking an increase of malarial complaints.

An Imperial Service Medal has been bestowed by H. M. the King on M. Passardes, Overseer of the Government Printing Press, after 44 years of service.

THE JAGHABUB OASIS.

[We publish here extracts from a paper written by Captain Dixon-Johnson and read before the Near and Middle East Association at a meeting on "Egypt," held at the Hyde Park Hotel, on July 3. After sketching the history of the Senussi and of Jaghabub until recent times, Captain Dixon-Johnson proceeded as follows.—ED.]

Up till now no agreement has been arrived at between Italy and Egypt regarding Jaghabub. The only progress that has been made is a very recent arrangement between Italy and Egypt to send a joint commission to examine the ground and report. It is very doubtful whether this will lead to any practical result in view of the determination of Egypt to retain and Italy to obtain this coveted Oasis.

The reason why Italy is said to be so particularly desirous of obtaining possession of Jaghabub is because the Fascista Government, having in 1923 denounced the Regima Convention with Sayed Idris, is anxious to block the Senussi caravan connections with Egypt and the inflow of foodstuffs into Cyrenaica.

Egypt's reply to this is: Abandon your claim: we will garrison the oasis ourselves and will stop the traffic to which you object. We shall be glad to do this because we shall then be in a position to stop smuggling into Egypt. As all caravans entering Egypt, except through Sollum, must stop for water at Jaghabub, this is the ideal place to collect the customs; if we do not carry out our undertaking you will then be justified in raising the question again.

THE ESSENCE OF INSURANCE IS SECURITY.

Digitized by Google

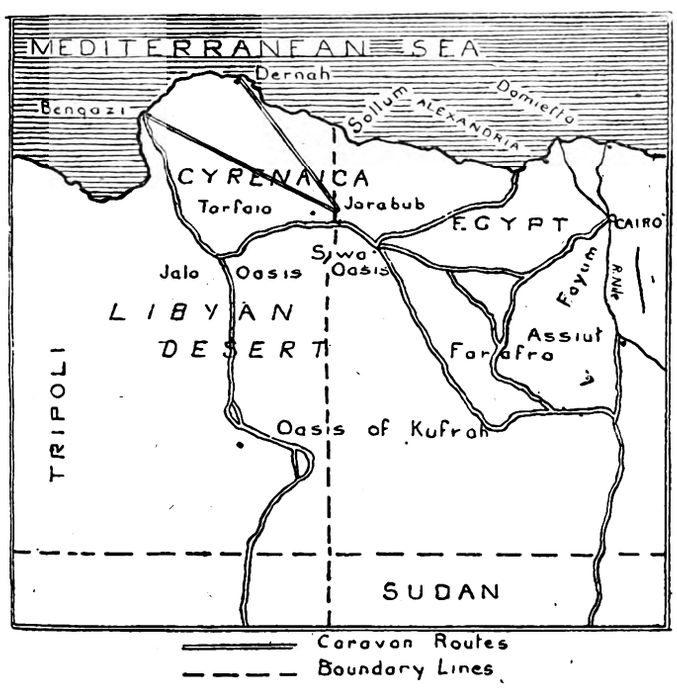
Some of the reasons why Egypt is unwilling to put Italy in possession of Jaghabub are:—

1. If she gives up Jaghabub to Italy she would lose her connections with Kufara, Jalo and the Libyan Oases.

2. She is anxious to retain control of the caravan route which passing along the border of Egyptian territory connects her with Kufara, where all the great caravan routes in the interior of Africa converge. By this route from Kufara caravans bring gold dust, ivory, ostrich feathers and other valuable merchandise. If Jaghabub were in possession of Italy instead of passing into Egypt, these caravans would most certainly be diverted into Cyrenaican ports and instead of returning with Egyptian goods would return laden with Italian.

The commercial potentialities of this route, which was the one so laboriously followed by Mrs. McGrath and her companion Hassanein Bey on their return journey from Kufara, are immense. The requirements are the goodwill of the Senussi, the construction of beacons, tanks of water at regular intervals, the opening out of existing and new wells and ordinary precautions to prevent these being silted up with sand. The journey from Jaghabub to Kufara, which is roughly about 400 miles, would then, with motor cars, take only 2 or 3 days at the most instead of the 17 days it took Mrs. McGrath with her camels.

3. Egypt feels that any such surrender at the very commencement of her career as an Independent State would



seriously prejudice her prestige in Africa and in the Islamic world, especially amongst the Senussi sect, which would greatly resent the surrender to a Christian Power of the home and burial place of its founder.

4. Her greatest objection of all is a military one. There are only two routes by which Egypt can be attacked by land from the West. The one is along the Coast through Sollum. The other is through Jaghabub. Everywhere else the waterless desert forms an impassable barrier.

Italy in return for Jaghabub has offered to present Egypt with some 10 miles of territory to the West of Sollum. A correspondent, writing in *The Times*, has insisted that this is a most valuable concession as the ground in question commands the town of Sollum and makes it indefensible. He therefore urges that Egypt would be well advised to agree to the cession of Jaghabub. This correspondent apparently forgets that Great Britain guarantees the security of Egypt, and that it would be quite impossible for any Italian force to pass through Sollum under the guns of a British fleet. What it therefore amounts to is that Italy offers to permit Egypt to bolt a door which is already barred provided she (Egypt) agrees to leave the back door, the only other entrance, open. It may be argued, as *The Times'* correspondent in fact does, that the strategical defence of Egypt and the Suez Canal centres in the Siwa Oasis, and not along the valley of the Nile. This is in itself an invincible argument against his own proposal to present Italy with an offensive base at Jaghabub hundreds of miles nearer to Siwa than any other available point.

There are four main caravan routes converging on Jaghabub; three lead from Benghazi, Derna and the coast and one from Jalo. By attention to the water supply and the formation of depots of petrol and supplies at regular intervals Italy could make these routes available for the rapid transport of a considerable army. It would not be necessary for Italy to maintain permanently any large garrison at Jaghabub. What she might do would be to increase the already ample supply of water and organise the Oasis as a thoroughly up-to-date military depot with large stocks of petrol, stores, munitions and supplies of all sorts.

Jaghabub would thus be prepared in case of hostilities with Egypt to receive the fleets of aeroplanes which would fly the coast while large bodies of troops were being brought up by motors. Although the possibility of such an untoward event as hostilities between Egypt and Italy seems remote it is an unfortunate fact, as a Cabinet Minister recently emphasised, that war often arises where least expected, and that, therefore, no nation can afford to trust its security entirely to the goodwill of another.

While the Italian troops pushed forward to the attack of the Siwa and El Quattara Oases her aeroplanes could be bombing Alexandria, Cairo, Fayum and the Valley of the Nile, all well within range of the heavy bombing machines of the Italian air force. To guard against a danger of this kind, Egypt would have to spend millions of pounds in counter measures of defence. If a few thousand Senussi were able to invade Western Egyptian Oases and compel the British authorities in Egypt to spend, even after the recapture of Sollum, several millions of pounds in fortifying the Valley of the Nile, it is easy to understand why Egypt objects to surrender a strategical position like Jaghabub to a first-class European military Power provided with aeroplanes and motors and all the paraphernalia of modern warfare which the Senussi were without.

5. Egypt further objects that Jaghabub is essentially a part of Egypt. There are records showing that a Mosque was built there in 1820 by the El Azhar University of Cairo and that the Oasis was visited by the Khedive of Egypt. She further objects that Jaghabub geographically belongs to the group of Western Egyptian Oases. That its nearest port is the Egyptian port of Sollum and the nearest Oasis is Siwa, on which it is dependent for supplies.

In the face of these objections, it seems difficult to understand how such a sincere and devoted friend of Egypt as Lord Milner could, in the negotiations with Signor Scialoja, have agreed to the proposed cession of Jaghabub to Italy. But it must be remembered that by the Treaty of London, Great Britain definitely promised Italy a rectification of the Libyan frontier. Although this inadequately considered promise ignored the essential factor, the consent of the Egyptian Government, which had never been consulted, it placed Lord Milner as a negotiator in a most difficult position.

He could not repudiate the written word of the British Government. All that he could do, and that was what it seems that he did, was to insist that the sanction and approval of the Egyptian Government was necessary to legalise internationally the proposed agreement.

The advantages of a friendly and prompt solution of any question outstanding between Egypt and Italy is obvious.

Egypt cannot afford to quarrel with such a powerful neighbour as Italy, with whom she has hitherto maintained the most friendly relations, nor can Italy ignore the existence of a large Italian Colony and important commercial interests in Egypt.

But having once left the settlement of the boundary to the Egyptian and Italian Governments it is earnestly to be hoped that the Foreign Office will abstain from pressing Ziwar Pasha to act contrary to his own judgment and the wishes of the Egyptian people. But as Great Britain is responsible for the security of Egypt, she would be more than justified in urging upon the principals, should they fail to agree, the advisability of accepting the arbitration of the League of Nations.

THE WEEK AT HOME

London, Tuesday Morning.

Church Affairs.

Ecclesiastical affairs occupied an unusual amount of attention during the past week, owing mainly to two things: the Anglo-Catholic Congress at the Albert Hall, and the suggestion, made at the Advertising Conference at Harrogate, that the Church should advertise itself.

It would appear that those who, having exposed what they called the "excesses" of the Anglo-Catholics, thought that the movement would decline as soon as the element in it of novelty had worn off, were badly mistaken. The Conference was a crowded one, and the speakers, including, notably, Viscount Halifax and the Duke of Argyll, showed no very obvious symptoms of decay. Lord Halifax went to the extreme length of urging the advantage of incorporation of the Anglican Church within Rome—a course which he said would not involve any interference with the status and prerogative of the See of Canterbury, nor with the government of our Church. Reconciliation with Rome, he said, did not involve anything but the union of the two Churches under the primacy of the successor of St. Peter.

The Duke of Argyll seems, according to the reports, to have been content with attacking those (notably, the Bishop of Birmingham) who have attacked the Anglo-Catholic movement. He appears to have claimed that members of the Broad Church of England were more interested in such things as Birth-Control than in purely religious matters: a pretty shrewd hit, this.

Whither things are now moving in the Church may be a matter of doubt, but it seems certain that it is the Anglo-Catholics more than anyone else who have caused the move. When tolerant and moderate men such as Dr. Gore come boldly out in advocacy of such reforms as the restoration of public prayers for the dead and for the removal of the Thirty-Nine Articles from the position of authoritative standards of belief or practice, it is obvious that something must be done quickly and thoroughly by those who oppose the "modernising" or "Romanising" tendencies of their fellow Churchmen. To give but one instance of the necessity of consolidating their ground as soon as possible: only last week so "broad" a man as the Bishop of London declared that "the Anglo-Catholics were the best type of Churchmen."

The Protestant Alliance.

In this connection a memorandum that I have received from a body called "The Protestant Alliance" formulates a proposal that the Evangelical Clergymen should act as one body, and should at the same time seek union with the Noncomformists. And if this is insufficient, influence should be brought to bear upon Members of Parliament to "throw out the Anglo-Romanish proposal to Romanise the Church of England."

It is possible that such action as the Protestant Alliance envisages will be sufficient to stem the Anglo-Catholic tide, but there still seems to be a certain reluctance on the part of Evangelicals to admit Nonconformists upon an equal footing, and in any case its proposals are, broadly speaking, negative. There is no question, however, that his action will help to draw public attention on the movement for reunion with Rome.

Advertising the Church.

That there is something amiss with the Church at the present time may not be a novel complaint, but it is demonstrably true. The two main features of our time are undoubtedly the progress of the Anglo-Catholic movement and the general decline in Church going. Now towards this second feature application for assistance is being made to the last men in the world whom one would reasonably expect to find within a Church—the "publicity men." These wiseacres do not shrink from testing their sapience on the institutions with Ambrose Bierce's definition of which they would doubtless agree—"a building with a steeple and a mortgage on it." Advertising, they say, is the lesson and the drift of the period, which churches, no more than hospitals and governments, can resist. Do not, they passionately exclaim, be content merely with the familiar announcement of Matins and Evensong—which is merely a reminder to the converted. Shout your goods in the highways and byways, and compel the multitudes to come in to fill your dusty pews.

To think that we have come to this! Some artists, we know, are ready to sell their talents to the highest-bidding railway company or touring car, all in the sacred cause of advertisement. The commercialisation of art has surely gone far enough in our generation: is it now to be extended to a thing that is far greater than art?

If only those ecclesiastics who already have spoken in favour of advertising the Christian religion would reflect how, without the allotment of a single penny on "space," the Church was built up! In any case, it will be money wasted; for you can advertise no more the beauty of the story of the Cross than the loveliness of the heart of a rose.

The truth is that advertising in its own sphere—the selling of tangible and perishable goods in the interest of the advertiser—is an extremely valuable, and, indeed, essential factor in modern "civilisation": the untruth is that advertising knows no boundaries, that it can without looking ridiculous, even monstrous, soar beyond the commercial confines of our time.

National Playing Fields.

It is one of the signs of true democracy that, in the interests of the vast masses of our sporting population which have no access to open spaces, our leading sportsmen should be devoting themselves, in the meetings organised by the National Playing Fields Association, to the acquisition of more grounds for sport.

This question of grounds is really a serious, and, as some think who believe that the love of sport in the British character is its most important asset, a vital matter. To realise how ingrained is the young Briton's love of sport one need but visit a public park on a Saturday afternoon, and try to count the number of games in progress! At Oxford and Cambridge already much has been done in the way of lending grounds to the youngsters, but it is in the more crowded towns that open spaces are so urgently needed.

Nor are the young sons of the poor the only ones in present difficulty. Many clubs, generally of many years' standing, are now in great danger of losing their grounds, which are wanted for the purposes of building. The financier is not often a man who cares for the retention of a sporting centre, and there are literally hundreds of cricketers now who do not know where their home ground next year will be.

Jams in the Traffic.

One of the most charming pleasantries that have befallen the official world of late was the presentation the other day of a very fashionable companion, the tortoise, to the Ministry of Transport, in recognition of the heroically consistent work which has been done under its ægis on London bridges and in the Strand. Somebody even went to the length of suggesting a race between the tortoise and a motor-bus up the Strand, but the G.O.C. has lost too much money already for there to be much probability of its stable being represented.

It was rather pathetic to see the Minister of Transport (to whom, generally, one has very sincere regard) attempting to justify the actions of his conspirators. But at least he is bringing one good thing to our London streets, or, rather, ridding them of a bad one: I mean the sandwich-man. In three months time, it is said, the sandwich-man, together with the purely advertising vehicle, will be a memory.

Cricket.

Last week should have been brimful of interest to cricketers, for it included the 'Varsity match, Eton v. Harrow, and the Gentlemen v. Players. The first two, however, were dull; they lacked in woeful degree the spirit of enterprise. No great reputations were made, those of Duleepsinghi and Holmes and, possibly, of Enthoven being but confirmed. The match at the Oval, on the other hand, was a glorious affair, ending, after two very good declarations by Hobbs, in a magnificent four wickets victory for the Amateurs. There was real cricket, and up to the last but one minute of the match. For the two men, Allen and Haig, who were picked as bowlers, both to have averaged over a hundred for the match, suggests that we are not quite so badly off for all-rounders as the croakers would suppose.

Pure Water Colours.

Nothing has been sadder, I suppose, in the history of British painting than the blight which descended on us after the principles which directed the work of men like Cox, Turner, and de Wint had been abandoned—a time when water-colours were put to uses for which only oils are meet, and when water-colour lost more and more its true character of a drawing relieved by washes of colour.

Of. late, however, we have, in spite of an enormous body of work as evidence to the contrary, begun to mend, and there are now artists, such as Walcot, Ackermann, Harry Morley, Ethelbert White, Wyndham Tryon, Talmage, and Brangwyn who can take their place beside the older masters. How worthily they stand in relation to acknowledged masterpieces may be very interestingly seen at the exhibition which has been arranged at the Beaux Arts Gallery, Bruton Street, Bond Street, in which most of the men whom I have mentioned are included. Everyone will find something different particularly to admire, but nothing impressed me more than Walcot's magnificent conception of Hamilcar's Palace at Carthage, Vulliamy's East Anglian sketches, and Harry Morley's open air drawings. And for those who wish further to acknowledge the acknowledged, there are such grand things as Brangwyn's "Ypres Cloth Hall," and Orpen's "Chelsea Old Church."

The Pursuit of Morbidness.

I have not seen Galsworthy's "The Show," which has just been produced in London, so that I can but record the discussion that is taking place on it. The play itself is apparently an attempt, by accurate representation, to expose the cult of prurience, morbidness, or sordidness—I leave the psychologists to determine exactly what it is that prompts journalists to report and readers to read the disgusting cases in the Courts which have since the War occupied so much space in the Press. Galsworthy shows up—or, as some critics say, merely shows—the whole story: how detectives wring wholly irrelevant and extremely distressing details from relatives of the centre of the piece, how the Court refuses, and later, the Press, to suppress such details. And behind the whole thing is the public's desire to have as many sordid details as possible.

It has been explained that the playwright's intention is to castigate neither the law nor the Press, but only the public. And the dispute that has arisen is: how far is the author justified in trying to expose a deplorable state of affairs? In other words, how far is the photographic method (and, of course, as in most of Galsworthy's plays, no solution, but only the problem itself, is set out) adapted to the purpose of the righteous propagandists? The majority of the newspaper critics seem to make out "The Show" to be rather a sooterkin. But theirs is not the final word.

Cezanne.

It is a curious fact that no public exhibition of Cézanne, the Provencal artist who died nineteen years ago and who has had, probably, as much influence on art as has anyone in the last fifty years, should have been held until the present time. And no more conclusive evidence that Cézanne has been misrepresented, both by those who adore and those who revile him, could be supplied than the exhibition now being held at the Leicester Galleries, Leicester Square. In this there is nothing of the wild, the bizárre, the flaunting. Instead, we have an industrious artist, preoccupied with form and colour, sincere sometimes to the point of dullness, though never of mediocrity. Cézanne, as Mr. R. R. Tatlock (who is one of the very few art critics who is readable) says in his Introduction to the catalogue, was great rather than clever: he was a sort of Busoni technically. There are, however, only a few pictures—mostly landscapes—in this small exhibition that redole at once and continually their beauty; and of these, "Les Grands Arbres," with the interplay of light among the leaves, is the simplest and best. Some other works—lent by Prince Antoine Bibesco—which are very highly accounted, were not on view when I was at the exhibition; but without any question at all the man who could paint "L'Estaque" and "L'Amour en Plâtre" could hold an exhibition of but a dozen works and yet be worth long study. Cézanne, for all that has been said about him, was a master who attained almost to perfect serenity.

The Hudson Memorial.

Controversy over the Epstein panel in Hyde Park has overflowed the railway carriages and the correspondence columns of the newspapers, but the tide of public opinion cannot yet be canalised. One finds support of and antagonism to it in the most unexpected places—*The Times* is against the *Morning Post*, for instance, in this furious matter, the *Manchester Guardian* against the *Observer* (that is, Mr. J. L. Garvin, not, of course, Mr. P. G. Konody).

Recently some enthusiastic opponent of Epstein's work poured out torrid words in the torrid air for twelve long hours—about which form of protest all one can say is that he obviously felt strongly on the matter. But it would be wholly wrong to disparage the opposition, which includes, indeed, many people whose opinions on most artistic subjects are profoundly respected. The "anti-Rima-ites" do not consist entirely of people whose method of judging sculpture is the foot rule. Nor, on the other hand, are those impressed with the individuality of Epstein's interpretation all afflicted with a desire to be more advanced than their compeers.

A Fine Journalist.

Journalists who are also good all-round men by no means abound, but the story of their lives would make one think that journalism is the best of all professions. Of this small band, Mr. E. F Knight, who died the other day, was certainly one. Not only had he been everywhere, done everything, but he had a large, keen, and ripe personality. There are few who do not know of his experiences as a war-correspondent on land and sea; there is no amateur sailor who does not know by heart his little book on sailing, published about thirty years ago. It was *the* text-book of all amateur sailors, in open boats, whether half-deckers or cruising yachts. He lived to see his strenuously opposed advocacy of the ketch rig for cruising yachts universally adopted. His death will be really mourned by all cruising yachtsmen.

ALTER EGO.

PERSONAL AND GENERAL

TO-DAY

July 16, 1925 (New Style).
July 3, 1925 (Old Style).
Dulheggia 24, 1343, A.H. of the Moslem Calendar.
Tammuz 24, 5685, of the Jewish Calendar.

Sir Anton and Lady Bertram have arrived in London from Port Said.

Lady Muir has left London for Scotland, and will be away for some weeks.

King George of Greece visited their Majesties at Buckingham Palace on July 10.

Lord and Lady Cable left Grosvenor Square last Saturday for Lyndridge, Devonshire.

Captain Papalexis, the Greek Naval Attaché in Paris, arrived in London last week for a few days.

Princess Mohamed Ali Hassan, the daughter of the Egyptian Minister, left London last Sunday for Zurich.

The Queen of Roumania honoured Viscount Astor and Viscountess Astor, M.P., with her presence at luncheon on July 9, at 4 St. James's Square.

Sir Geoffrey Archer was received in audience by His Majesty at Buckingham Palace on July 7, upon his appointment as Governor-General of the Sudan.

The Viceroy of India and the Countess of Reading will be present at the Inns of Court Officers' Training Corps Ball to-morrow (July 17) in Inner Temple Hall.

The Greek Minister in London recently invested Mr. Bowring-Hanbury with the Cross of the Order of the Saviour, conferred on him by the Greek Government.

Monsieur N. Mishu, Secretary to the Roumanian Legation, has been appointed by his Holiness the Patriarch of Jerusalem, a Grand Officer of the Order "Holy Sepulchre."

The Viceroy of India and the Countess of Reading will join the ss. Narkunda on July 24 at Marseilles for India. Field-Marshal Sir William Birdwood will also be a passenger.

Viscount and Viscountess Willingdon have returned from Switzerland, and are staying at Ball's Park, Hertford, as their house in Lygon Place is let until the end of the month.

Miss M. A. Broadhurst and Miss Farquharson, are holding a "Middle East" reception at the Hyde Park Hotel this evening at 8.30 on behalf of the National Political League.

Prince and Princess Nicholas of Greece, with Princess Elizabeth and Princess Mariana, visited their Majesties the King and Queen at Buckingham Palace last Sunday and remained to luncheon.

Last Thursday at Buckingham Palace, the Right Hon. Leopold Amery, M.P., received from the King the Seals of Office, and kissed hands upon his appointment as Secretary of State for Dominion Affairs.

Nawab Amir-ud-Din Sir Ahmad Khan of Loharu, has left for Bombay, in order to reach Simla for the session of the Council of State, of which he is a member representing the N.W. Frontier Province.

The Central Council and members of the Overseas League are entertaining Sir George Lloyd, the new High Commissioner for Egypt, and Lady Lloyd at a luncheon at the Criterion Restaurant next Friday (the 24th inst), at one o'clock. The chair will be taken by Sir Ernest Birch. Members of the public desiring to be present should apply to the Secretary at Vernon House, Park Place, St. James', S.W.1.

Sir Charles Alban Young, Bt. (upon relinquishing his appointment as His Majesty's Envoy Extraordinary and Minister Plenipotentiary at Belgrade), had an audience of the King at Buckingham Palace last Saturday.

Sir Henry Wheeler left London on July 9 to embark on the mail steamer Chitral at Marseilles on return from his four months' leave as Governor of Bihar and Orissa. Lady Wheeler will remain in England until the winter.

Princess Nicholas of Greece organised a special Gala performance of the Cossacks at Olympia last Monday. The performance was in aid of the Highway Clubs in East London and a Home for Russian destitute children. The Queen of Roumania, the Crown Princess of Roumania, and the Duke and Duchess of York were present.

The engagement is announced, and the marriage will shortly take place, between James Abbey Henderson, M.B., Ch.B., B.Sc. (P.H.), Principal Medical Officer, Jerusalem, only son of Mr. and Mrs. Philip Henderson, 7, Dudley Gardens, Edinburgh, and Beatrice Ellen, youngest daughter of the late Mr. and Mrs. Joseph Brutton, of Parkholme, Eastbourne.

The marriage arranged between Mr. Edward Stanley Mawer, of Abadan, Persia, elder son of the late Mr. Edward Mawer, of High Wycombe, and of Mrs. Mawer, of Folkestone, and Joan Clare, youngest daughter of Mr. and Mrs. T. C. Fenwick, of 161, Sutherland Avenue, W.9, and Aldeburgh, Suffolk, will take place on July 25, at St. Saviour's, Paddington.

OBITUARY.

The death occurred in Constantinople, on July 7, of Mr. Forbes Adam, First Secretary at the Embassy. Born in Bombay in 1888, Mr. Adam appeared to be destined for a brilliant diplomatic career. He performed valuable work in the Conferences after the War at Paris, London, San Remo, and Lausanne.

Mr. E. F. Knight, traveller, yachtsman, and war correspondent, whose death is announced at the age of 73, represented *The Times* as special correspondent in many campaigns: the Hunza-Nagar (in which he served as an officer and was mentioned in despatches), Matabeleland, Madagascar, Sudan, Greece, Cuba, and Spain, and later was *Morning Post* correspondent, going through the Russo-Japanese War with Kuroki's Army, and the Turkish campaigns of 1908.

CONDITIONS IN BULGARIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Recent occurrences in Bulgaria have drawn the attention of the public throughout the world to the conditions at present obtaining in that country, and the question of the responsibility for those conditions has been the subject of considerable controversy. The responsibility, in the opinion of the Balkan Committee, rests primarily neither with the present Bulgarian Government, nor with its opponents, but is largely the outcome of the Treaty of Neuilly and policy pursued by the Great Powers.

1. The request put forward by the Bulgarian Government to allow the temporary increase in the Bulgarian Army to continue for some weeks longer has been refused by the Great Powers. In the opinion of the Bulgarian Government, this continuance was essential if they are to deal effectively with propaganda which is directed against the very existence of the State. In this matter the responsibility for what may happen in Bulgaria rests obviously with the Great Powers.

2. The financial burdens arising from the Treaty (pre-War public debts included) amount to 1,900,000,000 levas, about £2,836,000, taking 670 levas to the £. Thus nearly 30 per cent. of the Budget of 6,875,000,000 levas is spent in facing obligations directly derived from the Treaty. As a result, the cost of living is high, the salaries of all public officials are miserably low, and this causes discontent among those classes with fixed incomes among whom the Government would naturally look for support.

3. From Macedonia, from Thrace, and from the Dobruja refugees continue to pour in owing to the frontiers fixed at Paris. Bulgaria has no means with which to satisfy them, and they, again, owing to the miserable plight in which they find themselves, tend to become centres of disaffection. The refugee question concerns the whole Peninsula. In the opinion of this committee arrangements will have to be made at an early date for the granting of a loan to Bulgaria, raised under the auspices of the League of Nations, for dealing with this problem.

4. Bulgaria was promised an economic outlet to the Ægean Sea by the Treaty of Neuilly. This promise remains unfulfilled. The chances of economic development are curtailed, confidence in the good faith of the Great Powers has been lost, and this again is a source of discontent.

5. Protection of Bulgarian minorities in Serbia, Greece, and Turkey was promised, but again the promise under the Treaties has been unfulfilled. The terrible developments as between the Macedonians, on the one hand, and the Bulgarian Government, on the other, are in a great measure due to the non-fulfilment of the promises held out in the Treaties.

This committee for some 25 years past has consistently drawn attention to the fact that condition in the Balkans must be regarded as a whole, and that the welfare of each individual State is bound up with the welfare of its neighbours. The recent terrible occurrence in Bulgaria may, it is hoped, serve to bring home to the public conscience the responsibility which lies on the people of the Allied Powers for the intolerable position in which Bulgaria finds herself.

A generous and understanding attitude towards Bulgaria in her difficulties will go far to promote the internal tranquillity and economic well-being not of Bulgaria alone, but of all the States of South-Eastern Europe.—We are, etc.,

EDWARD BOYLE, Chairman.
H. W. NEVINSON, Vice-Chairman.

YUGOSLAV ARTS AND CRAFTS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Referring to the account in your issue of July 2, of M. Plichta's exhibition of Yugoslav embroideries and weaving, may I crave space for a few remarks? The notice ends with the sad conclusion that the industries are fast dying out, and that little can be done to arrest the process. I venture to think, given some artist idealists willing to devote themselves to the cause, this need not be the case.

I happen to be trying an experiment of the same kind, which, so far, is full of life and hope. It is developing the inborn artistic tendency of the Serb, by teaching him the finest workmanship in cabinet making. I believe there are wonderful possibilities in the case of the existing weaving and embroidery industries. The peasants could produce, besides embroideries for clothes, material suitable for upholstery. At present I contrive to make up the peasant aprons as seats and backs for my handmade chairs, and I find them much admired. With the high wages of to-day, I see a time coming when hand work may compete with the machine-made article.—I am, etc.,

Travnik, Bosnia. A. J. DICKINSON.

[We are glad to publish Miss Dickinson's optimistic modification of our notice upon the embroideries of Yugoslavia. A short account of her own very valuable work in Bosnia was, it may be recalled, given in our issue of June 11.—ED.]

RUSSIA AND THE EAST.

Before the Central Asian Society, at the Royal United Service Institution on July 9, Miss Ursula Blackwood delivered a lecture entitled "A Pen Picture of Asia," General Sir Raleigh Egerton being in the chair. Miss Blackwood, whose address was based on the recent work of an Italian author upon Bolshevism and the East, sought to prove that the policy of the Soviets in the East was exactly what the Tsarist policy had been; it was grounded, that is, on antagonism to the British Empire and to Japan. Since Japan and Britain represented capitalism *par excellence*, Russia would attack them in China, India, and in the Middle East. It was a curious fact that, whereas in Europe Russia preached the gospel of internationalism, in Asia she preached, in her endeavours to upset the powers that be, the gospel of nationalism. The complication arose ultimately from ignorance whether Russia was really an eastern or western nation—now she was eastern, now western. But with the appearance at the head of things in Russia of Jews and Mongols, it seemed probable that the call to the East were the stronger. How far Russia's attempt to synthesise her Oriental and Western natures—at attempt which if realised might enable her to lead the world—would succeed, it was difficult to guess. It might be that where the Slavs were concerned our imagination was at fault.

In the subsequent discussion Miss Blackwood replied to a question whether the Government of the Soviet could be dissociated from the mass of the Russian peasantry in the negative: for the purposes of expansion into the East the idea of penetration into places like Persia, Afghanistan, and China was welcomed by all Russians. Major Blacker developed at considerable length the lecturer's reference to the division between Mongols and Nordics, illustrating the swing of the pendulum which swung now in favour of the lethargic, communistic Mongols, now in favour of the vigorous, individualistic Nordics. And Mr. Archibald Rose supplied interesting suggestions of how Russian influence was at work in the present disturbances in China.

SOME FOOTNOTES TO THE HISTORY OF THE WAR IN ASIA.

By LEONARD STEIN.

III.

ITALIAN CLAIMS IN ASIATIC TURKEY.

The further selection of diplomatic correspondence recently published by the Soviet Government includes a number of documents dealing with the claims of Italy to partnership with the other Allies in the partition of Asiatic Turkey. This subject becomes a prominent feature of the correspondence in the summer of 1916, when Italy began to press for admission to the secrets of the understandings arrived at between Great Britain, France, and Russia.

The following is an extract from a telegram dated 10/23 Sept., 1916, in which Count Benckendorff reports to M. Sturmer on the negotiations in London between Sir Edward Grey and the Marquis Imperiali:—

". . . . He (Sir Edward Grey) answered Imperiali that the three Powers could not reconsider between themselves the decision adopted in respect of Asia Minor, but that, on the other hand, he would not ask the Italian Government to confirm and to recognise the British zone before the Italian zone is determined. Grey considers it necessary to propose the formula to the French Government, the interests of which are especially affected by this question. Grey told Imperiali that when concluding the above agreement, the three Powers did not intend to set about the partition of European *(sic)* Turkey; that the negotiations which took place in the period preceding Italy's declaration of war on Germany arose from the desire of the Sheikh of Mecca to create an independent Government; that with this object the Sheikh applied to Britain, whereupon negotiations with him took place and caused in a natural sequence negotiations with France and Russia, at a time when Italy was still in a special position; now, however, things stood differently, and Italy would be placed in the possession of the documents in question. He told me that so far as Asia was concerned he had no objection to the conversion of the three-Power agreement into a four-Power one, so as to avoid difficulties at the conclusion of peace. . . ."

On November 5, 1916, Sir Edward Grey appears to have communicated all the material documents to the Marquis Imperiali, and on Nov. 19 the Italian Ambassador in Petrograd transmitted to M. Sturmer a long memorandum, in which the Italian Government formally set forth its demands. The opening paragraphs are as follows:—

"Italy has entered into the War of her own free will, without compulsion, and not under the influence of threats. The considerable importance of the services she has rendered to the cause of the Allies by the force of her arms, as well as by the declaration of neutrality at the beginning of the European War, is indisputable.

"Italy thus finds herself in a position which allows her to demand of her Allies, on a legitimate basis, an unreserved equality of status in the discussion of questions pertaining to the balance of power in the Eastern part of the Mediterranean. Italy is essentially and exclusively a Mediterranean Power, and an equilibrium in the Eastern section of the Mediterranean constitutes the fundamental basis of her policy."

After referring to Paragraph 9 of the London Agreement of April 26, 1915, the memorandum develops the Italian claim both to the Vilayet of Konia and to that of Adana, and insists that the Italian zone must have an outlet to the sea at Mersina as well as at Adalia. The memorandum then proceeds:—

"A just and proportionate partition of Asiatic Turkey between the Allies implies also the recognition of Italian claims to the Vilayet of Aidin. Only on this condition can the zone of Adalia acquire some value or an economic future, and not merely mean a financial burden for Italy. The zone of Adalia, as represented by the Anglo-Italian convention of May, 1914, constitutes a part of the Vilayets of Aidin and Konia, but it has no organic connection with the latter. All its future is bound up with the Vilayet of Aidin.

"His Majesty's Government is prepared to enter into an exchange of views with the French and British Governments with regard to their respective railway interests in this region.

"In the matter of the city of Smyrna, His Majesty's Government deems it to be its duty to draw the special attention of the Allies to the numerous and prosperous Italian colony and the Italian educational and religious interests which will receive new vitality as a result of the trade connections already existing between Smyrna and Trieste, which will be maintained and extended.

"The little island of Castelorizzo, temporarily occupied by France for military reasons and lying along the coast, naturally enters into our zone.

"In conclusion, His Majesty's Government deems it its duty to make a few remarks with reference to the declaration accompanying the communications of the text of agreements exchanged between the Allies.

"This declaration is couched in the following terms:

"'The boundaries of the zones of influence of the three Powers have been determined by their agreements, but the Powers do not require Italy either to recognise these agreements, or to support their realisation before the latter Power receives the compensation which we are prepared to grant it in the sphere indicated in the London agreement of April 26, 1915.'

"His Majesty's Government cannot consider itself satisfied with a declaration of such a kind, for it admits the possibility that the agreements entered into by the Allies may be realised, while Italy, on her own part, not having achieved the fulfilment of her legitimate aspirations and rights, will, in the last resort, remain in a purely negative position, giving no recognition to the agreements of others and no support to their realisation.

"His Majesty's Government has no doubt that the Allies will fully recognise that the agreements which they had concluded between themselves without Italy's knowledge, are incapable of realisation so long as Italian interests have not received their recognition and realisation. It therefore devotes its efforts to ensuring that all agreements between the four Allies should be considered on the basis of complete equality, both as regards aim and fulfilment, without regard to circum-

stance of time or place, and also that this should be formally confirmed.

This was supplemented by a voluminous memorandum dated Nov. 20, 1916. The Italian Government declares that the Three-Power agreements, which it has now had an opportunity of studying,

". . . . Refer to a number of questions affecting Italian interests. His Majesty's Government, being rightly imbued with a feeling of confidence and friendship in relation to the Allies, of whose reciprocal sympathy it has no doubt, will not dwell on the fact that these agreements were, contrary to all its expectations, concluded without its knowledge. His Majesty's Government wish to draw the attention of the Allied Governments, with a view to achieving the formulation of the agreements in question on a basis of complete equality of rights with the other contracting Governments, which object appears to be of essential importance to His Majesty's Government.

"The question of Constantinople and the Straits has always been a matter engaging the close attention of Italian policy in the Mediterranean, so that His Majesty's Government fully realises the importance and significance of the new state of things which will be established in that area, as soon as Russia achieves her secular goal. His Majesty's Government would be happy to give its consent to the wish of the Imperial Government in the sense of the circular Russian telegram of March 4, 1915, on the condition that the War be brought to a victorious end, and that Italy will realise her aspirations both in the East and elsewhere. Freedom of transit through the Straits and the establishment of a free harbour in Constantinople, as well as all kinds of privileges enjoyed by the other Allies with regard to institutions, administrations, religious, educational and medical estabishments, etc., will be equally assured to Italy. The Italian Government will also give its consent, if the above conditions be observed, to the territorial delimitations contained in §§1 and 2 of the memorandum of the Russian Government of March 17, 1916, and in §§ 1 and 2 of the Franco-Russian agreement of April 26, 1916. On its own part, it expects the Imperial Government to extend also to Italy, in so far as concerns the regions of Adana, the principle of disinterestedness which is spoken of in §1 of the memorandum referred to.

"His Majesty's Government, likewise, willingly endorses the agreements concluded between Britain and France (document No. 4) with regard to the Blue and Red and the (A) and (B) zones, with a special reservation regarding the recognition of its claims to the territory and Vilayet of Adana, Konia, and Aidin, as explained in Memorandum No. 1, and with a general reservation, that the War be brought to a victorious end and that Italy will realise her aspirations both in the East and elsewhere.

"The preservation of concessions, the rights and privileges of Italian religious, educational and medical institutions in the British and French zones must be assured. The first Anglo-French agreement regarding Asia Minor provides in §3 for the establishment in a part of Palestine of an international régime, 'the form of which will be decided upon after consultation with Russia, as well as in agreement with the other Allies and the representatives of the Sherif of Mecca.' For quite obvious reasons, which must, at the time, have escaped the attention of the authors, His Majesty's Government can in no way accept this formula. His Majesty's Government has no doubt that the Allied Governments will consent to such wording of the clause as will take account of Italy's status as a Mediterranean Power, directly interested in the régime to be established for the Holy Places. On its own part, His Majesty's Government will willingly agree to the establishment of an international régime in Palestine, with the necessary proviso as to the maintenance and guarantee of its interests, as well as its legal and historical privileges in that region. His Majesty's Government reserves for itself the right to formulate claims with reference to Italian commercial interests in the ports of Haifa and Acre.

"As an Allied Power, as well as a Mediterranean Power, His Majesty's Government solicits from the British Government a pledge—already given by it to the Government of the Republic—not to enter in any case into negotiations with a view to ceding Cyprus to another Power, without the previous consent of the Italian Government.

"The Italian Government reserves itself the right to negotiate with the Allies an agreement regarding a custom régime in the respective zones."

The Memorandum then proceeds to ask for the text of the agreements concluded with the Sherif of Mecca, and states that, while Italy is prepared in principle to assent to the establishment of an independent Arab State,

". . . . yet there are points to which His Majesty's Government considers it its duty to draw the serious attention of the British and French Governments.

"In view of the agreement of His Majesty's Government with the delimitation proposed to the South of the Zone (B), there ought to be a guarantee that below this boundary France, Italy and Britain will honestly maintain a complete equality towards the independent Arab State, and that all privileges acquired by any one of them will be enjoyed by the others as of full right. Italy is a Moslem Power to the same extent as her Allies. The régime of the Moslem Holy Places has a direct repercussion in her nearest colonies, Eritrea and Somaliland, as well as among the population of Libya.

"In view of these considerations, the great significance of which the Allies will not fail to appreciate, His Majesty's Government begs to be admitted to participation, on a footing of equality, in the obligations, negotiations and agreements provided for by §§10, 11, and 12 of the Anglo-French agreement.

"As regards § 11, the French and British Governments will agree to the necessity of immediately making the Italian Government a partner with equal rights in the negotiations with the Arabs. The continuance of the present situation, provided for by this clause, is regarded by His Majesty's Government as detrimental to its prestige and status as a Moslem Power."

Italian sensitiveness is further illustrated by the following telegram, dated Feb. 26/March 11, 1917, from the Russian Ambassador in Rome to the Foreign Minister, M. Pokrovsky:—

"N. 141.

Copies to Paris and London.

Reference my tel. 944.

Sonnino has informed me that according to rumours that had reached him, the English and the French are supposed to be preparing a landing of an Anglo-French detachment of troops in Palestine. He fears that such a landing would further irritate public opinion in Italy by stressing the fact that Italy is being kept out of the affairs of Asia Minor. The French Embassy in Rome knows nothing about this landing."

The following is an extract from a telegram sent on the following day by M. Izvolsky to M. Pokrovsky:—

"The Italian Ambassador declared to-day to Cambon the wish of his Government to participate in the present expedition by sending an Italian detachment. Cambon replied that he would transmit this to Briand, who is now completely absorbed by the ferment in the parliamentary lobbies and the probability of new attempts to overthrow the Cabinet. In his conversation with me Cambon referred, not without annoyance, to Italy, which aims at participating in all Anglo-French operations in the East, except those, e.g., in Salonika, where her participation is desirable and useful to the Allies."

"Straws in the Wind." By Commander G. Stoker, R.N., D.S.O. (London: Herbert Jenkins, 10s. 6d.)

We greatly prefer our heading as a title of this book to the somewhat stagey one chosen by the author. Had he shared our preference, we might have been spared an irritating succession of little moral remarks on straws in the wind which we could well have done without. Further, stringent cutting of all spreading of himself in annoying platitudinous little sermons on any and every little matter would have improved his work.

Having said so much in the way of blame, we have nothing but praise for this book left. The author writes well, has a thrilling tale to tell, and, with the exceptions mentioned above, tells it both modestly and vividly. Appointed as the first commander of the Australian Submarine AE2, he began by undertaking the perilous task of navigating her to Sydney. He took part in the expeditions to Rabaul and the Fiji Islands, and then brought her, lent to the British Government, to the Dardanelles. This in itself was an achievement, though the author, while describing it picturesquely and humorously, makes very little of the constant strain and peril involved. Arrived, Commander Stoker seems at once to have conceived the idea of reaching the Sea of Marmora under the Straits, and set himself to study how this could best be done. After a series of misfortunes to his ship, he was at last able to put his plan before the Admiral and had it accepted. He carried out his design with brilliant success, and the best chapters of the book are those devoted to this marvellous adventure. But the Submarine of those days was both fragile and untrustworthy, and it was the ship, not its commander, which brought the attack to a close. Throughout the account is wonderfully vivid, and the reader is made to share every thrill with the gallant sailors.

Most of the rest of the book is taken up with an account of prison existence in Turkey. Though enlivened by the indomitable pluck and irrepressible humour of the unfortunate prisoners, these chapters are full of tragedy. They include the account of two attempts at escape, one of which came near to success when liberty seemed assured after terrible sufferings.

Commander Stoker richly deserved the D.S.O. which was his reward. One cannot indeed avoid thinking savagely of the very different circumstances in which some others won this decoration. Fortunately he has avoided, unlike many other gallant fellows, being left unemployed. He had discovered considerable histrionic abilities in theatricals devised to break a little the tedium of captivity, and is now assured of a good future on the stage. We wish him all good luck, but we beg him, in his next book, to stick to his own admirable style and to keep off the theatrical. C. S.-W.

AN ALL-ROUND MAN.

THE WANDERING SCHOLAR." By David G. Hogarth. (London: Humphrey Milford, 8s. 6d. net).

It is nearly thirty years since Dr. Hogarth published "A Wandering Scholar in the Levant," and fifteen since "Accidents of an Antiquary's Life" appeared. Those who possess these works know the delight of their contents. But it has long been impossible to procure them, and we trust that multitudes will avail themselves of the chance now given them of buying the main contents of the two books in a very pleasant form. The result is a volume of very singular charm, a classic of "digging" and *antica* hunting just as Wallace's "Travels on the Amazon," and Hooker's "Himalayan Journals" are classics of the naturalist. It is indeed well worthy of being ranked with them. The author has a very unusual gift of vivid description of the curious things and places he saw in the queer, practically unknown parts of the Near East dealt with in this book. He paints easily and clearly the pains and pleasures incident to his work. And his study of the ways of life and of the thoughts and feelings of the inhabitants has yielded many pages of the greatest value both to the politician and to the student. This remark applies specially to his very able chapter on the Anatolian Turks. The whole is seasoned by quiet humour and a rare power of projecting himself into the minds of others.

The Ashmolean Museum has, for the last sixteen years, been privileged to use his unrivalled knowledge of the antiquities of the Near East as its keeper. It is a pleasure to record now that another side of his learning has been rewarded by election to the coveted post of President of the Royal Geographical Society. C. S.-W.

Indian Affairs.

LORD BIRKENHEAD'S STATEMENT.

To judge by the cabled reports from India, the Secretary of State's speech in the House of Lords on Tuesday has not been well received there. This would cause no surprise if the unfavourable criticism were confined to the extremist papers, which voice the views of those whom Lord Birkenhead described as the "elements in India which are determined to remain dissatisfied" and which are responsible for that "unfair and captious criticism of their actions" for which, as his Lordship truly said, public servants in India, both English and Indian, are never free. But it certainly seems surprising that important organs of British opinion in Calcutta should join in the chorus of disapproval—that the *Englishman* should complain of the absence of definite decisions, and the *Statesman* should characterise the speech as "a bitter disappointment." For on one point, and that a most important one, the Secretary of State spoke with no uncertain voice. As regards a further instalment of Reform, he said that "the condition was clear and precise. There could be no reconsideration until they saw everywhere among the responsible leaders of Indian thought evidence of a sincere and genuine desire to co-operate with them in making the best of the existing Constitution": and, as regards the Indianisation of the Army, he said that, while the Government would do everything in its power to make the experiment a success within its limits, "until it had been shown to be a success within those limits, it was not our purpose to go beyond them." And, in concluding his speech, Lord Birkenhead said, "I am not able in any foreseeable future to discern a moment when we may safely, either to ourselves or India, abandon our trust. There is no "lost Dominion," and there will be no "lost Dominion" until that moment, if ever it comes, when the whole British Empire, with all that it means for civilisation, is splintered in doom. It is our purpose resolutely, tirelessly and whole-heartedly to labour for the well-being of India as our ancestors have laboured throughout the generations. For that purpose we desire, and we request, good will; nor shall we be niggardly bargainers if we meet with the generous friendship which is near and dear to our hearts." The keynote of the speech is, in fact, to be found in the appeal to the people of India to offer good will and co-operation. The new constitution, said Lord Birkenhead, was freely conceived and generously offered: and had that which had been given been used with cheerful good will to justify the gift of that which was still sought, the task of acceleration would have been easy indeed. Here, then, we have a definite statement of policy and one that might reasonably have been expected to command the approval of responsible opinion in India. The Indian politician has not yet justified the measure of responsibility that has already been bestowed upon him, and has thereby, of his own act, made it impossible to offer him more; but the door is still open and he is still invited to prove his fitness to wield the power that is his for the taking. He has chosen to waste more than half of the period of probation, first in futile aloofness, next in futile obstruction; there is still time for him to prove himself worthy of better things; but, until he chooses to do so within the limits already assigned to him, "it is not our purpose to go beyond them."

Lord Birkenhead spoke of "certain indispensable antecedent steps" that must be taken before any conclusions could be formulated, or any decision taken, as the result of the conversations between Lord Reading and himself. Among these, he specified the formal advice of the Government of India and the considered opinion of the Legislative Assembly. In effect, he said that these were the antecedent steps that the Government would have to take; but he indicated, no less clearly, the antecedent steps that the Indian leaders would have to take before they could expect any move on the part of Government. At the same time, he gave a pretty clear indication of his personal views about the success of Diarchy: "it had neither altogether succeeded nor altogether failed; but it must further be noted, by way of additional qualification, that where it had succeeded the price of success had been, at some stages and in some districts, a considerable inroad upon the diarchical principle." He had not thought it proper to discourage such tendencies, holding the view that the whole matter was experimental and afforded an opportunity to each Province to work out its constitutional salvation in its own way. In this connection, while declaring that "the problems of provincial autonomy had not been adequately thought out by those who were now pressing it so strongly upon the attention of the Government," he referred to the Swarajist contention that no Constitution framed in the West could be suitable for, or acceptable to, the peoples of India, and said that any alternative Constitution, which might be produced by Indians and which "carried behind it a fair measure of general agreement among the great peoples of India," would be assured of the most careful consideration. This, no doubt was a reference to Mrs. Besant's "Commonwealth of India Bill"; since Lord Birkenhead went on to say how gladly he recognised that the so-called Liberal Party in India had refused to associate itself with the ill-starred course of non-co-operation, and that "it was still possible that that party might play a great part in the Constitution fashioning of the future"; while it is noteworthy that, in the debate on India that took place in the House of Commons on Thursday, Mr. Ramsay MacDonald paid a direct compliment to "those Liberal Indian politicians who had drafted the Commonwealth of India Bill," for they had the interests of India at heart, and to them "all those who wished to make India happy, contented and free, and who felt that this was the best aim to pursue, were under great obligations." It is also worth noting that Lord Birkenhead, in quoting from the preamble to the Government of India Act, included the paragraph that declares it to be expedient to give to the various Provinces of India, in provincial matters, "the largest measure of independence of the Government of India which is compatible with the due discharge by the latter of its own responsibilities." It is not perhaps a very far-fetched guess that Lord Birkenhead's personal preference may be in the direction of the solution of the Indian problem through the medium of Provincial autonomy; which, as he said, had not been adequately thought out by those who recommended it: and that he would welcome a more adequate attempt to do so.

The Secretary of State's speech contained one other indication of special interest; when, in referring to the sound financial position, and prosperous trade, of India, he "ventured with dogmatic certainty" upon the statement that an immense increase was attainable in the yield, and therefore in the prosperity, of agricultural India. Agriculture was a transferred subject, and this did not make "a correlated and rational attempt to deal with it" more easy; but it had been closely discussed by Lord Reading and himself: and he "was not without hope that, during his tenure of office, it might be in their power to contribute a powerful impetus to its further development." In its comments on the speech, *The Times* says that the need for a rational and scientific plan of agricultural development in India has frequently been insisted on in its columns: and expresses the hope that Lord Birkenhead's words mean that there is to be a serious inquiry into the problem, perhaps by the appointment of a special and authoritative commission for the purpose. "In any case, the possibility is growing that the realities of economic progress in India may leave the acute discussions of political theory far behind, and that an India interlocked and actually co-ordinated by modern economic processes, stimulated and guided by British rule, may begin to ask persistent and practical questions of politicians who still linger in abstractions." In the Indian debate in the Commons on Thursday, the importance of the economic factor and the necessity for the development of agriculture were specially urged, particularly by the "expert" speakers: the latter point being described as "the one constructive feature in Lord Birkhenhead's programme." When referring to the development of agriculture, Lord Winterton said that as a preliminary to any

Digitized by Google

wider survey, they must await the report of the Economic Inquiry Committee recently set up by the Government of India, which "would probably show the need for a wider and more specialist inquiry." THE NEAR EAST has always upheld the vital importance of the agricultural development of India as the chief factor on which the progress, not only economic but political, of the peasant, and therefore of the whole of India, depends: and THE NEAR EAST AND INDIA welcomes as a good omen, so soon after its appearance under its new title, these indications that the problem is at last likely to receive serious attention.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, June 25.

A Nation's Tribute.

Unprecedented crowds followed the body of Mr. C. R. Das along the route around the city on the way from the railway terminus to the burning ghat. Even more stood about the streets and watched the procession pass, and a Press estimate of two hundred thousand is probably below the mark. Even allowing for a large proportion of sightseers the manifestations of grief and respect were convincing evidence of the hold which Mr. Das had obtained upon the imagination of Bengal, and all Indian business was practically suspended for the remainder of the week. The tributes to the personality of the dead leader and to his self-sacrifice and sincerity came from all sides; an appeal has been issued over the names of Indians of all sections of political opinion asking for a memorial fund of ten lakhs of rupees, and the signatures include the names of Lord Sinha and Sir R. N. Mookerjee. It will be interesting to see how far pride in their first Nationalist, to whom the term "great" may be applied by posterity, will overcome the usual lethargy of the Bengali in such matters.

The New Leaders.

Who will take his place? For the moment Mr. Gandhi has announced his intention of remaining in Calcutta, but he has also stated that he would not accept the leadership if it were offered to him. It is not likely to be, and his name has not even been suggested in any Indian paper. A Swarajist party meeting takes place next Sunday to consider the matter, but the only signs of agreement at present are the cutting down of the possibilities for the political leadership to about four, and for the Mayoralty to three, which leaves a round dozen people amazed at the blindness and ingratitude of their political associates. There is little chance of the new Mayor being chosen by reason of his fitness for the post and his ability to give his whole time to the heavy demands it makes; even if he were to introduce the practice of leaving the executive to do its own work, he would have his time fully occupied. The party leadership can only be a nominal one for some time to come, as it is certain that there is no one capable of holding together the turbulent elements among the extremists. Mr. Das is said to have been more than the Mayor; he was the Corporation itself. It is beginning to be realised that he was also the Swarajist Party itself; his achievements, which would have been remarkable as the work of a much longer period than five years, were only possible in the post-War atmosphere; the War itself, idealism, discontent, and the false industrial boom with its almost immediate collapse, all combined to produce a revulsion against the West, and the representative of the revolt has passed with the circumstances that made his career possible. It is the opening of a new chapter in the political life of the country: Mr. Das's last message was his "gesture" for co-operation; his lieutenant, Mr. J. Sen Gupta, responds by a call to all "patriots" to unite in fighting Government if it does not respond to the refusal to work the Reforms with an immediate further grant of self-Government.

The Reforms.

The forecast in the local European papers of the result of the conversations between Lord Birkenhead and Lord Reading has been quickly followed by guarded official disclaimers both from the India Office and from Simla. The *Statesman* responds with a strongly expressed insistence upon the substantial accuracy of the forecast and states that it is quite content to await the event in order to show the reliability of its correspondent. Signs are not wanting that it is being realised by the Extremists that they have made a tactical error in thinking that they could rush the Home Parliament by frightening it; they may be forgiven for thinking that, at a time when the embarrassments of Government were many and there was a tendency to quieten clamour by concessions, there was some hope that a combination of agitation and terrorism would secure an increase in the power of the new political classes whose very existences began with the Reforms Scheme. Common sense has prevailed, and it is coming home to the most intemperate minds that the first principle of government is the observance of law and order. Few Europeans on this side of India would object to any form of Government which is reasonably efficient, and on the other hand there are hopeful signs of an appreciation of realities and a return to earth of some of the most heady of the extremist elements.

The Money Market.

The feature of the money market this week has been a sharp rise in the price of Government Paper, largely stimulated by demands from Bombay. The price has risen from Rs. 68/6/- to Rs. 70/4/- and there are still buyers. There is ample short money about and this should have an effect before long in the bazaar, where there is still a lack of cash. Before the War one of the principal securities of the Indian banking houses and traders was real property, but one of the effects of the industrial boom has been to tie up much of the money, which ordinarily would have been invested in land, in temporary advances at high rates of interest to cover the risks. In the meantime the situation has resolved itself into an *impasse* as between property owners and mortgagers, but sooner or later growing balances will demand an outlet and the market will become more normal.

Markets.

There is no change in piece-goods and the general feeling is one of depression. The Jute market has become slightly easier and sales are opening at rather lower figures than those anticipated. A statement appears in this morning's papers that the crop is expected to be smaller than the unofficial forecast, but the fact appears to be that, while this is the case in some districts, there is likely to be a counterbalancing effect in others. The cloth market is quiet but steady; there is no inclination on the part of sellers to give way and in these circumstances the market appears likely to firm up. Exchange remains high and telegraphic transfers this morning are 1/6-3/32; indications are that the market will continue firm. In spite of signs of a slight drop in prices in London, the local tea market gives signs of a slight improvement which may be due to a certain amount of Russian buying.

CURRENT TOPICS.

A Manchester Address.

Sir Maneckji Dadabhoy addressed the Manchester Chamber of Commerce on June 10, on the political and commercial relations between England and India. The speaker pleaded for the abolition of the excise duty on Indian cotton goods which would, he said, help the Indian

Digitized by Google

cotton industry in the present period of unprecedented stagnation, and would not in any way injure the English industry; for India was incapable of producing the finer kinds of cloth and was not, therefore, really in competition with England at all. The really dangerous competitor was Japan, whom the excise duty assisted to achieve the truly remarkable result that she did achieve—she bought India's raw cotton, paid heavy duties in the shape of freight, insurance, and other charges both ways, and yet sold her cloth in India twenty per cent. cheaper than the cloth manufactured in India. He referred to the non-co-operators' suggestion to boycott British goods, but said that wiser counsels had prevailed and that British trade was now gradually finding a firmer and firmer footing in India. As regards Imperial preference, while admitting that the Fiscal Commission—of which he himself was a member—had found against it, he thought that the time was coming when India, if granted full fiscal freedom, would welcome it. He thought that the general duty of 11½ per cent. against all imported manufactures might safely be increased to 20 or 25 per cent. against all other nations, and reduced to, say, five per cent. in the case of England.

Indian Cotton Industry.

A telegram from Bombay says that, in accordance with the promise recently given by Sir Basil Blackett on his way through Bombay to Simla, Mr. Chadwick, the Secretary of the Commerce Department, met the Bombay Millowners' Association on July 6. The meeting was private, and the millowners are understood to have indulged in much plain and strong speaking about the alleged sweating system obtaining in the Japanese mills, where the hours worked (in two shifts) amounted to 22 hours a day. The Association formulated two demands—the imposition of a higher import duty on yarn and cloth below thirty counts, and an export duty on raw cotton exported from India. Although the report does not say so, it may be assumed that they also pressed for the removal of the excise duty: as to which, it may be noted that Lord Winterton, speaking in the House of Commons on Thursday, said that "if and when the Government of India were in a position, from a revenue point of view, to abolish the cotton excise, they would do so." Mr. Chadwick promised to convey to the Government of India the views of the Association.

Training of Indian Officers.

The Government of India announced on July 6 the personnel and terms of reference of the Committee which, under the chairmanship of General Skeen, Chief of the General Staff, will inquire into the means of attracting qualified Indian youths to a military career and giving them suitable military education. The Committee consists of nine Indian members and one English member, and includes Mr. Jinnah, the leader of the Independent Party in the Legislative Assembly; Pandit Motilat Nehru, the Swarajist leader, has agreed to become a member if the Swaraj Party agree. The Committee will inquire by what means it may be possible to improve upon the present supply of Indian candidates for the King's Commission, both as regards number and quality: whether it is desirable and practicable to establish a military college in India to train Indians for the commissioned ranks of an Indian Army: if so, how soon should the scheme be originated, what steps should be taken to carry it out and whether the military college should supersede or be supplemented by Sandhurst and Woolwich, so far as the training of Indians for the commissioned rank is concerned.

An interesting point in the above message—if correctly transmitted—is the inclusion of Woolwich as well as Sandhurst. A grievance frequently expressed by Indian politicians—generally, it may be supposed, without proper knowledge of the facts—has been that Indians, though eligible for King's commissions in the Indian Army, are not eligible for commissions in the Royal Artillery (or the Royal Air Force) in India: oblivious of the fact that the latter is a distinct service and that the Indian batteries are officered, not by officers of the Indian Army, but by officers of the Royal Artillery seconded for duty with them.

Sikh Shrines Bill.

Telegraphic information states that the Sikh "Gurdwara" Bill was passed unanimously by the Punjab Legislative Council on July 7. The final passage of the Bill was marked by a series of congratulatory speeches, in which gratitude was expressed to the Government, the assurance was given by the Sikh members that the result would be the resumption of full and friendly relations between the Sikhs and Government, and friendly warnings were addressed to the Sikhs that they should use with discretion and judgment the wide powers now being placed in their hands, and should assure liberal treatment to the minority sects. On July 9 the Governor addressed the Council, and announced the decision of Government regarding the Sikh prisoners, at present in jail on account of the lawless part played by them in the troubles that have now been, it is hoped, finally, composed by the passage of the Bill. While unable to assent to a general or complete amnesty, the Governor said that he was prepared to release or withdraw the prosecution of all those who had been convicted or were under trial except those guilty or accused of crimes of violence or incitement to such crimes, provided that they would undertake to abide by the provisions of the Bill and not to seek, by force, by the show of force, or by criminal trespass, to gain control and possession of shrines or property. He declared that, though he could not admit that all the prisoners had been actuated by purely religious motives, it was nevertheless true that large numbers of them had been impelled to mistaken and dangerous courses by the idea that offences had been committed against their religion: and expressed the hope that those to whom a pardon would be offered would accept the offer in the spirit in which it was made. The Hindu and Moslem members of the Council expressed the opinion that the terms are unexpectedly generous; but the Sikh members, who had hoped for an unconditional general amnesty, were reticent.

The Imperial Bank.

The Governor of the Imperial Bank has addressed a memorandum to the Committee of the Indian Merchants' Chamber, setting forth the progress of Indianisation of the Imperial Bank staff.

At the time of the amalgamation of the Banks of Bengal, Bombay, and Madras, to form the Imperial Bank of India, there were 64 offices, which have now been increased to 157. Prior to the amalgamation there were no Indian officers in the Banks of Bengal and Bombay, and only one in the Bank of Madras: of the 93 new branches of the Bank that have been opened since the amalgamation, 38 have been put in charge of Europeans and 55 in charge of Indians. The Bank is also training 212 Indians, to fill up vacancies in its higher appointments in due course; of whom few, if any, had any real knowledge of banking at the time they were appointed, and the Bank has deliberately undertaken the task of training them in order to fit them for higher grade appointments. On the other hand, there is no scheme for training Europeans, and the Bank has on many occasions rejected applications from Europeans in India on the ground that they did not fulfil the Banks' requirements in regard to previous training in an English bank, although in other respects quite suitable for service.

THE INDIAN MAIL.

The Public Services Commission.

A leading article in the *Times of India* refers to the statement—which appears to have been unofficial—that the constitution and personnel of the Public Services Commission will shortly be announced. It is now more than six years since the Government of India Act provided for the establishment of such a Commission; but, until the Lee Report drew attention to the matter, nothing had been done. Lord Lee and his colleagues were unanimous in pressing the urgency of the question, and made a series of detailed recommendations that should have facilitated

Digitized by Google

an early and reasonable decision. They specified two categories of duties for the Public Services Commission: the first being the recruitment of personnel for the Public Services and the establishment and maintenance of proper standards of qualification for admission to them, and the second comprising quasi-judicial functions connected with the disciplinary control and protection of the Services: and recommended an All-India body of five members, two of whom should possess high legal qualifications, while all should, as far as possible, be detached from political associations. All the members should be men of the highest public standing who will appreciate the vital and intimate relationship which should exist between the State and its servants." Here, says the *Times of India*, are three obvious special qualifications—intimate knowledge of what is required of a public servant in the performance of his duties in India, judicial impartiality and ability, and freedom from political party feeling: and one equally obvious disqualification—unacquaintance with India, which should, in the opinion of the paper, be an absolute bar. If the delay in announcing the constitution of the Commission is due to controversy over its personnel, this ought not to be the case, since the essential points are so few and so obvious that there can be little room for reasonable dispute over them. The paper says it will be agreeably surprised if the Simla statement turns out to be accurate, for it is difficult to believe that matters have really advanced so far; but agrees that an early settlement of the question is urgently necessary, "for there is general acquiescence in the soundness of the policy involved, and the actual establishment of the Commission would have a settling effect in directions where the cessation of controversy and the production of contentment are in the highest interest of the State."

The *Bombay Chronicle* expresses the fear that the Public Services Commission "will function as an asylum for odd men out," and that the Chairmanship of the Commission will go to the present President of the Legislative Assembly, Sir Frederick Whyte: whose claims are supported by the *Times of India*. The *Bombay Chronicle* prophesies that the two Indians "favoured as reliable henchmen" will be Sir B. N. Sarma, whose appointment on the Governor-General's Council has recently been extended, and Sir Abdur Rahim, as a sop for being "passed over" for the acting Governorship of Bengal. "They will make good stable companions, for they are equally bureaucratised and superannuated. We have no idea who will be put up from the I.C.S. ranks to represent the oppressed members of the European Cadre;" but, on whomsoever the "succulent selection" falls, the members are sure to form "a fossil combination, like the Secretary of State's Council, quite worthy of their cosy functions."

It is interesting to note that Lord Winterton, in his speech in the House of Commons on Thursday, said that "progress had been made toward the establishment of a Public Services Commission, and he hoped that it would be possible to make an announcement within a short time."

Political Developments in Bengal.

The *Bombay Chronicle*, commenting on the resumption by the Governor-in-Council of the transferred subjects in Bengal, puts forward its view of what should be the Swaraj Party's next move. The Government's decision is likely to cause depression among "flagged spirits" and to bring joy to reactionaries, who blindly mistake it for "the first episode in the reconquest of India for the Services;" but, to true Indian patriots, it "involves a challenge worth accepting." Lord Reading has "led Lord Birkenhead by the nose" towards reaction, and the sum of their joint efforts proves to be recruitment propaganda, the establishment of a Public Services Commission "over the cringing head of the Government of India" (in this particular respect, it would appear that Lord Reading has led Lord Birkenhead by the nose over his own cringing head—an acrobatic stunt that must have been painful to both) and the imposition of "a policy of stiff government for the emasculation of contentious parties." The attitude of the Government of India in suspending the Reforms in Bengal "seems to be one of tranquil ease and unblemished conscience;" but a rude awakening awaits them. Autocracy having been restored in its stark nakedness, the Swarajists of Bengal have entered on their second phase of trial. They have got rid of "sycophant ministers" and must now follow up their success by work outside the Council. They must cease to neglect the masses, and begin on "the village programme. If they recline in the arm chair all (will) be lost." They must "counter the loyalist propaganda" that the refusal to retain subservient ministers has deprived the villages of "soaking benefits" in the improvement of their health and wealth: they must organise the boycott of foreign cloth: and they must take advantage of the "compelling opportunity" to carry out the constructive programme of the National Congress. Bengal will have to look forward to "a spell of vindictive autocracy"; but the "effrontery of Government" will bring about "revived agitation and combined procedure," and they will require "continuous exercise in repression" to keep peace not only in Bengal, but in the other Provinces of India which, with the example of Bengal before their eyes, may be expected to abandon their "slogging policy of Council manœuvres" in favour of more drastic forms of agitation.

The Indian Central Cotton Committee.

It is estimated, says the *Pioneer*, that the work of the Indian Agricultural Department, on the improvement of crops, has added about 3¾ million pounds to the income of the Indian cultivator; but the All-India Research Institute at Pusa is not located in a cotton growing area and has, therefore, been unable to do for cotton what it has done for many other crops. The Indian Central Cotton Committee, which forms a common meeting ground for all sections of the cotton industry—growers, spinners, merchants, traders and agricultural officers concerned with the improvement of cotton growing and manufacture—has a great field of usefulness before it. It has already established a Technological Research Laboratory which, among other valuable functions, provides the Agricultural Department with facilities for having new cottons tested at an early stage of the experimental work. By means of its research grants, it has made possible the provision of a Central Research Institute at Indore, and has provided for the investigation of a number of special problems on agricultural experimental stations in the various cotton growing tracts. One of these problems is an inquiry into the pink boll worm, which is a dangerous pest in a large part of Northern India, that has been undertaken at Cawnpore. Useful legislation has also followed on the establishment of the Committee—notably the Cotton Transport Act, which is in operation in the most important staple cotton tracts of the Bombay Presidency, and has to a large extent prevented the introduction of inferior varieties and cotton waste into districts where the superior varieties are grown, for the purpose of dishonest mixing of the bad with the good. Another legislative enactment which will come into force from the beginning of the next cotton season is the Cotton Ginning and Pressing Factories Act, whose main object is to place the cotton trade in a position to protect itself against malpractices by providing for the marking of bales and for a record of ownership, so that the complaint, that Indian cotton is frequently adulterated or badly handled after leaving the grower, may be removed.

There are indications that the American cotton crop has been permanently reduced by an annual average of two million bales, owing to the ravages of the boll weevil: and it was recently stated that the strenuous efforts, that are being made to extend the area under cotton throughout the British Empire, had resulted in an Empire production, excluding India, of 350,000 bales. Practically all this cotton is of the American type, and more than half of it is grown in Uganda. Last year, the output of cotton of the American variety, from the Punjab alone, was 360,000 bales: and, taking cotton production in India as a whole, the output has grown from 3¾ million bales in 1915-16 to six million bales in 1924-25. During this period, the aggregate production of long staple cotton in India has risen by over 81 per cent., the output for 1924-25 being estimated at 2,107,000 bales. The new canal projects in the Punjab and Sind should materially increase the area

Digitized by Google

under the better varieties of cotton—in Sind, the Lloyd Barrage canals alone will eventually admit of the cultivation of some 750,000 acres of cotton of good staple, representing a crop of 300,000 bales. But experts consider that, apart from new canal schemes, it is doubtful whether the actual area under cotton in India is capable of great expansion, so that enhanced production and lower relative cost must come through increased efficiency in cultivation and improved methods of handling and marketing the crop. It is here that the Indian Central Cotton Committee has vast opportunities for continuing the excellent work that it has already accomplished.

The Haj.

In last week's issue, the detention of the pilgrim steamer at Port Sudan was mentioned, as well as the demands that the British Government should assert its mastery of the seas and make use of the British Navy to ensure that King Ali's blockade and bombardment of Rabegh did not prevent the disembarkation of pilgrims. Last week's Indian Mail brought the news that a British warship had been ordered to Rabegh, in order that the situation might be examined on the spot and all possibilities explored for a compromise, in the matter of the pilgrimage, between King Ali and Ibn Saud.

On June 10 a meeting of Musulmans at the Jama Masjid, Delhi, under the presidency of Mahomed Ali (Shaukat Ali's younger brother) passed a resolution expressing their "utter detestation and abhorrence of the iniquitous act of King Ali," declared it to be the duty of Great Britain to arrange for the safe disembarkation of the pilgrims, and resolved that, if Great Britain failed in this, she would be "involved in the same sentiments of detestation and abhorrence that have been roused among Musulmans by King Ali's iniquity, and the inaction of the Government will turn the various suspicions that have been created at present into certainty and assurance." Mahomed Ali, in explaining the meaning of the sentence last quoted, said that no military operations were taking place at or near Rabegh until the Indian pilgrim ship was about to approach it, and that the declaration of the British Consul at Jeddah that Rabegh was within the area of hostilities appeared to the speaker to be a direct invitation to King Ali to attack it. If King Ali did not desist from preventing the safe landing of the pilgrims, Indian Musulmans would know full well "who was at the back of that monster of iniquity." Government had done its best to prevent pilgrims from proceeding to the Hedjaz and, when the persistence of Khilafat workers had compelled them to issue permits to pilgrim ships, Government continued, by the issue of alarmist communiqués, to confuse and frighten intending pilgrims. This action had reduced the number of pilgrims from scores of thousands to about three thousand, but even that number was a triumph for those who would not allow a most important duty to be left unperformed at the bidding of "the enemies of Islam."

On June 13 the Bombay pilgrimage committee invited a ruling from the *Jamiat-ul-Ulema*—the Convocation of Doctors of Moslem law—as to whether, since war conditions were prevailing and danger to the pilgrims was certain, and it would be impossible for them to proceed further (than Port Sudan) without British help, it was lawful that pilgrimage should be carried out with Christian aid.

It was at this juncture that the despatch of the British vessel to Rabegh was announced: whereupon the Jamiat-ul-Ulema declared that "no Moslem in any part of the world will tolerate the interference of any non-Moslem Power" in the Moslem Holy Land: so that the action of the British Government in despatching a warship to Rabegh, particularly when it became known that medical aid for the pilgrims was also being sent, "has caused doubts and fears in the minds of Moslems": and explained that all that the British Government had been asked to do was that, while preserving neutrality in the dispute between King Ali and Ibn Saud, they should "discharge the responsibility of landing pilgrims at Rabegh, or some other port, safely in accordance with international law." One of the leading members of the Jamiat also telegraphed to Simla strongly protesting against the despatch of the warship, since "the presence of any non-Moslem Power at any port of the Hedjaz at the present juncture, for whatever purpose it may be, will be a cause of great distress": and declaring his opinion that the taking of any action in the Hedjaz by any non-Moslem Power would be a greater breach of Islamic law than that the pilgrims should return without performing the Haj.

A Government communiqué issued from Simla on June 18 says that the Commander of the British warship at Rabegh reported that one of King Ali's ships was patrolling the entrance to the port and occasionally firing at the shore: but had not received any orders to prevent ships from entering the harbour. No operations were actually in progress at Rabegh, but King Ali's troops were expected to arrive there shortly. The pilgrim ship that had been detained at Port Sudan left that place for Rabegh on June 17, and the second pilgrim ship was reported to be making for Rabegh direct.

Whatever the upshot, it is a safe assumption that Government will be blamed. If the pilgrims get through safely, credit will be claimed by the Indian Khilafat Committee as against Government obstruction: if they do not, the failure will be described as due to Government inaction—or, indeed, connivance: accompanied, in both cases, by the "sacrilege" of Christian interference in the Moslem Holy Land.

Military Schools.

It is announced that the King George's Royal Indian Military schools for the sons of Indian officers and men will be opened, in September next, at Jhelum and Jullundur. The schools will accommodate boys of the classes enlisted in the Indian Army whose homes are situated in the Punjab and Frontier Province: the Jhelum school being intended for Mohammedans, and the Jullundur school for Sikhs, Dogras and Hindus. The cost of building the schools has been met from the King-Emperor's Patriotic Fund. Orphans and sons of disabled soldiers on small pensions will be educated free: a small charge being made in the case of other boys. If these two schools prove a success, the expansion of the scheme, so as to provide for other classes and for the sons of residents of other parts of India, will be considered later.

Bombay Murder Case.

The mail of May 30 brought the result of the sensational case that has caused such a stir all over India. A dancing girl named Mumtaz fled from the State of Indore, where she had been a court favourite, and accepted the protection of a wealthy Bombay merchant named Bawla. One evening, while Bawla and Mumtaz were driving in Bombay in a motor car, another car came up beside them, and a number of men disembarked and attacked Bawla's car, from which they attempted to abduct Mumtaz. They would probably have succeeded but for the fact that some British officers, attracted by the noise, came up and intervened in the struggle: in the course of which Bawla was shot dead, one of the British officers severely wounded, and Mumtaz hurt. Nine persons were eventually arrested and charged with the murder of Bawla, conspiracy to kidnap Mumtaz, and abetment of both these offences: the jury acquitted two and convicted the other seven: three of whom were sentenced to death and four to transportation for life. All the accused were subjects of the Indore State, and some of them held high official positions in the State. Among those sentenced to death was an officer of the Indore Mounted Police and the "Captain of the Indore Air Forces": among those sentenced to transportation was the Adjutant General of the Indore State Forces.

INDIAN COMMERCIAL NOTES.

East Indian cotton is making considerable headway with Lancashire spinners. It is true that the deliveries of this class of cotton to mills have fallen from 250,000 bales last season to approximately 200,000 bales this season. On the other hand, the lower figure represents a steady off-take by mills which have experimented with Indian cottons, and find they can use them to advantage.

Digitized by Google

It must be admitted that if, in the course of the next few years, there is a large increase in the American crop, accompanied by a fall in prices, there may be some reversion from Indian to American cotton unless the prices of Indian cotton fall in proportion; but it does not seem likely that the American crop will expand appreciably, and it is, therefore, a fairly safe conclusion that Indian cotton has come to stay.

It should be remembered that Indian cotton is of shorter staple than American. For example, the distinction between short and long staple is drawn in India at only $\frac{7}{8}$ths of an inch, as contrasted with a determining point of over one inch for American. Lancashire is, however, specialising on the better grades of Indian cotton, which occasionally exceed one-inch staple. The fact is that India is making strenuous efforts to increase her output of good staple cotton. Irrigation has brought into cultivation during the past few years millions of acres of land in India which have hitherto borne nothing; and of this increase a fair proportion is now under cotton, thanks to the high prices obtained for that crop. A committee has been organised in India which receives its funds from a cess of 4 annas a bale on all Indian cotton exported from the country or consumed by the local mills. From this source it obtained a revenue last year of £80,000. The money is actively employed in financing research in the cultivation of cotton with a view to improvement of staple and quality. Moreover, legislation has been passed in order to suppress adulteration and encourage better methods of handling and marketing the crop. As a result of these efforts, while the output of short staple cotton in India has, during the past ten years, increased by only 29 per cent., from 3 million to nearly 4 million bales, the output of long staple cotton has increased by 81 per cent., from 1,161,000 to 2,107,000 bales. There is no doubt whatever that the Indian cultivator has secured a high proportion of the profit due to these improvements and to the increased price of cotton. The Punjab Government estimate that during the season ending June 30, 1924, cotton growers in that province secured an additional profit of over £1½ millions in growing American cotton, as compared with the ordinary indigenous varieties.

In general, India has benefited considerably by the appreciation of the prices paid in western markets for her produce. This appreciation has occurred as a result of the working of the ordinary laws of demand and supply—in spite of the handicap to India's exports involved in the rise of the rupee from 1s. 4d. to its present value of over 1s. 6d. The following statement compares the prices of India's staple export commodities in the London market, first in August 1923, when the rupee was quoted at 1s. 4d.; secondly in October 1924, when it reached 1s. 6d.; and thirdly in July 1925, when the quotation was 1s. 6⅛d.:—

	Mid Aug., 1923	Mid October, 1924	1st July, 1925
Rice	13 6	18 -	15 6
Wheat	40 -	63 6	53 -
Castor Seed	£18 10 0	£30 10 0	£22 17 6
Linseed	£18 10 0	£25 0 0	£20 12 6
Ground Nuts	£20 10 0	£28 10 0	£25 5 0
Copra	£27 5 0	£33 0 0	£31 10 0
Cotton Seed Oil	£34 0 0	£44 0 0	£39 0 0
Ground Nut Cake	£11 10 0	£13 10 0	£13 5 0
Jute	£22 5 0	£42 10 0	£44 15 0
Cotton	11-20d.	12-30d.	12-10d.
Wool	12d.-14¼d.	19d.-26d.	17¼d.-19½d.
Hemp	£20-£35	£38-£55	£37-42 10 0
Hides	1 9	2 1	2 1
Skins	5 9	6 10	7 8
Manganese	1 9	1 10	1 10
Tea	1 6	2 -	1 3¾
Coffee	126 -	190 -	165 -
Shellac	260 -	330 -	245 -

So far, reports of the advance of the monsoon are fairly satisfactory. There has been some irregularity in its distribution, and it cannot be denied that Indian bazaar opinion, conscious of having enjoyed four successive good monsoons, is nervous as to the prospects of the fifth. A deficiency of rain in some parts of the country has to be set off against an excess in others; and it is a steady fall which counts in the long run. However, there is plenty of time yet for an improvement.

INDIAN EXCHANGE.

July 13.

This market was comparatively featureless all last week with steady rates of 1/6-3/32 to 1/6⅛.

These were also the best rates available in Bombay and Calcutta, and a fair amount of buying was done by Government at the higher figure. It has been reported that their total purchases from Banks and others during the month of June amounted to no less than £7,500,000.

Forward rates have kept wonderfully steady and delivery between November and January has been available in India at 1/6-7/32. The firmness may be attributed to the continued activity in exports, and we understand that a fair amount of Sugar imports have been contracted for from Java, for which Exchange has been settled at 1/6⅛ to 1/6-5/32 for September.

The beginning of this week brings little change except that 1/6⅛ for spot has vanished and no better than 1/6-7/64 is offering.

The Imperial Bank of India's last Return shows a further increase in silver rupees against which the notes in circulation have expanded to a similar extent. Their profits for the half year to 30 June show a shrinkage, but the dividend declared is maintained at 16 per cent. per annum, free of tax.

The Monsoon news continues favourable and the outlook at the moment is satisfactory.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

Progress in the Sudan.

I have had most promising accounts given to me of conditions in the Sudan by one who is just back from that country. The Sudan is only now, of course, entering on its career as a producer of cotton on a large scale, and I was very interested to learn that great though the output of cotton from the irrigated areas will be, it is anticipated that in the future it will be surpassed by rain-grown cotton. At present the native as a rule is very careless over the rain-grown product. He picks the cotton at his leisure and as he thinks fit, with the result that the yield is nothing like what it might be with adequate care. I was told of a case in which the amount of cotton left lying on the ground was equal to the amount that was picked, which was relatively a large production. As regards irrigated cotton, the hope is entertained that research will enable a great improvement in the present yield per acre. One factor which is an enormous asset to cotton growing in the Sudan is the freedom from cotton pests, but the fear is always present all the same that serious difficulties of this nature may arise. We must hope that nothing of the kind will happen, for the Sudan may not inaptly be described as the bulwark of cotton production within the Empire.

The Rubber Position.

My anticipations with regard to the rubber outlook are in process of being borne out to the letter. At the time of writing the price of the raw commodity stands at 4s. 4d., following a meteoric rise, and it may very well go considerably higher yet before the turn comes, for even if the restriction scheme should be modified it would take time for supplies to be increased. London stocks are now down to under 4,500 tons, and with the demand by manufacturers on a large scale it is not surprising that the upward movement should have been so rapid, and that in America the dollar per lb. rubber should have been realised. Of course, an agitation is now developing against the restriction scheme, but it must be pointed out that the fact that at the moment the production is limited to 65 per cent. is due solely to the lack of buying in the past. It has been possible until recently to buy rubber very cheaply, and it is because America has bought as sparingly as possible that the production was gradually reduced, and when the restriction scheme at length began to have results that the first increase was no more than 5 per cent. It is quite conceivable in view of developments that August 1 will see the introduction of some modification in the scheme, but if it does it can make no difference for some time. The plantation companies have based their plans on the operation of the scheme to schedule, and the consequence of the unexpectedly large demand for rubber is that there is now a real shortage which, in my opinion, will take some months to overcome.

Empire Cotton "Futures."

An important development during the past week, and one which will give unbounded satisfaction among all who are concerned in the production of cotton within the Empire, is the adoption of the Liverpool Cotton Association of a new form of futures contract which will be known as "The Empire and Miscellaneous Cotton Delivery Contract." Against this contract all growths of cotton not lower than the grade and value of strict low middling American cotton may be tendered, the contract only excepting certain grades of Egyptian cotton tenderable on the present Egyptian future contracts. The effect of the development is that henceforward Empire grown cotton will enjoy the same facilities as American, and it is undoubted that the change will tend to further the use of Empire cotton by spinners and manufacturers. It is the hope of the association that the provision of a "hedge" in the futures market for growers and importers of Empire cotton will greatly benefit Empire cotton growing.

Furness Withy Results.

Slightly smaller net profits are shown in the report of Furness Withy and Co. for the past year, the figures being £528,742 as against £572,443 for the previous year and £552,511 for 1923. Unfortunately, as the directors point out, the depression in the shipping industry has been accentuated during the year, and the shipowning branch of the business has contributed only a comparatively small proportion of the profits shown. It is proposed to maintain the distribution at 7½ per cent., tax free, which the shareholders will doubtless regard as an eminently satrsfactory result in present conditions.

Bank Amalgamations.

The statement by the Chancellor of the Exchequer in reply to a question in the House of Commons last week that further amalgamations with the larger banks would not in principle be regarded with favour by the Government is interesting as showing that in this matter the Government are following the policy of the late Administration. It is extremely unlikely, even if official approval were forthcoming, that there would be any further amalgamations with the "Big Five," as they are called, for

BANK OF ROUMANIA LIMITED
(FOUNDED 1866).

these banks have so developed the scope of their business that they are now able to give the most ample facilities to customers and it would seem, therefore, that they would have little or nothing to gain by any fresh alliance.

The Cotton Position.

At the moment the cotton outlook is quite promising. At any rate it appears probable that once again there will be enough cotton this season to keep the price of the commodity at a reasonable level. All depends, however, on the development of the demand for cotton goods. It is only the fact that the world's purchasing capacity has been so reduced since the war that has prevented the development of a real shortage of the raw material, and if conditions should be such as to enable a revival of trade it is quite within the bounds of possibility that a very difficult situation may arise. From the early reports it appears probable that the American crop will be in the neighbourhood of 15,000,000 bales, and as there will this year be a substantial increase in the production within the Empire, the position would appear to be fairly satisfactory. It is essential for Lancashire not only to have adequate supplies of cotton, but also to have cheap cotton, since it is only by this means that trade can be developed, and it would be little short of disastrous once trade begin to revive if it were to be checked by a sharp rise in the price of cotton. With the great developments now in progress within the Empire, each year that passes makes the position safer for Lancashire, though it must unfortunately be a long time before we can reach the ideal of being totally independent of sources outside the Empire for our cotton supplies. Still that will come in time.

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

41 LOTHBURY, LONDON, E.C.2

Empire Cotton Production and Prices.

The efforts now being made in the Sudan, Uganda, South Africa, Australia, Iraq, and elsewhere to develop cotton growing may possiby give rise to the fear that the ultimate result will be that the great increase in production will make the price of cotton decline to such an extent that some of these regions will be saddled for a year or two, until conditions alter, with an unprofitable crop. It cannot be too strongly emphasised that there is nothing in this view. The tendency over a long period of years has been for America to utilise an increasingly large proportion of her crop herself, leaving less and less for export. It is the function of Empire grown cotton to fill the gap thus created and also to provide for the world's future consumption, which is bound steadily to go on increasing and may quite conceivably develop in a few years out of all proportion to what it is at present. In developing cotton growing in the Empire on a large scale we are not merely attempting to safeguard the present—by which I mean the next few years—but are taking an option on future requirements. It would never do to wait for the development of the demand for cotton goods and then endeavour to meet it. It has been well said that the addition of one shirt to the average African wardrobe would create a cotton shortage. Will anyone venture to say that an increase in the standard of living of the peoples in question that would bring about a demand for cotton goods which could not be met is an impossible development? We have to see to it that any such happening shall not take us unawares, and the present price of cotton, were no other factors to be taken into account, affords the fullest justification for pushing on to the utmost with production within the Empire.

Phœnix Oil Profits.

It had been hoped that the Phœnix Oil and Transport Company would make its initial distribution on account of 1924, but while the shareholders will be disappointed that that has not happened, they will find compensation in the fact that the company has entered the ranks of dividend payers, an interim dividend being recommended in respect of 1925. The company made a net profit on the year of £225,610 as against £77,861 for the previous year, and with the amount brought in the available balance is £331,264. It is proposed to write off the whole of the balance of preliminary expenses, duty on increase of capital, new issue expenses, underwriting commission and brokerage, absorbing £80,709, creating a reserve against sundry assets of £29,000, leaving £221,554 to be carried forward. Including the above-mentioned amounts of £80,709 and £29,000, and various sums received by certain of the allied companies in respect of compensation, the sum of £300,166 has been written off for depreciation. The output last year was 187,904 tons, against 105,259 tons in 1923; for the first six months of 1925 the output amounted to 135,960 tons. No doubt the figures for the whole of the year will show a further marked advance. It has all along been foreseen that the strength of the company's position assured it a prosperous future under nomal conditions, and it may be expected henceforward to go rapidly ahead. The figures of this company incidentally throw a most interesting light on the outlook for Roumania. The Roumanian exchange still stands at a figure which ill accords with the country's potentialities, but it is obvious that now that the country's oil industry is really beginning to progress it cannot be long before the exchange is affected, for the recovery of the oil industry must ultimately mean a great increase in Roumania's exports, giving the country a large favourable trade balance, and, given ordinary conditions, no country with a favourable trade balance can long have an extremely depreciated exchange.

Progress in Persia.

At the meeting of the Imperial Bank of Persia the chairman, Sir Hugh Barnes, was able to give a most encouraging review of conditions in Persia. He referred to the growing power and popularity of the Prime Minister and Commander-in-Chief of the Army, Reza Khan Pehlevi,

Digitized by Google

by whom, he pointed out, the Government has been carried on with increasing strength and efficiency. The result of his work has been that the direct route from Ahwaz to Khurumabad through Luristan which has been closed for years as unsafe for traffic has been reopened and last April a caravan of specie was sent from Ahwaz to Sultanabad by this route without mishap. The trade of the country, it is satisfactory to note, is continuing to expand, and Persia has a substantial balance of trade in its favour. The great need of Persia to-day is for improved communication, and Sir Hugh Barnes indicated that this aspect was fully appreciated by the Prime Minister. "The question of railway construction," he added, "stands well in the foreground of his views, and I understand that all the recent plans for pushing on the various schemes suggested for linking up the capital with the sea emanate from him. The main roads have of late years received attention, and with the advent of the motor-car, they are serving their purpose fairly well, but there is still much room for improvement, and I understand the Government is contemplating special taxation for this purpose. Persia is to-day seeking eagerly for avenues by which to progress, and it is strange that the country should possess motors and aeroplanes before a mile of railway track has been built. This state of affairs we confidently hope may now be changed, as a serious beginning has been made to provide means for railway construction."

Cotton Growing in Syria.

While we are pre-occupied with cotton growing in the Empire France is doing her utmost to develop cotton growing in Syria, and by all accounts with a very great measure of success. The available statistics are at any rate significant, and the fact that the yield of cotton has risen in 1924 to five times what it was in 1922, speaks for itself. The painstaking work carried out in the Sudan Uganda and elsewhere has no doubt been studied closely by the French authorities who are evidently determined to proceed on the right lines by the establishment of experimental stations and other similar measures.

Cotton Research.

I have just received a copy of a summary of a report by Professor J. B. Farmer, F.R.S., and Mr. L. G. Killby, Secretary to the Empire Cotton Growing Corporation, on Trinidad as a possible site for a Central Research Station for cotton growing. The report is preceded by a Foreword by Dr. W. L. Balls, F.R.S., written after the decision of the Corporation to accept the recommendations made in the report and to establish a research station in Trinidad. The creation of a research station marks a new departure in the activities of the Corporation, and the development is one which has aroused the keenest interest in cotton circles for it is widely recognised that it is only through such a medium that it will be possible fully to utilise the great cotton growing potentialities of the Empire. It is pointed out in an introduction to the report that it is intended that the work of the station shall be to investigate the cotton plant in all phases of its growth and under rigorously controlled conditions, so that it may be possible to ascertain the importance of the various factors that contribute to the final result. It is not intended to provide strains of pure lint seed for large scale distribution to the cotton fields of the Empire. The effect of the acclimatisation factor makes it essential that the production of seed for this purpose must be carried out in the various countries concerned, and it is pointed out that the utmost that a central station can do in this direction is to breed out pure lines for special characteristics. These lines will have to be locally tested to find out whether they are satisfactory in any particular country and so to serve in that country as a starting point from which it can raise its own seed. The investigations that it is intended to conduct at the station include the study of the mechanism of the growth and behaviour of the cotton plant, its reaction to its environment and the connection between the characteristics of the lint and its spinning qualities.

COMMENTATOR.

NEWS IN BRIEF.

Zinovieff arrived at Tiflis last week.

Four Russian aeroplanes arrived at Kabul on July 4.

A heat wave is reported from Meshed, Persia, a temperature of 104 deg. having been registered.

Ziwar Pasha, Prime Minister of Egypt, left Cairo, for England on July 10, and arrived in London yesterday.

The Meshed correspondent of the *Pioneer* reports that the Turkomans have again retired to the hills after carrying off two women from two caravans.

According to the *Pioneer*, the Afghan authorities do not like the idea of Russian prospecting for oil in Herat and Afghan Turkestan. Failing Afghan prospectors they would prefer that the enterprise should be undertaken by the nationals of a country not adjacent to Afghanistan.

The Times Cairo correspondent reports that the Egyptian Government has appointed the Jarabub Commission, with Ismail Pasha Sidky as chairman, and has asked the Italian Government to agree that the first meeting of the Commission shall be in Cairo in October.

The mystery of the disease now ravaging the Bakharz district of Persia is still unsolved. Over 3,000 deaths have occurred from it during the past year in the 35 villages affected. Colonel Heron, Indian Medical Service, and Dr. Hoffman have gone to Meshed to investigate the disease.

The brother and sister of Lieutenant Mustapha Hamdy, who is alleged by Dr. Shafik Mansur—one of the accused in the Sirdar murder trial—to have accidentally killed himself while practising bomb-throwing in the desert, have identified a skeleton found at Helouan by the Egyptian police as that of their brother.

Negotiations for the concordat between Yugoslavia and the Vatican are said to be now at an end. The Yugoslav delegates have left Rome for Belgrade in order to submit the result of their mission to the Government. The negotiations were conducted on behalf of the Vatican by Cardinal Gasparri and M. Borgoncini.

THE TELEPHONE SYSTEM OF PERSIA.

A telephone concession covering all Persia, except the Province of Gilan on the Caspian, was granted to a group of Persians in 1903 for a term of 60 years. This concession gives the right to construct and operate telephone exchanges in every city or town in Persia and includes permission to erect lines along all roads and streets, on roofs, and in the yards of all houses.

By its terms, telephone buildings are exempted from all Government taxes, and all telephone equipment consigned to the company is free from customs duties. After deducting expenses and interest from the income, 10 per cent. of the remainder is to be paid to the Government, but no such payment is to be made for the first five years after the installation of the Teheran exchange nor for the first 10 after the installation of any other exchanges.

The General Telephone Co., or Société Générale Des Telephones de Perse, with headquarters at Teheran, is the present holder of this concession. The owners of two-thirds of the shares must be Persian subjects. After the payment of all expenses, and 10 per cent. of the remainder of the receipts to the Government, 5 per cent. of the profits is set aside as a reserve and 10 per cent. is divided among the members of the administrative council. The rest is divided among the shareholders. It was recently decided that 10 per cent. of the annual income should be set aside for improvements, repairs, and maintenance.

Under this concession, says an American Consular report, 24 telephone exchanges, all of which use the magneto system, have been established in Persian cities and serve a total of 2,639 subscribers.

The rates charged are about 10s. to 15s. per month, but the subscriber must furnish his own instrument, which may be purchased in the bazaars at a price ranging from £3 to £12 each. Most of the instruments now used are of Swedish manufacture, but there are also many Russian and a considerable number of German makes in service. A few American and English instruments are on sale, but they are not in general demand.

Besides the exchanges belonging to or licensed by the telephone monopoly, there are exchanges in Gilan Province, Resht, Ispahan, and a number of private exchanges bordering the Persian Gulf. The latter are, as a rule, operated by the British military authorities.

The central office equipment in Teheran consists of a local battery magneto system of Russian manufacture which has been in service about 20 years. There are five branch exchanges besides the central office. The total capacity of the system is 1,600 lines, and there are at present 1,350 subscribers.

The main central operates 24 hours a day, but the branches are closed four hours after sunset. The operators are both Mohammedan and Zoroastrian. They are required to speak only Persian, and their average wage is £3 12s. per month. The average number of calls is 414 per day.

A general reconstruction of the Teheran plant is now under way, and all of the equipment for this purpose has been purchased in Germany. The magneto equipment will be discarded and a common battery system installed. The outside plant has hitherto consisted of bare iron wire run on buildings and poles, but this is now being replaced in part by an underground cable system. The company is itself purchasing the new instruments; hereafter subscribers will not be required to furnish their own.

The new system is laid out for 3,000 subscribers, and it is estimated that the improvements will cost somewhat over £66,600. As there is at present a greater demand for the service than can be supplied, it is expected that the extension being made will bring in sufficient income to warrant the additional investment. Eleven exchanges, other than Teheran, average 66 subscribers each.

NEW GREEK REFUGEE LOAN.

The question of a further Greek Refugee Loan is the subject of the following reference in the current number of the fortnightly *Market Report* of Messrs. Hambros Bank, Ltd.

"Owing to the continued influx of refugees into Greece, far in excess of the number contemplated at the time of the issue of the Greek Refugee Loan in 1924, it is found that the moneys raised by this loan will not be sufficient to meet the requirements of these additional refugees, who are already said to number 300,000 people beyond the numbers budgeted for originally, and it is anticipated that very shortly even these numbers will be further augmented by 7,000 to 8,000 families expected from Turkey and Bulgaria. It is, however, not expected that any funds, other than those already available, will be required before 1926, when the Greek Government have in contemplation the issue of a further loan. No loan can, of course, be issued ranking pari passu with the Refugee Loan of 1924, and any further funds raised must be—in so far as any of the present hypothecated revenues are concerned—of inferior rank. At present, however, no definite steps have been taken in this direction, as the Council of the League of Nations will first have to investigate the situation before their sanction is obtained. The magnificent reports of the improved conditions in Greece since the advent and settlement of the refugees make it clear that Greece, by encouraging the settlement of these people who, formerly, were the great producing power of Asia Minor and Turkey, will benefit more and more each year."

SIR FLINDERS PETRIE.

Prince Arthur of Connaught, at University College, on July 7, handed to Sir W. M. Flinders Petrie the first Petrie medal for distinguished work in archæology. The medal, which will probably be awarded every three years by the Board of Studies in Archæology at London University, has been designed to commemorate Sir Flinders' services to archæological research. It represents the head of the famous Egyptologist, and on the reverse an Egyptian ibis—the symbol of research—combined with the heads of Keops, Petrie's most interesting find.

Sir Flinders Petrie said there was an enormous amount of work still to be done, and even in the records they already had there was enough to keep him busy for the next ten years.

TRAVELLING STUDENTSHIP TO MESOPOTAMIA.

To assist the archæological work which has been undertaken by Mr. Leonard Woolley at Ur in Mesopotamia, the Royal Society of British Architects has opened a fund to provide the sum of £400 for a "R.I.B.A. Travelling Studentship" to enable a young architect to accompany Mr. Woolley on his excavations. The sum of 40 guineas has already been received by the Institute from Mr. F. Halstead Best, and the secretary will be glad to receive any further contributions.

Detailed plans for the building of the Jebel Aulia dam (on the White Nile above Khartum) have been approved by the Egyptian Cabinet.

In view of the favourable provisional crop returns a decree has been issued abolishing the restrictions on the export of grain from Bulgaria.

A commercial agreement between Germany and Turkey has been reached on the basis of the Most Favoured Nation treatment. It will come into force immediately.

COMMERCIAL CORRESPONDENCE.

THE PORT OF SALONIKA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—With regard to Sir Harry H. Lamb's comment, in your issue of July 9, upon my letter in your issue of July 2, Sir Harry requests that I explain why an increase in the traffic on the Salonika-Ghevgheli line, such as would be ensured by Yugoslav control, should not be equally well attainable by means of an ordinary commercial convention, etc.

The question is not difficult to answer. Practical experience to date has demonstrated that ordinary commercial conventions have proved inadequate with Greek railway administration.

The installation of a competent administration, such as Yugoslavia is asking for, capable of making the line in question adequately serve the export traffic from the Serbian hinterland, would logically increase the volume of British shipping in those ports.—I am, etc.,

London, July 13. T. MAHONEY SHEA-LAWLER.

SPECIAL MARKET REPORTS.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

Teheran, June 13.—The bazaar is very quiet, indeed almost stagnant. The price of sugar continues to fall on account of the large stocks which have been accumulated. It is stated that the Government have already collected 6,000,000 krans from the new sugar tax. The present prices are:—Belgian 22 krs. per batman, Russian 20 krs. per batman. The prices of tea are unchanged. There is only a small demand for coffee and prices are unchanged. An increased demand is to be noted for opium, with a consequent rise in prices. Quotations are:—Shireh 330 krs. per batman, Tchouneh 410 krs. per batman.

Cyprus, June 13.—The wheat and barley crops are 30 per cent. superior to last year's and of a better quality. Opinions are divided as to the yield of carobs. The crops appear to be slightly inferior to last year's.

Haifa, June 13.—The grain market remains firm, and orders for Syria have resulted in a rise in prices of 5 per cent. Stocks show a marked decrease, and new sales are quoted at 4 to 5 per cent. over the prices of the previous week.

IMPORTANCE OF YUGOSLAV MARKET.

The Journal of the British Chamber of Commerce at Marseilles recommends British manufacturers and exporters to establish closer contact with the Yugoslavian market, where, in the future, there is likely to be an increasing outlet for British products and adds that statistics furnished by a correspondent serve to emphasise that those manufactures in which Britain specialises take the most prominent place in the import trade of Yugoslavia. During last year the total import trade of Yugoslavia amounted to 1,127,680 tons valued at 578,588,568 gold dinars, and exports totalled no less than 3,915,700 tons valued at 671,271,951 gold dinars, thus leaving a large balance in favour of Yugoslavia, which would undoubtedly have been increased still further had there been a sufficient number of goods-vans to carry the surplus produce available. The following were the principal articles imported by Yugoslavia: Cotton goods (18.30 per cent.); woollen goods (7.10 per cent.); cotton yarns for weaving (5.05 per cent.); and machinery and instruments (3.25 per cent.). Other less important items were sugar, coffee, coal, cotton in grey state, and raw skins. The most important commodity, supplied by Great Britain, was coffee, followed by yarns, for weaving, and coal.

At the present time Great Britain is fourth on the list of supplying countries, being preceded by Italy, which last year furnished 20.52 per cent. of the total imports.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended July 1, state:—

Since our last report the futures market has been rather dull for the old crop and active and firm for the new crop; the net changes on the week are the following:—Sakellaridis, 3.05 dollars up for July, 1.57 dollars up for November, 1.59 dollars up for January, 1.60 dollars up for March. Ashmouni, 1.22 dollars up for August, 0.95 dollars up for October, 1 dollar up for December.

July Sakel and August Ashmouni have been very little dealt in; interest is lacking as business with spinners for prompt shipment is almost nil and speculators do not care to operate in so narrow a market, where the bull and bear factors more or less counterbalance. Operations in new crop options have been heavy but again very speculative. We think that spinners so far have bought little new crop cotton; they consider the prices too high in view of the big acreage put under cotton both in America and Egypt, and the fairly normal condition of the growing crops at the present moment. The week's receipts amount to Crs. 1,069, against exports to Crs. 76,204; the stock stands at Crs. 572,044.

Spot: Minet el Bassal has been very quiet indeed this week and demand from spinners has fallen away considerably. The market has only been open four days and sales amount to about 2,500 B/s, of which we estimate 550 B/s Sakel and 1,950 B/s Uppers with a few bales of White.

Sakellarides: Has been in poor demand. The medium and lower grades have attracted most attention. Spot differences are rather easier with the exception of Good Fair, and Fully Good Fair, which are unchanged and maintain their parities with contracts.

Ashmouni and Zagora: Continue in fair request and all styles have been dealt in. Spot differences are unchanged from last week except for Fully Fair and below, which are inclined to ease.

Brown, Pilion and White: Are neglected and only a few bales of White have changed hands. Spot differences for Brown and Pilion are quoted unchanged except for Fully Fair and below, which are rather easier. Those of White are considerably easier all round.

Crop 1925: Climatic conditions have this week been quite favourable to the growing crop. In Upper Egypt and the South and Central Delta, the general condition of the plant is about normal. In the north Delta the condition is not yet what one would desire. The leaf worm attack is now in its most acute stage, but it is well controlled and no serious damage is expected. The pink boll worm has made its appearance but it is yet too early to express an opinion as to its future expansion. The irrigation rotations now at work in the great majority of the districts consist of 6 working days alternating with 18 days' stoppage; these rotations are of the longest type, and if the weather during July and August is exceptionally hot might adversely affect the final results of the crop.

Company Meetings.

BANK OF BRITISH WEST AFRICA.

Improvement in West African Trade.

The thirty-first annual general meeting of the shareholders of the Bank of British West Africa, Ltd., was held on July 9 at the offices, 37, Gracechurch Street, London. The Rt. Hon. the Earl of Selborne, K.G., K.C.M.G. (chairman of the company), presided.

The Secretary (Mr. G. B. Bennett) read the notice convening the meeting.

The Chairman first referred with great regret to the loss the bank had sustained by the death of his predecessor, Lord Milner. Dealing with the accounts, he said:—Our profits amount to £112,352, or some £16,000 more than a year ago, and while I am not disposed to be too optimistic as to the future, I think we can congratulate ourselves upon this definite evidence of an improvement in West African trade. Our main interests now and always are, of course, in British West Africa, but before touching on these I may say a few words as to our other fields of operation. Let me refer first of all to Egypt.

Our first branch in that country was established in 1918, and, as you will remember, we came to an arrangement with Lloyds Bank Limited early in 1919 under which that bank acquired a large holding of our shares. Lloyds Bank Limited in February, 1923, found themselves, by the acquisition of Cox's Bank, the proprietors of an existing business in Egypt. The operations of the two Egyptian businesses continued, but it became more and more clear that competition in Egypt between Lloyds Bank Limited—our largest shareholders—and our branches in that country was increasing, as indeed was inevitable. Various schemes were discussed between us in London, in that friendly spirit which characterises all our relations with Lloyds Bank, and ultimately it was decided that we should close our two branches and terminate our business in Egypt, transferring it, so far as we possibly could, to Lloyds Bank Limited.

We retain a substantial interest in the results of this amalgamated Egyptian business carried on by Lloyds Bank; we have two of our directors on their Egyptian committee, a representative concerned in the administration, and several members of our Egyptian staff and our local adviser in Alexandria, Mr. Ismalun, have been taken over by Lloyds Bank Limited. With the saving in overhead expenses which will result, the goodwill which each side to the bargain brings in, and the local experience now united, we look forward with confidence to increasing profits from the combined business.

Our business in Morocco continues to be carried on under the disadvantages of unstable exchanges. There are other problems connected with Morocco which also tend to make conditions difficult. Perhaps there is no more important matter from the point of view of British trade interests than that of the Capitulations. It is most earnestly to be hoped that our Foreign Office will resist any and all attempts to deprive our country of our capitulatory rights in Morocco

I now come to West Africa. Our accounts for the year to March 31, 1925, indicate that trade conditions have improved; and so far as exports are concerned the quantities of many products exported from British West Africa were greater in 1924 than in any previous year. Presuming the absence of any untoward and unforeseen occurrences in Europe or America, I see no reason why these exports should not continue to increase and thereby enable the West African Colonies to require and consume an increasing quantity of manufactured goods notwithstanding the higher prices they are called upon to pay for them.

There exists a friendly, if perhaps unspoken, rivalry between the Colonies in their development, but each recognises that the extension of communications is the great essential. More railways, more roads and harbour improvements are of the first importance for British West Africa, and the recent suggestion of Lord Kylsant that the British Government should provide capital for the purpose of their construction deserves every consideration.

The report and accounts were unanimously adopted.

P. AND O. BANKING CORPORATION.

Conservative Policy of the Board.

The fifth ordinary general meeting of the P. and O. Banking Corporation, Ltd., was held on July 10 at 122, Leadenhall Street, E.C.

The Right Hon. the Viscount Inchcape, G.C.S.I., G.C.M.G., K.C.I.E. (the Chairman), reminded the shareholders that last year he had briefly set out the lines upon which, in his view, their policy should run. As a young bank they must, he said, go slowly, conserve their resources in their business, and build up their reserves, distributing their profits with cautious regard to possible vicissitudes which might arise in the trades they were financing. In this policy he was sure they, the Board, would have the shareholders' complete agreement.

Dividend and Accounts.

Last year he had referred to the hopes expressed in some quarters of an early revival of trade. These hopes had not been realised; on the contrary, there was an even greater uncertainty now than there had been at that time, while in the last few weeks a new cloud—the trouble in China—had appeared on the horizon. In such conditions they would, he felt sure, endorse the Board's view that it was wise and prudent to increase the bank's reserves rather than to distribute up to the hilt.

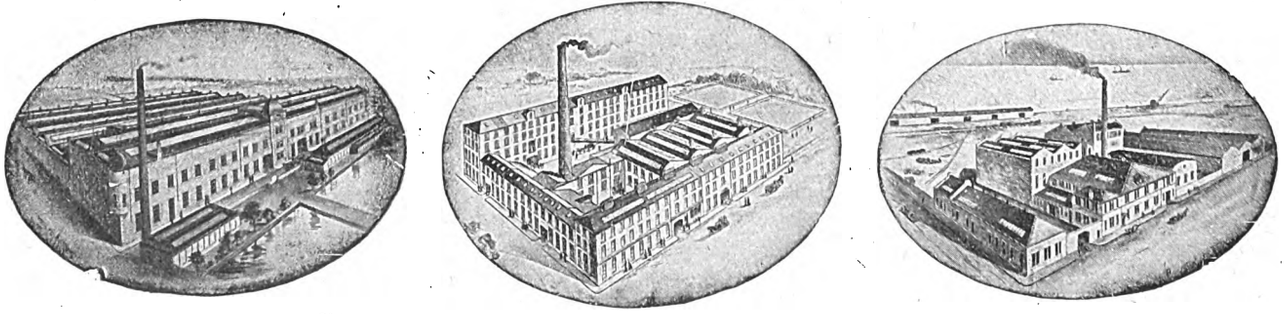
They had also felt that they should make a beginning with the writing down of their premises, which at present stood at a modest figure. They were now moving, both at the Head Office and at the Branches, into permanent premises; and it was only wise to write off gradually the expenditure of the last five years on premises which they had occupied temporarily in the early stages of the business.

The Year's Results.

The year's results showed very little material change, and they

Address: "Lobo, Dundee." **LOW & BONAR, Ltd., Dundee, Scotland.** *All Cable Codes used.*

Manufacturers of JUTE SACKS and JUTE CLOTH for all purposes.
Also of WATERPROOF CANVAS and TARPAULINS, YARNS, TWINES, ROPES, etc.



Shippers of all classes of JUTE, LINEN and COTTON FABRICS.
Also of CALCUTTA SACKS.

Digitized by Google

were indebted for the surplus on the year's operations to the efforts of the management at home and abroad. Their current and deposit accounts stood at £9,419,000, much the same figure as last year, and this important branch of their business was everywhere being steadily maintained. Liabilities on loans against security had been reduced to about £3,750,000; on the contra side they had—in their cash money at call, £2,476,224—a satisfactory reserve of 26 per cent. against their liabilities on current and deposit accounts. Their investments, loans and advances did not differ materially from last year's. The decline in the amount of bills in their portfolio on March 31 did not imply a decline in the bank's share of the financing of Eastern trade; on the contrary, their bill business to and from India and China had greatly increased, the turnover having been more than two and a half million pounds greater.

The past year had not been without its anxieties. Bad trade all over the world was bound to be reflected in a bank's business, but with a return to prosperity, peace in industry and settled conditions, which they hoped soon to see, those banks which had conducted their business prudently would, he concluded, reap the reward of their prudence.

I now beg to move: "That the directors' report and statement of accounts for the twelve months ended March 31, 1925, be and the same are hereby adopted."

Mr. Alastair Cameron (Deputy-Chairman) seconded the motion, which was carried unanimously.

The Chairman next proposed: "That a dividend of 5 per cent. per annum, less income-tax at 3s. 7½d., on 259,416 shares be and the same is hereby declared payable on July 16, 1925, to the members who were on the London and Bombay registers of the corporation respectively on July 3, 1925."

The Right Hon. the Earl of Selborne, K.G., G.C.M.G., seconded the resolution, which was unanimously adopted.

The retiring directors (Sir Frederick Eley, Bart., Mr. W. O. Grazebrook, the Hon. Alexander Shaw, and Mr. Alastair Cameron) were re-elected, and Messrs. Peat Marwick Mitchell and Co. were reappointed auditors.

A cordial vote of thanks was passed to the Chairman and directors, as well as to the staff both at home and abroad, and the Chairman, having acknowledged the compliment, the proceedings terminated.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned

(Particulars of tenders marked D.O.T are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

EGYPT.

Steel Index Cabinets.—The Survey of Egypt (Ministry of Finance) invites tenders for the supply of 18 steel card index cabinets. September 8.

Drawing Paper.—The Central Stationery Stores, Ministry of Finance, Cairo, invites tenders for the supply of 96 reams drawing paper. August 8.

Zinc Sheets.—The Superintendent of Stores, Egyptian State Railways, Telegraphs and Telephones, Saptia, Cairo, invites tenders for the supply of 9,000 kilos zinc sheets. August 8.

Mineral Lubricating Oils.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo, invites tenders for the supply of 1,775 tons of mineral lubricating oils. August 18.

Steam Engines.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection of two 80 B.H.P. semi-fixed superheated condensing steam engines at Beni Saleh, Beni Suef Province. August 18.

Pumps.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection of two belt-driven centrifugal turbine, or screw pumps at Beni Saleh, Beni Suef Province. August 18.

Vessel for Coastguard Duties.—The Director-General, Coastguards and Fisheries Services, Alexandria, invites tenders for the construction of a sea-going vessel for Coastguard duties. August 1.

Timber, Etc.—The Director of Stores, Ministry of Education, Sharia Kasr el Aini, Cairo, invites tenders for the supply of raw materials, i.e., timber, leather, iron bars, paints, tools, etc., for the year 1925-26. August 1.

Paper and Boards.—The Egyptian Government Press invites tenders for the supply of smooth surface writing paper, calendar printings for common forms, buff tinted paper, newsprint, millboard (thickness 1.1 mm. and 2.2 mm.), strawboard (1.1 mm. and 2.2 mm). July 25. (D.O.T.)

Paper.—The Superintendent, Government Press, Bulaq, Cairo, invites tenders for the supply of paper, bristol board, and millboard. July 25.

Nails and Shoes.—The War Department of the Egyptian Government invites tenders for shoes, horse and mule, about 5,400 pairs. Nails, horse and mule, about 150,000. July 21.

COMPANY NOTES AND REPORTS.

PHŒNIX OIL AND TRANSPORT.

The report for 1924 of the directors of the Phœnix Oil and Transport Co., Ltd., states that they are glad to be able to present the accounts so much earlier this year than in the past. The profit and loss account shows a profit of £225,610 (as compared with £77,861 for the previous year), which together with the balance brought forward amounts to £331,264. The directors propose to write off the whole of the balance of preliminary expenses, duty on increase of capital, new issue expenses, underwriting commission and brokerage, totalling £80,710, and to create a reserve against sundry assets of £29,000, leaving a net balance standing to the credit of profit and loss account of £221,554, which it is proposed to carry forward. The sum of £300,166 has been written off for depreciation during the year from the accounts of this company and those of the allied companies. This includes the above-mentioned amounts of £80,710 and £29,000, as well as various sums received by certain of the allied companies in respect of compensation.

In the opinion of the board, the company had reached a satisfactory revenue-earning stage at the end of last year, and, having regard to the continued progress during the first six months of the current year, the directors have felt fully justified in declaring an interim dividend in respect of 1925 of 1s. per share on the fully-paid shares of £1 each and 6.9864 pence per share on the fully-paid shares of 1s. each, in both cases less income-tax at the rate of 4s. 1½d. in the £. This interim dividend is payable to all shareholders whose names appear on the register of members at July 13, and the warrants will be posted before the end of the current month. This is the first dividend payment by the company.

The gross production of crude oil by the Phœnix group of companies for the last three years has been as follows: 1922, 42,106 tons; 1923, 105,259 tons; and 1924, 187,904 tons, while for the first six months of the current year it has attained 135,960 tons. The increase in the production of crude oil is evidence of the success attending the extended drilling programme The progress made in the previous years has been well maintained.

The negotiations for the acquisition of State oil lands and for the renewal of the State lease at Gura Ocnitei have progressed very satisfactorily, the Roumanian Government having signified the extent and position of the lands which it is proposed to allot and which should add considerably to the company's future prospects. The final details are now being discussed with the Roumanian authorities, and it is anticipated that possession of these new lands will be obtained in a very short time and the renewal of the existing lease granted. The negotiations with the Roumanian Government have been of a cordial nature, and the allotment of these lands and the renewal of the lease will redeem the promises previously made by them in this respect.

EAST INDIAN COAL.

The profits for the half-year ended April 30 of the East Indian Coal Company amounted to £26,580, while £8,544 was brought forward. A dividend for the half-year of 10 per cent., less tax, is proposed (making 20 per cent. for the year), while £15,000 is transferred to the reserve for equalisation of dividends. The total output for the year was 668,158 tons.

IMPERIAL BANK OF INDIA.

The net profits of the Imperial Bank of India for the half-year ended June 30 were Rs.69,39,700, and Rs.12,58,200 were brought forward, making Rs. 81,97,900. The Governors have declared a dividend of 16 per cent. per annum, free of income-tax; transferred to reserve, Rs. 10,00,000; to pension funds, Rs.5,00,000; and carried forward, Rs.21,97,900.

FURNESS WITHY.

The report of Furness Withy and Co., Ltd., for the year to April 30 last states that the net profit amounted to £528,742 as compared with £272,443, and with £216,637 brought forward makes the available balance £745,379 against £774,758. The directors state that they regret that the depression in the shipping industry, referred to in the last report, has been accentuated during the year, and the shipowning branch of the business has contributed a comparatively small proportion of the profits

The usual half-yearly dividends on the preference shares were paid on November 1, 1924, and May 1, 1925, and on the same dates dividends were paid on the ordinary shares at the rate of 5 per cent. per annum, free of income-tax. The directors now recommend a

Digitized by Google

bonus of 2½ per cent., free of tax, on the ordinary shares for the year, which will represent a total distribution for the year of 7½ per cent., free of tax. A sum of £200,000 has been transferred to depreciation account, leaving a balance of £187,259 to carry forward. The bonus will be paid to all shareholders registered on the books on July 22, and the warrants will be posted on August 17.

WESTMINSTER BANK.

The directors of Westminster Bank Limited have declared an interim dividend of 10 per cent. for the half-year ended June 30 on the £20 shares, and the maximum dividend of 6¼ per cent. on the £1 shares for the same period. The dividends, 10s. per share and 1s. 3d. per share, respectively (both less income-tax), will be payable on August 1.

Following is the half-yearly statement by the Westminster Bank showing the financial position as at June 30, 1925:—

Liabilities. — Capital registered, £33,000,000; subscribed, £30,264,688; paid-up, £9,051,718; reserve, £9,051,718; current, deposit and other accounts, £269,015,340; liabilities for acceptances, endorsements, etc., as per contra, £11,175,673; notes in circulation in the Isle of Man, £13,223; total, £298,307,672.

Assets.—Coin, bank and currency notes and balances with the Bank of England, £32,382,310; balances with, and cheques in course of collection on, other banks in Great Britain and Ireland, £10,243,294; money at call and short notice, £24,298,584; bills discounted, £34,342,723; investments, £50,034,441; investments in affiliated banks, £2,991,706; advances to customers and other accounts, £128,678,661; bank premises account, £4,160,280; liabilities of customers for acceptances, endorsements, etc., as per contra, £11,175,673; total, £298,307,672.

TEA RESULTS.

The profit of the Assam-Dooars Tea Company for 1924 was £104,762, and after sundry adjustments the balance available is £119,929. A further sum of £25,000 has been transferred to the reserve, and £21,387 added to the taxation reserve. A final dividend on the ordinary shares of 35 per cent. (less tax) is proposed, making 50 per cent., carrying forward £10,181.

The outturn of the Indian Tea Company of Cachar for the year to March 31, 1925, was 499,273 lb., against 669,076 lb. The profit was £13,629, making available £15,032. A dividend of 8 per cent. is proposed.

The profit of the Hope Tea Company for 1924 was £80,125, and after sundry adjustments the balance available is £107,239. A final dividend is proposed on the ordinary shares of 25 per cent., less tax, making 50 per cent., carrying forward £8,798.

The revenue account of the Lankapara Tea Company for the year ended December 31, 1924, shows a profit of £33,328, plus £6,042 brought in, and interest on investments £710, together making £40,081. The directors recomtmend a final dividend of 20 per cent. (less tax), making 30 per cent. for the year, carrying forward £7,379. The outturn was 1,357,887 lb., against 1,516,614 lb. for 1923.

The net profit of the Anglo-Ceylon and General Estates Company for the year ended March 31, 1925, was £81,469, plus a balance brought forward, making £123,726. The directors recommend a final dividend of 10 per cent., making 15 per cent., placing £5,000 to reserve, leaving £43,726 to be carried forward. The tea crop again shows an increase, and the output, which in the previous year amounted to 3,252,159 lb. and realised an average price of 16.59d. net per pound, was in the past year 3,581,234 lb. with an average price of 17.98d. per pound.

The index of the Egyptian cotton condition is given as 96 in Lower Egypt, 100 in Middle Egypt, and 100 in Upper Egypt.

It is estimated that the Cyprus locust bean crop will amount to about 55,000 tons, as compared with 60,000 tons in 1924 and 35,000 in 1923. At present the stock of locust beans in the island is about 5,000 tons, and it is expected that the greater part will be exported chiefly to Spain during this and next month.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

GREECE'S MINERAL OUTPUT.

The mineral output of Greece in 1924, showed, on the whole, an improvement on the position in the previous year, the figures (in thousands of tons) being as follows, the totals for 1923 being given in parenthesis:— iron ore 96 (100.1); lignite 111 (117.9); iron pyrites 76.1 (52.3); marble 58.2 (62.6); lead ore 53.6 (53.6); emery 22.6 (21.6); chromium 14.3 (14.8); lead 5.1 (4.5).

It is pointed out, however, in the *Oikonomologos Athenon* that except in regard to emery and lignite there was a marked falling off in post-War output as compared with pre-War down to 1922. In the last two years there has been a marked recovery in the output of iron ore and a slight improvement in that of zinc ore, whilst in most of the rest the decline would appear to have been arrested. The output of emery during the last two years has been greater than ever before, but lignite is still declining after reaching its maximum output in 1918.

The emery mines are a source of considerable profit to the State. Of the 22,632 tons produced in 1924, 19,251 tons were exported for 28.1 million drachmæ against a total cost of 16 million drachmæ for the whole output. Of the 19,251 tons exported France took 5,661 tons, England 5,400, Germany 1,591, Italy 1,421, the United States 1,100, and other countries 4,078.

The fall in the output of lignite is attributed not to exhaustion of the mines or shortage of capital, but to defective organisation and uneconomical methods of exploitation. It is the more painful to the Greeks in view of the increase in the output of their neighbours. Thus the Roumanians increased their output from 250,000 tons in 1919 to 1,800,000 in 1912, and the Bulgarians from 579,000 tons in 1919 to 1,100,000 in 1923. The fall in production is counter-balanced by a large increase in imported fuel; 434,000 tons of coal were imported in 1922, 463,000 tons in 1923 and 669,000 tons in 1924. In the latter year the imports of coal cost 334.3 million drachmæ, which is a considerable item in the Greek trade balance and indicates the necessity for an extension in the output of lignite. The import of oil is also increasing very rapidly, having risen from 20,000 tons in 1922 to 23,000 tons in 1923 and 39,600 tons in 1924, at a cost in the latter year of 140 million drachmæ.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Tarantia for Bombay (Liverpool, July 23). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mandasor for Port Said, Colombo, Madras, and Calcutta (London, July 25).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (Birkenhead, July 15).

British India Line.—S.s. Malda for Colombo, Madras, and Calcutta (London, July 18); s.s. Nalgora for Bombay and Karachi (London, July 18).

Cunard Line.—S.s. Cypria for Oran, Algiers, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, August 1).

Ellerman "City" Line.—S.s. City of Canton for Calcutta (Birkenhead, July 20).

Johnston Line.—M.v. Sycamore for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 8); s.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 5); s.s. Quernmore for Piræus, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 12).

P. and O. Line.—S.s. Morea for Bombay (London, July 24); s.s. Nellore for Colombo, Madras, and Calcutta (London, July 25).

Prince Line.—S.s. Cyprian Prince for Malta, Alexandria, Jaffa, Haifa, and Beyrout (London, July 21).

Roumania's crude oil production during the first three months of the current year amounted to 528,574 tons, as compared with 392,454 tons for the corresponding period of the previous year. Of this total the fields in the Prehova district contributed 421,709 tons.

Digitized by Google

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended July 11 states:—

The past week has differed little from its predecessors and business generally has been quiet. There was, perhaps, a slight increase of activity yesterday in the way of inquiry, the result of which, in the main, remains still to be seen. Surprise is expressed here that raw cotton quotations should have been so little affected by the favourable Bureau Report published last week.

Yarn.—The situation in this section is unchanged. Supply still exceeds demand, and those spinners who have not actual stock to offer can give early deliveries. It is said that the short time movement in the American section is receiving support from many firms who did not actually vote in favour of it.

Cloth.—There has been perhaps a slightly better tone here. Inquiry has broadened somewhat but, at the same time, it must be said that the prices offered are very low and much negotiation is necessary before orders are finally placed on the books. Business for India has expanded a little and whilst the same cannot be said of China, there is a more hopeful feeling with regard to that market. Other minor foreign outlets call for no mention, but the Home Trade has again contributed good support.

Raw Cotton.—An interesting announcement was made this week by the Liverpool Cotton Association to the effect that they have adopted a new form of "futures" contract to be called "The Empire and Miscellaneous Cotton Delivery Contract." Operation for the new contract will commence in Liverpool on September 1 next, in respect of deliveries for October and onwards, in multiples of 50 bales (480 lb. each). Against this contract all types of cotton will be tenderable with the exception of certain qualities of Egyptian. It is anticipated that this facility will be very useful in connection with the "hedging" of various types of outside growths, amongst which, of course, are Turkish, Cilician, and Iraq cotton.

The market is at present almost entirely under the influence of the weather reports from the United States. These are somewhat varied, and in certain quarters considerable importance appears to be attached to the very dry weather experienced in Texas, although, apparently, in the cotton growing area conditions are normal. Closing quotations yesterday were as follows:—American Middling, 13.65; Egyptian Fully Good Fair, 31.35.

The production of the Dacia Romano Petroleum for June amounted to 372 tons.

The annual general meeting of the Imperial Ottoman Bank will be held on July 29 at Winchester House, Old Broad Street.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended June 30 amounted to £E7,631, making the total from April 1 £E58,202.

White to play.—What result?

Solution to end-game No. 5:—1, K—B3, K—B3; 2, K—Kt4, K—Kt3; 3, K—R3, K—R3 and draws. If White attempts to get round on the Queen's side he must lose.

ENGINEERING TOPICS.

Production of Alcohol for Motor Fuel in the Tropics.

The question of making an efficient motor fuel in the tropics, where imported spirit is expensive, is at present attracting considerable attention. Various materials have been suggested, and in some cases tried, as a source of power alcohol, such as starch-containing roots, and cellulosic residues from the sugar and other industries, but one of the most valuable appears to be the sap which may be collected from the flowering shoots of the Nipa palm of the Far East. Considerable work has been done in the Philippine Islands in ascertaining the suitability of this palm for the production of alcohol and quite recently an experimental plant has been erected in the State of North Borneo. The plant is being run under the direction of the local Department of Agriculture and an account of the results of the first year's working, based on a memorandum supplied by the British North Borneo Company, is given in the current number of the "Bulletin of the Imperial Institute," published by Mr. John Murray.

There are about 300,000 acres of nipa palm in North Borneo, occurring in nearly solid stands of 5,000 acres or more. The sap flows for only six months in the year, but it is estimated that during this period 900,000,000 gallons of sap capable of producing nearly 60,000,000 gallons of alcohol, could be obtained. The results of the first year's working of the experimental plant came up to expectations in every way. The still was only capable of producing 100 gallons of alcohol per working day of 12 hours, and the cost of running such a small plant were naturally somewhat high, but it is shown that a permanent plant producing not less than 1,000 gallons per day should prove a commercial success. Estimates are quoted in the article of the cost of production for plants of various capacities. For a plant capable of producing 2,000 gallons per day of 12 hours the capital required is estimated at about £26,000, and the profits on the spirit delivered in Singapore or Hong Kong would be equivalent to a dividend of 10 per cent. on the capital. An 8,000 gallon plant run for 24 hours per day would require a capital of about £122,000 and this, it is estimated, would yield profits equivalent to 30 per cent. on the capital.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Yugoslav Coalition.

Even those who have not had occasion to listen to hour-long dissertations by M. Raditch on the subject of M. Pashitch and his Radical Cabinets can appreciate the importance of the coalition now effected in Yugoslavia. A truce is thus called to a political antagonism of half-a-dozen years that has been carried to all the extremes of which Balkan history affords so many precedents. At the actual moment of the formation of the new Coalition Government M. Stefan Raditch, the leader of the Croatian Peasant Party, is himself in prison under the gravest charge that can be brought against a responsible politician, that of sedition and of being in correspondence for treasonable ends with the Soviet authorities. According as the accusation against M. Raditch was well-founded or unfounded, so does it, in company with the fact that he has been in prison for six months, illustrate the degree to which political hatred on one side or the other has been carried for party ends. To-day, however, all this rancour is laid aside, officially and, we may hope, with individual sincerity. One of the first acts of the new Yugoslav Government, in which the Croats have four representatives, has been to order the release of M. Stefan Raditch and his fellow prisoners. The charge against them of high treason will be withdrawn, and the ground will thus be cleared for practical and useful co-operation between the two parties. The sound common-sense behind this agreement is obvious, however disconcerting it may be to those who are apt to take too seriously the verbal venom that poisons Balkan politics. The new Ministry comes into power with a joint following of two-thirds of the deputies in the Skupshtina, and in agreement on the general lines of M. Pashitch's policy. Certain modifications in the administrative system, however, are promised, and these, it is to be supposed, will represent the extent of the concessions made to Croatian feeling. Neither party, we may hope, will find it necessary to work out its gains and losses as a result of the coalition. It should suffice for both that the interests of Yugoslavia as a whole stand to be promoted by an agreement which offers the country an opportunity of proceeding with many projects of reconstruction which have been in abeyance or hindered by the political deadlock that has in effect prevailed hitherto.

The Œcumenical Patriarch.

In yet another direction the expenditure of much ink and breath is shown to have been a well-meant but wasted effort. When the Turkish Government gave practical effect to its warning that Mgr. Constantine VI. was an "exchangeable" Greek, and as such could not be regarded as a legitimate candidate for the Œcumenical Patriarchate, an attempt was made to represent the step as a challenge to Christianity and as the beginning of the end of the Orthodox Church. There was, however, nothing in the published accounts to justify the view. Whether in the absence of a world-wide protest the Turkish Government would have proceeded to further measures against the Patriarchate cannot, in the circumstances, be proved or disproved, and the golden rule of not crying out before one is hurt holds good. Mgr. Constantine VI. eventually resigned a post that he could not fill; the Turkish Government, which might not have felt obliged to proceed to extreme measures, if the controversy had been handled more discreetly, undertook not to enforce "exchangeability" in the case of other prelates, and a new election to the high office of Œcumenical Patriarch has taken place. The choice of the Holy Synod has fallen upon Mgr. Basil Georgiades, Metropolitan of Nicaea, who will be known as the Patriarch Basil III. His election occurs at a time when there are signs of improved relations being inaugurated between Greece and Turkey, and it should be possible for the new Patriarch, by emphasising the

Digitized by Google

ecclesiastical side of his office to the exclusion of the political functions, on which his predecessors laid so much stress, to mark a new and important era in the history of the Patriarchate.

The Progress of Iraq.

Last year in Iraq a Constituent Assembly ratified the Treaty with Great Britain and proceeded to draw up an electoral law. The first Parliament for the country was opened in state last week by King Faisal, who was able to refer in the Speech from the Throne to the progress made in various directions and to the friendlier relations with Great Britain that held out the promise of much-needed economic developments. The progress of Iraq is necessarily relative, and few people will expect a new State to find itself in a day, in a year, or in five years. The Report recently issued in which the High Commissioner reviews the period from April, 1923, to the end of 1924 impresses the reader as a shrewd and carefully considered estimate of conditions in the country. On the subject of economic development Sir Henry Dobbs states that material prosperity has been disappointingly held back by the poverty of the outside world since the War. Iraq's exports—dates, wool, hides and corn—have been in less demand; it has had to be content with a smaller transit trade between Persia and the Gulf. "Had not these untoward outside circumstances been counterbalanced by increased internal security and by the facilities of transport introduced by the British Administration, their effect would have been crushing. In fact, the result has been that the people find themselves pretty nearly upon the same level of prosperity as they had attained before the War, and, ignoring the adverse factors above described, which are beyond the control of any Government, they complain that they are not much better off in this respect than they were under the Turks."

The Sense of Proportion.

As few countries in the world can claim to be even "pretty nearly upon the same level of prosperity as they had attained before the War," Iraq has good reason to be satisfied with her lot, and the complaint of the Arabs that they are not much better off than they were under the Turks is seen in its proper perspective. Sir Henry Dobbs, indeed, whose Report does not convey the impression of being desirous to make the worse appear the better cause, goes on to say that "when once the trade of the outside world has begun to move, Iraq will be able to take full advantage of the improvements made during the past eight years and should enjoy an era of unprecedented prosperity." This optimism is not necessarily refuted by the Report of the Financial Mission which has been examining the financial situation in Iraq. Now that the time has come for the country to begin to pay off its indebtedness the comfortable surpluses of the last two years will have to give place to deficits, unless there is a complete overhauling of its fiscal policy and a revision of its indebtedness. The Mission recommends that both courses should be adopted. Economies should be effected in the Civil Service and in capital expenditure; substantial reductions should be made in the financial obligations laid upon Iraq by the Anglo-Iraq Treaty. Only by such means will it be possible for the country to take the fullest possible advantage of any improvement in the economic conditions of the world at large.

Akaba.

If ex-King Hussein knows his Shakespeare, he will have been tempted, on hearing of certain answers to questions in the House of Commons, to declaim with Hamlet, with only the difference of an aspirate,

> What's Akaba to him, or he to Akaba,
> That he should weep for her? What should he do,
> Had he the motive and the love for passion
> That I have?

For, ever since the former King of the Hejaz has changed his residence from on board his yacht off Akaba to the more picturesque Cyprus, the House of Commons has forced its soul to develop an abnormal interest in that Red Sea port, so that question and answer have done their best to

> Confound the ignorant and amaze indeed
> The very faculties of eyes and ears.

The long and the short of it would seem to be that Akaba, in common with the Turkish island of Ada Kaleh in the Danube, has contrived to get itself overlooked. Between 1841 and 1892, we are now reminded, the Porte permitted the establishment of Egyptian police posts at Akaba; but at the latter date the Sultan resumed possession of the town, without protest from Egypt, and in 1906 a Boundary Commission fixed the frontier dividing Egypt from Turkey a few miles west of Akaba, which thus remained in Turkey. During the War, when the Hejaz threw in its lot with the Allied Powers, the Emir Faisal used Akaba as a base; but there has been no formal definition of the frontiers between Transjordan, the Hejaz, and Nejd since the Armistice. The Colonial Secretary was, therefore, able to say that the Hejazi claim to Akaba had never been recognised by the British Government; but from the last answer in the House of Commons it has to be inferred that Egypt lays no further claim to the port. The question thus resolves itself, together with the fate of Maan, into a family matter between King Ali and Emir Abdullah, and a satisfactory settlement to both parties should not be impossible of attainment.

A Good Cause.

In whatever part of the world the Briton is situated he or she can generally find close to hand a worthy object for their charity; but in the belief that readers of THE NEAR EAST AND INDIA may be glad to have their attention directed to a definite charitable purpose at Home, we gladly respond to an appeal to call attention to the needs of the Royal National Orthopædic Hospital, of 234, Great Portland Street, London, W.1. Any tendency, by the way, to identify the word "orthopædic" with "feet" must be abandoned in favour of its more correct derivation which connects it with the right rearing of children. This hospital exists for the cure of deformity, tuberculosis, infantile paralysis, etc., or for the treatment of these diseases to an extent required to fit the young sufferers for the battle of life. The King, Queen Mary, and Queen Alexandra extend their patronage to the Institution, and Prince Henry, the President, has now associated himself with a Special Committee formed to raise a fund of £87,500, in order to make more adequate provision for the needs of crippled children. Full education, it is interesting to note, is provided for all children in the Hospital; there is a country branch at Brockley Hill, Stanmore, which needs to have its accommodation more than doubled; the out-patient department in London, designed for an attendance of 20,000 patients a year, had last year an attendance of over 71,000.

Donations should be addressed to "The Appeal Secretary," Royal National Orthopædic Hospital, 234, Great Portland Street, London, W.1.

We regret that, owing to a printer's error, the name of "Giers" was, in Mr. Leonard Stein's reproduction, in our issue of July 9 (page 47), of two telegrams from the Russian Ambassador in Rome to the Minister of Foreign Affairs, wrongly spelled as "Greis."

THURSDAY, JULY 23, 1925.

MINORITIES IN THE BALKANS.

The repudiation by Greece of the Protocol signed at Geneva in September, 1924, for the protection of Bulgarian minorities in Greece and of Greek minorities in Bulgaria has brought once more to the forefront a question that has an important bearing on the peace and welfare of the Balkan Peninsula. On another page we publish the correspondence that has passed on this subject between the Greek Government and the Council of the League of Nations. The latter, it will be recalled, took exception to certain statements made in the resolution of the Greek Chamber that rejected the Protocol, and called upon the Greek Government to answer three pertinent questions bearing on its attitude towards the minorities within its borders. Greece was asked to say what had been done to execute in practice the stipulations of the Minorities Treaty, what was her future programme, and, thirdly, what in her opinion are the needs of the Slav-speaking minority in Greece in the matter of education and public worship; also what special measures had Greece taken, or did she propose to take, in order to satisfy these needs. From the reply given by the Greek Government it is easy to infer the difficulty that is likely to be experienced by the Council of the League of Nations in getting to grips with the problem of Balkan minorities. In effect the Government states that there has been no time for the application of special measures, that the existing provisions in force in the country constitute an almost complete system for the protection of the rights of minorities, and that, if experience should show that steps of a legislative or other nature in addition to the measures already taken are necessary, these will be taken from the Government's desire to pay particular attention to the application of the Minorities Treaty. Finally, as an earnest of its good intentions, the Government gravely states that "it is at present studying means for ensuring the recruiting of an adequate staff for the teaching of the Minorities languages." It does not, however, pledge itself to do more than examine in a friendly spirit any application from a Slav-speaking minority for the opening of schools with teaching in its own language or for the employment in Church services of that language instead of Greek. In the face of all these good intentions it is the more regrettable that Greece felt debarred from taking the one step that could have ensured their being carried into effect, by committing the interests of the minorities in question to a neutral body.

The Minorities Treaty, associated first with the Treaty of Sèvres and then with the Treaty of Lousanne, was subjected to considerable opposition on the part of the States on which it was desired to impose it. Feeling against it concentrated on two points: that the treaty constituted an encroachment on the sovereignty of the State concerned, and that it could be tolerated only if it were applied equally to the Great Powers and to the minor countries. The argument of the Great Powers was that they were not making any new experiment. They claimed that it was a recognised principle of European international custom that in Eastern Europe the establishment of a new State was a matter of general interest which required the formal recognition of the Great Powers; further, that this recognition was given only on certain conditions. The first application of the principle was made on the creation of the Greek Kingdom, the Protocol of February 3, 1830, stipulating that all subjects of the new kingdom, whatever their religion, should be treated on a footing of perfect equality in all their relations, religious, civil or political. The same principle was enforced in turn as the establishment of each new State in the Balkans took place. It was not until the Bucharest Conference of 1913, when the Balkan States, as a result of their unaided efforts, rearranged their own frontiers, that the Great Powers stood aside and refrained from couching a lance on behalf of minorities. On this occasion, however, it is of interest to recall that the United States Government despatched a Note to the Conference stating that it would regard with satisfaction a provision in the Treaty granting full civil and religious liberty to the inhabitants of all territories which might be subjected to the sovereignty of any of the Powers concerned or be transferred between them. The representatives of the victorious Balkan countries decided that, in view of the claim that such liberty was already secured in their respective States, there was no need to embody the provision in the Treaty, but they allowed the American Note to be inserted in the Protocols of the Conference. In Paris the British Government strongly supported the view that the Great Powers were still responsible for minorities in the Balkans; but it was not until President Wilson had delivered a very closely reasoned speech, pointing out that the Great Powers could not be expected to guarantee settlements, unless they were satisfied that these rested on a reasonably peaceful basis, that the Balkan States waived their objections.

The Treaty clauses, without doubt, make admirable provision, on paper, for the protection of minorities. It is only in the application of the provisions that the local machinery shows a tendency to break down. The Greco-Bulgarian Protocol was an admission of a well-known fact, and if it could have been carried into effect it might have been the means of opening up a happier era for the Balkan Peninsula. As a general rule it may be admitted that the various States have observed the obligations imposed upon them at the time of their creation as independent countries in regard to the fair treatment of minorities. The minorities in question at the time were Moslems, and these have had no occasion to complain of their treatment. The minorities problem as it exists to-day is of later development, and has reference almost exclusively to inhabitants of the frontier territories in and around Macedonia, where the precarious fate of existing arrangements has made each Government anxious by any means in its power to strengthen its hold on subjects suspected of dubious allegiance. In no case has a Government felt strong enough to rely on good administration and generous treatment as the surest method in the long run of securing the loyalty of a community, and there has been little disposition to recognise that the most effective way of perpetuating racial antagonism is to attempt to suppress a language. The Greek Government, it will be seen, professes a more open mind on this point; but only actual experience can show whether practice, in the hands of local officials, will respond to the good intentions expressed to the League of Nations. If the countries concerned were sincere in their desire to eliminate a serious menace to their common prosperity, they would realise the difficulty of settling a vexed problem by their own efforts and would call in outside help, as the rejected Greco-Bulgarian Protocol proposed to do. Whether the knowledge that the subject is engaging the attention of the League of Nations will have the effect of ameliorating the lot of minorities in this distracted region remains to be seen. Certain it is that neither the nature of the problem nor the temperament of the different peoples holds out the least prospect of any satisfactory results being obtained by means of action in the case of one country only. The problem is essentially a Balkan one and must be dealt with as a whole and as concerning equally all the Balkan States.

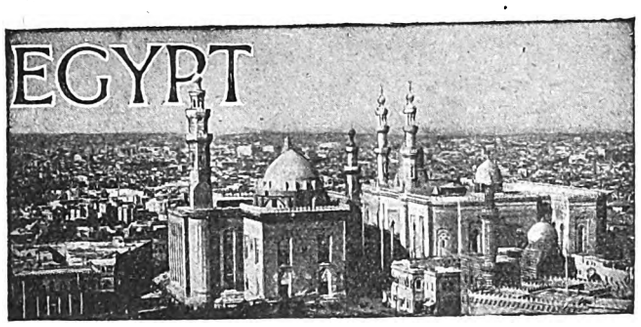
The Near and Middle East*

From Our Own Correspondents.



Cairo, July 11.

The Press Law.

Arabic newspapers, irrespective of political views, have lashed themselves to fury this week over modifications of the Press Law which the Government is now considering. Originally it had been proposed to abolish the old ordinance and replace it by an entirely new piece of legislation. This intention has now been changed to the modification of certain sections which will make it an offence punishable by imprisonment for a newspaper to publish inaccurate reports which the Government of the day may construe as hampering the good administration of the country. As a final sting it is proposed that punishment of the editor, publisher, printer, or, in the last resort, in the event of its being impossible to bring any of those persons within the judicial orbit, the newsboys who sell the papers in the streets, shall invariably connote suspension or total suppression of the journal concerned. The Press here has had such bitter experience during the past few years of the manner in which the Law can be used to serve the ends of the party temporarily in power that the present outburst of indignation against the new fetters now forging is not surprising. There can be little hope, in view of past experience, that the new penal powers would not be used oppressively, first by one side, then by another, and for that reason it is to be hoped that the proposed legislation will not be given the force of law.

At the present time there is no obvious need for doing anything at all to the Press. Newspapers here are notoriously venal, and readers are daily presented as independent opinion with columns that have been paid for and often written by persons interested in some commercial venture, judicial dispute or administrative question. But that is a question of innate morality with which the Law cannot deal and which is, in any case, probably no worse here than in many other countries. In other respects Egyptian journalism is notably progressing. The horizon of the newspapers is being rapidly enlarged: sheets which rely for their popular appeal on the political sensation of the moment are finding it ever harder to retain their readers while, on the other hand, the more important journals, which devote increasing space to the drama, literature, women's affairs and other interests outside politics, are making steady progress.

The Feminist Movement.

Egyptian women are making rapid strides towards the emancipation which their Turkish sisters have already attained, but the forward movement is not without its critics. Many of these, as is only natural, have their homes within the venerable walls of Al Azhar, whence has now issued forth a Rectorial pronouncement, declaring that the recent innovation of Moslem women appearing as actresses is contrary to Islamic Law and tradition. In point of fact there is nothing new in Mohammedan women appearing on the stage, but hitherto the dancing girls have belonged to a certain class recognised as outside the pale of society and, presumably, therefore, not liable to the disapproval of *ulema* and theologians. Now a definite attempt is being made by one or two Egyptian actor-managers to recruit for the dramatic stage among respectable girls, and already one or two daughters of good families have made public apearances and show considerable promise. In ignoring the theatre so long as it was a place where no decent woman might appear on the stage, and hardly in the audience, and condemning it now that a movement towards reform promises to attract a class of women entirely different from the old-time exponents of the *danse du ventre*, the divines of Azhar seem to be showing inconsistency.

In any case, the admonition will fall upon deaf ears, for Young Egypt no longer hearkens to the pulpit when it applies the *dicta* of mediæval theologists to the social evolution of the twentieth century. Orthodox Islam has not yet evolved a forward movement, comparable to any of the many such activities within the Christian Church, that shall enable the modern young Moslem to bring his religion into definite relationship with his daily life. For that reason the youth of Egypt, as of other Moslem countries, is increasingly inclined, where religion conflicts with inclination, to go its own way, . . ."nor care one penny piece for what grave old folks say,". . .and Al Azhar's indictment of the drama, like the simultaneous condemnation of the "short dresses and bright colours in which Moslem women are now seen walking on the streets," will be sparsely heeded.

Liubliana, July 15.

Yugoslavia's New Course.

After prolonged struggles and with great difficulty, and not until endless intrigues had been overcome, the agreement between Serbs and Croats has at last been reached, and the question which for all these years has obstructed the right consolidation of Yugoslavia is thereby liquidated.

It was on March 27, the day when M. Paul Raditch, as acting leader of the Croats, made his brilliant speech in the Skupshtina announcing the complete change of course on the part of the Raditch Party and ranging himself with those in favour of the Constitution and the existing laws, that the struggle began for the realisation of that agreement between Serbs and Croats which the two strongest parties in the State, the Radicals and the Raditch Party, desired to carry through.

General comment upon the probable outcome of their efforts for a settlement, their struggles for agreement, was pessimistic in the extreme. For indeed it seemed all but hopeless that a compromise should be reached by two parties that had been so bitterly at feud. The Radicals represented the extreme Right, the Raditch Party the extreme Left. M. Stefan Raditch had even gone on his famous pilgrimage to Moscow, and his party had joined the Moscow Peasant International. The electoral cam-

paign had further accentuated all differences, especially at the moment when M. Stefan Raditch and the leading men of his party were imprisoned. The fight had become so bitter that it seemed as though Yugoslavia must always be split in two camps.

But matters turned out otherwise. In spite of all noisy phrases, almost bordering on demagogy, the Raditch followers kept their heads and realised that there were only two courses open to them. Either continuation of the feud, which would entail most serious consequences for the State; or conciliation and consequently an understanding with the Government. The Raditch leaders decided for the latter alternative, because they realised that, after all, Yugoslavia is their State also, and that in harming Yugoslavia they would end by harming themselves. This position led to M. Paul Raditch's sensational speech in the Skupshtina, to the adoption of the new course by the Raditch leaders and their recognition of the Constitution and the existing laws.

Obviously the Government, or rather the Radical Party —for from the very beginning the Raditch leaders would treat with none but that—could not simply turn down the offer of the Croats. As a result one had those unofficial preliminary negotiations between Radicals and Raditch leaders, the main crux of which lay in the Radicals' question as to what guarantees the Radical Party could offer to prove that their change of front was genuine and sincere, and that the Radicals need not fear being let down if they were to make treaties with the Raditch Party.

However great the differences between the two, they would have to be overcome in the greater interests of the State; for the absence of the Croats from the State administration was in the long run proving an impossible proposition. This was recognised very clearly at the beginning of the parliamentary session, when the Croats made their entrance with a group of men so brilliant that their co-operation simply could not be dispensed with any more.

Raditch-Pashitch Negotiations.

The next move was M. Paul Raditch's letter of July 2, addressed to the chief of the Radical Party, M. Nikola Pashitch. The letter explains that among the people there is a growing tendency in favour of agreement with the Serbs; that during the course of their unofficial negotiations with the Radical deputies the Raditch partisans had observed that the programmes of the two parties were really in the main identical; and that it was clear, moreover, that an agreement might easily be reached. Wherefore he, M. Paul Raditch, proposed that official negotiations between the Radicals and Croatian Peasant Party be set on foot. M. Pashitch then appointed three delegates of the Radical Party to conduct the said official negotiations. They were the president of the Radical Deputies' Club, M. Zivkovitch; M. Trifkovitch, President of the Skupshtina; and the Deputy Minister in the Cabinet, M. Marko Giuritchitch. On the part of the Raditch Party the delegates appointed were M. Paul Raditch, Dr. Shuperin, and Dr. Nikitch. Another one to take part in these negotiations was M. Aca Stanoyevitch, who is, besides M. Pashitch himself, the only surviving original founder of the Serbian Radical Party.

The negotiations were conducted with zeal, and during the first few days brief *communiqués* were duly published. But as even these *communiqués* gave rise to all manner of intrigues, their issue was stopped; and for the same reason the delegates all bound themselves by word of honour not to divulge anything concerning the negotiations—not even to their closest partisans. This word of honour was scrupulously kept, with the result that besides the delegates themselves, the King, M. Pashitch, M. Stefan Raditch, and M. Aca Stanoyevitch, not a soul was given any information. Even the most importunate journalists could obtain nothing but the laconic utterances of the delegates to the effect that the matter stood well; that the negotiations were being continued, and that at the conclusion of the negotiations a protocol would be drawn up. Even at the end, when the negotiations were already positively concluded, and the two Deputies' Clubs were called upon to vote for the agreement, nothing at all was said in the Raditch Party Club, and in the Radical Club nothing more than was absolutely essential, viz., that the Raditch Party had fully endorsed the Vidovdan Constitution, and that it had in every respect become a State-constitutional Party.

It would be a mistake to interpret this discretion as an infraction of the democratic principle. It was the instinct of party self-defence which dictated this silence. For owing to the agreement between the two strongest parties in the country a whole string of lesser parties has lost its *raison d'être*. All these parties were just waiting for the moment, when, notwithstanding its cardinal importance to the State, they could drag the Agreement into their party feuds, and by means of demagogic agitation frustrate the understanding arrived at. The discreet silence preserved by the two parties directly concerned in the agreement baulked all these schemes, and the Opposition parties, however hard hit, are not in a position with certainty to attack any given point of the settlement simply for lack of information.

The Independent Democrats.

This is especially hard on the Independent Democrats, the so-called Pribitchevitch group. None stand to lose more than they by the Agreement; their very existence as a party is endangered by it. And therefore it is only natural that the present cry of the Independent Democrats is that they have been betrayed by their allies of hitherto. On closer consideration this complaint is not as valid as it seems. For it is the Independent Democrats' own fault that they have made themselves so unpopular that they had to be excluded from the Agreement if the latter was to be realised at all. But apart from the fact that the Radicals concluded their pact with the Independent democrats only for the duration of the electoral campaign, the former could not well act otherwise than they did; for any other course would have meant the placing of party interest before the interests of the State, and incurring the blame and responsibility for leaving the Serbo-Croatian settlement unrealised. And that the Radical Party could not incur this historic guilt was clear to everybody acquainted with the history of the Radical Party.

The "R.R." Government.

Immediately upon acceptance of the Agreement by both Clubs the King returned from his summer residence in Bled to Belgrade, where the resignation of the Pashitch-Pribitchevitch Coalition Government was submitted to him. This resignation was of course accepted, and the King himself at once opened the consultations concerning the new Government which can only be a Radical-Raditch ("R.R." for short) Government. For everything has already been discussed. The new Government will command a two-thirds majority in the Skupshtina, and is therefore the strongest Government that Yugoslavia has so far ever had.

By the installation of the R.R. Government the internal rift in Yugoslavia is closed, and the country definitely started on the path of consolidation. Hereby the cause of peace in the Balkan Peninsula is sensibly strengthened, and therefore every friend of peace should wish Yugoslavia well on the new course she has entered upon.

Sofia, July 17.

Internal Politics.

Although the Sobranye is not sitting, there have been several interesting developments in domestic politics. The Agrarians who used to follow Stambolisky, and who are commonly called "Rue Vrabtchists" (their headquarters are in the Rue Vrabtcha, Sofia), have made overtures to Draguieff, one of the founders of the Agrarian Union, with a view to a fusion. It was understood that Draguieff, if he liked, could become the titular head of the party. Draguieff, who is popularly known as the "Hermit of Stara-Zagora," having lived on his farm in comparative seclusion for the last few years, called a meeting of his supporters to consider the Vrabtchists' offer. After a short discussion it was decided not even to reply, as the meeting felt that the Vrabtchists were still so much imbued with Bolshevist morals and methods that any *rapprochement* was out of the question. Draguieff has thus preferred to maintain his idealistic, but if critics can be believed, more or less unimportant, status, to attempting to reorganise the Agrarian party.

Another development is the schism which has occurred in the National Liberal Party. The best-known Liberal Bulgaria has produced was Stambuloff, Prime Minister and virtual dictator, for many years. Recently a powerful faction in the Liberal Party decided to revive the Stambulovist spirit, as it considers that it is only through strong and ruthless Government that Bulgaria can successfully emerge from her present difficulties. Not all the Liberals, however, are in agreement with this point of view; so finally those who call themselves "Stambulovists" separated, and founded a new party. Thus yet another political party has come into existence in Bulgaria. Whether its programme differs very much from that of the present Government is somewhat to be doubted, but it is noteworthy that in the provinces it can count some very stout and loyal supporters who have never wavered in their adherence to liberalism.

The Closed Frontier.

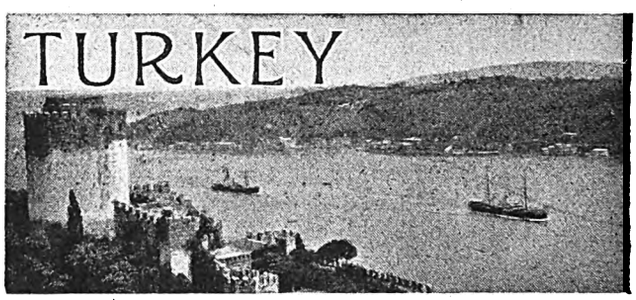
Nothing fresh has happened in connection with the closing of her frontier by Yugoslavia to all Bulgarians. M. Rakitch, Yugoslav Minister in Sofia, has just returned from a short visit to Belgrade, and it is understood that what is required is a "formula" to settle this unpleasant incident. There now appears to be little doubt that the missing Yugoslav subject is dead, and it thus remains to be seen what explanations the Sofia Government intends to make and what attitude the Belgrade Government will take up. In all probability the incident will be satisfactorily settled, but it is possible that other and more important matters will be discussed at the same time—notably the general question of Yugoslav-Bulgarian relations connected with the present situation in the Balkan Peninsula.

In this connection great interest is being evinced here over the negotiations between the Radical and Croat parties in Yugoslavia. It is realised that an agreement is now in sight and that the formation of a coalition Government will immensely strengthen the S.H.S. State.

General News.

On July 14 a new "Alliance Francaise" was opened in Sofia. M. Emile Darde, the French Minister, and M. Marcel Charlot made speeches on this occasion.

A conference regarding railway traffic between Yugoslavia and Bulgaria was recently held at Pirot. An amicable settlement was reached on all the points discussed.



Constantinople, July 15.

The Patriarchate.

The Patriarchal throne is now occupied by Monseigneur Vassilios, and the fact that the Phanar once again houses a Patriarch will, without doubt, afford the inevitable food for discussion which has become an absolute necessity to certain elements connected, both *pro* and *anti*, with the Œcumenical Patriarchate.

Since the expulsion of Monseigneur Constantin and his submission to the requests and demands to resign, all the metropolitans of the Holy Synod whose candidature for election as Patriarch have appeared possible have been passed in review by the local Turkish and Greek Press and "blackballed" or "touted" as occasion arose.

Papa Efthim.

Papa Efthim Effendi has allowed no occasion to pass whereby he could possibly influence the scales on their downward bump to "blackball" after having first made sure that his expressed opinion could in no wise clash with those of the Authorities. His unsuccessful attempt to be recognised by the Government as the supreme head of a Turkish Orthodox chuch, while naturally damping his spirits to a certain extent, has not, apparently, destroyed his hope of becoming at some time a quite effective opposition to the Phanar. He has augmented his activities in this respect by purchasing and constituting himself proporietor of two newspapers (one having been already closed by the police), which fact has given rise to much speculation as to the source of his affluence. The election proceedings were not allowed to pass without an incident which took the form of a raid on the Patriarchate and the forcing of its doors by a number of malcontents said to be closely connected with Efthim's dissentient Church in Galata. The election was also preceded, on Saturday night last, by an outrage, committed presumably by hostile Greeks, against Monseigneur Germanos. The unfortunate prelate was lured from his residence by three individuals who informed him his presence was requested by the Authorities, and taken to some unfrequented spot, where he was attacked and held whilst he was deprived of the respected long hair and beard which distinguishes all Orthodox priests.

The New Patriarch.

The enthronement of the new Patriarch, contrary to custom, immediately followed the election, and at two o'clock in the afternoon the Holy Synod met under its new president. His Holiness Vassilios III. is seventy-five years of age, having been born at Scutari (Constantinople) in January, 1850. He commenced his studies in Constantinople, subsequently entering the monastery at Halki, where he became a professor. After having studied theology and philosophy in Germany he directed the monastery at Balata for seven years, and was then elected Metropolitan of Ahialou, where he stayed until the Bulgarian expulsion of the Greeks. Prior to his nomination as Metropolitan of Nikias he held the same office at Pelagonie.

The new Patriarch, who is the author of several religious works, is renowned for his profound theological knowledge, and is considered as the most distinguished and capable Greek prelate of the present time.

An American Visitor.

The arrival here, this week, of Mr. King, the American Senator, has given rise to much comment in the Turkish Press which in some cases, considering he is for the present a guest of Turkey, is decidedly rude. Another portion of the Press, realising the weight which Mr. King's report to the Senate will carry, contents itself with statements of conviction that on examination the distinguished visitor will find the Turks better than he has previously imagined. Fortunately, for Turkish interests, there exist some organs in the ex-capital which are able to perceive that the violent terms employed by their contemporaries do not make for a favourable impression being given, and try on the other hand to facilitate Mr. King's inquiry.

Sir Herbert Samuel.

Sir Herbert Samuel, accompanied by Lady and Miss Samuel, arrived at Constantinople yesterday.

CYPRUS.

Nicosia, July 6.

The Zaptieh (Police) Force and the Fez.

The Cyprus Police Force—mounted and foot—are a smart-looking and efficient force, and under British officers have rendered excellent service in carrying out many and varied duties. Originally mainly Turkish, they have by degrees been largely recruited from Greeks. The headdress is the red Turkish fez, both for Moslems and Christians. Application was recently made by some of the Greek members that the fez might be replaced by a cap, if not for the whole body, at least for the Christians. When the Chief Commandant, Colonel Gallagher, D.S.O., pointed out the difficulty, having regard to the Moslem element, it was represented that in the Ottoman Navy a cap had been adopted. It is true that the fez is vanishing in various party of Turkey. In Asia Minor and Europe the official fez is being superseded by the *kalpak*, favoured by Mustapha Kemal. In Iraq the picturesque *Sidara* is worn. The form of the fez itself differs considerably in different parts of Islam. The bedouin and many desert Arabs wear the *aghal* and *keffiyeh*. The fez, though giving a smart finish to the uniform, is no protection from the sun. The movement referred to was bound to come sooner or later, and possibly in Cyprus, as elsewhere, time may, on the ground referred to, lead to a change.

A Breach of Promise Case.

Great interest has been taken in a case, the first of its kind in Cyprus, which came before the Nicosia Court on July 2. The plaintiff is a daughter of a deceased prominent Greek of Papho, who became engaged to Mr. J. Ellis, the Assistant Colonial Secretary, now acting Colonial Secretary. Three Greek advocates appeared for the plaintiff and two for the defendant. The plaintiff claims £3,000. The defendant fully admits legal liability, but, as the claim for damages is regarded as excessive, it will be for the Court to decide upon the amount, the case not having yet been concluded.

General News.

Ex-King Hussein, who appears to be in good health, has left the hotel to which he went, to take up residence in the vicinity of the Great Mosque (formerly Cathedral) of Ayia Sophia, where he attended prayer on July 2, when a large congregation of Moslems assembled.

Weather has continued to be very pleasant, the heat not having so far been oppressive.

Great satisfaction is felt that there is again a favourable outlook for the silk industry, and that the establishment of factories by a British firm is to be an accomplished fact.

BRANGWYN'S TURKISH SKETCHES.

At the St. George's Gallery, George Street, W.1, there is an exhibition now being held of works by Frank Brangwyn, Gordon Craig, and Austin Spare (the exhibition includes, incidentally, the head which Epstein modelled as the study for Rima for his Hudson panel in Hyde Park). Brangwyn, of course, strides the exhibition like a colossus; and his water-colours here illustrate admirably the development of the artist.

His studies of Turkey, if one is not mistaken, were made some years ago. They are delightfully fresh, but everywhere held in decent restraint. His sketch of "A Turkish Mosque," for example, is as different as may be from the ordinary artist-tourist's over-coloured representations: it is at once vivid and reticent. His "Constantinople" (done, it would seem, from the Asiatic side) is a beautiful sketch; and even more lovely is "The Golden Horn" with the flopping sails of its ships and its mosques in the background. But the finest, possibly, of all these Eastern sketches is that of "Scutari." Here, among the tombs and cypresses, women in highly-coloured garments (which against the darkness of the trees take on an added brightness) slowly are gathering, while below are the ever joyous or sad waters of the Bosphorus. We have, indeed, no one who can more capably reproduce the soul of the East than Mr. Frank Brangwyn.

MINORITIES IN GREECE.

[We give below the full text of the documents bearing on the question of the protection of Minorities in Greece, which was recently dealt with by the Council of the League of Nations.—ED.]

NOTE BY THE SECRETARY-GENERAL OF THE LEAGUE OF NATIONS.

The Secretary-General has the honour to circulate for the consideration of the Council the following documents concerning the protection of Minorities in Greece:

(1) Letter from the Secretary-General to the Permanent Greek Delegate to the League, dated April 2, 1925.

(2) Letter from the Permanent Greek Delegate to the Secretary-General, dated May 29, 1925.

This question was dealt with at the March session of the Council. (See Minutes of the 33rd session, page 478.)

LETTER FROM THE SECRETARY-GENERAL TO THE PERMANENT GREEK DELEGATE TO THE LEAGUE OF NATIONS.

Translation. Geneva, April 2, 1925.

Sir,—I have the honour to forward to you a copy of the Minutes of the Meeting of the Council of the League of Nations held on March 14, 1925. At this Meeting the Council examined your note of February 11, 1925, communicating the resolution adopted on February 3 by the Greek National Assembly respecting the Protocol concerning the Protection of Bulgarian Minorities in Greece signed at Geneva on September 29, 1924. These Minutes contained the Report, submitted by the British representative, which was adopted by the Council, and the statement made by the Greek Representative.

In conformity with the Council's decision I have been instructed by its President to draw your attention to the following points.

The Resolution of the Greek Assembly communicated in your note of February 11, contains certain statements which the Council felt that it could not accept.

It stated in the first place that the Protocol was at variance with the general provision of the Minorities Treaty at present in force. The Council felt that it could not allow this statement to pass unchallenged. The Protocol extended and applied the provisions of the Minorities Treaty, but did not contain any stipulations at variance with these provisions.

Secondly, the Resolution of the Greek National Assembly states that "the provisions of this Protocol institute a procedure inconsistent with the general recognised principle that the provisions relating to Minorities preclude any interference in the internal affairs of the State." The Council felt that this statement also it could not accept.

While rectifying the above statements the Council has decided to address to the Greek Government a questionnaire consisting of the following three questions:

1. "What has been done by the Greek Government since September 29, 1924, up to date, in order to execute in practice the stipulations of the Minorities Treaty?"
2. "What is the programme for the future action of the Greek Government if it has not been possible up to now completely to execute in practice the stipulations of the Treaty?"
3. "What, in the opinion of the Greek Government, are the needs of the Slav-speaking minority in the matter of education and public worship, and what special measures has Greece taken, or does she propose to take, in order to satisfy these needs?"

Being convinced that the Greek Government is resolutely determined to fulfil all its obligations under the Articles of the Minorities Treaty, the Council in drawing up this questionnaire has expressed a desire and firm belief that the Government's reply to the three questions will be of such a nature as entirely to satisfy the Council which feels the deepest solicitude for the welfare of Minorities. (Signed) ERIC DRUMMOND,
Secretary-General.

GREEK LEGATION IN SWITZERLAND.

To the Secretary-General.

Translation. Berne, May 29, 1925.

Sir,—With reference to your letter No. 41/42997/39349 of April 2, I have the honour to forward to you herewith my Government's reply to the three questions submitted to it by the Council of the League of Nations concerning the situation of racial, religious and linguistic minorities in Greece.

As regards the observations of the Council concerning the two sentences in the resolution adopted by the Greek National Assembly on February 3 last when it rejected the protocol concerning the protection of Bulgarian minorities in Greece, my Government would refer to the statement made on this matter by its representative, M. E. Venizelos, at the meeting of the Council of March 14 last.

The real meaning of the first of these two sentences was that the protocol imposed on Greece new obligations, not provided for in the Treaty, in connection with the protection of minorities, as the honourable Rapporteur on the question has pointed out. The exact meaning of the second sentence was that the provisions concerning minorities preclude all foreign intervention of a continuous and more or less permanent nature in minorities questions, which are questions of a purely domestic character.

My Government hopes that its reply to the three questions submitted to it concerning the situation of the minorities in Greece, and its explanation concerning the resolution of the Greek National Assembly on February 3 last will give full and entire satisfaction to the Members of the Council of the League of Nations, and that they will be regarded by the latter as constituting a final solution of the question.

In any case it is absolutely impossible for my Government to admit that the protection of the Slav-speaking minority in Greece is of any, even indirect, interest to Bulgaria, or that the Council of the League of Nations is obliged to see that "the indirect interests of the Bulgarian Government are not sacrificed." My Government is bound to see in these statements of the Rapporteur an allusion to the effect that, simultaneously with the signature by the Greek representatives of the protocol for the protection of Bulgarian minorities in Greece, the Bulgarian representative signed a similar protocol concerning Greek minorities in Bulgaria.

This fact should not, however, be regarded as giving any right to Bulgaria in respect of the Slav-speaking minority living in Greek Macedonia. This would be absolutely contrary both to the letter and the meaning of the treaties for the protection of minorities whose object is to ensure that questions concerning minorities shall not be questions between Governments, but questions of a domestic nature in respect of which the League of Nations alone would be entitled to intervene.

(Signed) V. DENDRAMIS,
Chargé d'Affaires.

REPLY BY THE GREEK GOVERNMENT

to the three questions submitted by the Council of the League of Nations concerning the protection of Racial, Religious and Linguistic Minorities in Greece.

FIRST QUESTION.

What has been done by the Greek Government since September 29, 1924, up to date, in order to execute the stipulations of the Minorities Treaty?

Since September 29, 1924, up to the present date no new measure of a legislative or other nature has been taken with a view to giving effect to the stipulations contained in the Treaty for the protection of minorities in Greece.

The reason is that this Treaty, signed at Sèvres on August 10, 1920, came into force when the Treaty of Peace of Lausanne came into force, that is to say, as from August 6 last, for it was only on that date that the last ratification required for the putting into force of the Treaty of Peace of Lausanne was deposited by Japan at Paris.

As regards the Slav-speaking minority in particular, there is no further reason. As you are aware since November 27, 1919, a Convention has been concluded between Greece and Bulgaria concerning the voluntary and reciprocal emigration of Bulgarian Greeks into Greece, and Greek-Bulgarians into Bulgaria. If we consider that this Convention affects not only Bulgarians inhabiting Thrace, but also the Slav-speaking Macedonians in so far as they have demonstrated their Bulgarian national sentiment by their desire to emigrate, it will readily be understood that no special measures on behalf of Slav-speaking Macedonians could be adopted in the matter of education, until the emigration provided for in the Convention had come to a conclusion. The time-limit for handing in emigration declarations only expired on December 31 last, and consequently only since then has it been possible to form an idea of the volume of emigration.

In these circumstances it was materially impossible for the Greek Government to take any legislative or other measures for the application of the Minorities Treaty, in cases where existing legislation was not sufficient, and additional measures were required.

However, long before Greece had signed the Treaty of Sèvres of August 10, 1920, for the protection of racial, religious and linguistic minorities living in her territory, she had accorded protection to the legitimate rights of the latter by a series of legislative and other provisions, some of the more important of which have been included in the national constitution.

These provisions we may say constitute an almost complete system for the protection of the rights of minorities, which has always and indiscriminately been applied in the most liberal spirit, and earned for Greece the praise of the Principal Allied Powers in the preamble to the Treaty of Sèvres of August 10, 1920, according to which Greece "has given to the populations living in her territory equality of rights without distinction of origin, language or religion."

The provisions concerning the protection of minorities in Greece include: 1. Religious freedom. 2. Educational freedom. 3. Other rights of minorities generally recognised by the treaties and conventions concluded in their favour up to 1919.

M. E. Venizelos, at the meeting of the Council of the League of Nations on March 14 last, referred to these liberal provisions of Greek legislation and gave statistical information concerning the situation from the point of view of the education of minorities living in Greek territory.

SECOND QUESTION.

What is the programme for the future action of the Greek Government if it has not been possible up to now completely to execute in practice the stipulations of the Treaty?

As has been pointed out above in reply to the first question, the application of the provisions of the treaties for the protection of minorities in Greece is facilitated and ensured by a virtually complete system of legislative and other measures, and also by the wide and liberal spirit of toleration shown by the Greek people towards minorities. The result is that a large number of churches and other religious institutions, as well as many scholastic establishments, exist and carry on their work unhindered wherever there are a sufficient number of Greek nationals belonging to linguistic and religious minorities.

The Greek Government will always pay particular attention to the application of the minorities treaty and it intends to take all steps of a legislative or other nature which experience may show to be necessary in addition to the measures already taken. It is at present studying means for ensuring the recruiting of an adequate staff for the teaching of minorities languages.

THIRD QUESTION.

What, in the opinion of the Greek Government, are the needs of the Slav-speaking minority in the matter of education and public worship and what special measures has Greece taken or does she propose to take in order to satisfy these needs?

The needs of the Slav-speaking minority do not differ from those of other linguistic minorities which are provided for and met by the treaties or conventions concluded for the protection of minorities in general and by the Greek legislation relative thereto.

The Slav-speaking minority has enjoyed all rights and advantages secured by these provisions in the same way as other minorities. If it has not up to the present received the benefit thereof, as regards education or religious matters, the reason must be sought above all in the uncertain situation created by the Græco-Bulgarian Emigration Convention.

The Greek Government will examine in a friendly spirit any request which may be submitted to it by this minority for the opening and maintenance of schools with teaching in its own language, in conformity with the laws and regulations of the country concerning elementary education and private schools. The Government will also give it the benefit of any other measure which may be adopted subsequently in favour of minority schools, particularly as regards the recruiting of teaching staff.

As Greek nationals belonging to the Slav-speaking minority are orthodox, they cannot surely suggest that they constitute a religious minority in a country in which the predominant creed is their own. Nevertheless, although from the early days of Christianity until a few years ago Divine Service in their churches was conducted in Greek, the Greek Government will at any time be prepared to consider in a friendly spirit any request from these nationals concerning the employment of their own language in a church instead of Greek.

Moreover it should be noted that the Greek Government does not in any way interfere with the choice and nomination of priests, several of whom are members of linguistic minorities. It is even the intention of the Government to extend to the new provinces inhabited by linguistic minorities the Decree Law of December 17, 1923, under which priests will no longer be appointed by the Metropolitans as was the case under Turkish rule, but will be elected by the parish and by secret ballot. It also intends to take other measures, particularly financial measures in favour of the orthodox clergy, and priests belonging to a linguistic minority will benefit on an equal footing with Greek-speaking priests.

The Greek Government will not in general draw any distinction between the Slav-speaking and other minorities as regards the application of the Minorities Treaty and Greek legislation connected therewith.

Being above all desirous of maintaining peace and order in the country, however, it cannot in any circumstances allow schools and churches to be made the centre of any propaganda carried on against the interests of the State. In particular it reserves the right to exercise control over the origin and nature of the funds by which schools are maintained.

THE WEEK AT HOME

London, Tuesday Morning.

The Mining Deadlock.

It is painful evidence of the suspicion with which each side regards the other in the mining industry that the miners in conference last week at Scarborough should so summarily have refused to participate in the Court of Inquiry that the Government has set up. Recently one had occasion to refer to the unreasonable attitude of the owners, but it seems to differ from the attitude of the men only in the degree of cynicism that it possesses. There must be something more than *amour propre* in the demand by the miners that the owners' proposals for a new agreement should be withdrawn before the Court begins.

However, the Court is to pursue its inquiries without the assistance of the miners' leaders. Their absence, of course, robs it of much of its value, but it is still possible that good may come from it. Exactly what the Court is setting out to do is not quite clear—if it limits itself to examining the owners' proposals (which was the miners' first interpretation of its intention), little good can result, but if it examines the whole future of the industry, with a view to its thorough reforming, we may see something worth consideration. It is at least expected that Mr. Bridgeman may be able to use its report when he brings the two sides together again.

The Trade Union Alliance.

Meanwhile, a movement of the highest importance is developing, though there is little enough prospect of its being able to influence the present mining crisis. One refers, of course, to the great plan of forming an alliance between the men of the mining, railways, transport, and engineering Unions. A draft constitution of such an industrial alliance—the alliance which has been the dream of nearly every big Labour organiser, and which has so far been frustrated by the individualism of the British Trade Unionist—has been made. The object is manifestly strategic, and its revivification caused apparently, by the fear that the attempt at reducing the wages of the miners is but the herald of similar attempts in other industries. Whether that fear is real I have no means of knowing, but it is obviously deeply founded.

Such an alliance as this, if it were ever realised (and one cannot help recalling the history of the failure of the much smaller Triple Alliance—a failure directly due to the unwillingness of a particular Union to surrender its sovereignty), would be of very considerable import to the future of this country. For it would imply a definite tendency to substitute economic for political action—a form of activity which is Syndicalist rather than Socialist, and one, therefore, which the upholders of Capitalism can far less easily sidetrack. But the alliance could, one thinks, thrive only in adversity, and although, while the mining dispute remains unsettled, there are distinct chances of its being formed, if the mine-owners' ideas are not realised, neither, it would seem, will those of Mr. Cook and Mr. Bevin see the light. This fighting alliance, however, is the biggest move of our time, and should be watched closely.

The Cabinet's Tension.

Some conception of the opposition that exists in the Press to Mr. Baldwin's Administration may be gained by the eagerness with which reports are given of dissensions within the Cabinet. The resignation of certain Ministers over the question of the Cruisers is, we are assured, but a matter of time; nor is the problem of our naval forces the only point over which the Cabinet is at loggerheads.

At least 90 per cent. of these rumours come from professed or professing friends of the Conservative Party, and may therefore be discounted. It is probably true that at the moment there is an unresolved difference of opinion over the cruiser question (when has there not been?), but this talk of Mr. Bridgeman's resignation is a little fantastic. It is inconceivable that he would resign alone, however strongly he may be supported by the Admiralty.

Mr. Churchill, it is stated, is on the side of economy in this matter. How strange the position must be to him, whose Admiralty days were the days of days! However, *autres temps autres moeurs*, although one has little doubt that his real sympathies are with Mr. Bridgeman.

Summer Time.

The die is now cast; for, despite the Gaelic threats from farmers north of the Tweed, the clock will irrevocably be advanced on the third Sunday of April, and, on the first Sunday in October, as irrevocably be put back. Last week in the Commons they argued about it and about, and although considerable and decent sympathy with the agriculturists of this country was shown the fact that we are now become an industrial people, with the consequent neglect of country interests to the benefit of urban interests, was duly recognised.

It seems curious that an Assembly which can so easily, and in the most literal sense, put the clock back, should never consider whether the same procedure could not be adopted in other spheres, such as the social and industrial. For it is the claim of one school of those who believe that once England trod in right paths and has since deserted them for perilous and precipitous routes that a return to the older ways is the most pressing and yet simple need of our time. But summer time is "progress," and retrogression is—regress.

Amateurs and Professionals.

1925 cricket will at least be remembered for its representative cricket, for the two matches between the Amateurs and Professionals have been unusually interesting. We still call those most popular of matches "Gentlemen v. Players," though so long ago as the time of Craig, the one cricket poet who could sell his verses (cannot one still hear him chanting "Young 'Utchins and young Woolley, the right 'and of Kent?") we knew the immortal truth that "all the Gentlemen are players and all the Players gentlemen." No new professionals were found to help in the beating of the Australians next year, but men such as Nigel Haig, G. T. S. Stevens, and G. O. Allen at least have earned a right to be considered. Above all, even Lord's apears to have convinced itself of the merits of one to whom most of the critics outside that august institution have been looking as England's future leader—A. W. Carr.

The Future of Broadcasting.

Precisely because the British Broadcasting Company has a monopoly of broadcasting, its activities and claims are to be carefully watched, and the speech of Lord Gainsford at the second annual meeting of the Company has, therefore, been scrutinised with a view to discovering the trend of the most important discovery of our generation. A large part of this speech was occupied with the necessity, if the B.B.C. is to reach the plane of excellence at which it aims, of increasing the number of licensed listeners-in, but the process works, of course, round the other way, the number of listeners-in depending upon the quality of the programmes. Now it is at once admitted that much of the work of the B.B.C. has been very good. Lord Gainsford, indeed, claimed that it had already established a "definite influence over the minds of the people." This claim seems rather to depend on the definition of "definite." One still is forced to think that the main importance of broadcasting lies in its scientific significance, and that the uplifting and educating of the listeners-in are rather dragged in—the sort of stuff that is supposed to "go down" well in a democratic age. On the whole, listeners-in take from broadcasting in proportion as they bring to it. To suppose, as some have supposed, that in a few years' time listening-in apparatus will be as necessary to a household as is gas or electric light is precisely the kind of blind servitude to scientific discovery which is so distressing a feature of these pagan times.

The Drought.

The drought which has so long (and, in the towns at least, uncomplainingly) been suffered in the South of

Digitized by Google

England has done very serious damage to the fruit crops. The strawberry season was short and unprecedently small; raspberries were less than two-thirds of the usual yield, black-currants one third of the estimate. Apples have been "dropping" every hour; pears are complete failures; and of plums, only Pershore and Prince of Wales are at all plentiful. Even worse have the cultivators of vegetables suffered. No rain has fallen since beans were planted, and marrows will have a negligible crop.

We may suffer these things gladly enough now, but when, next winter, we lack our customary vegetables—brussel sprouts, cauliflowers, and the rest—we shall think of these sunny, rainless days when we laughed and the farmers groused.

"Shepherd's."

It is pleasant to read that we are to have another well-known restaurant name in London. On the site of Devonshire House is to be built an edifice which shall contain shops, luxurious flats, and a large restaurant. The Gordon Hotels are taking the ground floor in Berkeley Street, and are making of it a ballroom, banqueting hall, grill-room, and reception rooms. The name chosen for this new restaurant is "Shepherd's," a happy reminder of Shepherd's Market, an old precinct in Mayfair. The single name for a hotel is a great fashion now in Mayfair. What psychologists our business men are!

The 'Nineties.

It is strange, after the real years of the War, to observe how the call of the artificial 'nineties, that perfumed *fin de siècle*, still makes its appeal. The pale ghosts of that time still hover round us, and how audibly and intelligently they yet gibber may be seen from the portraits of men of the period which Professor William Rothenstein has collected at the Leicester Galleries, Leicester Square. Professor Rothenstein made these drawings about thirty years ago, so that we see Bernard Shaw in the thirties and in flaming red beard, Max Beerbohm an undergraduate and in dapper mediocrity, George Moore less than forty and in weakly melancholy.

It is all extremely interesting, more, perhaps, for those of his subjects who are now dead than for those who, such as Thomas Hardy and A. E. Housman, have ripened into a greater dignity than could conceivably be imagined from their portraits here. The decadence or sadness of men like Ernest Dowson, George Gissing, John Davidson steal unfailingly through these portraits down the decades since they were made. But it must not be supposed that Professor Rothenstein chose only such a type for his portraits, for he has brought equal understanding to men so diverse from these as Lord Morley, Robert Bridges, Sir Hubert Parry (a curious choice, this), Sir E. Ray Lankester (one of the jolliest works in the exhibition) and W. H. Hudson. It is indeed a show as much for the lover of literature and music as for the lover of art.

At the same galleries, incidentally, is a most charming collection of water-colours by Mr. James Wilkie, a young master at the Slade School. Mr. Wilkie has, one is convinced, a great future. He is already a master of line and tone, and he uses water-colour in the traditional method. His drawings here of Northern France and of Southern England are a standing reproof to those who would deride the principles of the Slade School as wild or unsound: one drawing, "Near Otford, Kent" is, in fact, as delicate and as finished a work as any that one has recently seen by a young English artist. There are likely to be in the history of British art at least two Wilkies.

Public Health.

There was not over-much encouragement in the report of Sir George Newman upon Public Health which has just been issued, for it showed that 1924 compared badly with 1923. The Birth rate was, with the exception of the War years, the lowest on record, and there was an alarming increase in influenza (which topped the list of fatal diseases. Next to cancer on this list (of which, incidentally, the cause is yet again reported to have been found), are placed nervous afflictions, which also appear to be on the increase. And the statistics of infant mortality are by no means reassuring, although there was in 1924 a saving of 39,000 infant lives on the average of the years 1901-1910. Compared with 1923 there were in 1924 28,198 fewer births and 28,450 more deaths. ALTER EGO.

BOOK REVIEWS.

"THE DOME OF THE ROCK." By E. T. Richmond. (The Clarendon Press. £6 6s.)

To many lovers of architecture the Dome of the Rock in Jerusalem, so persistently miscalled the Mosque of Omar, is the most beautiful and the most nobly set building in the world. Covering and enclosing the crude and shapeless mass of rock—scarred, seamed and pitted with age—which has attracted the veneration of men from the days of the Patriarchs until the present time, rises that masterpiece of Arab art with which, in 691 A.D., the Caliph Abd al-Melek replaced the wooden mosque built by Omar in the hope that it would divert, by its magnificence, the stream of pilgrimage to Jerusalem from Mecca, closed by the rival Caliph, Abdallah ibn Zubair, to all but his own supporters. Participating, from the seventh century onwards, in the vicissitudes which have befallen Jerusalem, even becoming for a while, during the Crusades, a Christian Church, the Dome of the Rock has necessarily suffered from the ravages of time and history, has undergone changes, has required periodical examination and preservation, has altered "its tissue and renewed its structure" in order to remain, in the words of Mr. Richmond, "the living symbol of a living Faith." One such period of overhauling synchronised with the British occupation of Palestine in 1917-18; and those responsible at that time for the upkeep of the Harm al-Sherif were fortunate in securing Mr. E. T. Richmond to advise them regarding the treatment of the central monument of "the Noble Sanctuary." Mr. Richmond, combining an inherited artistic taste with long experience of Moslem architecture as architect to the Egyptian Ministry of Waqfs, brought not only his high technical qualifications but a deep love of the building to bear on his study of the Dome of the Rock, some of the fruits of which are now made public in this sumptuously produced volume. For several months, while he was making his detailed survey, Mr. Richmond lived, as he tells us, in the presence of the Dome of the Rock, so that he became impregnated with its beauties as well as with its vitality. He is able to write, therefore, both as a technician and as an enthusiast; and not only the Moslem Supreme Council of Palestine but the world at large owes him a debt of gratitude for his work. Mr. Richmond disclaims, perhaps with undue modesty, having attempted in this book an exhaustive study of the Dome of the Rock in all its aspects. He claims only to have set himself the task of describing its present condition and of suggesting the nature of the work needed for its preservation and the means for carrying it out. But this he has done with admirable thoroughness and a wealth of illustration.

BY MAIL AND MESSENGER

Times Literary Supplement:—"Primarily the letters are love-letters, and as such illustrate the writer's mood; he sings another's love to interpret his own, and what he seeks and finds among all the strange peoples whom he visits, is some tale of true love . . . Sir Thomas's speciality is his method of conveying the outlook and mode of life, of the peoples among whom orders or inclination take him . . . . As a record of travel the book is noteworthy for descriptions of rural Greece."

In few buildings does decoration, external and internal, play so important a part as in the Dome of the Rock; and a large portion of Mr. Richmond's book is devoted of necessity to a study of the outstanding feature of the decoration, that is to say, of the tiles, with which the upper portion of the exterior of the Mosque has been, and to a large extent still is, faced. A series of admirably clear diagrams show us in detail these tiles according to the six main periods from which they date. The coloured plates illustrating the tiles are likewise above praise. In the frontispiece, which reproduces the present condition of three bays, as well as in Figures 41 and 42, in which are given a suggested arrangement of the tile decoration in the early sixteenth century and a conjectural restoration, each individual tile is drawn and painted with the minute accuracy of a Satsuma vase. The mosaics of the interior and the glass of the windows of drum and octagon are also described and illustrated so clearly that no future custodians and restorers of the shrine can have any excuse for deviating from tradition in this respect.

The repair and preservation of the Haram al-Sherif have now been entrusted by the Moslem Supreme Council to the distinguished Turkish architect Kemal al-Din bey and his competent staff, who have set up their technical office in the precincts of the Haram; and it is to be hoped that Mr. Richmond's advice will continue to be available in the difficult and highly responsible task which they have undertaken.

This is a noble book, well worthy of the "Noble Sanctuary," and it constitutes a notable addition to the works on Oriental art and architecture which the Clarendon Press are producing so wisely and so splendidly. I have only one small query: Why does Mr. Richmond, so rightly careful in his transliteration of Arabic names, adopt the French transliteration in his references to the Yeshil Jami, the beautiful Green Mosque, at Brusa?

IRAQ, 1923-1924.

"Report by His Britannic Majesty's Government on the Administration of Iraq for the period April, 1923—December, 1924." (H.M. Stationery Office. 7/3).

This Report on Iraq, which is virtually a statement of the progress of King Faisal's State under the administration of Sir Henry Dobbs (Sir Percy Cox having left Iraq in May, 1923), shows, on the whole, the most satisfactory state of affairs that it has been possible to record since the constitution of the Iraq kingdom. It is true that many of Mesopotamia's major problems, both internal and external, are not yet solved, but the year and nine months under review have at least "witnessed on the part of the Iraq Government a determination to seek right solutions and on the part of the people a willingness to accept them."

Sir Henry had the advantage of beginning his régime upon the basis of the protocol, the effect of which was to clear the way for genuine co-operation between the British and Iraqi officials, and it is gratifying to observe to what good uses he has put the opportunity of proving to the Mesopotamians that Great Britain was prepared, on the one hand, to abstain from undue interference, and, on the other, to accord active support. In his general survey of the period he touches, among other things, upon the difficulties, now happily at an end, that arose out of the attitude of the Shiah *ulema*, and upon the activities of the Turks in the North, activities the end of which it is more difficult to see. Another trouble which reared its head persistently during this time concerns the Kurdish districts on the Eastern frontier. His words on the relations between the Kurds and Iraqis are worth quoting. After commenting upon the increased willingness of the Kurds to participate in the conduct of the Iraq State, he says: "There is no reason to anticipate in the future the occurrence of racial dissension and every ground for hope that further development will follow the lines of closer amalgamation. But Arab nationalists will need to bear in mind that the end in view will be more speedily and more surely attained if the national aspirations of their Kurdish fellow-subjects are treated with as much consideration as the similar sentiments which they themselves cherish."

It is not surprising to find that the High Commissioner pays a warm tribute to the Royal Air Force in Iraq, which he says has been a main factor in the pacification of the country. The advantages and the care with which this arm is used are lucidly explained. But Sir Henry is alive to the danger that the R.A.F. may be asked to do the work for which infantry is more suited, and this very problem is now engaging close attention. It is unwise to risk the defeat of an Army whose total strength is 7,500 men, and of which, though the cavalry and artillery are spoken of well, the infantry, owing mainly to the fact that the period of service is but two years, is not so satisfactory.

With those sections of the Report which deal with the Ministries of Interior, of Justice, of Communications and Works, and of Auqaf, we have here no space to deal; and Sir Henry's very frank words in the section which he devotes to the Ministry of Finance deserve separate attention elsewhere. It is sufficient here to explain that that derided "official optimism," so justly complained of in some reports, is refreshingly absent here.

The account of Iraq's foreign relations is worth close study. The frontier with Syria is complicated by the fact that neither the Shammar nor the Anizeh tribe pays the slightest attention to it, but there is a close co-operation between the authorities of Iraq and Syria which makes friction of rare occurrence. With Arabia, however, relations were during this period very far from satisfactory; nor, according to this Report, is there much prospect of improvement. The Sultan of Nejd is represented as being quite unreasonable in the matter of boundaries, an attitude which was mainly the outcome of the conduct of those refugee Shammar whom he has claimed as under his tutelage since his victories of 1921. With Persia, relations are now much better, and in October, 1924, the Persian Government recognised the Kingdom of Iraq.

Extremely interesting is the state of affairs revealed in regard to Education in Iraq. The British, after the occupation of Baghdad in 1917, had nothing but relics of the old Turkish system on which to build. How hard that task was is shown by the fact that the adoption of Arabic as the medium of instruction was by no means a simple matter. The system now in vogue in Government Schools is claimed as being "sound as far as it goes." The Primary Schools exist mainly so that an intelligent electorate shall be formed; Secondary Education exists only for the selected few; and the subject of Higher Education is treated in a very serious manner. Sir Henry's words, incidentally, upon the Baghdad University, should be read by all those who may have been deceived recently by the extravagant claims made out by another University in the East. "A so-called University which has nothing of Academic standard about it except the scale of its buildings, will confirm instead of destroying that belief in false standards of value which is one of the worst banes of this country." And upon the Iraqi's tendency to imagine that unlimited education is the cure for every ill, the High Commissioner writes the soundest of sound sense.

To sum up, it may be said that this record of the events which have befallen Iraq in the twenty-one months from the Spring of 1923, of the way in which difficulties, old and new, have been encountered, and, particularly, of the hints dropped in regard to future happenings in Mesopotamia, has been made by an acute, unbiased, and very close observer. It may be that Sir Henry Dobbs emphasises the financial side of Iraq's problems where some would emphasise her military problems, but it is certain that his account is indispensable equally to the optimistic and to the pessimistic student of Britain's experiment with the first Arab State. A more readable, straightforward, and level-headed document it is impossible to conceive.

PERSONAL AND GENERAL

TO-DAY

July 23, 1925 (New Style).
July 10, 1925 (Old Style).
Muharram 2, 1344, A.H. of the Moslem Calendar.
Ab 2, 5685, of the Jewish Calendar.

The Maharaja of Porbandar was received by the King last Thursday at Buckingham Palace.

The Crown Prince of Kapurthala arrived at Claridge's Hotel, London, last week from Paris.

Prince and Princess Paul of Serbia left London on July 15 for Paris.

Colonel Ion Antonesco, Military Attaché at the Roumanian Legation, has returned to London from Norway.

M. Stoyan Petroff, Counsellor at the Bulgarian Legation, left London last Saturday for Edinburgh.

The Bulgarian Minister returned to town on July 14 after a week's stay at Sheringham.

Sir Harcourt Butler, Governor of Burma, who had an audience of the King at Buckingham Palace on July 14, left for Bombay last week.

Prince Peter and Princess Eugenie of Greece, who have been staying at the Savoy Hotel, left London last week on a short visit to Paris.

The Earl and Countess of Reading are leaving Victoria for India by the Peninsular and Oriental special at 1.50 p.m. to-day.

Canon A. S. Hitchens, formerly Canon of St. George's Cathedral, Jerusalem, has been appointed as Chaplain to the College for Clergy Widows at Bromley.

Prince Frederick Duleep Singh arrived last week at the Hotel Splendide, Evian-les-Bains, where he will remain for about four weeks.

Viscount Milner, of Sturry Court, near Canterbury, who died in May, left estate of the gross value of £45,868, with net personalty £32,164.

The Prime Minister entertained Ziwar Pasha, Prime Minister of Egypt, and the Egyptian Minister in London at luncheon last Sunday at Chequers.

Sir H. Seymour King has left England in his yacht for a cruise to Norway, and will not return until September.

Field-Marshal Sir William Birdwood, Bt. (upon his appointment as Commander-in-Chief of the Army in India), had an audience of the King at Buckingham Palace on July 15.

Mahomed Izzet Bey, Master of Ceremonies at the Court of King Fuad, who has been visiting his parents, the Egyptian Minister and Madame Izzet Pasha, left London last Thursday for Switzerland and Egypt.

A marriage has been arranged, and will shortly take place between John B. Mackie, of Abadan, Persia, eldest son of Mr. and Mrs. J. H. Mackie, of Castle Cary, Somerset, and Joan M. Padwick, elder daughter of Mr. and Mrs. F. G. Padwick, of Monks Barn, Petersfield.

The Secretary of State for India and the Countess of Birkenhead gave a luncheon party last Thursday at 32, Grosvenor Gardens to the Maharaja of Jodhpur and his polo team—Captain A. H. Williams, Thakur Dalpat Singh, Thakur Prithi Singh, and Rao Raja Hanut Singh.

The marriage arranged between Humphrey Bowman, C.B.E., Director of Education, Palestine Government, and Mrs. Arthur Bowman, of 12, Church Row, Hampstead, widow of Arthur William Bowman, will take place in August.

Among the passengers who left London last Thursday by the P. and O. Bombay express to join the s.s. Razmak at Marseilles were Colonel the Hon. D. Bingham for Port Said; Major-General and Mrs. J. H. K. Stewart, for Aden; and Sir Harcourt Butler and Sir Samuel O'Donnell, for Bombay.

The King has given Mr. Humphrey Ernest Bowman, C.B.E., authority to wear the insignia of the Third Class of the Order of the Nile, conferred on him by the King of Egypt, in recognition of valuable services rendered by him as Inspector under the Egyptian Ministry of Public Instruction.

The engagement is announced between Vivian Fox-Strangways, Colonial Civil Service, younger son of Mr. M. W. Fox-Strangways, C.S.I., late I.C.S., and Mrs. Fox-Strangways, and Rona Heathcote Plummer, younger daughter of Mr and Mrs. A. H. Plummer, of Risdons, Bradford-on-Tone, Taunton.

CORRESPONDENCE

The columns of THE NEAR EAST AND INDIA *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* THE NEAR EAST AND INDIA.

"ARSHIN-MAL-ALAN."

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Will you permit me, as one who has seen and enjoyed "Arshin-Mal-Alan" six times, and concurs entirely in your favourable notice of its production and performance at the Philharmonic Hall, to correct some of your dramatic critic's remarks, which are misleading?

This amusing piece was not "played and sung entirely in Persian." Gulchora had a Persian song, and in the course of the conversation a few remarks were made in Persian, but the language of the play was Armenian. Not even its title is Persian.

Again, it is not clear why the instrument played in such a masterly manner by M. Abgar should be described as a Persian "fiddle." It is not played with a bow.—I am, etc.,

WOLSELEY HAIG.

West Kensington, July 16.

[Our critic writes: "I regret very much having been misinformed upon some of the details concerning "Arshin-Mal-Alan," but, being unfortunately ignorant alike of Persian and Armenian, I had to rely upon the services of an interpreter. As for the kind of mandoline upon which M. Abgar played, I was given to understand that it was known as 'the Persian fiddle.' But I sincerely thank Sir Wolseley Haig for correcting my main error of supposing that the comedy was a Persian one."]

A FESTIVAL AT KERBELA.

By MARGARET HASLUCK.

Every reader of THE NEAR EAST AND INDIA knows that the breath had hardly left Mohammed's body before his followers quarrelled about who should be Caliph, that is, his successor in the leadership of Islam. Some wished to elect him as occasion arose, others, the Shiahs, preferred him to be the Prophet's natural heir. At length, at Kerbela, south-west of Baghdad, the elected Caliph Yezid attacked and defeated his legitimate rival Husain, son of Ali and Mohammed's daughter, Fatima. Cruelly starving him to death, as the festival of Moharram still commemorates, he finally decapitated him. The head found its way to Damascus, the body was buried where he died. Later, a gorgeous tomb was reared over it, and so Kerbela became one of the holiest cities of Islam.

Finding myself in Baghdad on my way home from India, I naturally wished to see so famous a place. Physically this was easy, since a railway now connects it with Baghdad, but my only possible date was the Mahdiyeh, the Mahdi's birthday. To most English people he is only the false prophet of 1881 who fanaticised Sudan Moslems against the British and eventually caused Gordon's death at Khartoum. To simple Shiahs, the Mahdi is the child Imam, who, vanishing for a time from human ken at Samara on the Tigris, will return to earth like Christ, to re-establish justice and convert the Universe to Islam. Meanwhile they celebrate his birthday annually, but at Kerbela rather than Samara, as Husain's head was brought back to Kerbela from Damascus on the same date. Now it is a law of the Mesopotamians that no woman shall go to Kerbela during a festival, for fear it may dangerously excite their religious prejudices. Fortunately for me, the Mahdiyeh is neither so important nor so emotional as Moharram, and the British police, allowing that measuring 500 Moslem heads in Macedonia may have taught me something of Moslem ways, kindly stretched a point in my favour and let me go.

The night train from Baghdad set me down at dawn at Kerbela station. It was crowded with pilgrims come to catch the first train out. True, it was not scheduled to leave till after mid-day, but Arabs, having little notion of time, now habitually take it by the forelock when a train is in question. Mindful of those kind, but inevitably responsible, officials in Baghdad, I first looked anxiously for signs of hostility among the pilgrims, but they did not seem even interested in me. Then the station-master, an Indian Moslem, reported everything quiet in the town, if only because most of the pilgrims were sleeping off the effects of the festival. It had been strenuous. The previous evening they had assembled at Husain's shrine well before midnight and spent several hours reciting the Koran and gazing at the full moon. This pious observance was to change all their lives for them, the rich becoming poor and the poor rich, saint turning sinner and sinner saint. The stationmaster was unable to say whether many rich kept the festival.

Having supplied me with an excellent breakfast for which he would not take a penny, he next despatched me —in a Ford, of course—to the Commandant of Police. Immediately outside the station lay the famous cemetery of Kerbela. Moslem theologians having painted hell fire in even more lurid colours than Calvin did, simple Moslems dread it intensely. They believe, however, that they can escape it by being buried in Kerbela, as that in itself will sanctify their dust by mingling it with Husain's—it is nothing to them that a good mile separates cemetery from shrine. So they come from far and near: before they die, if possible, like the Aga Khan's mother last year —only she happily recovered. Already dead, they perhaps come on a camel picturesquely laden with coffins. Dead or dying, they receive a warm welcome from both Kerbela and the Iraq Government for the sake of the handsome fees both demand for such holy burial. The Government requires six months to elapse before a corpse enters Iraq, but no one seems to wonder what happens to its soul in the interval. On the whole—Moslems abhorring our practice of burying several persons together—the cemetery seemed small for the numbers it is alleged to hold. Possibly, the soil being pure sand, desert winds soon level the graves and put them again into commission; more probably the numbers are exaggerated.

A fairy garden succeeded the cemetery. On either hand a lake reflected beautiful pictures of the tall and short male and female palms, which fringed it. Between them, fruit-trees, white with blossom in March, sprang from a soft green carpet of young wheat. Further on, the stiff grace of other palms was set off by the haphazard, but always straight lines of a khaki house at the entrance to the town. The first street was a great surprise after Baghdad, whose dilapidation beggars description. Wide and handsome, this Kerbela street had proper pavements and a tidy, if monotonous, frontage of high garden walls interrupted by occasional houses. To a lively imagination their many barred windows inevitably suggested fiercely guarded harems behind, but there was no fierceness in the Commandant, who presently welcomed me in most engaging English. Only when my visit was over did he reveal that my arrival had wakened him from much needed sleep, for till 3 a.m., he had been busy preventing the pilgrims from picking each other's pockets.

On hearing what interested me, he volunteered to escort me himself and took me first on a dull duty visit to the *mutessarif*. The next, to the government doctor, was much livelier. Trained in Constantinople, Vienna, and Paris, he is reputed a *seyyid*, that is a lineal descendant of the Prophet. As a scientist, he was humorously sceptical about this, but said it was a splendid trade-mark. A *seyyid's* hand being thought to heal by its mere touch, he could take the pulse of his (heavily veiled) women patients, whereas their modesty forbade such a familiarity to a doctor of humbler pedigree. The number of waiting sick indicated how his tact and skill are gradually wearing down their ignorant prejudices, but a progressive doctor has still a long row to hoe among such people. Before they even consult him, for instance, they ask advice of their rosaries. Grasping them at any two points, they tell the intervening beads, two by two. If two beads are left at the end, they are free to see the doctor; if only one remains, the omen is bad and they wait till a luckier day. Perhaps it is then too late, but that is Kismet. The doctor having seen them and given them a prescription, the rosaries again come into play: shall they, shall they not, have the prescription made up? If the rosary says no, they return to tell the doctor his medicine is bad. "All right, I will change it," he answers, too wise to reason with such undeveloped creatures. And, tearing up the old prescription—he writes it all out again. He knows of course that they are too unlettered to detect the trick. So far he humours them, but, should they propose to consult the oracle about paying his fee, he takes a firmly negative stand.

The Commandant now suggested taking me to see some Kerbela ladies. We therefore penetrated inside the town wall, which has been utterly ruinous since 1843, when the Turks battered it to fragments in their attempt to persuade the citizens that, whatever future pains residence at Kerbela insured them against, it could no longer save them from military service in this world. We now found ourselves in a conventionally oriental town, the streets being narrow and devious, the houses very tall, their doors low, solid, and sinister, and their street walls blank, because like the ancient Cretan palace of Knossos they are lit and ventilated from a central court. Passing through one low doorway, we saw our prospective host seated on a dais in an open gallery of the forecourt. He was Persian, like half Kerbela, and a very eminent *Mullah*, as his gigantic white turban indicated. With correctly obtrusive appreciation we noisily sucked in the tea he gave us, while we talked of the astounding differences between the tolerant Shiahs of Turkey and their bigoted cousins in Iraq. Then he had me conducted up a winding staircase to the harem beyond a second court. In the reception room, which was neatly furnished with European chairs and tables, the *Mullah's* wife and other female relatives sat awaiting me. They gave me their hand in European fashion, I countered with the beautiful threefold *temena* of Moslems. Then a daintily Persian tray of tea, biscuits, and delicious jam was brought in by a manservant, who took up his stand in the background with

Digitized by Google

some other retainers. Evidently these Persian ladies did not mind unveiling before him, as Turks would have done. Their dark, gentle beauty was entrancing enough to turn a Spanish belle green with envy, but unfortunately they did not know Turkish, my only oriental language, so we could say little except with our eyes. We removed our respective headgears to show each other our hair; theirs was bobbed in front and plaited behind. It was always inky black, by nature in the young ladies, by art in the others—not out of vanity, however, but *sewab*, respect for their religion which dislikes grey hair. Then they explained their relationship, laughing at its complications. Just as I had sorted them out, the *Mullah* himself came to conduct me downstairs. There the Commandant made him a flowery speech of thanks for his kindness and carried me off to see the twin shrines which cover the mortal remains of Husain and his half-brother, Abbas.

To reach them, we had to traverse the bazaars. With their floors of beaten earth and their lofty, sharply gabled roofs, they resembled some at Baghdad. As usual in the Orient, each trade had its own street, so we moved from Clothmarket to Shoe Lane and on to Honeybourne Road, where honey brought from Persia's distant hills in goat-skins was being sold. What most interested me were the tiny tablets of Kerbela earth made for pilgrims to carry home. When ill, they drink one dissolved in water as medicine—faith being an important element even in western cures, they sometimes recover in consequence. On another they press their foreheads when they prostrate themselves in prayer: ultimately this tablet is placed under their heads in the coffin, if they cannot face the expense of sending their bones to Kerbela itself.

In the bazaar shops squatted their owners, all except four Jews being Arab or Persian. The Arabs wore their usual monkish frocks and flapping head handkerchiefs, the Persians, extraordinarily pale, wore halo-like turbans. Some offered me their goods, which showed that the railway's advent is beginning to civilise them. Hitherto, they have regarded a Christian's mere touch as pollution and even now, had fear or favour wrung me a glass of tea from their coffee-houses, they would have smashed the contaminated glass or washed and re-washed it in running water.

Pilgrims swarmed everywhere, all in the sombre garments Shiahs have worn since Husain's death. The old men had dyed their beards a vivid orange with henna. A sly suggestion of their danger from the evil eye, now they had so renewed their youth and beauty, was received with roars of laughter and banished my last fear of their unfriendliness. Then in a side yard I salaamed a woman who was surveying me curiously. To my dismay she flushed red and, gathering up her skirts in dudgeon, removed herself to a distant corner, where she turned her eloquent, indignant back on me. The trouble was that the early fog had made me, fearing rain, wear khaki and, a skirt being neither here nor there among Arabs, the colour had made her think me a soldier and my salute an insult. Luckily, the surrounding men were wiser and merely jeered at her for a fool, who had never seen an Englishwoman before.

All this time we were continually emerging on the gateway of one or other of the shrines. There is little to say of them, because infidels are not allowed inside them and, if wise, do not linger long outside. The artists in both cases being Persian, their general scheme recalls the gorgeous Moslem tombs of India. That is, handsome gateways lead into a large court, in the centre of which stands the holy sepulchre. At Kerbela the walls of gateways and tombs alike are one blaze of wonderful blue tiles, while the dome and minarets of the sepulchre are plated with pure gold, for which Persia found the money. Strange chains of bronze festoon the gateways, but no one seems to understand why. As we looked, pilgrims streamed out and in, reverently kissing the threshold, the gateposts, and the chains, so that it was most provoking to be excluded like a fallen angel from such a paradise.

Once more at the station, I learned that even exaggerated fanaticism makes concessions. For all his alien creed and the Indian blood "high-nosed" Arabs despise so heartily, the Kerbelites have made the Hindu ticket-clerk free of their town and coffee-houses, though of course not of the shrines. His assistant, however, an Armenian, they have forbidden to stir from the station precinct, and even there they refuse to give him food and drink. Nor will they shave him—no great hardship in English eyes, but severe in the East, where even a barber rarely shaves himself. And then the pilgrim train tore me away to Babylon and Kerbela's sister, Nejef.

A FILM OF NORTHERN ABYSSINIA.

The Duke of Connaught will attend a private view of the film record of Mrs. Rosita Forbes's recent journey through Northern Abyssinia, to be given at the Capitol Theatre on Monday, July 27, at 11.30. Among others who have accepted invitations to be present are the ex-King of the Hellenes, Prince and Princess Nicholas of Greece, Princesses Elizabeth and Marina of Greece, the Spanish Ambassador, the Austrian Minister, the Duchess of Atholl, the Duchess of Rutland, the Home Secretary and Mrs. Joynson-Hicks, the Minister of Transport and Mrs. Wilfrid Ashley, the Countess of Birkenhead, Viscountess Inchcape, Sir Robert Horne, and Air-Marshal Sir Sefton Brancker. The film will afterwards be shown publicly at the Capitol Theatre.

THE EGYPTIAN PREMIER.

Mr. Austen Chamberlain, Secretary of State for Foreign Affairs, entertained Ziwar Pasha, Prime Minister of Egypt, at dinner at Claridge's last Thursday. The following guests were invited to meet him:—Mr. Ramsay MacDonald, the Egyptian Minister, Midhat Bey Ziwar, the Marquess of Salisbury, Viscount Peel, Viscount Haldane, Field-Marshal Viscount Allenby, Viscount Cecil of Chelwood, Viscount Inchcape, Sir William Tyrrell, Sir George Lloyd, Sir Geoffrey Archer, General Sir John Maxwell, Sir Samuel Hoare, Mr. Amery, Sir Ronald Waterhouse, Sir Ronald Storrs, Mr. Selby, Mr. Murray, Mr. Lloyd Thomas, and Mr. Beare.

A MIDDLE EAST RECEPTION.

Miss M. A. Broadhurst and Miss Farquharson gave a "Middle East" reception last Thursday evening at the Hyde Park Hotel. Lord Lamington, Lord Danesfort, and Lord Leigh assisted the hostesses in receiving guests, and Marchioness Townshend, Lady Sydenham, and the Hon. Mrs. Gideon Murray were also helping. The large company included, among others, the Chinese Chargé d'Affaires, the Hungarian Minister, Prince Nader Mirza Arasteh, M. and Mme. Yovanovitch, Air Vice-Marshal Sir Sefton Brancker, Sir Atul and Lady Chatterjee, Sir Prabhashanker Pattani, and Sir Maneckji Dadabhoy.

SUDAN POLITICAL SERVICE.

The following have been selected as probationers in the Sudan Political Service:—

Mr. J. Beavan, Mr. F. D. Corfield, Mr. D. C. Cumming, Mr. E. W. Davies, Mr. G. L. Elliot-Smith, Mr. R. J. Hillard, Mr. E. C. Hasleden, Mr. J. Longe, Mr. D. M. Marshall, Mr. A. E. D. Penn, Mr. S. R. Simpson, Mr. C. R. Wordsworth, and Mr. H. M. Watt.

MARLBOROUGH'S SELF-TAUGHT SERIES
OF ORIENTAL LANGUAGE BOOKS.

Containing Travel Talk, Railway, Steamboat, Numerals, Post Office, Hotel, Classified Vocabularies, Conversations, Commercial Terms, Grammar, Officials' Ranks, and Titles, Correspondence, Amusements, Shooting and Fishing, Pronunciation, Trades, Money, &c., Illustration of Coinage.

Indian Affairs.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 2.

The Political Atmosphere.

Whether it be due to the return to "bureaucratic government," or to the death of the leader, or to the suspense with which the Birkenhead statement is awaited, the fact remains that the political atmosphere is more tranquil than at any time since the launching of the Reforms. The Indian masses out of the towns live in a state of perpetual economic servitude to the bania, the money-lender; they are born in debt and die in debt, but they live in happiness! The town dwellers are largely drawn from the middle classes; they are literate but beneath the surface they are equally infected with the "pathetic contentment" that excited Mr. Montagu. Together, these are really "the country," and the removal of the terrorists has made it possible for them to return to an absorption in the realities of their own lives. They return, however, with almost a worship of Gandhi and Das and something very akin to racial antagonism to the British.

The Political Classes.

The Indian political classes, lawyers, students, hangers-on who would otherwise be idle, are intensely occupied in mourning their lost leader, whose Sradh ceremony took place at his house yesterday before enormous crowds, while memorial meetings were held later in the day which were mass meetings indeed. Their leaders, lawyers almost to a man, are equally occupied in distributing Elijah's garments, a very difficult problem. The political cloak has fallen upon Mr. J. M. Sen Gupta, thanks to Mahatma Gandhi's influence, but it is a dubious experiment, and even the Swarajists are finding it difficult to defy common-sense to the extent of letting the mayoral robe follow the cloak. A political friend finds Mr. Sen Gupta an amiable and inoffensive individual, who has never learnt the art of saying no. He is a practising barrister and a member of the Calcutta Club.

The Political European.

The non-official Europeans who have been forced by circumstances to think and act "politically" are now able to attend to their own affairs; business or professional occupation is to-day a whole-time problem, but that has never prevented a large proportion of the community from devoting its scanty leasure hours to public service, and the calls of charity, municipal service and other administrative work are to-day more insistent than ever. The voluntary taxation of incomes which have to meet ever-increasing costs of living is becoming a serious problem as each new enthusiasm creates a new organisation for spending money; and the older charities have new duties forced upon them while their government grants are being cut down by corporations and departments alike. The co-ordination of charities has ceased to be merely desirable; it has become imperative.

Competition.

It is not only political animosity that is responsible for the preference shown in many quarters for "continental," frankly German, or Japanese goods. Exchange and low costs of production enable something very akin to dumping to be practised in the Indian market at present, and the bazaars are flooded with goods, particularly those which can be shipped direct in small parcels, which are often quite satisfactory in quality and are on offer at astonishingly low prices. An example may be referred to in the piece-goods market; a large consignment of Japanese nainsook, of a quality which directly compares with Manchester goods, has been placed this week at a price which is below the figure at which Bombay can compete even with an inferior article. Energetic propaganda is accompanied by a regular distribution of bulletins, magazines and price lists, and it is interesting to note the tone of the [illegible] special articles which appear in these; the subtle references to the disinterestedness of the trader whose only concern is to please his customers, as compared with the exploiting activities of the land-grabbing nationals, are worthy of the later stages of the War. British manufacturers will inevitably be hit and increasingly so: their reply will not only have to take the form of lower costs and prices, but they will have to initiate propaganda of an equal quality, and this implies a close study and understanding of the mentality and the point of view of the dealer and the buyer. The new trade war has begun and the enemy is mobilising his brain-power.

The Markets.

The latest reports from Dacca are not optimistic, and it is expected there that the jute crop will fall considerably short of the figure generally anticipated. The market closed with both parties watching a slight firming up. Fabrics show a slight improvement, but business is quiet and that done appears to be either speculative or to cover shipments falling due. There is little change in the piece-goods outlook; the holding out of the Marwaris has not produced the improvement hoped for, and there are signs that the Association will modify its recent resolution. Bombay stocks in the mills are still high. Tea has been well-supported; at the sales competition has been general and there is plenty of inquiry. Indigo is quiet and the shellac market closes steady. There is a glut of money in Clive Street and this is beginning to influence Burra Bazar. There is a strong demand for all Indian raw produce for export but at the moment it is Bombay that is mostly affected by the trade, and money rates there are considerably higher than in Calcutta, where short money has been on offer at 2 per cent. Government have been heavy purchasers of Sterling from the exchange banks, and the rupee seems no nearer its 1s. 4d. level. Stock market movements seem to be purely speculative.

INDIANISATION OF THE ARMY.

(By Our Simla Correspondent).

Simla. June 24.

My last letter dealt in general terms with the practical difficulties which will have to be overcome before the Indianisation of the Indian Army can be carried out with any greater rapidity than at present, and the difficulties to which reference was made were discussed almost entirely from the point of view of those in authority, who are responsible for the success or failure of any Indianisation scheme. There is another point of view, however, which must be taken seriously into consideration, one which does not find expression to such an extent as the other in the debates of the Legislative Assembly, but which must nevertheless weigh very definitely with the military authorities in this country. This is the point of view of the Indian officers who hold the King's or the Viceroy's commission, and of the sepoys themselves. At the present moment eight selected units of the Indian Army are being Indianised as fast as King's commissioned Indian officers become available for posting to them. Although, however, this process of replacing British by Indian officers in these eight units was begun more than two years ago, the results achieved as yet are by no means encouraging, for there is not one of them that to-day has more than two Indians among its King's commissioned officers.

The chief reason for this lies not, as many Indians would have one believe, in the apathy of the authorities or in the smallness of the number of Indian cadets passing out of Sandhurst each year, but in the rooted objection which the Indian officer, newly commissioned from Sandhurst, has to being posted to one of the units in process of being Indianised. When the eight-unit scheme was first formulated early in 1923, the majority of Indians holding the King's commission, who had already been posted to other regiments, expressed their unwillingness to be transferred

Digitized by Google

to any of these eight. This was readily understandable, for they had already had time to settle down in their messes and were loth to be moved away from the friends they had just made. Unfortunately the same unwillingness has continued to manifest itself among the officers of more recent batches, many of whom have expressed their intention to resign their commissions rather than serve in these Indianised units. What is the reason for this general objection to service under such conditions? There is no doubt that the young Indian officer after his first year's attachment to a British regiment, following directly on his training at Sandhurst, finds himself thoroughly at home among British officers, and prefers the known, in the shape of a mess peopled, besides himself, almost entirely with British officers, to the unknown which may mean living in close contact with numbers of officers who, though his fellow countrymen, may differ from him in religion, caste, speech, habits and practically every other respect. But it is rather the fear of the future which acts upon him as the chief deterrent, the fear of the time when he may have to serve under other Indians, for whom by reason of these very differences he will have a feeling of dislike, if not of actual hostility, such as he is never likely to feel towards the average type of impartial and straightforward British officer, albeit the latter is in most respects even more different from him than his fellow Indian. There may be other and minor reasons also which have combined to turn the minds of young Indians, so definitely against the eight-unit scheme, but they all relate directly or indirectly to this preference for service with or under British officers.

The attitude of the sepoy class, brought up for generations to believe implicitly in the fairness and justice of the British officer, is very much the same. Knowing only too well the weaknesses of their fellow-countrymen when placed in positions of authority, the men in the ranks will always prefer to lay their cases before a British officer rather than an Indian officer, even though the present King's commissioned Indians, drawn for the most part from the highest classes in the land and from those which have military traditions behind them, have been educated at Sandhurst in just the same manner as their British comrades. But the greatest bugbear to the sepoy is the fear that the officer ranks of the Army may be thrown open to the educated classes of India as a whole without regard to birth or antecedents, and that he may find himsef under the command of men drawn originally from the clerk or shopkeeper classes, for whom he, as a fighting man, has a supreme contempt. The officers drawn from the aristocracy or from the martial classes, agriculturists like himself, he can put up with, if it is necessary for him to serve under his own countrymen, but it is another matter to ask him to serve under the sons of men for whom he has not a vestige of respect. This fact in itself constitutes a further difficulty to the progress of Indianisation in the Army; for it is the classes to which he objects which can most easily afford the expense of having their sons trained to enter the commissioned ranks of the Army. If, however, as a result of political pressure by the leaders of Indian thought, or of weakness on the part of the Government, the way is opened to these classes to find their way into the Army as officers in any numbers, there is nothing more certain than that the men of the martial classes, from among whom the recruits for the Army have always been drawn, and through whose sterling qualities it has been found possible to make that Army as efficient a weapon as it is to-day for the defence of India, will prefer to seek employment elsewhere.

Indian politicians are fond of declaring that, since Japan was able in the short space of forty years to organise and train an army capable of comparison with the armies of European nations, India must be able to do the same. There is one vital point, however, which they overlook—that, unlike Japan, India is not a single nation, but a mixture of many, differing widely in religion, language, and outlook. The division which exists at present between Hindus and Moslems, to take but a single instance, is by itself sufficient to prevent the growth of that spirit of unity and patriotism which is essential to the formation of a national army.

CURRENT TOPICS.

British Trade in the East.

The *Monthly Journal* of the Glasgow Chamber of Commerce for July remarks that her trade with the Far East is the greatest testimony to the all-round enterprise of Britain: it was the most difficult to obtain, and may prove the most difficult to retain. It thus forms a fairly accurate measure of her general economic efficiency.

Our supremacy in the Indian trade is still unchallenged, but Japanese competition is beginning to make itself felt in the cotton industry. This has affected the Indian as well as the British manufacturer, and the Bombay cotton magnates have proposed an adjustment of duties in favour of Britain against the worst effects of Japanese rivalry. That Indian industrialists recognise the advantage of the Imperial connection is a good omen for our future trade with India, and it is possible that their appreciation of the solid benefits of Imperial Preference may have an important bearing upon the general movement for the encouragement of trade within the Empire.

Our greatest commercial rival in the East is Japan, the seriousness of whose rivalry is not only indicated by the great increase in her trade with India during the last twelve years, but even more by the fact that she has achieved it in her present condition of comparative poverty. "At present she is concentrating very largely upon internal development and improvement. These will bring about a healthy increase in her total economic efficiency; they will mean that her competition, when the full pressure of it becomes apparent, will at least not be that of a country driven to depend upon sweated labour and reckless underselling. It will be normal competition of the kind that, in the long run, through the general stimulation of trade and of buying power, automatically compensates for temporary injury done to the trade of vigorous and alert rivals."

The Commander-in-Chief.

A luncheon was given to Field-Marshal Sir William Birdwood by the Royal Colonial Institute on July 16. The Duke of Connaught presided, and proposed the health of Sir William and Lady Birdwood. In the course of his reply, Sir William Birdwood said that he challenged the idea that India no longer afforded an honourable career, in either the civil or military services, for young men of the British race. He knew of no people who, more than the Indians, would respond to the human touch, eagerly, willingly and happily. If young men would go out there with the courage and faith of their forefathers, determined to go straight to the point honestly, and to show the people that they intend to deal always with courage, courtesy, common sense and, if possible, continuity of policy, he could assure them that they would not regret looking to India for an honourable career to the great advantage of the Empire.

The Davis Cup.

The defeat of the Indian lawn tennis team by Holland was not unexpected; but, even if the result had been reversed, India could not have hoped to survive another round, since the winners have to meet the redoubtable Frenchmen who carried all before them at Wimbledon. It is noticeable that the team against Holland consisted solely of Indians—a new departure which is certainly in the right direction. The Indian players did quite well at Wimbledon, especially Jagat Mohan Lal who, up to a certain point, made an excellent match of it with the brilliant French player Cochet. Jagat Mohan Lal's display was, indeed, most refreshing to watch, since his style was markedly different from that adopted by most Indian players, who have a tendency to reduce to an exact science the two first principles of lawn tennis—to get the ball over the net and to keep it in the court. The result of this style of play is a sort of glorified pat-ball, in which the player never makes an actual winner unless his opponent gives him a chance of passing him at the net, but relies upon the latter to beat himself. Jacob, who learned most of his tennis in India, is a skilful exponent

Digitized by Google

of this style, and his match against the Belgian Washer —a fierce hitter—was a good example of it: Jacob did not so much win the match as wait for Washer to lose it. Jagat Mohan Lal, on the contrary, goes for the stroke every time, and very often brings it off; which is, after all, the way to bring himself into the first flight. The skilful pat-baller will often manage to get a round further than the man who always goes for the stroke, until the latter learns to add certainty to brilliance, when he may hope for the highest honours; while the former can never be anything better than a "useful plater."

INDIAN EXCHANGE.

London, July 20.

Since our last report cable advices from India indicate that Rupee Exchange has remained fairly steady at 1/6-1/16th T.T., although rates were none too strong in Bombay towards the end of the week, when 1/32 lower was the general quotation.

Buyers of exchange in India, however, do not seem to be plentiful, and any business reported has been at 1/6-1/16 to 3/32 up to Saturday. Monday's cables indicate more strength, with 3/32 offered freely without attracting buyers.

In the London market, business has been quoted at a shade under 1/6-1/8 and transactions, so far as we have been able to gather, have been on a restricted scale at 1/6-7/64; but in sympathy with the firmness in India the rate is now 1/6⅛ to 5/32 with very little passing. The Indian Government has not been called upon to buy, and easier conditions prevail in the money market. Forward rates on the other side have been maintained, and December and January telegraphic is offering at 1/6-3/16 to 1/6-7/32.

According to the Government forecast from Calcutta, the acreage under jute has been increased by over 7 per cent., and the estimated crop is placed at bales 8,800,000. Private reports received in this country indicate that the condition of the crop is fairly good. Taking the figures issued in previous years, in which Government have invariably under-estimated the out-turn, it may safely be assumed that the crop will probably show a more favourable result than the forecast. The Monsoon news continues good and the rainfall has been generally up to the average.

THE LIBERATOR.

BY MUSAFIR.

It was Ram Lall's ambition to be hailed as the Liberator of India. The idea had grown up gradually in his mind. A clear, pushing lad, he had obtained his education practically for nothing with the aid of scholarships provided by the Government, he had qualified at the Bar, and had settled down to the pursuit of that honourable calling. Unfortunately the processes of education had developed his tongue at the expense of his brain, and, like so many other aspirants, he learned that practice is apt to lag behind theory. Few cases came his way, and the number showed no signs of increasing, so he had leisure to meditate upon the causes of things, and naturally he began by blaming the authorities who had educated him for a profession by which he could not live. His eyes thus opened, he saw that the iniquity of the Government was the root of all the trouble in the world, for nearly everyone said so, and words are facts; that being so, it was obvious that the Government should be extirpated, and then everything would go right.

He explained this guileless creed one afternoon to his banker, Manohar Dass, who had hinted that his account was in an unhealthy state, and that a certain promissory note was about to mature. The banker was sympathetic. "True, very true," he said, "this foreign Government is a very great evil. But what's the use of saying so to me? We poor shopkeepers are helpless," and he patted his portly stomach with a deprecatory air.

"Who should I say it to, then?" asked Ram Lall. "We are all helpless alike."

"Not all. Look at the politicians. They can do what they like, and an orator like you should go far. Why don't you turn politician yourself?"

"How should I live?"

"How do you live now? Talking can pay better than law, if one knows how it's done; but come inside, for these things are not for the ears of all my customers."

Manohar Dass was acting under instructions. His banking business was real enough, but apart from it he had a secret connection with the great Cotton Syndicate, which controlled so many of the mills further South, and the Syndicate was out for a change of government on strictly commercial grounds. It was prepared to clothe all India—at a price, and objected strongly to any share of the business going to any other country, whether Lancashire or Japan. It believed in cheap labour, and had no use whatever for Factory Acts, Welfare Work, Trades Unions, and such Western notions. It yearned for the good old days when the whip that hung on the wall of every workship was not there for ornament. It was not too late to restore the old régime, but it soon would be, if spinners and weavers should once grasp the pernicious doctrine that they were human beings; and accordingly the Syndicate was spending substantial sums by way of Secret Service, and debiting them in its books to Goodwill. Several agitators were already in its pay, but there was room for more, and Manohar Dass, who was a tolerable judge of human nature, had come to the conclusion that his loquacious customer was made of the right stuff. At any rate, the bargain was struck, and Ram Lall emerged from the banker's parlour with a new mission in life, to abuse the Government in return for a small salary and an allowance for the expense of travelling.

His rise was rapid. He harangued the local political associations to such purpose that they chose him as a delegate to the provincial conference, and thence in due course he passed to the national executive. And he improved as he went on, for every day he heard of fresh grievances, and he believed them all; the torrent of his burning eloquence swept over India, until the Syndicate raised his salary; he travelled East and West and South, searching for oppression, and he never failed to find it; the young men hung on his lips; and his seniors, though some of them were desperately jealous, were forced to allow him ample scope. Already he was known as Srijut in the East, and Mahârshi in the Middle West: whispers of his miraculous powers began to spread; daily he sought martyrdom at the hands of a callous Administration; and the supreme title of Mahâtma seemed almost within his reach. His success was due mainly to his transparent sincerity. He was indeed a master of his craft, he possessed in full measure

"action, and utterance, and the power of speech
To move men's minds,"

but he could not help believing that what he said was true, and his greatest strength lay in the absence of any critical power. He could rise to white heat in a moment at the story of something that never had, nor could possibly have happened, and he could bring his audience quickly to his own temperature, just because of the obvious depth of his conviction.

It was a great day for Ram Lall when he was invited to be President of the Central Revolutionary Conference. For a few months the whole movement had been a little under the weather. Some of the leaders had been sulking, a few had blundered into gaol, and the remainder had been quarrelling rather bitterly among themselves. The Conference was announced to "inaugurate a new era"; everyone was to be reconciled; and the whole gathering, to be held at Delhi, directly under the Imperial Government's nose, was to decide on a plan of action which should eliminate that Government from the field of vision. Ram Lall followed the etiquette recognised as appropriate to such occasions. He refused the nomination on several contradictory but convincing grounds; he was adamant against the torrent of telegraphic protests which followed his refusal; and then he yielded gracefully to a train-load

Digitized by Google

of delegates, who embraced him individually and by squads. As a matter of fact, the position was sufficiently onerous. First came the long hours of deliberation in committee, when, behind closed and guarded doors, each member in turn directed his unrestrained invective against the previous speaker; when deadlock succeeded deadlock; and when the search for a formula threatened to degenerate into a catch-as-catch-can scrimmage. But on this occasion a sense of the common interest happily prevailed, and towards two o'clock in the morning the Committee agreed on the text of the principal resolution, which covered eleven pages of print, and ended with the declaration that India, wounded almost to the death, and prostrate at the feet of an alien mis-government, looked for deliverance to her neighbours, and offered her unswerving allegiance to any Asiatic Power which should cleanse her Sacred Soil from the pollution which now sullied it. That was the line of action on which agreement had at last been reached. Some speakers had urged a direct appeal to Kabul, others had been in favour of Khatmandu, but the choice of a dynasty had been left open, and India was to offer herself to the first king who came along.

At noon Ram Lall rose to address the full Conference in this sense, and when he sat down at sunset there was literally nothing left to be said. It was said, however, at some length by the speakers who followed; then the great resolution was carried without amendment, and Ram Lall was chaired in triumph to his lodging amidst the delighted yells of all the bad boys who infest the streets of Delhi. He was the guest of a prominent Moslem delegate named Wali Khan, for they had marked his elevation to the presidential seat by a formal abandonment of all social or religious restrictions which might conflict with the newborn national unanimity. Of course there was a great dinner in his honour, so great that a European cook had been employed for the occasion; and Ram Lall. worn out as he was, ate largely of the unaccustomed food, while the company canvassed eagerly the chances of their invitation being accepted. Pleading fatigue, he retired early, and fell into a heavy sleep the moment his head touched the pillow.

II.

Ram Lall was awakened by unusual sounds, the trampling of horses and the rumble of guns, and his first thought was that the challenge had been accepted, and that the city was being filled with troops as a preliminary to the arrest of the Conference *en masse*. That, he thought, would be a glorious martyrdom, and he went out into the verandah to meet it, but it was his host, Wali Khan, who seized him in an eager embrace, saying, "This is the Great Day, Brother, for India and for us."

"What has happened?" asked Ram Lall.

"The English devils are marching South, with their backs to Delhi, and the King of the North is coming to complete our deliverance. You can see his horsemen already before the Fort."

"Already! It is only a few hours since——"

"The King of the North wastes little time. To-day he takes his seat upon the throne, and you and I must be there to welcome him, and claim our reward. We had better dress at once, so as not to be late."

"Dress?" said Ram Lall. "I have nothing but my homespun suit."

"Wear it then. It will suit you as our leader, but homespun has done its work, and—you know I used to be rather a dandy."

When they met again Wali Khan looked very little like a serious politician. With his moustache curled defiantly upward, his turban stiff with gold embroidery, and his sash stuck full of daggers, he was much more like a cheerful trans-Border ruffian out for a holiday, and he made an effective foil to his companion, who wore a scanty suit of the coarsest cotton cloth. Together they made their way to the Fort, and on to the great Hall, already filling rapidly for the Durbar. The ushers separated them at the doorway, and Ram Lall found himself in a prominent place, close to the Golden Rails, and surrounded by rather truculent-looking strangers, who showed no interest in his conversation. He spent the time, therefore, in putting together a few phrases of welcome to be uttered when an opportunity should present itself, and, before very long, he saw the new Ruler of Hindustan enter and take his seat upon the throne—a lithe figure with a stern face that showed no trace of any emotion.

The proceedings opened with a proclamation announcing the departure of the English, and the King's return to what, by a pardonable perversion of history, was described as the throne of his ancestors. Then the members of the audience were called up, one by one, to do homage and receive their rewards, jewelled swords, richly brocaded robes, and assignments of revenue to be collected from the fat plains of Hindustan. The procession was a long one, but at last Ram Lall was called, and advanced to the steps of the throne, a figure at once pathetic and grotesque in the midst of that barbarous splendour. Departing from the recognised etiquette, he delivered a brief address of welcome, touching on the efforts he had made to hasten the advent of the auspicious day, and his unfeigned joy at its arrival, asking little for himself, but urging that the services of his associates might not be overlooked. At the close he bowed, awaiting the burst of applause to which he considered himself entitled; but the silence was unbroken, until the Minister, standing at the King's right hand, announced the royal pleasure that the efforts of the late President of the Central Conference should be fittingly rewarded on a more suitable occasion, and then a trooper conducted him out of the hall. This somewhat unusual procedure naturally aroused his anxiety, for he realised that his stipend would probably cease now that his work was done, and when they were in the open air, he asked his guide what the reward would be. The reply was a rude laugh, and a blow on the head with a sword-hilt, which put an abrupt end to the conversation.

When Ram Lall recovered consciousness, he found himself in very evil case. He was lying on the sandy ground between the Fort and the River; he was naked, his arms and legs were secured with thongs, and, what was almost worse, he was gagged, and so deprived of the weapon on which he most relied. Looking round, he saw that he was the only occupant of a sort of arena, the boundaries of which were marked by lines of troops, while behind the troops the whole population of the countryside were saluting with the utmost reverence; and when he glanced from them to the Fort, he saw the new King, sitting in full state at the historic window, where Emperors of India, from Shahjahan to George, had been wont to show themselves to their subjects. From the battlements, where the whole Court was gathered, came a call to silence, and then a loud voice was heard. At first Ram Lall took in little of what was said, but his head cleared by degrees, and he noticed that this was no effort of rhetoric or conventional language, but an Order given by a Man accustomed to being obeyed, and then suddenly the words began to burn themselves into his brain.

"Under the rule of the English," he heard, "Hindustan has learned much, but some things have been forgotten. Let these things now be recalled to mind. Hindustan has forgotten that subjects owe obedience to their King. Treason and rebellion have been allowed to raise their heads, and designing men have lured the people from the path of allegiance. Wherefore, Men of Hindustan, the Great King has ordered that on this day of his accession ye shall see how traitors die. Such an one lies there. A traitor to the English Emperor, he has been bold to ask for a reward. The Great King has listened to his request, and has deigned to grant him his deserts, even the Reward of the Elephant. Long live the King!"

The crowd echoed the loyal wish, and at the same moment a magnificent elephant entered the arena, and paused to salute his King. And through the din Ram Lall seemed to hear, like an echo, the monotonous voice of the old Professor, who had failed to teach him the history of his native land.

"The Mogul administration," it said, "while always strict, was particularly severe on any manifestation of disloyalty or disaffection. The commonest penalty for seditious language was to be mangled by an elephant,

Digitized by Google

which was specially trained for the operation, and could protract the sufferings of the victim for an indefinite period, though a sufficient bribe paid to the mahout might secure a comparatively speedy death."

But on this occasion money had not passed, and the elephant was in no hurry. Having performed his salute, he strolled leisurely towards his victim, eyed him carefully, prodded him once or twice with a tusk, then, lifting him up, showed him to the King, and dropped him casually on the ground. Then after a short period of reflection, he repeated the operation before each section of the spectators in turn, and as he did so, the long-forgotten blood-lust of Old Delhi revived, and the crowd pressed hard on the double line of soldiers, each man striving to get a better view, while the hordes of naked street-boys, peeping between the soldiers' legs, yelled encouragement to the elephant, as they had cheered Ram Lall the day before. But there was no immediate hurry, and the brute went through his programme conscientiously. Bruised and bleeding, the idol of the crowd was now only a plaything for the crowd's delight, and horribly conscious through it all that there was worse to come. Then, quite suddenly as it seemed, the executioner's attitude changed. It was business now, and the elephant, laying his victim squarely before him, began to kneel on his chest with one tremendous knee, while the crowd listened eagerly for the cracking of the ribs, which would mark the end——

And then, at last, Ram Lall woke up, still President of the Central Revolutionary Conference, and suffering from the most acute indigestion which it is possible to conceive.

COMMUNAL REPRESENTATION IN INDIA.

(By G. B. Scott, late Survey of India Department).

The Earl of Birkenhead, in his speech in the House of Lords, allows that the attempt to introduce representative government in India in accordance with the Montagu-Chelmsford scheme has not so far been successful and that the scheme needs modification. Sir George Lloyd, in the "Empire Number" of *The Times*, asks whether a fair measure of success may not be obtained by "considering whether the present method by which the Electorate express their will might not with advantage be modified to forms more suitable to the particular circumstances of the country and the degree of development of the Electorate."

It may be admitted that one of the main reasons for the non-success of the experiment so far has been that the so-called representative councils and assemblies are almost exclusively composed of members of the town-bred, semi-anglicised professional classes, the product of the government colleges and schools, the notorious "student" class, who are as a rule ignorant of and antagonistic to the interests of the agricultural and "depressed" classes, who form about nine-tenths of the entire population of over 300 millions.

So soon as the large communities of other sections realised the fact that the form of representative government adopted was likely to place powers of legislation and administration in the hands of an oligarchy of Brahmins, lawyers and moneylenders, a demand arose for communal representation of Moslems, Sikhs and the millions of "untouchables" in the Madras Presidency, as well as of the scattered domiciled English and Anglo-Indian communities and the Native Christians.

Racial and religious animosities have on many occasions led to rioting and bloodshed in all parts of India, in spite of the most careful precautions on the part of the civil and military authorities. But, until within the last few years, no "Colour Question" arose, nor any doubt as to British supremacy; nor did the Native Press add to other causes of bitterness by such remarks as that "the Hindus were desirous of imposing a Hindu Raj" or that the "Moslems were aiming at the use of physical force to impose their will on the Hindus." Such statements, appearing in the Native Press on the eve of the last Bakr Id Moslem festival, probably had much to do with the serious disturbances that occurred in Calcutta, and those which were only averted in Allahabad by the tact and firmness of the civil authorities.

Lord Olivier, in an article on communal representation in the *Contemporary Review* for April, 1925, seems to imply that communal representation is impossible especially for the Europeans and Anglo-Indians—is this so?

Every province in India is divided into districts and these into sub-divisions and villages with well-defined boundaries, and also into village circles. From very early times till the rise of the Moslem Kingdoms most of the administrative work in the villages was carried on by panchayets, committees of five elders, to whom were referred all civil and religious disputes for settlement. Up to the present time in Hindu villages there are panchayets, elected by the members of each caste, to whom disputes regarding breaches of caste customs as to marriage, eating and drinking with lower castes, and occasionally disputes regarding field boundaries and water distribution for irrigation are referred.

The decisions of these panchayets are as a rule accepted without demur and acted on. It should not be beyond the ability of district officials to organise some such committees in each village circle to collect the votes of all actual landholders and tenants residing in the circle in favour of candidates to be sent as representatives to a district council. From members of these councils could be chosen by vote representatives to form a provincial council and from the provincial councils representatives for an Imperial Council or Assembly.

Representatives for urban areas could be chosen by such form of election as seemed suitable.

For rural areas only members of agricultural castes actually holding land in a village circle should be eligible for election to these councils. To ensure this the elections should be managed and checked by British or Anglo-Indian officials who alone would as a rule be accepted by all classes as impartial and incorruptible. No doubt many of the rural representatives would be illiterate, as some nine-tenths of the population can neither read nor write, but this does not prevent them from knowing what legislation would be beneficial for their constituents. How many of the lay nobility that compelled King John to sign the Great Charter, or who fought at Crecy, could write their own names? Anyhow, communal representation would be attained automatically. Urban representatives would certainly be members of the "intelligentsia" and, though in the minority, would know well how to guard their own interests. In the Imperial Council and Assembly the members of the more important though antagonistic religions would be in about equal numbers. Thus, for example, Eastern Bengal is Moslem, Western Bengal mostly Hindu. Behar and Orissa are Hindu, the North-West Frontier Moslem. The Western Punjab is Moslem, the Eastern Sikh and Hindu. In Agra and Oudh the two main religions have about an equal number of adherents intermingled. Somewhat similar conditions prevail in other provinces. In the Bombay Presidency the Parsis and Jains are small in numbers but influential and wealthy and would secure representation for the towns.

There remain to be considered the Europeans, Anglo-Indians and Native Christians and the "untouchables" of Madras. These last have in recent years greatly improved their social standing and are numerous enough to secure very able and highly educated members of their community to represent them. There are throughout India some four millions of Native Christians, half of whom are Roman Catholics, and there are large communities of both Catholics and Protestants in the Madras Presidency who, with the help and advice of the European Missionaries, could secure representatives in the councils, and guard the interests of their co-religionists in other parts of India. The European mercantile community, especially in Calcutta, is well able to take care of itself. The same cannot be said of the Anglo-Indians and "Domiciled Europeans" scattered over India, to the number of about three hundred thousand.

Of the Anglo-Indians a large number, owing to neglected education, unhealthy surroundings and poverty, live in the crowded cheap quarters of Calcutta and other large cities, many hardly distinguishable from their Indian neighbours living under similar conditions. But, scattered throughout the Empire are many thousands differing only in colour from Englishmen, who with their domiciled English co-

Digitized by Google

workers have, during the last century, formed part of the "steel frame" that made, and still upholds, the Indian Empire which, without this frame, would soon collapse into a chaotic mass, worse than Russia or China. Some have risen to high rank and position in the Army and the Civil Services, and are prominent members of the mercantile community. But the greater number have held what may be styled the intermediate stages of the services between the "men from home" and the vast Indian establishments. While the senior executive and administrative posts in the various branches of the service were filled by the "Covenanted" Civil Servants and others appointed in England, including some Indians, the upper subordinates in the Magisterial and Judicial, Public Works, Forests, Customs, Survey, Medical ,Telegraph and other services, as well as the mechanics, drivers, guards, etc., on the railways, were largely Anglo-Indians, and well they did their work.

Lord Olivier thinks it is right that all posts in the subordinate Civil Services should be reserved for Indians in preference to domiciled Englishmen and Anglo-Indians. In this connection the following extract from *The Times* own correspondent's letter, dated Allahabad, May 22, 1925, may be of interest:—

> "Since 1920 out of a cadre of 120 subordinate judges (in the United Provinces) six had confessed to having been guilty of habitually receiving bribes, a seventh had been found guilty. . . .others less guilty had received warning. . . . Conditions in India are different from those in England, owing to the daily mixing of the judges with members of the Bar in friendly intercourse. . . . ."

It may be surmised that, if such practices are customary in such an advanced Province, matters must be worse in others. On the other hand it may confidently be asserted that during the last half-century not six Anglo-Indian submagistrates have been truthfully charged with bribery. And, if sub-judges take bribes, it is certain that the same may be said of the other branches of the services, the Forests, Canals, Public Works, Customs, etc. It is characteristic that what is known as bribery in England is known in India as dastoori—customary!

If the Anglo-Indian is trusted by the natives, especially the agricultural and depressed classes, as being honest, impartial and sympathetic, surely that alone should be a good reason for employing him in government work, even if he is not as good as the Indian in passing examinations. Even this defect, if it be one, is due to the way that both State and Church have neglected their duty to the community. Lord Olivier thinks the Anglo-Indian youth should enter the government schools for Indians, and cites Jamaica where English, Negroes, and those of mixed blood all attend the same schools without any class distinctions. In Jamaica all these sections are born and educated as Christians, all speak the same language and have the same interests, and the same standards of morality and conduct.

In Indian schools Anglo-Indian children would form a small minority. If Lord Olivier sees no objection to the Anglo-Indian youth adopting the Moslem opinions and practices on, say, sexual matters, or to their being influenced by the degrading superstitions imbibed by many Hindu children in their homes, he cannot expect Anglo-Indian parents to do so.

It is largely due to the fact that the great bulk of British officials, Civil and Military, and the British mercantile community in India, held aloof from the Indians and remained thoroughly British in the eighteenth and nineteenth centuries, and did not follow the lead of M. Dupleix and some other French and Italian officers, that the British have retained the respect, if not affection, of all Indians, and it is largely due to the same cause that the bulk of the Anglo-Indian community has not been submerged into the "untouchable" classes.

It is deeply to be regretted that, when money was being lavished by Government on an Indian Educational Establishment, little or no help was given to the schools for Anglo-Indian children, and that the great Protestant Missionary Societies, unlike the Roman Catholic, used all their zeal and resources for conversion of the "heathen." Their utter neglect of their fellow-Christians of mixed blood was a bad object-lesson to those "heathen" and certainly did not encourage evangelisation.

Perhaps it is still not too late for Church and State to take up the cause of a community that in the future, as in the past, could be relied on to remain loyal to the British Raj, and to render valuable aid to the cause of Law and Order in troublesome times. A few seats in the Imperial and Provincial Councils might be reserved, with advantage to Government, for representatives of the domiciled European and Anglo-Indian communities who could be chosen in each province by their Associations or by votes of all adult members of those communities holding responsible positions.

THE INDIAN MAIL.

India's Iron Industry.

Speaking at a meeting of the Rotary Club in Calcutta, Mr. C. B. Chartres said that for centuries India exported steel until her trade was killed by developments in Europe, but that now she was beginning to reassert herself by exporting pig iron to almost every country in the world—even to Glasgow and Middlesbrough. The day might come when it would pay better to export steel than pig iron, but that would involve the training of a large body of Indians in the difficult processes and hard work inseparable from steel making, and would take time and money—the latter very difficult to raise at present in India. In every country in the world where steel was successfully produced to-day, it was done under protection: e.g., in the United States, Belgium, and Germany. England was the only "free" country, and the works there were struggling: many companies had shut down, and those that were working were losing money. It was not to be wondered at that Indian steel required protection. It would take at least two generations before they could thoroughly train Indian steel makers. The success of Indian pig iron was due not, as is generally believed, to cheap Indian labour, but to the excellence of the raw materials, their favourable geographical position, and to the fact that the works were modern, built on a large scale, and replete with every possible labour-saving device, so that the labour force required was relatively small.

Insurance Legislation.

The text of a Bill, to consolidate, amend and extend the law relating to Insurance Companies, has been published in the *Gazette of India*. The "statement of objects and reasons" explains that it is intended to rely, for the protection of the public, mainly on a policy of allowing no Insurance Company to carry on business in India unless and until it has paid a deposit to the Government, which should prevent the establishment of mushroom companies. Government securities to the face value of two lakhs of rupees will have to be deposited in respect of life assurance business, and of one lakh of rupees in any other class of insurance. The profits derived from the deposits will be made over to the companies, and will form part of their assets, but will be protected from attachment under any judgment obtained by a creditor of any company. In addition, it is proposed to insist on the fullest measure of publicity in regard to the working of each company, so that the public may be able to judge for themselves whether it is worked on sound and prudent lines. The control of Government over Insurance Companies is to be tightened—in the case of any Company whose returns show it to be on the verge of insolvency, the Government may apply to the Courts for the winding up of the Company, if it appears to be insolvent, and may require it to submit its affairs to actuarial examination where it seems likely that sound actuarial advice may restore it to a flourishing condition.

The N.W.R. Strike.

The North-Western Railway strike, as already reported by telegram, came to an end on June 18. On that and the

Digitized by Google

following day 2,600 strikers were re-engaged by the Railway, and those who have returned to work have done so unconditionally. The disapproval of the strike, expressed by the recognised Union, has therefore been justified; and the unrecognised Union, which engineered the strike, has had to be content with publishing a lengthy statement in defence of their action, which appears in fact to have been mainly directed towards the establishment of their own importance in the Union. It should be noted, says the *Pioneer*, that the importance of this strike has been out of all proportion to the notice it has received. Thanks to the energetic action of the authorities, it had comparatively little effect on the train services. Altogether the Railway Administration has reason to congratulate itself on the firmness and fairness of its handling of a situation that could only have arisen in a country where the fundamental principles of trade unionism have yet to be properly appreciated.

The Haj.

Official news was received in mail week that the first two pilgrim steamers from India arrived safely at Rabegh, and that the pilgrims and their stores were landed without interference. The first caravan was due to leave Rabegh for Mecca on June 20. The total number of pilgrims who sailed from India is 2,350, of whom approximately 1,100 were Indians, the remainder being foreigners who passed through India *en route* to the Hejaz. The news of the safe landing of the pilgrims has relieved much anxiety felt in India regarding their reception at Rabegh; since the British Consul at Jeddah received notice from King Ali's Foreign Minister that the bombardment of Rabegh would continue in spite of the arrival there of the pilgrim ships: that the pilgrims would not be harmed but that, if they "went ashore and mingled with the enemy" they would do so at their own peril: that landing of goods would be prevented by all possible means: and that every boat or dhow appearing in the harbour would be captured or sunk. Possibly the presence of the much-maligned British warship dissuaded the commander of King Ali's "man-of-war" from adopting these rather remarkable methods of refraining from "harming" the pilgrims.

Mr. Das' Funeral.

Remarkable scenes were witnessed in Calcutta on June 18 on the occasion of the funeral of Mr. C. R. Das. The body arrived at 7.30 a.m. at Sealdah Station, and long before that hour a great concourse of people, estimated at at least 100,000, had assembled: all the platforms being filled to their utmost capacity, and every available inch of space in the station and the surrounding buildings being occupied. A procession was formed soon after the arrival of the train, the body being carried on a bier which was covered with flowers. All along the route the streets and houses were packed, and the procession took about five hours to reach Mr. Das' residence, and nearly eight hours to reach the burning ghat on the bank of the Hooghly. At various points along the route the pressure of the crowd was so great that the barricade was broken through, and it was with great difficulty that the actual ceremony of cremation was performed: a personal appeal from Mr. Gandhi to the crowd, not to enter the cremation enclosure, being disregarded. Mr. Gandhi has appealed to the Government to release the Bengal political prisoners in memory and honour of Mr. Das—"not on the ground of innocence, for the Government may have the best proof of their guilt, but as a tribute to the deceased and without prejudice."

Punjab Sports.

The Governor of the Punjab opened, on June 22, a Conference at Simla for the encouragement of rural games in the Punjab. He said that their object was not only to see the Province materially more prosperous and intellectually more advanced, but also healthier, happier and brighter. Anyone who had seen the great attendances at sports meetings and wrestling matches in the Punjab would know how universal was the interest that they aroused. The life of the ordinary Punjab villagers was often a hard one, and generally somewhat drear and colourless: in his leisure moments there must often be much ennui—the source of many of the troubles of life—and he was apt to seek distraction in civil litigation, "or even the more expensive and intriguing entanglements of the criminal courts." The Conference decided that a serious attempt should be made to revise old rural games that were falling into disuse, and to encourage those that were still popular: these, if desired, could be supplemented by such special forms of sport as tent-pegging and horseracing, or by the introduction of exotic games such as hockey and football.

It is, of course, perfectly well known that litigation in India is quite often indulged in as a form of sport, and this is specially true of the Punjab. In a memorandum presented to the Civil Justice Committee by the District Judge of Jullundur, the writer remarked that a member of the intelligentsia usually lives in a city where he has certain amusements open to him; but the average cultivator's only form of amusement, until the annexation of the Punjab in 1849, was attendance at local fairs. Since then he has had another form of interest and amusement open to him, furnished by the Civil Code then prepared. At first the volume of litigation was small; but, when the Punjab Laws Act was passed twenty-three years later, it turned into "a great flood": so that there is probably not a family in the Punjab that has not had at least one lawsuit since the annexation. The procedure in the subordinate courts is long, but apparently not tedious to the suitor: and, whenever possible, there is invariably an appeal—partly because the litigant has become interested in the game, partly because it is a point of honour with him to fight to the bitter end. Incidentally, the writer of the memorandum said that, if a Supreme Court is ever established in India, in a few years twenty judges will not be able to cope with the flood of litigation that will overwhelm it.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

Smyrna's Recovery.

One of the most interesting developments in the Near East is the rapid way in which Smyrna is recovering the trade position it occupied before the War. Of course, the situation at Smyrna cannot be taken as indicative of the progress of Turkey as a whole for the region which the port serves is specially favoured from the economic point of view and it was obvious that once the fruit growing regions recovered, the restoration of the importance of Smyrna would not be long delayed. But it was not imagined that the progress would be so swift. Last year the value of the exports was £T57,448,400, while that of the imports was £T48,288,000, there being thus a favourable trade balance of £T9,160,400. A comparison of these figures with those of the previous year brings out very clearly the advance that has been made. The value of the exports in 1923 was £T35,007,482, that of the imports being £T17,911,229. The principal exports last year were sultanas £T22,900,000, tobacco £T10,156,000, and figs £T5,956,000 while the principal imports were grain and flour £T7,046,000 and coal £T3,000,000. To compare the trade figures for last year with those of 1913-14, the last normal pre-War year, it is necessary to allow for the fact that the pre-War £T1 is at present equal to roughly £T8. For 1913-14 the value of the exports was £T8,061,304, while that of the imports was £T5,803,350. Multiplying these figures by 8 we get £T64,490,432 for exports and £T46,426,800 for imports, the total value of the trade being thus £T110,927,232. The corresponding total for 1924 was £T105,736,400, so that it will be seen how far Smyrna has progressed on the road to economic recovery.

Smyrna Fruit Production.

The chief factor in the recovery of Smyrna as a port has been the development of the fruit production of the province. Last year the yield of sultanas was almost up to the pre-War average. The yield of sultanas last year amounted to 45,000 tons as compared with 59,000 tons for 1913 and 53,000 tons for 1912, and with the average for the period of 1903 to 1913 of about 46,000 tons. The yield of figs for 1924 was 23,000 tons while that of the previous year was 24,500 tons, and these figures compare with 20,900 tons for 1913 and 19,800 tons for 1912. In the trade figures I have quoted in the previous note, it will be observed that there was a great increase in the imports in 1924 as compared with 1923. The fact that the imports were relatively small prior to last year, was due to the general impoverishment of the province. Developments since 1914 and then the war with Greece, the destruction of the orchards and vineyards and the fire at Smyrna, all meant a decreased purchasing power, and one or two good harvests were essential before the inhabitants could be in a position to make purchases on an extended scale. The improvement in the imports last year is a measure of the material progress of the province, and indicates plainly that Smyrna is going to be an economic force in the Eastern waters of the Mediterraean.

Constantinople To-day.

It is a commentary on the fact that natural advantages are not everything, that while Smyrna is, to some extent, recapturing the prosperity of the pre-War period, Constantinople, despite positional advantages should still be a city of stagnation with little prospect in the immediate future of regaining its prosperity unless a turn of the political wheel should bring about the transference of the seat of Government from Angora to the Bosphorus or the Russians changed their Government, and with the restoration of normal conditions the development of the Black Sea trade again made Constantinople an important market. The main economic importance of Constantinople at the present time is, of course, in relation to trade between Turkey and the Balkans, in particular with Roumania and Bulgaria, but while this has been increasing and has imparted to the port rather more activity in recent months it would take much more than merely local trade before Constantinople can assume once again a busy appearance. The main hope of Constantinople lies now in the economic development of the country, and considerable progress is being made in this direction elsewhere than in Smyrna, notably as regards cotton growing in the Adana region, the production of which increased from 69,000 bales last year to 200,000 bales this year. According to a Turkish estimate, the possible output of cotton for the country is put at four million bales. That is rather a large total, and if it be possible, it will at any rate, judging by experiences elsewhere, be a very long time before it is reached, but the concentration on cotton as a crop shows more plainly, perhaps, than anything else could that the rulers of Turkey understand very clearly the best way of promoting economic progress of the country.

Quality of British Motor Cycles.

I commented recently on the success obtained by British motor cycles at Sofia. The same story is to be told of the motor cycle competition which has just been held at Linas-Montlhery in France. Again the British products were successful over all opposition, and the result can only be regarded as most encouraging for British industry as a whole in this period of depression, for it proves clearly that British engineering ability is still equal to holding its own with the best efforts of foreign countries.

Now that our motor cycles have so triumphantly demonstrated their quality it is only natural to expect that a sustained campaign will be entered upon to promote their sales abroad, and it is equally reasonable to expect that the potential foreign purchaser will demand a British machine because he will be sure that he is getting the best article of the kind on the market. And that brings me to the point that I want to emphasise. The foreigner will assuredly take British motor cycles because their quality has been brought to his notice, but our motor cycles are no isolated effort of British engineering, but are merely symptomatic of the quality for which all British products are distinguished. Why, then, is the foreigner not a buyer of other British engineering products on a large scale? The answer is, of course, that our firms, speaking generally, do not take the necessary trouble to bring their wares to the notice of buyers. This applies particularly to some of the Near Eastern markets. Buyers want to see what they are purchasing. As a class they are unwilling to go to any extreme trouble to obtain what they require, and if an article is put before them, so to speak, and it appears to meet with their requirements, they take it as the simplest course rather than wait to find out if they can obtain a superior article elsewhere. That explains very largely why British trade is not to the fore in the Near East. Some of our firms unfortunately prefer to wait for business to come to them rather than take the trouble to find possible openings, and it is not always the case, unfortunately, that when inquiries reach this country the necessary care is taken over the reply, with the result that business is lost. Methods such as this are less frequent than formerly, happily, but they must disappear altogether if this country is to hold its own in the foreign markets.

British Films.

To-day the President of the Board of Trade is receiving an important deputation consisting of representatives of the Federation of British Industries and other national organisations, who will submit a report giving the conclusions arrived at as a result of discussions by these bodies on the question of British film production. I dealt at length in these columns recently with the vital importance of the film question, and there is no need now to recapitulate the reasons which make it essential to establish a British industry which can at least hold its own against foreign competition. I would, however, point out that the matter is one which admits of no delay, and it is to be hoped that the result of this meeting will be that some definite scheme will be evolved and carried into effect by the Government.

Advertising for Lancashire.

I was very interested in Sir William Edge's remarks at the Advertising Convention at Harrogate regarding the scope for advertising in relation to the cotton trade. It is undoubtedly a fact that in proportion to its size the Lancashire cotton industry does remarkably little advertising, and yet, though it neglects the most obvious method of developing business, we hear more laments from it when things are going badly than from any other industry in like case. Sir William Edge points out that the problem of the advertiser is not only to get English people and people in the Empire to buy Lancashire cotton goods, but foreigners and peoples in Africa and Asia. As he says there is a very large gulf between the producer and the ultimate purchaser, and he believed that a properly organised sales campaign will sell the high-quality goods and lift them over every tariff wall in the world.

Near Eastern Markets.

It is to be hoped that if Lancashire does embark on an advertising campaign as a means of recovering her lost trade that the Near Eastern markets will receive adequate attention. The Near East is one of the trade outlets where as a result of conditions arising out of the War Lancashire has lost much ground, and while the

position in many of the markets in that region has been very bad there are in every direction now indications that the economic situation is improving, and the time would certainly seem ripe for a sustained effort by Lancashire to recover her trade in these outlets. It is the more incumbent to do so in view of the strenuous efforts that competitors are making in the Near East. Not nearly enough attention has been paid hitherto to the painstaking attempts Italy is making to establish herself firmly in the Near East markets. At the moment Italy is undoubtedly one of the most dangerous trade competitors we have in the Near East, and the general industrial situation in Italy speaks volumes as to the success of that country's efforts to find outlets for its products.

Lake Copais Company.

The nature of the development work being done in Greece by this company lends a special interest to its operations. At the general meeting, a report of which will be found on another page in this issue, the chairman, Mr. W. Sandford Poole, dealt in detail with the progress made in 1924. During the year the area cultivated was 31,107 acres, which represents an increase of 4,424 acres. Crops were harvested on 29,690 acres, a larger area than in any year since 1918. The principal crops grown are oats, wheat, and cotton, the last-named being the most remunerative crop grown. Last year the area under cotton was 4,593 acres. Mr. Sandford Poole mentioned that the arbitration proceedings between the Greek Government and the company have been concluded, and stated that as soon as the full details have been received they will be communicated to the shareholders by circular. "It is hoped," he added, "that the award will remove many of the uncertainties which have so handicapped the administration of the company during the past thirty years and more, and will clear away the various grounds of differences. We have ourselves given up a good deal to achieve this end, and we hope our good will in this respect will be recognised as indicating our wish to help in the development of the resources of Greece to the benefit of her people, who now live in health upon the soil we have reclaimed for agriculture, and for the good of the nation generally."

The Rubber Position.

During the past week the price of rubber has varied very little. It has touched 4s. 6½d., and has then swung back, and at the time of writing stands at 4s. 5¾d. The general opinion is that before the inevitable decline sets in rubber will see a much higher figure, and even 6s. is suggested as a possibility. I should hesitate to pin my faith to that development personally, though I shall not be surprised to see 5s. reached in the near future, and it must be admitted that there is nothing in the statistical position to make it impossible. But while it is true that it stood at more than double that figure in the great "boom" of 1910, conditions are different now, and besides the fact that the rubber situation is unreal in the sense that the price is the result of the restriction scheme, there are so many factors unconnected with the industry which yet may affect it that it would be altogether too hazardous to predict definitely what developments may be ahead. Suppose, for instance, that the labour troubles looming on the horizon were to develop into a strike, then for the moment there would be an end to the question of a further rise, and instead the price would fall, not because a strike here would have any real influence for, broadly speaking, it is not the British manufacturers who are the substantial buyers, but on account of the fact that all markets are extremely sensitive to extraneous influences.

The Outlook.

Leaving the contingency of external influences aside, there is the ever-present prospect of a modification of the restriction scheme which draws nearer and nearer as the price of the commodity rises. It seems very probable that August 1 will see the release of more than the 10 per cent. that is provided for, possibly another 5 per cent., but even if that should be the case, while it must have a temporary effect on the market, I cannot think that it will be of lasting duration, for the strength of the statistical position is most impressive. The restriction scheme was devised to save a great Imperial industry, but given the conditions at the time when it was introduced it certainly could not have raised the price of rubber to its present figure. That development is due to the unprecedented increase in the demand for America and to a lesser extent for the Continent due to the great extension of motoring and the use of the new type of tyres. At the present rate of consumption there would be none too great a margin were production on the maximum scale, and on that account a moderate increase in the percentage is not likely to have a very pronounced effect. Ultimately, some time early next year so far as can be foreseen, we shall again reach the stage when stocks will begin to increase, provided of course that there is not a further marked expansion of production. But according to the estimates it will not be many months before consumption overtakes production owing to the fact that on account of the prolonged depression no provision has been made for an expansion of the planted areas, and it is fully expected that between 1928 and 1930 there will be a real shortage. Should that anticipation prove correct we shall see rubber again at a very high price.

BULGARIA'S TRADE POSITION.

In the first three months of this year Bulgaria's imports totalled 92,120 tons, of the value of 1,692,000,000 levas, while the exports amounted to 92,300 tons of the value of 1,393,000,000 levas, so that there was an adverse trade balance of roughly 300,000,000 levas. For the same period of the previous year the value of the imports was 1,185,000,000 levas and that of the exports 882,300,000 levas.

The value of the principal imports, in millions of levas, were as follows, the figures for the corresponding period of 1924 being given in parentheses:—textiles, 631 (566); cereals, 249 (2); metals and metal products, 157 (177); machinery and instruments, 132 (66). For exports the leading totals are:—tobacco, 670 (160); maize, 395 (352); eggs, 84 (48).

SYRIA'S EASTERN FRONTIER.

[We are indebted to a correspondent for the following translation from the issue of June 19, of *Alif-Ba*, an Arabic journal of Damascus, of an article dealing with a neglected corner of Syria.—ED.]

By the Turko-French Agreement at Angora (1921), the eastern frontier of Syria was defined as extending from Tel El Abyad (some 60 miles east of Aleppo) to Jeziret ibn Omar (on the Tigris some 25 miles N.W. of Iraq). The frontier line of this "Neglected Territory" runs east and west on a line parallel to that of the Baghdad Railway. This terrritory includes an area of about 6,000 square miles, with an approximate population of 200,000, who are a mixture of Kurds, settled and migratory Arabs, and certain Christians belonging to the Syrian Jacobite, Nestorian and Roman Catholic Churches. They dwell in some 600 villages, and practise husbandry. Approximately their live-stock number 500,000 sheep, 50,000 camels, horses, mules and donkeys, 20,000 oxen and kine, and 15,000 other domestic animals.

In view of the number of rivers, rivulets, and streams which traverse this territory—the waters of which are stored in old Roman reservoirs, many of which are still intact and perfectly usable for irrigation purposes—the land is very fertile. It yields very rich crops of cereals, and cotton and rice are also grown.

Shortly after the Angora Turko-French Agreement, the French forces occupying this territory made Biandour, the central post, their H.Q. But towards the end of 1922 Turkish and Kurdish bands formed under the leadership of ex-Lt.-Col. Ismail Hakki (of the Turkish Army), attacked the French troops stationed here, and killed the French Intelligence Officer, his Assistant, and seventy men. This disaster caused the French authorities to withdraw from Biandour and thus to leave this wide district to the savage chieftains and aghas. Since that date these illegal rulers have oppressed, with an iron hand, the helpless population, who are patiently awaiting the return of the Mandatory French Government to deliver them and to establish a civilised administration.

That this territory is acknowledged by the Turks to be a part of Mandated Syria is proved by the Agreement of Angora.

Many landlords both in Syria and in Turkey own extensive lands and villages within this "neglected territory." Some of these went to maintain their properties, but the chieftans and aghas killed a certain number and expelled others. Thus these unfortunate landlords can gain no sort of benefit from their property. They have already applied for help to the Government of Syria, but in vain; and the reply given by the Turkish Government to those of its subjects applying for relief was that, the district having been allotted to the French Mandatory Power, Turkey saw no cause for interference on their behalf.

In the opinion of those from whom this information is derived, a force of 500 troops would be quite sufficient to overcome the difficulties of the situation, and to establish a civilised government in this "neglected territory." It is indispensable to have civil servants acquainted with the ways and customs of the people. It is a fact that public opinion—even including the ruling chieftains—is in favour of the Mandatory Government of Syria, owing to the fear of the Kurds that they might have to return under Turkish domination. Certain of the aghas who took part in the attack of the French forces are afraid of the consequences of their misdeeds, but even they wish never again to be ruled by the Turks.

The inhabitants of this "neglected territory" are really submissive to the authorities and would abide by the law, and it is a fact that the region is worthy of being administered by a civilised government. Moreover, the richness and fertility of the soil would make it in a short time not only self-supporting, but a source of considerable revenue to the Treasury of the ruling administration. The Turks, when this territory was under their control, collected 250,000 Turkish liras gold, and this amount could easily be quadrupled.

As things are, the district is a peaceful resort for brigands and other criminals escaping from Turkey and Syria, for here they dread no pursuer.

COMMERCIAL CORRESPONDENCE.

THE PORT OF SALONIKA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—May I, through your kind intermediary, thank Mr. Mahoney Shea-Lawler for his courteous reply to the inquiry contained in my letter of July 9? There are only two observations which, with your permission, I should like to make by way of rejoinder. The first is that it seems to me that the danger of a non-fulfilment of the provisions of an ordinary railway convention between Greece and Yugoslavia might be sufficiently provided against by the inclusion in it of an obligatory arbitration clause. I can conceive no conflict in such a matter which it would be beyond the capacity of a Hague Arbitration Tribunal to arrange.

The second is that, admitting the Hellenic Railway Administration to be not entirely free from defects, my own "practical experience to date" does not lead me to believe that Yugoslavia could safely be relied upon to substitute a more competent one—unless perchance the word "competent" in this connection connotes at Belgrade something rather outside its customary signification here.—I am, yours, etc.,

HARRY H. LAMB.

52, Morpeth Mansions, S.W.1., July 18.

BAD DEBTS IN EXPORT TRADE.

It is announced that Mr. A. M. Samuel, Parliamentary Secretary of the Department of Overseas Trade, has appointed a committee, under the chairmanship of Colonel Sidney Peel to consider the question of insurance against bad debts in export trade. The committee which comprises representatives of the banks, accepting houses, insurance companies, Lloyds, the Association of British Chambers of Commerce, the Federation of British Industries, together with the Comptroller-General of the Department of Overseas Trade, has, as its personnel:—Colonel Peel (chairman) chairman of the National Discount Co., Ltd.; chairman of the London Committee of the National Bank of Egypt. Mr. J. Caulcutt, general manager of Barclays Bank. Sir William H. Clark, Comptroller-General of the Department of Overseas Trade. Mr. A. C. Gladstone, director of the Bank of England. Sir William Goschen, of Messrs. Goschens and Cunliffe, chairman of the Sun Insurance Office. Mr. Joseph Powell, general manager of the Commercial Union Assurance Company. Mr. Eustance R. Pulbrook, deputy-chairman of Lloyds. Mr. Gilbert C. Vyle, deputy-president of the Association of British Chambers of Commerce. Colonel F. V. Willey, president of the Federation of British Industries. The secretary will be Mr. F. H. Nixon of the Export Credits Department.

It is probable that Turkey will shortly adopt the 24-hour day system for railway time-tables and for all official purposes.

The Bank of Roumania recommends a final dividend for 1924 of 3s., less tax, making 6s. per share, less tax, for the year.

The traffic receipts of the Suez Canal Company from July 4 to July 10 amounted to 3,490,000 francs, against 2,980,000 francs.

The Lord President of the Council has appointed Mr. R. S. Pearson, C.I.E., F.L.S., Forest Economist, Forest Research Institute, Dehra Dun, India, to be Director of Forest Products Research under the Department of Scientific and Industrial Research. Mr. Pearson will be in charge of the Forest Products Research Laboratories, in which pure and applied scientific research will be carried on to meet the practical needs of the using industries and of Departments of State.

COTTON GROWING IN IRAQ.

In the early part of this year, Mr. W. H. Himbury, general manager of the British Cotton Growing Association, visited Iraq to investigate the cotton growing possibilities of the country, and on his return he made a preliminary report to the Council of the Association on the results of his tour. This report, which appeared in extenso in these columns at the time, has since been supplemented by a fuller review of the position, and the two reports have now been published together by the Association, together with a number of interesting illustrations and two maps, one showing the course of Mr. Himbury's tour and the other illustrating the railways of Iraq. In commenting on the later report it will be necessary to advert to Mr. Himbury's preliminary survey for the second report is supplementary to the first.

In view of the short time he spent in Iraq it can only be said after reading his extremely succinct report that Mr. Himbury has covered the ground with wonderful thoroughness, and neglects to mention none of the factors which have a bearing on the opening up of Iraq as a cotton region. He lays stress on the importance of the political factor in relation not only to cotton growing but to the general development of the country, and emphasises the need for sound administration. The country which has a population of under 3,000,000, or, as he aptly puts it, only about half that of Lancashire, has an area larger than the United Kingdom, and while the great bulk of the inhabitants are Arabs there are also many Jews, Syrians, Armenians, Greeks, and Turks. This question of population is of the first importance, for the Arabs are to no small extent nomads, and the attractions of the life to which they are accustomed are no doubt such that it will be a matter of time before they can be induced to settle down to a sufficient extent to render possible economic progress on a considerable scale. The nomads live by their live stock, and they will have to be convinced of the benefits of a settled existence which can only be accomplished by the examples they see around them. When they realise that cotton cultivation is a really satisfactory means of existence it may be assumed that they will take to it as readily as the natives of the Sudan have done. Mr. Himbury points out that there may be no doubt that large numbers have recently settled on the land and that a great deal of cultivation has been done, but he adds that it is doubtful if any really big thing could be accomplished quickly. He is opposed to the idea of importing labour from India or Egypt, and this course could indeed only increase the problems which have to be solved in Iraq. Incidentally he is emphatic on the point that the country is capable of supporting a population many times in excess of its present inhabitants if drainage and irrigation are developed and extended.

So far cotton growing in Iraq can only be said to be at its commencement, but the pioneer work done by the Association has had very notable results. The suitability of the country for cotton growing has been demonstrated, and the increasing demand for seed each year shows very plainly that the virtues of the crop are in process of being appreciated. It may be interesting at this juncture to give the figures for the production for the past four years. They are as follows:—1921, 60 bales; 1922, 300 bales; 1923, 1,100 bales; 1924, 2,500 bales.

The totals bulk very small when measured against the millions of bales of the world's production, but everything has to have a beginning, and at least it can be said that Irag is now travelling on the right road to enable it ultimately to make a really useful contribution to the total of Empire grown cotton. Mr. Himbury does not consider the cotton possibilities important south of Hillah. While the whole of the soil in Iraq is more or less salted, he remarks, the country to the north and north-west of Baghdad is more promising. He was greatly impressed by the appearance of the land irrigated by canals from the Diala River, especially the area belonging to the new Syndicate. The only difficulty he foresees in regard to this venture is the question of the water supply, but he points out that the new irrigation scheme when materialised will provide much more water.

Mr. Himbury emphasises the need for experimenting with new types of seed to prevent the deterioration of the quality and any decrease in the quantity per acre. He visited the demonstration farm at Rustam and comments favourably on the building arranged for a research institute, but states that there is "practically only about one quarter of the staff necessary for the institute if it is ever to do the work it was intended to do." In view of the importance of agriculture for the future of Iraq the necessity for adequate research into the various problems confronting the grower of agricultural products, he urges, is a vital matter, and while he recognises the need for economy, "it is doubtful" he adds, "if the limitation of money necessary for research work to develop what may be termed the most economic resources of the country is really true economy."

Insect pests have so far not proved a very serious trouble in regard to cotton growing. The principal cotton pests in Iraq are the spotted bollworm and jassids. Mr. Himbury points out, however, that the depredations of the former are worse in some areas than in others. Concluding his report he emphasises the three main factors which he deems essential in Iraqian policy.

1. The establishment and maintenance of a strong government with a sound financial policy.
2. The inauguration of a definitely settled policy of drainage and irrigation.
3. A steady increase in the agricultural population which he believes would follow from the accomplishment of the first two factors.

Cotton growing, he adds, would largely benefit Iraq by bringing prosperity to the cultivators and in encouraging others to settle on the land; but there are great difficulties at the moment in its cultivation. It is essential for the Government to take up a scheme of drainage of land already irrigated, the effect of which will be to put a much larger area under cotton and other crops. It is estimated that with a full irrigation and drainage scheme two million acres can be used for cotton cultivation, but Mr. Himbury fears that it will be many years before there is a sufficiency of labour to cultivate anything like this area.

* "Iraq (or Mesopotamia) as a Source for Increasing Raw Cotton Supplies." By W. H. Himbury (General Manager of the British Cotton Growing Association). (The British Cotton Growing Association. 1s.)

EUROPEAN COMMISSION OF THE DANUBE.

The Foreign Office have received from the British Commissioner on the European Commission of the Danube a detailed statement of the financial situation of the Commission on December 31, 1924. The following is a summary of the figures taken from the official accounts:—

	Francs.		Francs.
Receipts during 1924	14,806,039	Expenditure	17,684,762
Balance from 1923	3,215,155	Balance for end of 1924	336,432
	18,021,194		19,021,194

While the receipts as given above include the proceeds of a loan of 3,028,147 frs., the expenditure includes for repayment of advances 2,094,700 frs., and no less than 7,370,177 frs. in respect of the purchase of a new dredger and of the prolongation of the embankments at Sulina.

An exhibition called "The Palestine and Near East Exhibition and Fair" will be held at Tel-Aviv from October 4 to November 7.

EGYPTIAN TOURIST CONFERENCE.

Thirty-two delegates representing the various organisations interested in the Egyptian tourist traffic attended the annual conference held under the auspices of the Egypt Promotion Association, which took place on July 15, at Industrial Court, 5, Old Palace Yard, S.W.1., Mr. H. W. Tite (International Sleeping Car Co.), presiding. The object of these annual gatherings is to co-ordinate efforts in order to avoid any unnecessary clashing of the dates of arrival in Egypt of the different cruises, and at the conclusion of the conference the Chairman announced that, in consequence of the exchange of views, the arrangements decided on by the various steamship companies and tourist organisations for next season and for the season of 1926-7 were such as would minimise as far as possible the discomforts occasioned by the influx of a large number of visitors to Egypt during the season, especially in the month of March, when the majority of trans-Atlantic visitors were timed to arrive.

According to the figures produced at the conference, the coming season in Egypt will see the arrival of 18 cruisers, bringing a total of 7,650 tourists from the United States. The vessels affected are the Transylvania, Mauretania, Belgenland, Adriatic, Arcadian, Homeric, Samaria, Rotterdam, Empress of France, Conte Rossie, Conte Verdi, Empress of Scotland, Franconia, Lapland, Corinthian, and Scythia, the Adriatic and the Lapland doing the cruise twice during the season. The first vessel to arrive will be the Conte Rossi, on the 22nd November, an unusually early date, which shows that the Egypt Promotion Association's efforts to induce people to visit Egypt before Christmas, when the weather is ideal, is bearing fruit.

PALESTINE CROP OUTLOOK FAVOURABLE.

The June report of the Director of Agriculture and Forests of Palestine states:—

Harvesting of wheat and barley continues, yields proving so high in most villages of the northern area as to necessitate enlargement of threshing floors. In the south, with the exception of Jericho, winter crops are somewhat uneven and the total yield will fall short of the average.

Weather conditions for the past month have been especially favourable to the growth of sesame and durrah; these crops are well advanced and promise exceptionally high yields. Harvesting of kersenneh, lentils and beans is complete, results averaging from 10 to 30 per cent. under normal.

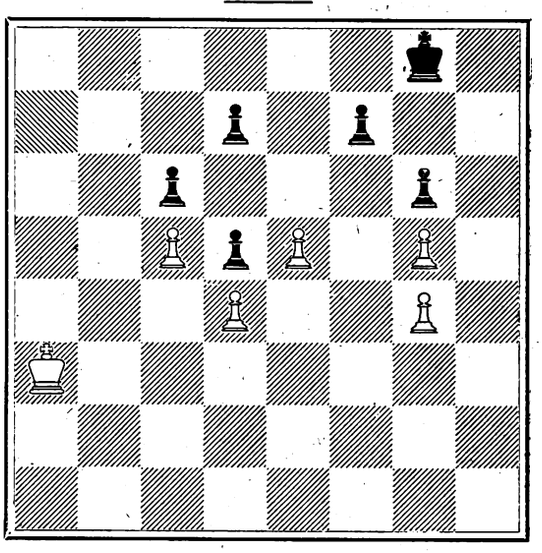
Tobacco plantations are in a satisfactory condition. The plant has benefited from cool weather and is generally free from disease.

A good melon year is anticipated: early varieties are already being marketed.

The almond crop is also good, but the prospects for grapes, oranges, olives, and apricots are disappointing.

CHESS.

By "CARO-KANN."



END GAME No. 7.

White to play.—What result?

Solution to end-game No. 6.—1, P—B4, P—Kt4; 2, K—B3, PxP; 3, KxP, K—Q2; 4, K—B5, K—B2 and draws. If 1 . . . P—Kt3; 2, K—K4, P—B4; 3, P—Q5, PxP; 4, PxP, P—Kt4 and wins.

From my recent remarks regarding the Caro-Kann Defence it might possibly be gathered that this method of deploying the Black pieces invariably leads to a dull game. This is by no means the case. There is a well-known game betwen two masters which only lasted a few moves. As some of my readers may be unfamiliar with it, I reproduce it.

1, P—K4, P—QB3; 2, P—Q4, P—Q4; 3, Kt—QB3, PxP; 4, KtxP, Kt—KB3; 5, Q—Q3, P—K4 (a); 6, PxP, Q—R4 (ch); 7, B—Q2, QxKP; 8, O—O—O, KtxKt, and White mates in three moves.

(a) This was a quite unnecessary manœuvre. KtxKt followed by P—K3 and Kt—Q2 would have given Black quite a promising game.

Once again may I repeat that I shall be glad to hear whether my readers would prefer end-games or problems. I hope their choice is for the former, for it seems to me that the lover of problems is amply catered for in other journals.

On July 15, without formality, the Sennar dam was opened and water admitted to the canal, in the presence of a small gathering of representatives of the Government, the Sudan Plantations Syndicate, the contractors and local notables (says a Reuter message).

Near East Markets.

PRODUCTION OF ATTAR OF ROSES IN BULGARIA.

The following particulars are taken from the report of the Bulgarska Banka for July 1 :—

The rose crop in the region of Karlovo has reached this year 2,460 tons. Last year the crop amounted to 4,230 tons. This year about 620 acres of new ground were planted with roses, and on the other hand 247 acres of old rose trees were uprooted. A large capital has been invested in installations for distillation of roses, but it was not first assured that there would be a sufficient quantity of roses. The roses in the Karlovo region have been attacked this year by a special mildew blight, called in Bulgarian "reujda." It is not anticipated that next year's rose crop will be abundant for no precautionary measures have been taken for the treatment of this blight. The rose essence factories are able to produce much more than will be made this year in proportion to the quantity of roses grown, with the result that a number of coppers set apart for this distillation have remained unused. The present price of roses at Klissoura, at Slatina and at Tekia is 15 leva per kilogram (1 kg. equals 2.204622 lb.), at Rahmanlari 13 leva per kg., at Yganovo 12 to 15 leva per kg., and in the other villages of this region 12 leva per kg.

Owing to the bad crop of roses this year and the great demand for rose essence, the price of this product is high. In the region of Kasanlik the price varies considerably at present in the different localities of the country, as will be seen from the following. In the western villages of this region the price of roses is from 12.60 leva per kg. in the centre 9.60 to 10 leva per kg. and in the eastern portion buyers offer only 8.40 leva per kg. for the roses.

The Grain Harvest.

The barley harvest has commenced in Bulgaria. In the north of Bulgaria, at Varna, for example, the condition of the cereals is excellent. The flowering of wheat and of rye has begun under good conditions, while that of barley has already finished. The rains have had a most beneficial effect on wheat.

Good reports of crops also come from Bourgas and Stara-Zagora. It is stated that there has not been such a good harvest for 15 years.

CROP CONDITIONS IN IRAQ.

The Agricultural Bulletin of Iraq for the month ended June 15 states :—

Low relative humidity was the outstanding feature of the calendar month of May and gave rise to a general impression of unusual coolness which was not justified by thermometric observation. At Hinaidi the mean maximum and mean minimum temperatures recorded were 98.3 deg. F. and 65.8 deg. F. as compared with 94.1 deg. F. and 68.2 deg. F. the averages for the same month over a period of 36 years.

In general the climatic conditions were favourable for all crops and particularly so for harvest operations. The low humidity impeded vegetative growth of summer crops to some extent but not seriously.

Threshing of winter cereals became general during the period under report. As usual the influx of new cereals on to the market was delayed by the necessity for Revenue Assessment, but towards the end of the period new season's grain was on offer throughout Lower and Middle Iraq. Prices fell considerably in Middle Iraq where the havest is good, but they still remain abnormally high, good quality new season's wheat commanding about Rs. 200 per ton, and barley varying from Rs. 80 to Rs. 120. In Middle Iraq early sown cereals are threshing out well, but the late sown are poor and shrivelled in the grain. Reports from Northern Iraq are to the effect that all grain so far threshed out is of poor quality and very shrivelled. Cultivators attribute this to the locust attack, but it is chiefly due to the excessive cold and consequent short growing period of the crop. The Sunn pest has also done much damage.

Summer crops are on the whole promising. Cotton, as previously reported, has not been extensively sown this year. The condition of the crop is, however, good, and it is remarkably free from insect attack, particularly spotted boll-worm.

At the experimental farm larvæ of Platyedra Vilella, a near relative of the dreaded pink boll-worm, has been noticed feeding freely on the growing shoots and buds of the cotton-plant. The transit of this pest from hollyhocks, its normal host plant, to cotton is viewed with some alarm.

In Northern Iraq small trials are being made with specially selected early varieties of cotton with a view to testing the economic possibilities of sowing cotton after the depredations of locusts have finished. In Middle Iraq early sown cotton has already made bolls.

By the middle of May locusts had started egg-laying. The general trend of the swarms was to the north, and the bulk of the areas on which eggs have been laid are to the North of Mosul. Egg-laying was general throughout the period under report. Eggs from carefully measured areas of egg-infested grounds were dug up and the eggs weighed, with the result that it was found that nearly one ton of eggs had been deposited per acre. This weight, of course, includes the weight of the egg cases.

Flax from the 1924 crop which was scutched in the experimental flax mill was sold in England at the rate of £120 per ton. This figure is most encouraging, especially when it is considered that the straw was a mixed consignment from a number of different sources, and varied greatly in quality. An influential group of prominent business men and owners are now interesting themselves in flax, and it is hoped that as a result of their endeavours a flax-mill will be opened and the cultivators will have a market for their straw.

Live stock are being grazed generally over the winter cereal stubbles and are greatly improved in condition. Wool-clipping is practically completed.

The July 1924—May 1925 exports of wheat from Iraq were 1,104 tons and of barley 31,223 tons, total 32,327 tons as compared with 185,868 tons exported during the same period last year. The August 1924—May 1925 exports of dates from Iraq were 142,086 tons valued at Rs. 1,84,19,529, as compared with 123,641 tons valued at Rs. 1,56,54,808 exported during the corresponding period last year.

The July 1924—May 1925 exports of wool from Iraq were 18,287 tons as compared with 6,104 tons exported during the same period last year.

In answer to a question by Major Kindersley, in the House of Commons last week, Mr. Churchill said the revenue for 1924-25 applicable to meeting the charge for interest on the Turkish Four per Cent. Guaranteed Loan of 1855 was not sufficient to cover the interest. He did not think it was desirable to state in what precise securities past surpluses were invested.

An important company has been formed at Angora under the auspices of the bank founded by the ex-Khedive, Abbas Hilmi Pasha, and other leading Turkish banking houses for the handling and exploitation of petroleum, both in the crude and refined state, and all its derivatives (says a Reuter message). The company will have a capital of 1,000,000 Turkish liras.

The export schedule of Roumania for the current year has been drawn up by the Government (says a Reuter message). The minimum surplus of wheat left over after home requirements have been met is given as 60,000 truckloads. Exportation will be facilitated by a reduction of the export tax to 30,000 lei per truck instead of 45,000. The tax on other cereals remains unchanged. The surplus of petroleum left over for export is subject to an export tax of 1,000 lei the truck, and that of motor spirit to 2,000 lei the truck.

Company Meetings.

LAKE COPAIS COMPANY.

Development Work in Greece.

The ordinary general meeting of the holders of shares and debenture stocks of the Lake Copais Company, Limited, was held on July 16 at Winchester House, Old Broad Street.

Mr. W. Sandford Poole, chairman of the company, presided.

The Assistant Secretary (Mr. R. D. Prichard) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said:—The area of land cultivated during the year 1924 was 31,107 acres, an increase of 4,424 acres. On account of unseasonable climatic conditions, the crops on 1,417 acres were a failure, the area from which crops were harvested being reduced to 29,690 acres. This, however, was a larger area than has been harvested in any year since the year 1918. One of the principal causes of the increase in expense was the large amount of development work carried out during the year. An additional 2,321 acres of low-lying land, which had gone out of cultivation, were brought under the plough, and this season some 4,375 acres of tough, couch-infested land had been broken up and sown with oats, and it is expected that it will be possible to deal with a further similar area next season. Cotton is now the most remunerative crop grown on the Copais, in addition to being an excellent cleaning crop, and one of the least exhausting to the soil. The area under cotton last year was 4.593 acres, or nearly double the maximum area under cotton in any pre-war year. As to the new gravitation drainage works, taking into consideration the many difficulties to be overcome, the progress made during the year may be regarded as fairly satisfactory.

Profit and Loss Account.

The net profit in Greece, converted into sterling, amounted to £31,909 18s. 4d. This compares with £23,606 10s. 10d. in the previous year. The increase was due to our having suffered less from losses in exchange. After adding the sundry receipts and deducting the expenses shown in the profit and loss account and transferring £2,000 to capital reserve account, there remains a credit balance of £25,291 7s. 7d. This enables the directors to recommend the distribution of interest at the rate of 5 per cent. on the "A" debenture stock, leaving £14,164 1s. 8d. to go to the credit of the "B" debenture stockholders' interest account.

We have now a total of £14,299 6s. 1d. at the credit of the "B" debenture stockholders' interest account, and it is proposed to distribute interest at the full rate of 6 per cent. per annum in respect of the year 1924 on the "B" debenture stock, leaving a balance of £79 6s. 1d. to be carried forward to the credit of that account. Both payments will be made, less tax, on the 31st day of this month, in scrip for Five per Cent. "A" debenture stock of the company in accordance with the scheme of 1922.

Arbitration between Government and Company.

In the report we refer to the visits to Greece of two of the directors, Mr. Foster and Mr. Whitmee, mainly in connexion with the arbitration proceedings between the Greek Government and the company. Since the issue of that report we have received by cable information to the effect that the arbitration is concluded. As, however, the award may not yet have been promulgated or made public in Athens, and also because we have not the full text, I think it will be best to say nothing about the details to-day. As soon as the award has been promulgated, and the full details are in our hands, they shall be communicated to you by circular.

It is to be hoped that the award will remove many of the uncertainties which have so handicapped the administration of the company during the past 30 years and more, and will clear away the various grounds of differences.

We have ourselves given up a good deal to achieve this end, and we hope our good will in this respect will be recognised as indicating our wish to help in the development of the resources of Greece, to the benefit of her people, who now live in health upon the soil we have reclaimed for agriculture, and for the good of the nation generally.

Mr. E. W. P. Foster, C.M.G., seconded the resolution, which was unanimously adopted.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

EGYPT.

Post Binders.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of 3,000 loose-leaf post binders. October 6.

Conversion of Pumping Station Machinery.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the gradual conversion of Mex Pumping Station machinery No., 1. Copy of the specification and drawings may be obtained against payment of P.T. 50. September 1.

Sewage Pumping Machinery.—The Director-General, Main Drainage Department, 2 Sharia Abbas, Cairo, invites tenders for the supply, erection and delivery of sewage pumping machinery, comprising 3 large and 1 small Diesel engines with 3 large and 1 small centrifugal pumps, complete with auxiliary plant. November 2.

Pumps, Etc.—The Director-General, State Domains Administration, Savoy House, Sharia Qasr el Nil, Cairo, invites tenders for the supply of 4 centrifugal pumps and 1 oil filler. September 1.

Machinery, Etc.—The Controller, Technical, Industrial and Commercial Education, Sharia Qasr el Aini, Cairo, invites tenders for the machinery and machine tools required for the engineering and the carpentry also the metal plate sections of the new Mansurah Trades School (September 9); hand tools and machinery required for the Workshops of the School of Engineering (September 17); supply of Diesel engine, generator, switch board, etc., and locomotive boiler, for Assiout Model Workshops; machinery for the Engineering and Carpentry Section, for Port Said Trades School; machinery for the Engineering Section of the Bulaq Technical School (September 17).

Trunk Record Table.—The Superintendent of Stores, Cairo, invites tenders for the supply of a trunk record table. Copies of the specification may be obtained on application, against payment in advance of 500 milliemes (not acceptable in postage stamps) at the Stores Department, Saptia (Cairo), or Gabbary (Alexandria), September 10.

Tarboushes.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of 1,075 "Tarboushes Azizi" with tassel as per Administration sample. October 1.

Steel Index Cabinets.—The Survey of Egypt (Ministry of Finance) invites tenders for the supply of 18 steel card index cabinets. September 8.

Mineral Lubricating Oils.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo, invites tenders for the supply of 1,775 tons of mineral lubricating oils. August 18.

Steam Engines.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection of two 80 B.H.P. semi-fixed superheated condensing steam engines at Beni Saleh, Beni Suef Province. August 18.

Pumps.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection of two belt-driven centrifugal turbine, or screw pumps at Beni Saleh, Beni Suef Province. August 18.

Vessel for Coastguard Duties.—The Director-General, Coastguards and Fisheries Services, Alexandria, invites tenders for the construction of a sea-going vessel for Coastguard duties. August 1.

Shipping Intelligence.

NEW LIGHT-VESSEL OFF THE INDUS.

As a result of correspondence which has transpired with the India Office the Imperial Merchant Service Guild was able to announce, some months ago, that the Government of India has decided to place a light-vessel off the Khai mouth of the Indus, on the Sind Coast, the opinion of masters of shipping being that a navigational aid of this kind was required in that vicinity. The Guild is now in receipt of information to the effect that the actual position of the light-vessel will be between the Kedwari mouth and Hajamro mouth, and that the vessel will be on station from October 15 to May 15, every year. The Guild is, however, suggesting that the lightship should be retained on her station throughout the year. The question of establishing a lighthouse at the Hajamro mouth, showing a light of 100,000 candle power, visible 18 to 20 miles, is at present under discussion. It is understood that masters of vessels trading to that port have been consulted for their advice. There is also a wireless direction-finding station just opened for the use of ships which is at present in an experimental state, working from 8.30 to 17.30, and at present no charge is made or liability accepted.

TANKER CHARTERING REVIEW.

The Fall in Freight Rates.

Messrs. John I. Jacobs and Co., in their report on tanker chartering for the half-year ended June 30, state :—

The present half-year closes with tank steamer freights lower than at any time since the winter of 1922/23. Our last report was published during a time of improving rates which were not long maintained after the close of 1924. Nevertheless, for the first four months of this year owners were obtaining rates of freight which enabled them to trade their boats to some advantage. The decline during the late winter and early spring was gradual, but when the importing European countries had replenished their storage of motor spirit for the summer months, rates commenced to fall away to levels which have caused owners to lay up their tonnage freely.

What little chartering is being done is at rates which scarcely cover working expenses. Contributory causes to this decline are the increasingly lessened traffic in oil between California and the eastern seaboard of the United States, the increasing amount of refining which is taking place in the countries of consumption, and lastly, but not least, the unsatisfactory financial and political situation which prevails in many of the most important oil-consuming countries of Europe. The price of fuel oil continues to be maintained at levels which do not enable it to compete with coal in many trades, and whereas the bunkering facilities for fuel throughout the world are continually improving, tramp steamer owners find that unless rates of freight are on high levels it suits them better to keep to, or return to coal-burning in spite of the delays occasioned in bunkering and the extra number of hands required for firing.

The March returns of Lloyd's Registry of Shipping this year showed that the tonnage of tankers under construction had increased to 352,143 tons. Vessels fitted with internal combustion engines grow in popularity, and at the end of 1924 60 per cent. of the tonnage building was to be so propelled, and amounted to 923,738 tons. The latest returns published by Lloyd's Register show 939 tankers (of 1,000 tons and upwards) afloat with a total tonnage of 5,177,630 tons, and 2,145 vessels fitted with internal combustion engines and of a total tonnage of 2,714,073 tons as compared with only about 220,000 tons in 1914. Over 27.5 per cent. of the total gross tonnage afloat is now using oil fuel for boilers.

The volume of tanker tonnage passing through the Panama Canal is now but half of what it was 18 months ago, the peak of the movement in tankers in this direction having been reached in September, 1923.

The production of oil in United States in 1924 aggregated about 718 million barrels, or some 2 per cent. below the 1923 output, whilst the consumption, including exports, increased about 4 per cent. and approximated 761 million barrels. The imports which supply this deficiency come mostly from Mexico. The United States for domestic requirements consumes as much as 73 per cent. of the world's production, and it is said to have been about 748 million barrels in 1924. In spite of the fact that American experts see no large new producing fields, the daily production in U.S.A. remains at round about the two million barrel per day mark, which is considered satisfactory.

Mexico and the East Indies show a falling off in production, but the production in Venezuela is rapidly increasing. Oil experts consider that the potentialities of Persia are very large. Russia and Argentina are also increasing their production. Russian exports for the six months ending April 1 aggregated 554,000 tons, an increase of 93 per cent. over the corresponding period of the previous year. Large contracts have been entered into by the Soviet Government with French, Italian, and Anglo-American interests. During the past fiscal year France took the greater proportion of spirit, and Germany of lubricating oil from Russia, whilst Italy took the bulk of the fuel oil.

There is nothing at present to enable tank steamer owners to look into the near future with anv degree of confidence. The large producing companies continue to increase their own fleets, and some foreign owners during the time of prosperity contracted for a number of large tank steamers which the market is for the present, at any rate, unable to absorb. With petroleum products increasing daily in demand, search is being pursued in all parts of the world for fresh production, and should fields be discovered in areas remote from the large centres of consumption, then tank steamer owners will be able to face the future with the prospect of remunerative employment for their tonnage.

Representative rates of freight during the above period in the principal markets may be taken as follows :—

Time Charter.—The highest rate obtained was 8/6 for a modern diesel vessel, and the lowest recorded for this type was 5/3 in June. In each case the periods being for 12 months to 18 months, and 9 months to 12 months in Charterer's option. A steam tanker was fixed for 12/18 months in the clean trades at 7/-, but the majority of time charter fixtures have been for the carriage of crude oil and/or fuel oil, and rates have declined from 7/- on the d.w. paid early in the year to 4/6 in June, and 4/- now offering by charterers.

Northern States of America.—As usual not many vessels have actually loaded in the Northern States with refined oil and/or spirit although in the majority of charters owners have to give this option at a reduction of from 3/-

Digitized by Google

to 5/- under the Gulf rate. Actual fixtures, however, may be recorded of 37/6 French Atlantic and 33/6 to Two Ports Portugal done in January last, and several fixtures for North Spain at varying rates, the lowest of which was 22/-. Marseilles usually takes tonnage with New York or Philadelphia loading, mostly handy sizes, the highest rate paid being 39/6 and the lowest 21/-. A white oil fixture can be recorded from Two Ports Northern States to Two Ports in Norway at 17/3 for June/July loading.

In regard to dark oil boats these are mostly for lubricating oil and rates have declined from 30/- to 18/- for handy sizes. Handy tonnage for Copenhagen at one time commanded 30/6 but now tonnage can be obtained at about 19/-. A fixture for crude oil may be noted towards the end of the period under review at about 20/- to Trieste.

Gulf of Mexico.—The favourite size for refined and/or spirit for trans-Atlantic voyages continues to be 7/8,000 tons capacity, for crude and/or fuel oil 8/10,000 tons capacity. In the former trade the highest paid for U.K. Continent was 37/6 and the lowest 17/- to two ports of discharge. Early in the year Stockholm paid 42/6 and French Mediterranean 45/-, while Helsingfors obtained tonnage at 36/3, but in June Copenhagen was able to get a boat at 20/-; two ports Norway at 19/6; and the French Mediterranean ports also obtained tonnage at 20/-.

Black oil freights have, except towards the middle of the year, been on lower levels, the highest paid for U.K. Continent being about 26/6, but on the other hand the lowest for one port of discharge was 19/-, although to-day tonnage can be obtained at about 2/- less. In January West Coast Italy paid 30/- for black oil but has since obtained tonnage at 24/6, and Trieste fixed at 35/- in March. Handy boats for lubricating oil have of course commanded better rates but not truly in proportion to their smaller size and at the moment the owner of the small boat is also forced to lay up his tonnage.

Mexico to North of Hatteras.—Fluctuations in this market have been perhaps more marked than usual. Early in the year tonnage was freely obtainable on the basis of 28 cents per barrel to New York or Philadelphia, and 30 cents to Boston, but in March rates had increased to 39 cents for one of the former ports and 40 cents was reached for Boston. During May and June rates were in the neighbourhood of 23 cents New York or Philadelphia, and 26 cents Boston, whilst at present tonnage could probably be obtained at slightly less owing to lack of demand.

California.—As mentioned above the volume of oil moving has been considerably less than last year, and so far as Europe is concerned chartering has been confined to a few fixtures for the carriage of spirit. In January the rate was 55/-, in March 50/- and in May had declined to 40/- to U.K. Continent, whilst owners of large boats can now be found to accept about 32/6. So far as the trade between California and the American Atlantic ports is concerned the rate after starting at 73 cents and going to 77 cents per barrel to Boston, in February has declined to 57 cents or less for Philadephia or New York. Fixtures with fuel oil have been effected for consecutive voyages at 85 cents per barrel to New Zealand and 80 cents per barrel to Japan, but at the moment there is a distinct lack of trans-Pacific demand.

Russia.—The expansion of her export oil trade has been greater than the number of fixtures show, owing to the fact that large volumes of oil have been moved by vessels belonging to the oil companies and Italian and French Governments. In this trade as in the trans-Atlantic trade rates have declined very considerably and whilst 35/- was obtainable in the early days of the year tonnage is now being fixed for refined and/or spirit at 16/9, and a large boat has been satisfied with 14/6 for gas oil. A number of boats have again been taken for lubricating oil at rates which have declined from 30/- down to 18/- two ports of discharge in the U.K. Continent, Bordeaux/Hamburg Range.

Roumania.—Slightly more chartering can be recorded from this destination, in nearly every case boats of 4,500 tons or under, and rates have declined from 36/3 paid in January to 16/6 paid towards the end of June.

Creosote.—Rates have been steady in the trans-Atlantic trades and as usual the consumers who can get the largest quantities together in one bottom have reaped the advantage. It may be noted that this is essentially a trade which must offer some better inducement to the tanker than returning to the United States in ballast. Throughout the first half of this year tonnage has been obtainable for 8/9,000 ton shipments at 10/- to 10/6; 7,000 tons at 11/6; 5,000 tons at 14/6; and pro rata for intermediate quantities basis one port of loading to one port of discharge. It is only occasionally that these basic rates have been departed from, and then mainly for unsuitable combinations of loading ports. There have been one or two shipments for the Pacific and in one case 33/- two ports of loading to two ports of discharge was paid for 8,000 tons.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Scindia. for Bombay (Liverpool, August 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mandasor for Port Said, Colombo, Madras, and Calcutta (London, July 25).

Bibby Line.—S.s. Oxfordshire for Port Said, Colombo, and Rangoon (Birkenhead, July 29).

British India Line.—S.s. Hatimura for Colombo, Madras, and Calcutta (London, August 1); s.s. Warfield for Bombay and Karachi (London, August 1).

Cunard Line.—S.s. Cypria for Oran, Algiers, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, August 1).

Ellerman "City" Line.—S.s. City of Brisbane for Calcutta (Birkenhead, July 30).

Johnston Line.—M.v. Sycamore for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 8); s.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 5); s.s. Quernmore for Piræus, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 12).

P. and O. Line.—S.s. Morea for Bombay (London, July 24); s.s. Nellore for Colombo, Madras, and Calcutta (London, July 25).

GREEK EXTERNAL DEBT.

Hambros Bank announce that the following has been received from the Governor of the National Bank of Greece: "A legislative Decree is increasing, as from July 20, the rate of the gold drachma for Customs Duties and also Excise Duties on tobacco and salt. As has already been stated, these revenues are being assigned to the service of the International Financial Commission at Athens. The yield of these increases is estimated at from 300,000,000 to 350,000,000 drachmæ per annum. Thus these additional revenues are to increase those already in the hands of the International Financial Commission for the service of the External Debt of Greece, which is adequately provided for and secured. The recent Refugee Loan naturally comes under the same category, and the security thereof is therefore also considerably strengthened."

COMPANY NOTES AND REPORTS.

The report of the Brahmapootra Tea Company for the year ended December 31, 1924, states that the outturn was 2,656,492 lb. (against 2,502,391 lb. in 1923), at an "over-all" cost of 10.24d. per pound (against 9.92d.). The average selling price was 20.52d. per pound (against 18.53d.). The profit is shown at £114,253, and £16,809 was brought forward. The total distribution for the year is 75 per cent., and the allocation to reserve £25,000. After setting aside £8,000 to cover the cost of installing an electric plant and the purchase of two oil engines, a balance of £10,747 is carried forward.

Cotton and Cotton Goods.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended July 18, states:—

Whilst the amount of business booked during the past week shows only slight improvement on recent experience the feeling generally is somewhat brighter. Inquiries for cloth have come in on a rather freer scale but the prices secured are said to be still far from satisfactory.

Yarn.—Nothing of special interest has transpired in this section and operations continue to be mainly of a hand to mouth nature and of small dimensions. In spite of the short time movement it does not appear that current production is being absorbed so that spinners find themselves unable to advance their quotations proportionately to the rise in raw cotton. Shipments of yarn in June amounted to 13,272,800 lb. as compared with 17,203,200 lb. in May and 15,090,000 lb. in June of last year.

Cloth.—The tone in this section has improved to some extent. Goods have moved off a little more freely for India and, somewhat surprisingly, a number of small lots have been bought for Shanghai. Other foreign markets remain in a subdued condition. Shipments of cloth during June amounted to 337,963,000 sq. yards as compared with 371,028,200 sq. yards in May and 346,762,100 sq. yards in June, 1924.

Raw Cotton.—Movements in Liverpool have been on a wider scale than recently owing to conflicting ideas as to the present position of the new crop. A further Bureau Report will be published on Thursday evening next. On balance American is ¼d. per lb. higher, whilst Egyptian has moved upwards to the extent of almost 1d. Actual operations on the spot in Liverpool, however, have been very small for both qualities. Closing quotations yesterday were as follows:—American Middling, 13.92; Egyptian Fully Good Fair, 32.30.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended July 9 state:—

Since our last report the futures market has been very active but prices have fallen considerably: the net changes on the week are the following:—Sakellaridis: 1.35 dollars down for July, 1.70 dollars down for November, 1.45 dollars down for January, 1.55 down for March. Ashmouni: 1.35 dollars down for August, 0.70 dollars down for October, 0.75 dollars down for December. The severe drop in prices in New York which followed the publication of the U.S. Bureau condition at 75.9 against 71.2 last year has affected our market very unfavourably and induced heavy liquidations of bull positions in both Sakel and Ashmouni in old and new crops. . . The tendency of the market is undecided and we think that contrary to what the case has been for many months now the future course of prices of our market will, during the coming weeks, be influenced by the course of prices in New York. At the first July tender no dockets were issued. The severe depreciation of the leading Continental exchanges cannot but affect unfavourably the textile trades of these countries; also the unsettled state of things in China might have an unfavourable repercussion in Lancashire. There have been no arrivals from the interior during the week; exports total Crs 26,417 and the stocks stand at Crs 545,627.

Spot: Minet el Bassal continues very quiet and demand from spinners shows no signs of improvement. The market has only been open four days and sales amount to about 2,600 B/s of which we estimate 800 B/s Sakel, 1,700 B/s Uppers, and 100 bales other varieties.

Sakellarides: The demand has been very mediocre and such business as has been put through has been mostly in the medium and lower grades. Spot differences are generally without much change, though Good Fair and Fully Good Fair are on the easier side.

Ashmouni and Zagora: A fair business has been done, covering all grades. Spot differences are a little stiffer except for Fully Good Fair and Good which are unchanged from last week.

Brown and Pilion: A small business has been done in both these growths at about last week's spot differences.

White: Is neglected and no business has been reported. Quotations of spot are rather stiffer.

Crop 1925: We have had very favourable climatic conditions during the past week and the state of the plant has improved considerably in all districts of both the Delta and Upper Egypt. The leaf worm attack, although probably more serious than last summer, is well controlled and no important damage is expected.

The water supply is adequate; very few complaints have been heard so far. Rotations have been reduced to 6 working days alternating with 16 stoppage days. The readings of the Sudan gauges are now better than those of 1924 and about equal to those of 1923, therefore, prospects for the summer water supply may now be considered to be quite good.

The report of the Alexandria General Produce Association for the month of June reads:—

Lower Egypt.—The cold winds prevailing during the first fortnight of the month caused the temperature to be comparatively cool in the North of the Delta; the second half has been warmer; in the South of the Delta the temperature was more regular and more favourable to the plant. Taken altogether one can say that the temperature during June has been favourable to the crop. From the foregoing it results that in the North, the fifteen days' backwardness of the crop, previously reported, continues, but more to the South it is now only about seven days later than normal. The cotton plants are, generally speaking, in good condition, they look healthy but are not as much developed as last year. In several districts a new disease is reported; some cotton plants have dried up; the damage caused is estimated at 5 per cent. in those fields attacked. The appearance of considerable quantities of egg masses of the leafworm is reported from all districts, but the farmers are taking steps to destroy them by picking them off the infected leaves. Generally speaking the damage caused is of small importance up to the present. Water for irrigation has been sufficient.

Upper Egypt and Fayoum.—The temperature during June has been favourable to the crop, which is in good condition. A slight lateness compared with last year is reported in some districts. A few sporadic cases of leafworm, of small importance, have been reported. Water for irrigation has been sufficient.

BULGARIAN TRADE WITH GREAT BRITAIN.

M. D. Christoff, the Bulgarian Minister of Commerce, has left for Varna to attend a special conference to study the question of establishing a direct steamship line with a regular weekly service between Great Britain and Bulgaria (says a Reuter message). It is intended to facilitate trade between the two countries, and the proposal is also connected with the plan for the exportation of frozen meat by a British company.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

Coalition in Yugoslavia.

The burying of the hatchet between M. Raditch, the leader of the Croatian Peasant Party, now no longer Republican, and M. Pashitch, the Radical Prime Minister—a step entirely in the interests of Yugoslavia—is likely to prove as embarrassing to the friends of the Croats as to their enemies. On June 12 there was held at Pittsburgh, Pennsylvania, the first Convention of the Croatian Republican Societies of America, and a copy of the lengthy Resolution passed at that meeting has recently been circulated. It endorses the programme of the Croatian Republican Peasant Party, the realisation of which programme means self-government for the republican and pacifist Croatia; it condemns lock, stock and barrel the Yugoslav Administration at Belgrade, "its centralism, its militarism, those of its measures contrary not only to the principles of democracy, but also to the very Constitution and laws held up and, pretendedly, defended by the very same Administration, all the maltreatments and ordinary crimes committed by the armed agents of the said administration . . . the application of the Bolshevist measures against the lawful activities of the Croatian Peasant Party." Fortunately the American Croatians have safeguarded themselves in the same Resolution by recognising the political leadership of M. Stephan Raditch and the other leaders of the Croatian Republican Peasant Party as the only trustworthy leadership of the Croatian people and they accord to them their fullest confidence. They should, therefore, experience little difficulty in accepting the new developments in Yugoslavia. M. Raditch himself describes these as a complete change of policy for his party: republicanism, he says, was necessary during the transition period, as it enabled the Croats to strangle the Hapsburg tradition, to defeat anarchy and to pave the way for the present agreement, with its acceptance of the Karageorgevitch dynasty. It also wooed the Croats from Clericalism. He chides the Croatian Union Party for not appreciating the subtle wisdom of these stepping-stones to the monarchical system and for remaining Republicans. As for his past expressions of opinion and all that he said against the Radicals, he explains these away as the necessarily demagogic utterances of the electoral candidate.

A Whole-hearted Monarchist.

The seal on the *rapprochement* and coalition has been placed by M. Raditch's audience of King Alexander. As the meeting lasted three hours, we may well believe that the discussion covered a wide field. It was the first time that the Croatian leader had met the King, and he was compelled to admit that up till then he had completely misjudged his Sovereign. The present agreement, M. Raditch has since explained, was altogether in keeping with his political convictions, and he would have brought it about long ago, if only he had known King Alexander's views on the subject. He had been wrongly informed about his Majesty; "he is our man, he is of our temperament and the true representative of the sovereignty of the people. Such a good grasp of all political problems as the King has I have never once met in any of our party leaders." In the face of these spontaneous admissions it would seem superfluous to challenge the sincerity of M. Raditch's change of front. Interest centres in the first concrete results arising from the coalition. So far M. Raditch has not been able to see M. Pashitch since his release from prison. After his audience of the King at Bled he hurried to Belgrade to meet the Prime Minister, but a sudden improvement in the latter's condition enabled him to leave for Karlsbad before the Croat leader arrived. For the moment, therefore, M. Raditch occupies the centre of the political stage, and his enthusiasm tends to confirm the belief that the Radicals will be found to have made as definite a contribution to the common agreement as the Raditchists.

Roumania and Foreign Capital.

The Roumanian Minister of Finance has left Bucharest for France and is credited with the intention, during his

Digitized by Google

stay abroad, of discussing with the French and British Governments the subject of War debts and other financial questions. It is not unnatural that, in view of the long tenure of office of M. Bratianu's Government, which has set itself the task, above everything else of placing the country on a sound economic basis, the Allied Powers should have looked for some overtures for an agreement regarding Roumania's War indebtedness. Unfortunately the fiscal policy of M. Bratianu and his brother, although it has accomplished much for the internal economy of the country, has produced no exportable surpluses, and the Government has taken up the attitude that it cannot liquidate its obligations until the reparations question is settled to its satisfaction and it is able to form an idea of the amount that it may expect to receive and as to when payment is likely to begin. This attitude, however reasonable it may be from Roumania's point of view, is hardly likely to break the vicious circle in which the country finds itself. For the full development of her resources Roumania requires foreign capital; the Government, however, stipulates that this foreign capital must come in on terms that to the majority of financiers are unacceptable. Until such capital is forthcoming, Roumania's prospects of being able to pay off her War indebtedness are not bright, and her omission to make any offer to this end has brought down upon her more or less peremptory requests to give the matter her immediate attention. As there can be no obligation upon American and British capital to take up investments in Roumania, it would seem essential that sooner or later the terms for which the Government of M. Bratianu has hitherto held out should be modified. The fact that foreign criticism has been met to some extent in regard to the mining law prompts the hope that a fresh journey on the part of M. Vintila Bratianu to Paris and London implies that there is to be a change of attitude towards the terms on which foreign capital is to be invited to Roumania. A Roumanian financial mission, it is reported, may be sent simultaneously to the United States to discuss the Note addressed by the American Government to Roumania over two months ago.

The French in Syria.

The French, whose colonial history has been relatively free from trouble as a result of their attitude towards native education and the accumulation of wealth by natives, are beginning to experience in Syria those first stirrings of nationalism which have long been familiar to the British in a similar position. When riots took place in Damascus on the occasion of Lord Balfour's visit, it seemed probable that the authorities saw no need to take seriously threats of a demonstration directed against a foreigner. The precedent, however, may prove to have been a dangerous one. Beyrout has now indulged in disturbances, in the course of which the offices of the gendarmerie were stoned and a number of policemen, as well as the Town Commandant, were injured. A company of spahis had to be called out to deal with the rioters, and there were several casualties before order was restored. The cause of the outbreak is said to have been the suspension of the provisional Rent Restriction Law. A minor rebellion is also reported from the Jebel Druse, where some of the leading chieftains have resented the appointment of a French Governor as a challenge to conditions that they consider essential to the maintenance of their own feudal authority. In these days the cynical adage regarding the troubles of our friends no longer holds good: unrest is to be deprecated wherever it appears, if only because it is apt to be contagious. It is certainly not to the interests of the British in Palestine that the French should have trouble in Syria, and so we may hope that General Sarrail will not only succeed in appeasing the people, but will also by a wise policy remove causes for dissatisfaction and keep the inhabitants of Syria in loyal co-operation attached to France.

Sic Transit.

Yildiz Kiosk, the palace of Sultan Abdul Hamid, has been handed over to the Municipal authorities of Constantinople and is to form, with its magnificent grounds, a casino and amusement park destined to swell the revenues of the city by attracting tourists. The Palace of Dolma Baghtche at the same time will become an hôtel-de-luxe. Of the latter it is reported that at the deposition of Sultan Abdul Aziz in 1876 the occupants were thinned out by three thousand dismissals; when Abdul Hamid left Yildiz Kiosk the removal of the women and children of the Imperial Harem occupied a whole week, one day's exodus alone having required forty-six carriage loads. It was Abdul Hamid who raised the villa of Yildiz Kiosk to the status of an Imperial Palace and converted the park into a fortified retreat,, where he could feel safer than at the Dolma Baghtche Palace on the Bosphorus. On his deposition Yildiz Kiosk became national property, and there has long been talk of utilising the buildings for educational and scientific purposes. More material interests have prevailed, and Yildiz Kiosk will cater for the contemporary craze for amusement.

NEWS IN BRIEF.

Information received at Angora, Turkey, from the provinces gives every hope that this year's harvest will be generally well above the average.

A Turkish Government Commission has arrived at Budapest to buy horses up to the value of two milliards of Hungarian crowns (roughly, £5,000).

It is announced by the European Danube Commission that the new canal giving access to Sulina, Roumania was opened to navigation on July 25.

Fethi Bey, the Turkish Ambassador in Paris, was injured in a motor accident near Paris last Thursday, and five other members of the party were also hurt.

The Egyptian Government has approved the Suez Canal Company's plans for the creation of a new town on the eastern bank of the Canal, opposite Port Said, to be named Port Fuad.

After August 1 Turkish barristers are ordered to wear the newly prescribed long-sleeved gowns with satin facings when pleading in the Courts. This settles a question which has caused much difference of opinion ever since the end of the old régime.

The British and Foreign Bible Society last week received news of the sudden death of Mr. C. T. Hooper, Secretary of the Society's Egyptian agency, which covers Egypt, Syria, Palestine, and the Sudan. Mr. Hooper, whose offices were at Port Said, was 58 years of age.

At Harmer, Rooke and Co.'s Fleet Street Auction Rooms on July 22, the sum of £1,500 was realised for a collection of Syrian stamps. The album was sold with a massive gold and silver casket of Arabic design and workmanship. It was sold on behalf of Mohammed Kamel el Kassab, son of the ex-President of the High Assembly of Syria, who is on a visit to this country.

EGYPT AND GOOD WILL.

By a happy coincidence the Prime Minister of Egypt is on a visit to England at a time when the new High Commissioner is being bidden God-speed by his fellow-countrymen prior to his departure to take up the duties of his important post. Educated and thinking Egyptians will understand that the responsibilities of the British Empire are so manifold and wide-flung that it is inevitable even at the centre of the Empire, where domestic problems are not less insistent than Imperial issues, that interest in any one question should be diverted from time to time to others which are more immediately pressing. At this moment, however, the presence of Zewar Pasha in London and Sir George Lloyd's appointment serve to direct attention once more to Egypt. The essence of the British attitude may be summed up in one term—good will—and it is to be hoped that the significance of this will not have been lost either on Zewar Pasha or the more responsible Egyptians. The honour conferred on the former, who was decorated last week by the King with the Grand Cross of the Order of St. Michael and St. George, is an expression of the national good will entertained towards his country. It is true that Zewar Pasha's personal contribution to the maintenance of good relations between the two countries has been most notable, and the British nation cordially endorses the royal recognition bestowed upon it, but it would be a grave mistake to suppose that in honouring Zewar Pasha His Majesty has sought to imply that Great Britain is attempting to take sides in Egyptian politics. The Prime Minister of the day comes to England as the representative of his country, and as such it is natural that he should receive in his own person the tributes that are addressed to Egypt as a whole. Whether he is fated to continue to be the official representative of his country is beside the point. So long as he remains in office Great Britain naturally reciprocates through him every desire for the maintenance of the good relations which Zewar Pasha himself has been at such pains to re-establish. If for reasons of their own the Egyptians should at any time elect to withdraw their confidence from him and to place it in someone else, the change of personalities, however much the withdrawal of a good friend from active responsibility might be regretted, would be no concern of Great Britain's. She would merely wait to see whether the change implied any change of attitude on Egypt's part; whether it did or did not, her own attitude would remain the same, though naturally more demonstrative, if she was called upon to reciprocate good will than if she had to show good will in the face of hostility or indifference.

Sir George Lloyd did well to stress the point that good will is the ultimate solvent of all outstanding questions between Egypt and Great Britain. It has been notably absent, to the British way of thinking, on the part of those Egyptians who identified themselves with Zaghloul Pasha and encouraged him in an attitude of unyielding intransigence whenever an attempt was made to bring up for discussion any of the questions still at issue between the two countries. Good will does not preclude honest differences of opinion; it merely stipulates that the other party's opinions shall be regarded as being as worthily held as one's own and that prejudice shall not prevent a conscientious effort to discover common ground and a workable understanding. Nothing, as far as we are aware, that Zewar Pasha has done amounts to more than this; he has not abandoned, to the extent of betraying, any of the slogans of the street that were Zaghloul Pasha's substitute for statesmanship, but he has put them in their proper perspective, and has adopted the attitude that, when the suitable moment arrives, he will be prepared to discuss the questions at issue in a friendly and intelligent manner. Until such a conference takes place it is impossible to know whether or not a settlement that can be honourably accepted by both parties is possible. Zaghloul Pasha affected to believe that he could dragoon the British Government into promising to give him everything he asked for before he would consent to enter into what were supposed to be negotiations, but which he desired to make a capitulation on Great Britain's part. He was too fearful of mob clamour and of his own extremists to adopt any other course. Zewar Pasha has taken a more courageous line, and the autumn will show whether Egypt has the political intelligence and sufficient character as a nation to stand by him and to endorse his action. Britain until then must "wait and see," but she does rightly to make it quite clear that she heartily approves of the level-headed policy that Zewar Pasha is adopting.

People lacking good will themselves are incapable of crediting others with it. The Zaghloulists have had little difficulty in persuading the bulk of their countrymen to claim the Sudan for the Egyptians alone, on the ground that if Britain retains possession of it, she will be in a position to do harm to Egypt. The British public, having made up its mind that its own interests are identical with those of Egypt, refuses to allow the interests of both Egypt and the Sudan to be prejudiced by yielding to this specious argument. The uneducated Egyptian thinks and speaks of the Nile as a pipe line leading from an inexhaustible cistern in the Sudan, where is also a tap to be turned on or off at the pleasure of those in control of the country. If the Zaghloulists had trusted themselves with an open mind to a conference, they might have learned that, if such a cistern exists it is not in the Sudan but farther south; also, as Sir Geoffrey Archer, Governor-General of the Sudan, reminded an audience last week, that a dam built at the north end of Lake Albert, with a subsequent canalisation of the Sudd area, would relieve Egypt once and for all time of any anxiety regarding her water supply. Now such a dam can be built only by Great Britain or with her support, and it is at least conceivable that a group of intelligent Egyptians, capable of dissociating themselves from slogans and mob clamour, would decide that such a dam would in the long run be far more beneficial to Egypt than the certainty of political trouble in the Sudan while Egyptians were trying to govern it before they had mastered the science of administration in their own country. If they came to this conclusion, one slogan at least might be jettisoned. In the same way other problems, no doubt, would be found to wear a different complexion. An indispensable preliminary to this end is good will; for certain it is that Great Britain will be far more tempted to make generous allowance for Egyptian susceptibilities when her own good will is reciprocated than when she is being denounced day by day as the enemy of Egypt.

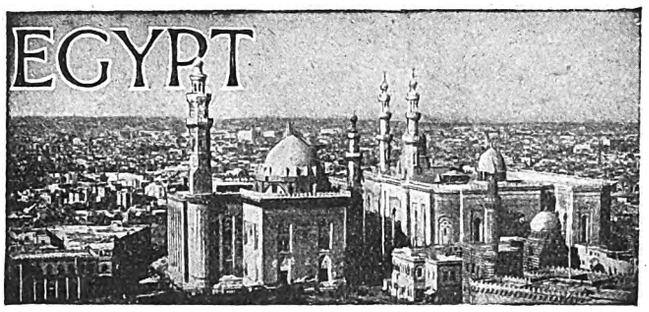
The Near and Middle East*

From Our Own Correspondents.



Cairo, July 19.

Electoral Law Revision.

The Electoral Law Revision Commission, under the presidency of Ismail Sidky Pasha, Minister of the Interior, has finished its labours. The Commission's recommendations will now go to the State Legal Advisers, who will draft the new law in correct form for promulgation, which is expected by the middle of next month. Although the Commission's decisions have not been published, apparently well-informed summaries have appeared in the Press, and from these it seems that the new electoral ordinance will correspond very closely with the form with which intelligent anticipation has invested it. The minimum age of electors is to be raised from 21 to 25 years; for electors between 25 and 40 years there are certain tests. To be eligible to vote there must either be a property qualification (ownership of land taxed at not less than £2 a year, or tenancy of property paying at least £24 yearly in rent) or an educational qualification (the possession of a diploma entitling the holder to practise any one of the liberal professions). These qualifications are not applicable to men over forty years of age, whose mature years alone will entitle them to vote. Secondary electors will in future represent twenty, instead of thirty voters, the reduction being made so as to give the same number of deputies with the new reduced electorate as with the previous system, from which the new qualifications were absent. Any person eligible to vote is eligible for selection as an elector delegate.

These are the principal changes from the old law, and most people will be inclined to agree that they are changes for the better. In Egypt's present stage of political evolution it is probably wise to restrict the suffrage in the comparatively slight degree that the Commission has adopted. But whether these alterations will have any great effect on the type of man to be returned to the Chamber is at least open to doubt. To secure an altogether different kind of deputy from those who formed the Zaghloulist majority was the declared object of the revision of the law, and one will have to await the next elections to see whether that object has been achieved.

Responsibilities of Journalists.

Despite the unanimous protest of the Arabic Press, marked by all the daily newspapers excepting three ceasing publication for a day, the Government has put into operation its amendments to the Criminal Code articles dealing with the responsibilities of journalists. The chief effect of the new provisions is that they make it an offence to propagate false news or opinions regarding the Government of the day, and stipulate that suspension or suppression of the journal concerned shall be an invariable accompaniment to the imprisonment or fining of the editor and publisher. Apart from the obviously reactionary character of this law, it is being attacked on the ground of its defiance of the Constitution, which lays down that, while Parliament is not in session, exceptional legislation may only be enacted, by Royal Decree, when necessitated by grave emergency. It is argued that no such emergency exists, that the country has never been calmer than at present, nor the tone of the Press more mild. The principal purpose of the law is, presumably, to put a term to the campaign carried on by certain Opposition newspapers which have lately been violently critical, not of the Government alone, but still more of the influence on internal administration of the Palace, as represented by Hassan Pasha Nashaat, acting Director of the Royal Cabinet.

Al Azhar University.

There is again talk of embarking upon the hopeless task of reforming Al Azhar University, that refuge of a mediaevalism which would seem to be so utterly out of sympathy with modern life and needs that no reform, short of abolition, can ever change it. The present time seems an unfortunate one to choose for such plans, for Al Azhar, in the past such a well-spring of turbulence and fanaticism, has lately, thanks to tactful handling by the authorities, and not least by King Fuad himself, who has lent a sympathetic ear to the University's grievances, been so uncommonly tranquil that it would be a pity now to trouble the placid waters. In the matter of reform, Al Azhar has lately neatly returned the thrusts of the modernists outside by declaring, in a statement to the Press issued over the signature of a learned Sheikh, that the manners and morals of to-day are in pressing need of change. Similarly, a Moslem divine who has scandalised orthodoxy by publishing a Koranic commentary in which polygamy and other practices supposed to be lawful to Moslems are roundly condemned, has been summoned to appear to-morrow before the Rector and a board of elder sheikhs, there to give an account and explanation of the faith that is in him.

GREECE.

Athens, July 14.

Government.

The development of the internal situation has until the present falsified the hopes of those who prophesied trouble. By the adhesion of Papanastassiou's Republican Union to the military cabal which engineered the "Revolution," the Pangalos Government has acquired a sufficiently strong tinge of constitutionalism to satisfy the moderate standards of the Near East. The executive continues to function *tant bien que mal*, as always, and the prorogation of the Assembly has resulted in the assumption of its legislative functions by a commission which promulgates decrees having the force of law.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

Digitized by Google

General Pangalos' early and rather hectic pronouncements about the policy and intentions of his Government have given place to a more sober view of things, and it must be admitted that the life of the country has been little disturbed by the new Government's doings. He persists in the cardinal point of his policy, namely, the strengthening of the armed forces of the State, and it is probable that apart from that his main preoccupation is finding the money to make that possible. The military League is undoubtedly dictating his policy, but it will be interesting to see how far his purely political collaborators will succeed in freeing him from professional tutelage. Greece's relations with her neighbours are not satisfactory; the thinly-veiled hostility to Serbia, the armed truce with Angora, which has been rudely shaken by the latest outrage on the person of Mgr. Germanos in Pera, and the apparent hopelessness of any sensible entente with Bulgaria, are sufficiently important factors to cause General Pangalos to postpone any sabre-rattling he may have in mind until a more convenient season.

Reception of the "Coup."

The reception of the new régime by the Greek people has been curiously apathetic. The Athenians appeared to regard the actual *coup d'état* as a form of comedy staged for their amusement, and the provinces have not shown any tendency to react in any way for or against. The subversive elements, commonly called Communist, are in a quandary. They hate and are afraid of General Pangalos and his military friends, and wonder what is going to happen to them at their hands; on the other hand they are rather hopeful since the *mariage de convenance* between Pangalos and Papanastassiou, for they regard the latter as their particular friend. General Pangalos has steered a middle course by releasing the Communists under detention at Salonika and told them "not to do it again," threatening them with conviction by drumhead court-martial and summary execution if they do. The defeated labour elements have put forward to Pangalos demands inspired by their confidence in the influence of the Republican Union, but so far have obtained nothing except polite sympathy. For the sake of vote-snatching at the eventual elections it is probable that some benevolent labour legislation will be put into force.

Financial Policy.

The policy of M. Cofinas, the Finance Minister, is obscure, but it is clear that he will follow in essentials the line of his predecessor in taking every possible precaution against frightening the City of London. It is generally thought here that the Governor of the National Bank of Greece, now in London, has been instructed to give the most solid assurances to London financiers concerning the direction of financial policy, and Government circles are now much more optimistic about their chances of keeping on the right side of foreign finance than they were at the outset of their régime. M. Cofinas is credited with the intention of holding as a threat over the heads of the Greek nation a repetition, on a small scale, of the Protopapadakis forced loan of 1922, by the further devaluation of the paper money, but these reports should be treated with great caution until something more definite is known.

The American Archæological Concession.

Much local interest has been aroused by the publication in the London Press of a story that American Archæologists have obtained a concession to dig on a large scale on the site of the old agora of Athens, which has as yet hardly been touched and which is expected to yield valuable finds. The project was reported to involve the expenditure of some fifty million sterling and the expropriation of property housing 100,000 people. This account is somewhat exaggerated in its tone, for the present scheme is to commence operations on a small scale with two or three houses and gradually to progress as money and personnel are available. The excavation of the whole area will probably extend over a period of 50 years or more, and therefore any apprehension concerning the fate of the 100,000 inhabitants of the expropriated houses is rather premature.

Athens, July 21.

Republicans and Militarists.

The internal situation has undergone no unexpected modification, although the papers are full of "statements" made by various prominent political leaders which savour a little too much of mud-slinging. The main point of interest remains the question whether Papanastassiou and his Republican Union will be able to continue his collaboration with Pangalos and his military junta. Rumour has it that relations are not particularly solid, and although the alliance probably hampers Pangalos, it is thought that the slight tinge of constitutionalism, which the alliance adds to the present Government is sufficiently valuable to Pangalos to cause him to acquiesce in certain limitations of his dictatorial tendencies. Pin-pricking is being freely indulged in, and the main point of divergence between Pangalos and his fortuitous supporters is on the question of the submission, or not, of important matters affecting foreign policy to the parliamentary commission. For example, Papanastassiou is publicly pressing for the convocation of the commission to examine the lately signed Angora Agreement, and Pangalos maintains that the question is for him to decide, but up to the present he has neither decided anything nor convoked the commission.

Well-informed circles hold the opinion that the lackey-like policy adopted by Papanastassiou has not found favour with a great portion of his supporters, who are beginning to regret their hasty vote of confidence in the present Government, and that a split in the Republican Union is imminent, the result of which will be that Pangalos will find himself practically without support in the Chamber; also he has made for himself numerous enemies among the senior officers of the Army, who require only a certain amount of time to prepare their underground schemes for organising a movement against him.

In a word, the situation is that Pangalos wants to rule if possible *solo*, until Parliament reassembles in the autumn, and Papanastassiou wants to share his dominion. Meanwhile, the country goes on peacefully amassing money.

Prosperity of Greece.

The progress in savings banks deposits is generally accounted good evidence of the prosperity and progress of a people, and under this head Greece makes a distinctly good showing. The figures given by the Greek representative at the international congress of Savings Banks at Milan show that in the first quarter of 1924 the movement in the Savings Banks departments of the various Greek Banks amounted to over 460 millions of drachmæ,

to which must be added an increase from January 1 to July 31, 1924, of nearly 13 millions of drachmæ in the deposits in the P.O. Savings Bank, and a net increase of 5,437 depositors. Savings banks date only from 1915 in Greece, and the increase in the total deposits between 1920 and 1923 is remarkable, even when allowance is made for the depreciation of the drachma.

Foreign Relations.

The new Government does not appear to have yet made any startling innovations in the foreign policy of the country. Matters are stationary as regards the relations with Yugoslavia and Turkey, and the only mildly interesting feature was the visit to Athens of the Italian Under-Secretary of State for Foreign Affairs, M. Grandi, who was received with fair words and replied in kind with true Latin elasticity. The Athenian Press, eager to pursue some new thing, seized upon this everyday incident as a text on which to hang discourses concerning the isolation of Greece and the possible advantages of a counterpoise to the overweening Yugoslav ambitions. These things must not be taken too seriously. The internal situation is too obscure, and the financial negotiations in London too important to be neglected by the present Prime Minister for the sake of chimerical schemes for the reversal of traditional Greek foreign policy.

CYPRUS.

Nicosia, July 14.

The Limassol Communists.

The foolish body of so-called Communists who, in spite of warnings from the Commissioner of the District and others, have continued to lead astray ignorant townspeople and to publish their organ, *The New Man*, have had a setback. Their leader was recently taken to the Limassol Police Station, and there informed by the Commissioner and the Chief Commandant of Police that the Government had ordered his expulsion from Cyprus. He was forthwith placed on board a Greek steamer, the Albania, then in port, his family being allowed to visit him before he sailed.

The Silk Industry.

With reference to the newly-awakened expectation of a successful development of sericulture, it is to be hoped that a stumulus will now be given to the cultivation of mulberry trees. Here we touch the everlasting question of better water supplies in the practically rainless months (say, May to October, in the plains). As Professor Patrick Geddes pointed out when visiting Cyprus, the decline of population, and often of land values, in Cyprus as in the East generally, has been largely due to the decay of the methods and practice of irrigation in the past. Even in Cyprus there were, not so long ago, simple but valuable systems, on a small scale, of bringing underground water on to lands, for example by chains of wells, which have fallen into disuse, instead of being extended, through Government encouragement and better conditions. Fortunately, for some years past much larger use has been made of air-motors—chiefly Canadian and American—in some areas, especially in the east of the island. Here oranges of the Jaffa and other varieties are largely and now very profitably grown, and there is a considerable export. There water-lifters have turned out very well. The growing of citrus trees may be largely extended in many localities.

Ex-King Hussein.

His Highness is gaining the esteem of the Moslem, and indeed of other communities, by his kindly and kingly demeanour and pleasing manners. He has exchanged visits with various leading personages, including the Armenian Patriarch, to whom he presented £50 for charitable purposes. It is said that he intends to contribute generously to a school building for the Moslem community in Nicosia.

PERSIA.

Teheran, June 26.

Quiet in the Capital.

Everyone who can afford the luxury of a house up country is now out of town at Shemiranat where all the Foreign Legations are in residence. Reza Khan Pehlevi, the Prime Minister, is on tour in Azarbaijan and Gilan, and the greater part of the troops in the north are near Bujnurd and Astara to punish the Turkomans for past raids. The capital is consequently quiet, and business slack.

The Premier's Movements.

The Prime Minister's trip to Tabriz was a great success at first, though it is rumoured that certain of the Mullahs were offended at his failure entirely to meet their wishes. General Abdulla Khan, the Governor, is popular, and has succeeded in carrying out many improvements. The Prime Minister will afterwards visit Resht and Enzeli, where Sartip Fazlolla Khan is now in supreme charge on transfer from Khuzistan, and he will return to Teheran early in July.

The Work of the Mejliss.

Nothing further has been heard of H.I.M. the Shah, and his return is not expected till the outcome of the next elections at the end of the year is clearer. The Mejliss just now is so well balanced that the Prime Minister with little effort can control the voting in his favour. The composition is at present: 56 in the Right Group under Mudarress and Prince Firouz, 32 in the Left, and 29 Independent members—totalling 117. The summer weather and the early approach of elections are having effect on the activity of the present Mejliss, but it has achieved much in the past few months. Prior to his departure the Prime Minister personally did much to secure the final passing of the Compulsory Military Service Bill. Its provisions will be gradually brought into force in the towns, but is unlikely to affect the country districts for some time. Every male is liable after 21 years of age to serve for 25 years, of which two years is Colour Service, four years First Reserve, 13 years in the Second Reserve, and six years in the Third Reserve. Curiously enough, the Act is at present a popular one in the capital, and its possibilities are scarcely realised. Other Acts of importance recently passed are as follows:—

The Registration Act for births, deaths, marriages, and for military service, and for registration of documents. The Weights and Measures Act providing for standard

measures on the metric system, to be adopted everywhere within a limit of three years. The Tea and Sugar Monopoly Tax providing for a surcharge of krans 2s. per 6½ lb. of sugar and krans 6s. per 6½ lb. of tea, to be levied after May 12. The Monopoly Administration was devised to evade the restrictions of existing Customs Agreements, but will eventually be merged into Customs. The receipts are ear-marked for railway development only, and necessitates a Railway Act now in course of preparation.

The incidence is not expected to be heavy on consumers, and the Act is not unpopular in the popular belief that it will result in a National Railway. Gradually it is being realised by the public that the receipts will at most cover a loan on capital. It will cost the country time and money to realise the advantages of private enterprise as opposed to State Monopoly.

The Registration of Companies Act has been made law and is modelled on existing European legislation of a similar character. It will be shortly followed by a Penal Code Act, the necessity of which is very severely felt.

A Bill which is in preparation, but has not yet been debated, is that for the arbitrary abolition of pre-Constitution concessions conveyed by Firmans. The Bill is loosely drafted, and in its present form most unfortunate as likely to defeat the efforts of those who wish to attract capital to Persia, at a time when it is urgently needed.

General News.

The New Russian Minister gave a reception on the 25th instant to the Diplomatic Corps and leading personalities in the Russian Legation in town. The reception was well attended. The new Minister, M. K. Jouranleff, was appointed to Teheran from Rome.

The new Ministers for Poland and Egypt have not yet arrived here, but are expected shortly.

The Khorramabad route from Ahwaz to Teheran is now in use, and becoming popular on account of its cheapness. It will, however, become popular only when guaranteed by Government or when experience has shown that its safety can be relied on for long.

The number of German experts will be shortly increased by the addition of experts on Forestry, and in Road Engineering. Other German experts now employed are the Head of the Technical School, and a representative of the dye-stuffs industry.

Three of the present staff of the American Financial Mission are due to leave at the end of June, but will be replaced shortly by new arrivals now being selected by Dr. Millspaugh in America.

BRITAIN AND EGYPT.

Sir George Lloyd on the Future.

In honour of his appointment as High Commissioner for Egypt and the Sudan, Sir George Lloyd was the guest last week of the African Society at dinner and of the Overseas Club at a luncheon.

The African Society's Dinner.

At the dinner on July 22, at the Trocadero Restaurant, the African Society entertained, in addition to Sir George and Lady Lloyd, Sir Geoffrey Archer, Governor-General of the Sudan, and Lady Archer. Lord Buxton presided and proposed the health of the guests of the evening. Among others who were present were the Hon. W. G. A. Ormsby-Gore, M.P., and Lady Beatrice Ormsby-Gore, the Hon. A. Asquith, D.S.O., Sir George and Lady Barnes, the Countess Buxton, Lady Burghclere, Mr Howard Carter, Dame Alice Godman, D.B.E., Sir William and Lady Tyrrell, General Sir Reginald Wingate, Bart., Lady Gould-Adams, General Walter Baird, Sir Henry and Lady Birchenough, Viscount and Viscountess Broome, Sir Gilbert and Lady Carter, Sir W. D. Mitchell Cotts, Bart., Major-General Sir J. H. and Lady Davidson, Baron E. B. d'Erlanger, Lady Annabel Dodds, the Hon. Mrs. Wilson Fox, Lt.-Colonel Sir Henry and Lady Galway, Sir Humphrey and Lady Leggett, Sir Sidney and Lady Low, Mr. D. O. Malcolm and Lady Evelyn Malcolm, Sir J. C. and Lady Maxwell, Sir Neville Pearson, Lady Arthur Pearson, Sir Milsom Rees, Sir Alfred Sharpe, and Sir Thomas Troubridge.

Sir George Lloyd, in reply to the toast of his health, said that he had struck his roots in the East and was glad to be going back there. He hoped that he might have the good fortune to keep alive and to fan the fires of good feeling between Islam and Great Britain, to maintain and, perhaps, to develop the old friendship between England and the peoples of Egypt, which had so long been the tradition of British policy and of British feeling. If he was a definite optimist in the task to which he was going it was because he could not help being confident that there was no necessary ground for misunderstanding. Partly by her own industry and partly through British guidance Egypt, once smitten by poverty and torn by strife, had become prosperous and attained to financial eminence, which was the admiration of her neighbours. This prosperity had been a real prosperity, inasmuch as it had been founded, not on the wealth of the few, but on that of the masses of the people. In those processes interests of special and vital importance to the British Empire had been created, the rupture of which would cause incalculable damage, not only to the peoples of Egypt themselves, but to others far beyond the confines of Egypt. Those interests it would be his first duty to protect and uphold, but in Egypt, as in other countries to-day, new feelings, new aspirations, and new impulses were all alive at the present moment, and they must recognise and appreciate this and play such a part that Egyptians of all classes and grades should feel that the British Empire was not only the most potent power, but also the very best friend of Egyptian interests and of the true liberties of her people. It was not the form nor the machinery of government that mattered, but the spirit which made for smooth working. Good will was the best, the most efficient lubrication, and good will was the ultimate solvent of Egypt's troubles. It was by mutual good will and co-operation between England and the Egyptian people that he hoped to find a solution of the problems before them.

Sir Geoffrey Archer, after paying a tribute to Lord Allenby for having asserted the high traditions of British disinterestedness and fair play, stated that Sir George Lloyd would find in Egypt a friendly Government doing its best to restore a position marred by extremists. In the Sudan the political barometer was set fair. Cotton and water were the outstanding questions. The Makwar Dam was now complete, and cotton would shortly be coming to Lancashire from 80,000 acres of the Gezira. Referring to Uganda, Sir Geoffrey Archer pointed out that it produced half the cotton grown in the British Empire, if India and Egypt were excluded. In the Northern Sudan the main problem was water; but it was capable of solution. A dam built at the north end of Lake Albert would give both Egypt and the Sudan all the water they wanted, if the canalisation of the Sudd area were also undertaken. For work of that nature Great Britain was indispensable to the two countries, and he thought that Egypt could be well content to have British executive control in the Sudan. He deprecated judging everybody by our standards alone. Toleration and consideration offered the quickest way to the heart of the native, and Sir Geoffrey Archer instanced the case of Somaliland, held with a corporal's guard, where we had been able to achieve our object by the threat of evacuation. Half a dozen political officers had made themselves indispensable to the country and had accomplished what could not have been done by force of arms.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor St., W.1.

The Overseas Club Luncheon.

On July 24 Sir George and Lady Lloyd were the guests of honour at a luncheon given by the Overseas Club at the Criterion Restaurant. Sir Ronald Storrs, Governor of Jerusalem, presided, and among the guests was Zewar Pasha, Prime Minister of Egypt. After the toasts of The King and King Fuad had been honoured, Sir Ronald Storrs proposed the health of Sir George Lloyd, who, he said, was bringing to his new post a knowledge and experience of Eastern affairs extending over a lifetime. Sir George Lloyd well knew that the secret of the East was that there was no secret. In Egypt British interests and those of the Egyptians were not only common but identical.

In the course of his reply, Sir George Lloyd said that he was very happy that His Excellency the Prime Minister of Egypt should be present on that occasion, and they all hoped that this visit of his to England would be followed by others, and that he would feel assured not only of the happy impression he was leaving behind him, but also that he would always find a warm welcome in the capital of the British Empire.

Of his task in Egypt there were those who told him that it was not an easy one. "It would be surprising if it were easy, for Fate has disposed, with bitter flattery to our generation, that all our tasks, whether we be diplomats, administrators, or politicians, should be surrounded with unusually delicate problems. The whole field indeed of our political vision had been so cracked and burnt in the fierce heat of the world struggle that, as we scan the war-scorched territory of national thought and insurgent impulse, it is hard to see how best to sow the seeds of peace, stability, and mutual understanding. But that is true of all the world and not of any one part of it, and in looking to the field in which I am going to work, I confess I look not only with real pleasure and happiness, but also with a steady optimism to what lies before me. What are the grounds for my optimism? Partly, I suppose, because I am going to live and work in a country which has for me the greatest attraction. It is a land of antiquity, of romance, studded with magnificent and monumental records of a proud and ancient civilisation. All that there is—but there is much more; there is the record of half a century when Great Britain and Egypt worked hand in hand for the modern improvement of her peoples, where poverty gave way to wealth, where strife yielded to order, where modern science yoked to an ancient civilisation brought Egypt once more to wealth and prosperity.

If I am hopeful it is because I believe that in the hearts of the Egyptian peoples those years are not forgotten, and I am convinced that an intimate friendship between the British and Egyptian peoples is essential, not only to one or the other, but to both. I go further indeed, for it seems to me that the very fact that the British Empire has in Egypt interests of such vital and permanent importance to guard and protect, is in itself a guarantee of the abiding interest and friendship which must be conserved between the two countries.

I look forward no less with keen interest to the study of the general problems in development and administration afforded by the Sudan. It was my fortune during my period of office in India to be concerned with great irrigation problems undertaken for the benefit of the people. In Western India the desiccation of that great area of the Deccan and the appalling famines that have resulted, have impelled the Government to undertake a vast chain of irrigation works. These, spread over half a century, are nearing completion—and in a few years now we shall be able to say that the monsoon has been finally harnessed to our great purpose, and that under providence never again shall famine stalk that land with its deadly visitation. In the great Northern province of Sind likewise we are preparing so that some new 8 million acres of desert soil shall become fully productive in less than another lustrum of time. In the Sudan we have similarly gigantic tasks awaiting us, not only for the increased prosperity of the Sudan, but also in order that North Africa, which drinks the whole Nile, should drink it in absolute equity to the special needs of both Egypt and the Sudan. There is, too, that vast swamp area into which five great rivers, each of them bigger than the Nile at its outflow, now pour their wasted riches, and throw their empty tribute to the sun. In the prudent but persistent development and organisation of these waters for the benefit of the peoples of the Sudan and of Egypt, there is the widest field for cordial co-operation between the Governments of Egypt and the Sudan, another opportunity for that mutual good will which it is my object to inspire.

The future, like some gaunt Memnon, straining his lidless eyes over the yellow land, is always blind; but I at least look forward to it with confident and sturdy gaze."

SCHOOL OF ORIENTAL STUDIES. LONDON INSTITUTION
(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

LORD READING'S DEPARTURE.

Lord Reading, Governor-General of India, with Lady Reading, left Victoria Station last Thursday, by the P. and O. express for Marseilles, where they embarked on the mail steamer Narkunda for Bombay. Among those taking part in the informal leave-taking were the Prime-Minister, Lord and Lady Birkenhead, Lord Louis and Lady Louis Mountbatten, Mr. Lloyd George, Lord and Lady Inchcape, Lord and Lady Winterton, Lord and Lady Lee of Fareham, Lady Oxford and Asquith, Sir Robert Horne, Sir John and Lady Simon, and a number of relatives and family connections, including Lord and Lady Erleigh, Sir Alfred and Lady Mond, Mrs. Godfrey Isaacs, and Mrs. Detmould. The company also included.—Sir Arthur Hirtzel (Permanent Under Secretary for India), Lady Harcourt, Sir William Vincent, Sir Robert and Lady Holland, General Sir Havelock and Lady Hudson, the High Commissioner for India and Lady Chatterjee, Mr. Austin Earl (representing Sir Laming Worthington-Evans), Lady Birdwood, Sir Thomas and Lady Carey-Evans, Sir Francis Oppenheimer, Colonel Bannerman, Sir Henry and Lady Dickens, Sir Reginald Mant, Mr. N. M. Samarth, Mr. H. A. F. Lindsay, Mr. J. C. B. Drake, Mr. Ewbank, Sir Muhammad Rafiq ,Mr. R. H. A. Carter, Mr. N. C. Sen, Miss Raleigh, Mr. F. Oldrieve (British Empire Leprosy Relief Association), Mr. H. S. Polak, Mr. V. Dawson, and Colonel Gidney.

OTTOMAN LAW.

Count Leon Ostrorog has been appointed to be Honorary Lecturer in Ottoman Law for three years at University College, London. Count Ostrorog was formerly head of the legal department of the Ottoman Public Debt in Constantinople and Judicial Adviser to the Sublime Porte. He graduated in Mohammedan Law at the Turkish University of Stamboul in 1897.

Professor N. N. Gangulee, who is a son-in-law of Sir Rabindranath Tagore, has been awarded the Ph.D. of London University for his researches on leguminous plants carried on in the bacteriological department of the Rothamsted Experimental Station, Harpenden.

Suleiman Sirry Bey, the Turkish Minister of Public Works, recently opened a railway Congress at Angora for the discussion of proposals for extending the existing system of railways in Turkey and to consider the possibility of effecting a reduction in fares and goods rates.

PERSONAL AND GENERAL

TO-DAY

July 30, 1925 (New Style).
July 17, 1925 (Old Style).
Muharram 9, 1344, A.H. of the Moslem Calendar.
Ab. 9, 5685, of the Jewish Calendar.

The Queen of Roumania was present at the dinner and dance given by the Duchess of Sutherland last Friday.

Moukbil Bey, Counsellor at the Turkish Embassy, left London on July 21 for Paris on leave.

The King received Ahmed Ziwar Pasha, the Prime Minister of Egypt, on July 22 at Buckingham Palace.

Mme. Ferid, wife of the Turkish Ambassador, is due in London on August 4, from Paris.

Dr. G. Djouritch, the Yugoslav Minister-elect, is expected to arrive in London about the end of August.

Queen Elizabeth of the Hellenes arrived in London last week and joined King George of the Hellenes at Brown's Hotel.

Sir Herbert Samuel, formerly High Commissioner in Palestine, arrived in Bucharest on July 21. He left last Friday for Vienna and the Austrian Tirol.

Prince Nicholas of Roumania, who is undergoing naval training on the Benbow in the Mediterranean, will arrive in London on leave about August 4.

Abdul Rahman Fikry, Secretary at the Egyptian Legation, left London on July 21 for Edinburgh to attend the International Educational Conference.

Among the visitors to the Indian Pavilion at Wembley last Thursday, was the Earl of Birkenhead, accompanied by his youngest daughter, Lady Pamela Smith.

Colonel I. Antonesco, Military Attaché at the Roumanian Legation, who is accredited also to the Legation in Brussels, left London on July 22 for Belgium to attend the Belgian Army manœuvres.

The King received Major T. N. Watson (Officer in Charge) and the King's Indian Orderly Officers at Buckingham Palace on July 24, and took leave of them upon their return to India.

The Hon. Sir Ronald Lindsay (His Majesty's Ambassador Extraordinary and Plenipotentiary at Constantinople) was sworn in a Member of His Majesty's Most Honourable Privy Council on July 24.

His Excellency the Turkish Ambassador (Ahmed Ferid Bey), His Excellency the Czechoslovak Minister and Madame Masaryk, and Lady Robertson had the honour of being received by the Queen at Buckingham Palace on July 24.

The marriage took place on July 18, at St. Mary's, Cowes, of Mr. Alfred Philip Wood, son of Mr. F. B. Wood, O.B.E., I.S.O., and Mrs. Wood, of Aroe, Patras, Greece, with Charlotte Noel, daughter of the late W. W. Barnes and Mrs. Barnes, of Balmoral, Newport-road, Cowes.

The will of Colonel George Young, of Fir Cottage, Pytches Road, Woodbridge, Suffolk, an Indian Mutiny Veteran, and one of the last survivors of the Old East India Company's Army, afterwards commanding the 56th Gurkha Light Infantry (net personalty £2,609) has been proved at £3,603.

Two of the water-colours exhibited by the Bombay artist Mr. Fyzee-Rahamin, at Messrs. Tooth's galleries, 155, New Bond Street, have been acquired for permanent exhibition at the National Gallery, Millbank. They are "Raagni Todi" (Goddess Tune), representing one of the 12 classical melodies of India, and "A Rajput Sirdar."

The Egyptian Minister and Mme. Izzet Pasha entertained at luncheon at Claridge's last Thursday:—Ziwar Pasha, Mr. and Mrs. Austen Chamberlain, the Earl and Countess of Cromer, Sir William and Lady Tyrrell, Sir Geoffrey and Lady Archer, Mrs. W. Selby, the Hon. Mervyn and Mrs. Herbert, Sir Laming and Lady Worthington-Evans, Sir George and the Hon. Lady Lloyd, Katherine Countess of Cromer, the Earl of Cavan, and M. Ziwar Bey.

Mr. J. S. Wardlaw-Milne, M.P., gave a dinner on July 22 in the House of Commons. Those present were:—The Secretary of State for India, the Under-Secretary for India, Sir Montagu Turner, Sir Henry Craik, M.P., Sir Sidney Sitwell, Sir Charles McLeod, Brigadier-General Charteris, M.P., Sir Frank Nelson, M.P., the Hon. E. J. Hawke, Sir Thomas Catto, Mr. Langford James, Mr. Sandeman Allen, M.P., Sir Thomas Birkett, Mr. W. Osbern Grazebrook, Mr. G. Pilcher, M.P., Mr. Dudley B. Myers, Sir Alfred Knox, M.P., Sir Victor Warrender, M.P., and Mr. E. T. Campbell, M.P.

PROMOTIONS, APPOINTMENTS, ETC.

The Secretary of State for the Colonies has transferred Dr. C. H. Cuff, Senior Assistant Medical Officer, Seychelles, to be District Medical Officer, Cyprus.

Major E. T. T. Todd, 1st/8th Gurkha Rifles, will vacate his appointment as D.A.Q.M.G. at Army Headquarters on October 31, and receives combined leave for one year.

Major J. de L. Conry has taken up the command of the 2nd/19th Hyderabad Regiment in succession to Lieutenant-Colonel C. H. Jardine, who has vacated the appointment.

The honorary degree of Doctor of Laws was conferred by the University of Edinburgh on July 22 on Brigadier-General Charles Granville Bruce, chief of the Mount Everest Expedition.

Ahmed Ziwar Pasha, Prime Minister of Egypt, was invested by the King with the insignia of a Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George on the occasion of his reception by his Majesty at Buckingham Palace on July 22.

Colonel Miralai Russel Pasha, Commandant of the Cairo City Police, whose name was so conspicuously associated with the tracking down of the murderers of the Sirdar, has been promited Lewa (the equivalent of the rank of Brigadier-General).

THE PLACE OF CASTING.

By "Fulanain."

The plains of Lower Mesopotamia, all travellers are agreed, are unutterably dreary, flat, and featureless. Still, their monotony is occasionally broken; and the low mounds which mark the sites of ancient cities sometimes serve other ends than that of mere relief to the eye. Here is a useful landmark on a rarely-used caravan route; here the resting place of some holy man, whose bones still bring blessing to those whose faith is great enough; here is the common cemetery for many of the neighbouring tribes. One of these mounds I often passed on my way to the rice fields, and classed it with the majority of its fellows as devoid of all interest except in so far as it broke the changeless flatness of the plain, until by chance I heard the name by which the tribes knew it: Masub, the Place of Casting.

Why the Place of Casting? Once, in earlier days, the mound had been surrounded by marshes; but the water, receding year by year, had left Masub high and dry, until to-day it stands in the barren land which, once marsh, has become first rice land, then wheat and barley growing land, and finally an uncultivatable waste.

Once in the rice country, slipping silently down a narrow canal in the *mashhuf** of Shaikh Thamir, I questioned my host.

"Why do they call that mound Masub?"

A voice behind me answered, before the sheikh had time to reply.

"I will explain to your Honour."

I turned to look at the speaker. A very old negro, his face seamed and lined with wrinkles, the ends of his grey woolly beard dyed red with henna, laid down his paddle, in order to give his whole attention to his story.

"I will explain," he repeated. "Well do I know the reason, for the tale was often told me by my mother. And she was bought by the great Faisal for twenty-five liras," he added with pride, as one might mention the fact that one's ancestors came over with the Conqueror.

Most of the sheikhs in Iraq are the owners of slaves, who seem to have no quarrel with Fate on the score of their condition. They are, as a rule, well treated, address their master as "my uncle," and may rise to positions of considerable influence and power. As is natural in a Mohammedan country, the yoke of slavery presses most heavily on the women. A female slave may be given by her owner to whom he will, for the purpose of adding to the number of his slaves, and the child belongs not to her but to her master; even if she is formally married to another slave, with the usual payment of dowry, their child is not freed from bondage to its mother's owner.

The lot of the slaves, in those exceptional cases where they were badly treated, has improved since the British Occupation. Once my old friend Makia, a sheikh in her own right, made an illuminating remark on the subject. The matter on which she had come in having been settled, she sat in silence for some minutes. Then she burst out with a sudden question.

"Can you *expect* me to be grateful to the British?"

"Why not?" I asked.

She replied, "I had fifteen women slaves. Thirteen have run away, and the Government does nothing to help me to get them back."

I said nothing.

"Still, I dare say I deserved it," went on the deep masculine voice of Makia. "They didn't like my branding them with hot irons," she added with her hoarse chuckle.

But the old man who had been paddling vigorously behind me all this long, sunny morning was probably one who found slavery to his liking. He was on the best of terms with his sheikh, and felt quite at liberty to drop his paddle and join in the conversation when it interested him.

"In the days of the great Faisal," he began, "the Chawaimal, as now, were cultivators of rice, though not as an independent tribe, for they paid tribute to the Bani Madhkur. Now Faisal was young, and a proud sheikh, and he counted it a disgrace that his tribe should pay tribute to any. So one year he made excuses and did not pay, and when after some months messengers came from the Sheikh of the Bani Madhkur, ordering him to send at least a part of his dues, he sent them away with insults, openly refusing any longer to acknowledge an overlord.

"Zumzir of the Bani Madhkur, as proud a man as he, began to collect his tribes at Bahatha, for the overthrowing of his disobedient vassal. Faisal called together his own men likewise. Then came news that Zumzir was building mud forts at Bahatha, and we rejoiced with scorn and taunting, for we thought he was afraid to come down and fight our sheikh in open battle. We rejoiced too early. Soon the reason of his building became apparent: he had brought together, not only his armed warriors, but men used to toil in the fields, and these he had set building a great dam at the head of the Madina canal, from which our rice fields drank their water. Thus Zumzir achieved his end, with no fighting and without venturing into our marsh country; for Faisal, unable because of its protecting forts to break down the dam, thought it better to pay than to lose the whole of his rice crop—the value of ten years' tribute. But those who sat with him that night in the *madhif*† say that he broke silence only once, to swear "by Allah, and in Allah, and through Allah" that this year of humiliation should be his last of vassaldom.

"After that day his people saw no more of Faisal for many weeks. He shut himself up in his fort, and all we heard of him was an order that no coffee should be drunk in the tribal madhif, until the stain of his disgrace should be washed away. Day after day the coffee-beakers stood empty in the unkindled ashes, and the old men who had gathered nightly to talk of war and the good days of their youth came no more to the madhif.

"At last Faisal came forth from his fort, smiling the smile of a conqueror, and made a great feast for the headmen of the tribe. None knew what his plan was, save that messengers who had been sent with money to distant Baghdad had returned, bringing with them a certain Saiyid, by name Ali son of Mahbush. But after the feast, Faisal gave orders to his mullah that every family, both of his own tribe and of those who owed allegiance to him, should send him copper vessels, each household to the utmost of its ability.

"The order went forth among the people, and they hastened to obey, for Faisal was a sheikh whose bidding

it was best to do quickly. They sent in cooking pots of copper, and coffee pots of every size, from the heavy *gum-gum* to the tiny *dallah* copper trays and water-vessels they sent, and *mushkhanas*. There was no stint or hold-in back, for it was said that the sheikh was in need of copper for the making of a mighty spell against the Bani Madhkur.

"Faisal chose the *ishan* we have just passed, that which which men now call Masub, for the place to which all the tribes should bring their gifts of copper. Here, where the surrounding marshes gave him security from his enemies, he set to work, building a mighty furnace. Every day from dawn to sunset came mashufs from all the neighbouring tribes, bringing *bardi* and *gossab*‡ to heat it, and every day came more mashhufs with household vessels from the more distant settlements.

"Ali, the Saiyid from Baghdad, directed the work. He showed the sheikh's men how to make moulds of dried mud, each one in a deep pit. The copper vessels were heated in the furnace, and the molten metal poured into the moulds. All the tribesmen made *hosa*§, running round the smoking pits, waving their swords and lances, praising the ingenuity of Faisal.

"The sheikh and all his people waited breathlessly for the cannon which, the Saiyid had said should be made from their household vessels; but alas, there was no success. Then Faisal ordered that the furnace be rekindled, and the metal melted once more, for he had set his hand to the task, and would not own to failure. This time sheep were slain as a sacrifice to Allah, but still with no good result, so that the people began to murmur, asking one another how it could be possible for them, ignorant folk of the marshes, to make cannon such as the Turks employed in their wars against other great nations. And those who had spent many days in bringing fuel for the furnace begged leave to return to their homes, saying that it was now the turn of others.

"But Faisal would not listen. He ordered the people to bring in more *bardi*, as much again as they had brought before. And for the third time the furnace was heated, many hundreds of men running to and fro with more fuel and still more, while the shaikh himself stood by and encouraged them with cheering words. And this time, Allah was gracious.

"When under the direction of Saiyid Ali the cannon had been taken from their moulds, some of the men were set to smoothing them with roughened pieces of iron, others were called in to make wheels, and others the sheikh set to work to make powder.

"That was a great work, of which men talked far and wide, so that the Bani Madhkur heard of the hostile intentions of our tribe, and their sheikh with many followers came out with war flags against us. But thanks to Allah and the cannon of Faisal, the Bani Madhkur broke and fled."

"Were many killed by the guns?" I asked.

"Five or six," said the old negro, "May Allah have mercy on them!"

"Only five or six! Why did Bani Madhkur flee at the loss of so few as that?"

My error was gravely corrected. "The cannon killed five or six of our men. None of the Bani Madhkur was killed, but because of the great noise they were filled with terror, and fled."

"And after that, what happened?" I asked.

"After this great success, Faisal determined to attack his enemies, and free himself once and for all from their yoke. Their forces, many hundreds of horsemen, were collected at Abu Hassaniyah, behind the great bund which protects their land from the Tigris floods. But when the men of the Chawaimal, in their mashhufs, saw how many were gathered against them, they were unwilling to land, saying that they feared no enemy in their own marsh country but could not hope to match the mounted men of the Bani Madhkur in their open desert.

"Then Faisal spoke to his followers, and promised them horses more fleet than those of the enemy. He kept his word, for he had brought his twelve good cannon, on *danaks*‖ lashed two by two, and with these he broke down the great bund. The waters rushed in over the dry land of the Bani Madhkur, and our tribesmen followed in their mashhufs, passing swiftly where the horses could only flounder. Great was the defeat of the Bani Madhkur, and their yoke was lifted from the Chawaimal tribe. Thus, Sahib, our Faisal brought freedom to the people."

The old slave took up his paddle once more, and fell to work, crooning softly under his breath—the song a pathetic link with his own unknown freedom, for the words, meaningless to him, were those which are sung to their children by the mothers of far-off Africa.

A strange story he had told of pluck and energy, of one man's will overcoming obstacles which might well have seemed insuperable! It seemed hardly credible that nearly a century ago an ignorant savage of these wild marshes should not only have conceived such a project, but have carried it through to success, and I should have been inclined to doubt the old slave's story, had I not heard of the cannon from other sources, and learned of the disaster which, in the end, they brought upon Faisal and his tribe; on this point the negro had been silent.

In those days, only Baghdad and Basrah were occupied by the Turks, the intervening tribes being left to their own devices. But news of the existence of Faisal's guns reached the ears of the distant rulers; they became alarmed at the increasing strength of the tribes, and resolved to break them before it was too late. Thus the Chawaimal, after one short taste of liberty, found themselves under a yoke far heavier than that of the Bani Madhkur, and under masters far more tyrannical, grasping, and corrupt. The guns were taken to Baghdad: and I have often wondered whether, among the collection of disused, antiquated cannon found in the citadel after the fall of the town, were numbered the clumsy, home-made, splendid guns of that fine old warrior Faisal.

‡ Reeds. § War-dance. ‖ Large type of mashhuf.

THE WEEK AT HOME

London, Tuesday Morning.

The Coal Crisis.

Although the Government succeeded in bringing together the rival delegates of the coal-industry last Friday afternoon, the real battle will not come until after I write—to-morrow afternoon. In the meantime opinions upon the probable result of this eleventh-hour conference—which takes place but forty-eight hours before the expiry of the Agreement—vary in accordance with the equally unfounded optimism or the pessimism of the individual. Those who believe that something like a real solution may be found are relying not so much upon the stupidity or cleverness of one of the parties, nor upon the general sympathy that the rest of the world of Labour and of Capital are reported to have with the miners and with the coal-owners, but upon the intervention of a beneficent

Government. For there is a common credence in the generosity of the Premier's nature, and it is thought that no such cruel lock-out as is contemplated by the owners will be permitted during his régime.

It is by this time fairly obvious to even the stoutest defenders of our present industrial system that this crisis, if it is precipatated, will be the result, not of a strike, but of a lock-out; but it must also be fairly obvious that the miners, in refusing the suggested reduction in their wages, are really acting upon the best Capitalist principles —the miner in effect says to the Capitalist that he will serve him for three guineas a week, but not for two. Whatever be the ultimate intention of the miners, therefore, whether it be socialisation of the mines, or merely an improvement of the present system, the arguments they are using are fundamentally capitalist. So that we get the curious spectacle of principles identical in spirit being used in practical opposition. Whether the Government can resolve this anomaly will be seen to-morrow. Meanwhile, the nation is anxiously waiting. But even now one would not swear that the equalising by Hobbs of "W. G's" record is not more anxiously awaited.

The Admiralty's Victory.

The Admiralty has secured its annual victory, and this time not only over the preachers of economy within the Cabinet, but also over those who believe that the defence of this country depends much more upon our air fleet than upon our Navy. Possibly the fight within the Cabinet was exaggerated by imaginative journalists, but there does appear to be real ground for assuming that the Chancellor of the Exchequer stirred himself to oppose the Admiralty's ingenious scheme of "replacement." As a matter of fact, the Navy's triumph will not be reflected in this year's Budget, but if Mr. Churchill wishes to add further to his reputation, he had better not be Chancellor of the Exchequer next year, for without question the new cruisers will have to be paid for either out of new taxes or out of savings which normally would have gone to the relief of taxation.

The ordinary man who is no expert in these matters looks on a little bewilderedly. But at least he can see the wisdom, given the desirability of concentrating upon naval defence, of securing continuity in naval construction. In other words, it is not the scheme, but only the decision of the Cabinet, which he is a little prone to criticise.

The End of the Drought.

For Southern England at any rate, the end of the drought came last week with most violent suddenness. Thunderstorms and downpours visited us mercilessly; at night between the rollings and flashings of the heavens one could lie awake literally hearing the passage of the rain before it descended. It is always a thrilling experience, hearing in the dark silence the downpour before it has poured down. And how sweet, after the deluge, smelled the good earth and the grass and the flowers! The brown lawns and courts took on the green that we love to think is peculiarly English; and the bowler smiled in anticipatory victory over the too-long triumphant batsman.

The Harvest.

But there is another side to these things. The sunny summer and the long drought have caused the harvest to be both very white and small. In the Midlands, they say, a grass field resembles an oatfield, so bleached are they both become. Oat-crops had to be cut far earlier than usual; some fields have actually been ploughed already. And though in the West of England the harvest has been very gratifying, the Eastern counties (by which the English harvest is always judged) and the Home counties have another tale to tell. In some parts of Hertfordshire and of Norfolk, for example, one can see at a glance the excess of dryness, and it is calculated that in oat and barley crops the yield is not within fifteen per cent. of the normal. All the same, a passage now, after the rain, through our agricultural counties is to the layman one of the finest sights that the Earth affords.

The Purchase of Honours.

The abuse of Honours is not quite so prevalent at the moment as it was immediately before and after the War, but the despair of ever ridding ourselves of this accretion upon the Party System was shown when the second reading of Sir Douglas Hogg's Bill was introduced into the Commons last Friday. The mover himself confessed that the punishment by fine was not likely to put an end to traffic in honours, and there was a general atmosphere of impotence in face of this recognised practice of purchasing honours. It fell to a Liberal Member, Captain Wedgwood Benn, to make the only sensible contribution to the debate, for he stated—what of course has long been known to sincere students of the problem—that the only real way to get rid of the taint of money payment was publication of the lists of party funds. He, indeed, out-Persianed the Persians, and said that he saw no reason why in a democratic age signs of distinctions should not be abolished.

As a Liberal he had naturally to talk of democracy, although it is patent to everyone that the English is an aristocratic people, and so loves titles that it will suffer plutocracy (as indeed it is now doing) rather than have democracy. And it may be that neither the Conservatives nor the Labour men suggested the publication of the names of their "benefactors" because these have now become more numerous than those of the Liberals. After all, the Conservatives are in for a long time, and when they are succeeded, it will be those who are responsible for the incident of the Daimler Car. Our business-men are not unmindful of these things.

The Name of Gladstone.

Nothing has been more characteristic of post-War journalism than the tendency to broadcast to the world the private deeds of public men. It is a tendency that in many cases has far outstripped the bounds of decency. Fortunately, however, it is less prevalent than it was a year or two ago.

But the whole question of the propriety of the practice is likely to be raised again by the protest which the sons of Gladstone have raised against Captain Peter Wright's defamation of the Liberal statesman in his recently published "Portraits and Criticisms." Viscount Gladstone and Mr. H. N. Gladstone have written point-blank to Captain Wright calling him a liar, a coward, and a fool. It must be many years since English letters contained such direct charges, but it is by no means a bad thing to revive the tradition of outspokenness that was at one time a distinguishing mark of our prominent men.

The Sargent Sale.

The two sides that there are to every picture, the commercial and the artistic, were seen very clearly at Christie's when a few Sargents came up last week and yesterday for sale. On the first day alone almost £146,000 were obtained a price that is, of course, fantastic, and one which could result only from the actions of patriots or speculators. For the most part it was a case of England and America (both of which countries claim Sargent for their own) bidding against each other, but for a small water-colour to reach nearly £5,000 was an event, I should think, unprecedented in the history of British painting.

But much the most interesting aspect of this sale lies in the question: how does it reflect real values? Was Sargent so incomparably above his contempories in portraiture and in water-colours as these figures suggest; or is it merely that to realise huge posthumous prices one should take the precaution of making oneself known in America?

ALTER EGO.

Indian Affairs.

THE COMMONWEALTH OF INDIA BILL.

The mail of July 3 brought a memorandum on the "Commonwealth of India Bill," signed by 41 Indian politicians of various parties, some of whom may rightly claim to be leaders of political thought in India, though most of the best known names are absent. They include the Right Honourable Mr. Sastri, Sir Tej Bahadur Sapru, late member of the Governor-General's Council, Mr. G. S. Khaparde, an influential member of the Council of State, Mr. Jamnadas Dwarkadas, lately an equally influential member of the Legislative Assembly, Mr. N. C. Kelkar, a Bombay Swarijist on whom some part at least of the mantle of the late Mr. Tilak fell, and Mrs. Besant. The memorandum says that the Indian National Congress unanimously passed, in 1914, a resolution that India should be placed on an equality with the self-governing Dominions and, in 1918, another claiming the right to self-determination: and that the signatories now "demand from the Parliament of Great Britain the passing of a statute embodying these resolutions." It then goes on to assert that, so far from any action having been taken in that direction, "steps are being taken to perpetuate the administration of the affairs of India by a foreign bureaucracy and assurances are being authoritatively given to British undergraduates to induce them to enter the service of Great Britain in India by promises that they will have a life job." Incidentally, it declares that India "is on the down grade under British rule": under the present régime she can neither revive her ancient prosperity at home nor defend her nationals abroad: and an enormous proportion of her revenue is spent on the Army because it exists for Imperial purposes, not for home defence. These are stock arguments, in which there is nothing new: the rather pathetic belief in the golden age of India before the advent of the British is no novelty, no matter how often and how completely it has been exploded: nor is the refusal to admit that British development of industry, railways and canals has been of crucial value to India, as the means—and the only means—of permitting the vast expansion of the population of India since the era of the Moguls. It never seems to occur to any Indian politician to inquire how, without the material benefits provided for her by "a foreign bureaucracy," it would be possible for India to support a population of 320 millions, or to envisage the enormous human disaster that would necessarily ensue if those material benefits should cease to be operative. Many thoughtful writers have drawn a moral from the political chaos that now exists in China, and have predicted a similar fate for India should the strong hand of the British administration be withdrawn; but one seldom sees any mention of the fact that China's population reached its economic limit very many years ago, since when its further growth has been prevented by vast calamities of which the outer world hears little, but which represent an appalling amount of human suffering. Forty years ago the textbooks used to put the population of China at something between 400 and 450 millions: they now put it at about the same total as that of India—320 millions. The diminution is very likely due to more accurate computation, but at least makes it certain that there has been no increase.

But, if these are stock arguments, often repeated until those who employ them have come to accept them as facts, what can be said of some others, put forward in the memorandum? The recent alarming recrudescence of communal strife is thus explained: "There is only one cure for the admitted 'restlessness' of India, and that is her freedom. Her irritability finds vent in domestic quarrels because she is denied self-expression as a nation." One ought, no doubt, thankfully to recognise that one, at least, of the old stock arguments has been dropped—that Hindu-Moslem strife in India is solely due to "the British policy of *divide et impera*," which deliberately fans communal differences that would cease to exist with the removal of their instigator. How is it possible to accept, as a serious statement of the belief of the signatories to the memorandum (who, it is true, are almost all Hindus), that Hindu-Moslem differences are solely due to the absence of national "freedom," when prominent Hindu leaders are starting an organisation to protect their community from the danger of foreign Moslem invaders, whose aid they profess to expect the Moslems of India to invoke in order to redress the inequality of numbers between themselves and the Hindus in the event of the grant of self-government—that "Hindu Swaraj," to defend themselves against which the Moslem leaders are starting counter-organisations? And, patently absurd as this argument is, the climax of absurdity is surely reached when the signatories permit themselves to indulge in the childish statement that "the Prime Minister has made the sinister proposal that the term 'Empire' shall be changed into Commonwealth of British Nations, thus relegating India definitely to the detested position of a dependency." It would, indeed, seem ridiculous to accept such an argument seriously, and hopeless to argue with persons who claim to speak for "the people of India" and can yet solemnly commit themselves to so preposterous a misrepresentation. After this, it is no matter for surprise that the memorandum should continue with what are described as a "statement" and a "warning," expressly disavowed as a threat. The statement is that, if Great Britain is obdurate in her refusal to grant Dominion status to India, "government will become increasingly difficult and ere long impossible": and the warning, that a nation cannot for ever submit to foreign domination and that Great Britain must beware of a mistake such as she committed in the case of her American colonies, but avoided in that of her existing Dominions.

The memorandum proceeds, "No intermediate steps are required—and so far as we are concerned they would be rejected—before the establishment of Dominion status in India by the passing of a measure made by Indians": and concludes, "We therefore demand from the British Parliament the passage of the Commonwealth of India Bill. . . The country is organising itself in its support, and the work will be carried to success, for when a great nation demands its freedom it cannot long be denied." Here, then, we have three stages—a statement, a warning, and a demand: none of which is intended as a threat, though their combination amounts to an ultimatum. It is worth noticing that the two signatories representing the submerged classes signed "subject to safeguarding the interests of the depressed classes," which shows that they, at least, look upon the Bill, and its authors, with some suspicion: while Sir Tej Bahadur Sapru, the only one of the signatories who, as an ex-member of the Governor-General's Council, has any practical training in the art of government, signed the concluding paragraph only—which apparently means that, though he dissents from the arguments employed, and dissociates himself from the statement and the warning, he accepts the conclusion whereto they lead, and approves of the ultimatum. Before Mrs. Besant left India, she and her associates in the preparation of the Bill publicly announced that they would reject any suggestion of compromise—that they stood by the Bill, the whole Bill, and nothing but the Bill, which must be presented to Parliament to take or to leave—to pass without amendment, or to reject altogether. She added that, if Parliament did reject it, it would be presented again and again, until they made a virtue of necessity and took the only course that could save the situation. No doubt this also was no threat: merely an announcement of the terms that would be dictated to an opponent so completely defeated as to be incapable of further resistance.

And what of the Bill itself? It lays down that the Viceroy shall be a constitutional ruler, acting solely on the advice of his Cabinet except in two matters: relations with the Indian States which are, "for the time being," to be excluded from the provisions of the Bill, and military defence "until such time as (the Indian) Parliament shall, in pursuance of the recommendation of the (Indian)

Digitized by Google

Defence Committee, signify its readiness to assume control over the naval, military, and air forces of the (Indian) Commonwealth"; till when, the Indian Parliament "shall have no power to make any law with regard thereto without the previous approval of the Viceroy." The Bill contains no provision under which the Viceroy can legislate of his own motion, without the consent of his Parliament; so that it would appear that relations with the Indian States, and matters of national defence, are to be left in *statu quo*, without alteration, until such time as the Indian Parliament is prepared to get to work on them. If so, it is obvious that the interregnum would have to be as short as possible: and the clause constituting the Defence Committee evidently envisages such a result. It is to be appointed by the Viceroy "in consultation with" his Cabinet, with a majority of Indians, every five years: its duties are to recommend the total expenditure to be incurred on the Indian Defence Forces, with the proviso that "no revenues of the Commonwealth shall be expended on those branches, if any, of the military, naval, or air forces in which Indians are ineligible for holding commissioned rank": and "to report on the progress in the Indianisation and training of the Defence Forces of the Commonwealth, so as to enable the people of India to undertake their own defence as soon as practicable." The Indian Parliament is to consist of two Chambers, a Legislative Assembly and a Senate: each Province will be under a Governor, also ruling constitutionally, with a Legislative Council, which will have the right to add a Second Chamber if its decision, to that effect, be approved by referendum among the electors of the Province. The Indian Parliament may admit to the Indian Commonwealth, or establish, new Provinces: and may, with the consent of the Provincial Legislature and with the approval of a majority of the electors in the area or areas to be affected by the decision, voting upon the question, increase or diminish or otherwise alter the limits of any Province. There shall be a Supreme Court for India, against whose decisions no appeal shall be permitted to the King in Council unless the Supreme Court shall certify that the question is one that ought to be so decided. Until the Indian Parliament otherwise provides, the appointment and removal of all officers of the Executive Government of the Commonwealth shall be vested in the Cabinet: and, immediately on the establishment of the Indian Commonwealth, a Public Services Commission shall be appointed to make recommendations for such reorganisation and readjustment of the departments of the Public Services as may be necessary, and in regard to assignment of officers to the several Provinces. After it has reported, the Viceroy, acting on the advice of his Cabinet, shall assign to each Province such officers as may be necessary, who will then become officers of the Province. Later, a permanent Public Services Commission will be set up, with full powers over all public officers. Any officer not retained in the service of the Commonwealth or assigned to that of a Province" will receive such pension, gratuity, etc., as he would have received in like circumstances, if the Commonwealth had not been established. There are to be a series of "sub-provincial governments," beginning with that of the (rural) Village and the (urban) Municipal Ward, and rising, in an ascending scale of importance, through the "Taluk" (group of villages), the Municipality and the District (group of Taluks). The Village or Ward will elect a "Panchayat" whose members shall serve for one year: the "Taluk" a "Sabha" for two years: the District or Municipality a "Samiti" for three years. Electors must be 21 years of age and, if "aliens," must have resided in India for at least five years: there will be no disqualification of sex. The "Panchayat" will be elected on manhood suffrage: the "Sabha," the "Samiti," the Provincial Legislative Council, and the Central Legislative Assembly on an ascending scale of educational and property qualifications, particularised in detail in the Bill. Communal Representation will be abolished, and all elections will be held on the basis of purely territorial electorates. As a temporary measure, the number of seats now reserved for Mussulmans and Europeans will be guaranteed for five years, at the end of which period the question of their continuance, modification, or abolition will be examined by a Franchise Commission set up for the purpose. A Finance Commission will be appointed every five years, to make recommendations regarding the apportionment of the revenue between the Commonwealth and Provincial Governments: inter-Provincial trade shall be free, and nothing shall be done to give preference to any one Province or locality over another.

It is impossible, of course, to accept seriously the claim of the authors of the Bill that it must be accepted and passed as it stands, without compromise, without amendment, without any "intermediate steps." As it stands, the Bill is more a piece of political propaganda than a serious attempt to solve an intricate problem. Indian politicians have long complained that the British Government, while affecting to approve, in principle, of the eventual Indianisation of the civil and military services of India, have only made even so much of a gesture with reservations that make it ineffective. The Secretary of State has started a recruiting campaign at the British Universities: the Bill shows the way to make this campaign of no effect—the Indian Parliament will retain any officer whom it is its pleasure to retain, and will scrap the rest. The British Government keeps in its own hands the appointment of officers to the British Army, to the Artillery, and to the Air Forces—the Bill lays down that, if it desires to continue to do so, it can itself pay for its contribution to the military establishment in India, that is, as the authors of the Bill affect to believe, kept at its existing strength to serve Imperial ends without reference to the real military needs of India. The unofficial Briton in India claims that his material services to his adopted country are out of all proportion to the numerical strength of his community, and that this should be recognised much more than it is at present: the Bill disfranchises him during the first five years of his residence in India and, while agreeing to retain his present meagre legislative powers for five years, quite clearly intends to reduce it, if not abolish it altogether, after that period. It is true that it proposes similar action in the case of the Moslem minority: and, as the only recognisable Mohammedan name among the signatories to the memorandum is that of the egregious Shaukat Ali, it is—to say the least—unlikely that Moslem opinion will accept the Bill as anything but an avenue to that result of which they continually express their open fear—"Hindu Swaraj." It is, indeed, characteristic of the inveterate inability of Indian politicians to face facts that this predominantly Hindu coterie should solemnly put forward their Bill as receiving the support of "the country." But this is not to say that the Bill, preposterous as it is when examined as a whole, does not contain points not only of real interest, but of real value. To begin with, it is a constructive plan, and as such a welcome novelty after the years of negative or destructive effort that have, so far, followed the introduction of the Reforms. Dyarchy was admittedly an experiment, intended to usher in the transition stage between "paternal" and democratic government; the actual form that it took was, no doubt, largely due to the fact that Indian opinion had not crystallised sufficiently to suggest an alternative. An objection, voiced by Indian opinion of practically all shades, to the Government of India Act is that it attempted to foist on the East a form of government on the pattern of Western civilisation, but entirely foreign to their own: and we have now the advantage of seeing a scheme drawn up by Indians and giving their own ideas as to what the ultimate form of government in India ought to be. It is not at all impossible that the Commonwealth of India Bill may contain the germ of what that form of government ultimately will be; for the rejection of any "intermediate steps" between the present Government of India and full-fledged Dominion status is a claim the absurdity of which is recognised the moment it is examined. The proposal that bases the ultimate democratic government of India on the village unit, with its immemorial "panchayat" system, is no new one, and has often been put forward before, though never in precise terms, as part of a considered scheme, as it is in the Bill. And perhaps of even more interest is the clause that suggests the recasting of the limits of the existing Provinces, for in this lies the germ of what many people believe to be a real solution of the problem of Indian Government. The Indian National Congress has its own "electorate"

Digitized by Google

and its own "Provinces," widely different from those that obtain in India to-day, the latter being twenty in number, following the main racial and linguistic divisions of the country roughly indeed, but much less roughly than do the existing "official" Provinces of India. This is a large subject, demanding separate treatment, that cannot be discussed within the limits of the present article; it is enough to say now, that the Commonwealth of India Bill, though it cannot be admitted to be worth serious consideration in its present form and within its present limitations, should be welcome as the first definite attempt on the part of Indian thought to solve the problem of India: and does, at any rate, provide a basis for discussion and consideration, in the hope that its authors may realise the impossibility of their present attitude, and may, after all, find themselves in a mood to "try again."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 9.

Lord Birkenhead's Speech.

Lord Birkenhead's statement in the House of Lords pleases nobody. The Indian "Liberals" sit on the fence this morning, obviously puzzled by the cabled comments from the English Press; the *Statesman* has no doubts as to the dampness of the squib and is more than a little annoyed that its intelligent anticipation appears to have been severely edited on its way to the public ear. The extremist Press has a handsome present in the comments of the Home papers and is not slow to use it; *Forward* quotes the *Morning Post's* "frigidly pompous nullity" right across its centre page, and adds "a blustering outburst" and "an open challenge" as sub-heads. Its leader-writer concludes that this is an attempt to bully "the people, particularly the Swarajists," to work the Reforms, and he adds that Lord Birkenhead's obsession will not leave him until hard facts knock the "impressions" out of his brain. The recent promise of the Secretary of State to the Prime Minister affords an opportunity too good to be missed for facetious comment upon the time spent in journalism which might have been better spent in the India Office, and the article ends with a vehement denial of the right reserved to the British Parliament under the Reforms Act, to determine "the time and manner of each advance" in self-government.

It is a little early to speak of general impressions, as the speech was only available this morning; but if no more was available for saying than this, it is a pity it was not said much sooner.

The Commonwealth of India Bill.

With recollections of crowded audiences in Kensington and Langham Place, swayed by the eloquence and fascinated by the personality of Mrs. Annie Besant, it is impossible not to wonder to what extent public opinion will be misled by the deputation which has gone to England to urge the immediate grant of Dominion status to India. The value of the memorandum recommending the passage of the Commonwealth of India Bill is well understood in India, but it is not intended for Indian consumption. The signatories do not include a single Bengal Swarajist, and though they mostly come from Bombay and Madras, one looks in vain for names that have recently been conspicuous in political circles; there is no unanimity behind the proposal and the memorandum is misleading from the beginning. Its value may be judged by the signature of Bepin Chandra Pal, who combines a sort of semi-extremism with the writing of frank political articles in the *Englishman*. He signs the demand for the immediate grant of Dominion Home Rule to India, but in an article published this week he puts forward a series of arguments to show that India is not ready for self-government and adds that to talk of giving, or getting, Swaraj under these conditions within a year or even a decade, or twenty years, is to adopt the familiar tricks of a clever company promoter. How many people who see the mass of signatures will hear of the comment on them by one of the best known of the writers?

The Mayor.

Nothing is yet settled in regard to the appointment of a successor to the late Mr. C. R. Das. The matter should have been before the Corporation yesterday, but it was postponed by orders of the Swaraj caucus as it has not been possible up to date to settle the claims of the contending parties. Even among the Extremists there is more than a little resentment at the part that is being taken in this matter by Mr. Gandhi; he is strongly urging the claims of the new Congress leader to the third of the offices which formed the triple crown of the late Mr. C. R. Das and, in spite of the objections from all sides, it is quite likely that his wishes will prevail in the end. It is a significant comment on the political capacity of the average member of the Swaraj Party; it would be grotesque to pretend that the new leader can be compared with the old either as a politician or as a leader, and his claims to be the Mayor of Calcutta are absolutely nil; further, Mahatma Gandhi knows nothing of Calcutta or its problems and he lives in a world of his own where he is completely out of touch with material things, and Calcutta is one of the most material towns in the East; yet he is regarded with such a personal reverence that his wishes in this matter are quite likely to carry the day. The policy of such an appointment is more than doubtful; it is actively dangerous to the party which makes it, and will eventually recoil on the heads of those who can show such a contempt for the city and its needs.

Assam.

Political news from Assam is sufficiently rare to make a headline in the daily paper conspicuous, and this week reports have come through which indicate a certain amount of mild excitement in connection with the salaries of the Ministers appointed under the Reforms Act. In previous sessions the salaries have been both reduced and raised, and there is now a proposal to interfere further with them. Happy is the Province in which there is nothing else to disturb the executive; conditions in Assam appear to be much more satisfactory than in the sister Province of Bengal. Thanks to the absence of agitators, labour is contented and the situation is better than for some time past, and those concerned in the tea districts have every cause to congratulate themselves on the present state of affairs.

Bakr-Id.

The magistrate and the police spent a long day yesterday in parading the coolies employed in the new dock works and identifying those who were concerned in the racial riots at the Bakr-Id; thanks to the prompt steps which were taken, the incident remained one of little importance; but it is a reminder of the inflammable material which is always liable to ignition at such times. One man was killed and some forty injured, a comparatively small casualty list when the vast number of labourers engaged in the mills along the banks of the Hooghly is considered. At Delhi there was an imposing preparation against expected trouble, with the usual result that everything passed off quietly; it is to be hoped that the situation will not have to be faced in such a way in the Calcutta area, for the expense alone would be staggering apart from the number of troops required.

Protection.

Tatas are asking for more; the protection and the bounty they have already do not enable them, according to the evidence offered before the Tariff Board this week, to meet Continental competition, although they are now happy as competitors with British steel. They therefore ask for a further bounty, and put forward an imposing array of figures to support their case, coupled with promise of increased production and reduced costs if their demands are granted. Judging by precedent, they will be granted, as the solitary printing ink factory in Howrah has just been encouraged by a tax on all similar imports throughout India. The Home manufacturer, and the Labour Party, should read the signs of the changing times.

Digitized by Google

Markets.

There is nothing to report in regard to piece-goods, except possibly a deepening of the gloom. Jute, however, more than compensates; the forecast is out and, while showing an increase on last year's figures, is much below market anticipation. The market at once rose and is still inclined upwards. The position was reflected in an improvement all round in fabrics, and the market closes very confident. Tea is better underneath than the cable accounts indicate. There is no reason to anticipate any weakening in spite of a substantial increase of stocks. Exchange, after some dullness at the week-end, has improved again on Government buying and closes with a steady undertone.

THE INDIAN COTTON SITUATION.

(By Our Bombay Correspondent.)

Bombay, July 10.

Sir Basil Blackett and Mr. Chadwick visiting Bombay this week have been severely heckled by the various bodies representing public opinion on what Sir George Lloyd, at the Bombay dinner held in London on June 12, called the profound mistake of the Excise Duty. Unlike Calcutta, which has tea, coal and zemindaries, besides its jute mills, Bombay is solely dependent on the one industry of its cotton mills: and when, as at the present moment, the cotton mills find it impossible to work at a reasonable profit, the business community of Bombay has some reason to claim that the Government of India has proved a rather hard stepmother.

Setting aside some rather fanciful grievances of the War period, the Bombay mill owners attribute their present trouble to, first, the Excise Duty, secondly the rise in exchange, and thirdly the burden of local and municipal taxation: and, while the two latter may be considered debatable points of political economy, they hold very strongly that the present position of the Excise Duty is unsound in every way, and that, even as a means of raising revenue for the Government of India, it is both unjustifiable and unprofitable. In the nineties, after a period of no import duties at all, a duty of 5 per cent. was levied on imported piece-goods. In 1896, in deference to the Free Trade principles of Great Britain in general and of Manchester in particular, the import duty was reduced to 3½ per cent. and a countervailing Excise Duty of the same amount was imposed on the production of cloth in Indian mills. The situation was a perfectly logical one if the principle of free trade was to be maintained, and that principle was only shaken in a very minor degree when it subsequently became necessary to raise the import duty to 5 per cent. at which rate it stood till the beginning of the war.

During this period the Excise duty was consistently attacked in Bombay (and, on at least one occasion, very injudiciously defended in the House of Commons) as a piece of legislation devised solely in the interests of Lancashire to check the legitimate growth of the Bombay cotton mills. Neither side has as yet realised its limitations: and, while Lancashire demanded the right of free competition with Bombay in low grade twills and shirtings, the Bombay mills still believed that, with a very moderate amount of protection, they would be able to take away Lancashire's monopoly of the finer cloths.

It is safe to say that this particular form of bitterness has passed away to-day. For purposes of revenue the import duty has been raised to 11 per cent, but, even without this reasonably high protection, it is recognised that Lancashire, at the present level of wages and of American cotton, cannot possibly produce cheap cloth in competition with Bombay; while we on our side realise that the low grade and short staple of our local cotton, coupled with the comparative clumsiness of our labour, prevents us from meeting Lancashire on an equal footing in the higher counts.

Yet the Excise duty continues: and, seeing that it can no longer be justified either as a sop to Free Trade or as a reciprocal agreement with their friends in Lancashire for benefits received, Bombay millowners are entitled to ask what purpose is served by it.

They are harassed by a severe, and as they maintain, unfair competition from Japan, who is able, even in face of the import duty of 11 per cent. (less Excise), to dump its production into India at less than the present Indian cost of manufacture: and they point out that, while the import duty hits Japanese mills only on that proportion of their output that it suits them to unload on India, they themselves have to pay an Excise on the whole of their production. It is beyond the scope of this article to discuss how far the Indian Government can afford to remit the Excise and how far the millowners are justified in their contention that Government would gain as much directly through income tax and indirectly through the general improvement in economic conditions, as they would lose on the duty. But there is no doubt that it is almost universally believed that the present condition of the mill industry in Bombay is due to the imposition of an Excise duty, which is of no conceivable benefit to anyone but the Japanese cotton mills.

To what extent the extreme pressure of Japanese competition is due to temporary causes may be discussed later. In the meantime the depression in Bombay's only important industry is acute; and though up to the present few, if any, of the mills have had to close down, and the question of a reduction of wages is still, it is to be hoped, a remote one, there are no profits now circulating in the city, and all prospects of genuine development are at an end till the industry revives.

It must be remembered that the present agitation against the Excise duty is entirely non-political, in the sense in which that word is generally used in India. There is no racial feeling about it whatever: on the contrary, all communities are united in the view that its abolition can do no harm of any kind to any British interests, and are only anxious to secure its repeal because they consider that it is sapping the power of one of the greatest of Indian industries to resist the inroads of a far more important competitor.

THE "INDIAN SANDHURST" COMMITTEE.

(By Our Simla Correspondent).

It has now been definitely announced that a committee will shortly be appointed under the chairmanship of the Chief of the General Staff, Sir Andrew Skeen, to enquire "into the means of attracting the best qualified Indian youths to a military career and of giving them a suitable military education." Of the two tasks which will thus face the committee the former is, in the case of India, a most essential preliminary to the latter: for, to judge by results attained up to date, there can be no question that, despite statements to the contrary frequently to be found in the Press and elsewhere, Indian youths, whether of the right or of the wrong type, are not at present attracted to a military career in any number. Moreover when it comes to a consideration of actual results, it appears that the military authorities are with difficulty able to fill the ten vacancies allotted to Indian cadets at Sandhurst, although the standard of examination set in India is distinctly below that demanded in England. Whenever this fact is ventilated in the Legislative Assembly, however, there are always speakers prepared to insist that there does exist a large body of suitable young Indians, who would prove just the very material required to man the officer ranks of India's army of the future, if only —. There are several "if's" brought forward by the supporters of the theory, or, it is better to hope, the fact of the existence of such a body of Indians. Some declare that, if the conditions of entry to Sandhurst and the advantages of a military career were better advertised, youths of this class would be attracted; others that they can only come forward for the Sandhurst examination if the cost of the course they will have to undergo, provided they pass, is considerably lower than it is at present; while others again maintain that Indian lads will only present themselves in any numbers for examination with a view to obtaining the King's commission, if their train-

Digitized by Google

ing can be done in India and they are not called upon to travel thousands of miles across the sea to a foreign country. These are plausible arguments, and in one at least of them there is a considerable grain of truth; for the cost of the training which a boy must undergo before he obtains his commission is a very serious consideration, particularly when compared with the paltry amount which is usually held to be sufficient to enable a boy to obtain a B.A. degree in this country. But surely there is a deeper reason than this for the paucity of suitable candidates for commissions? The information made public about the methods of entering the army, the nature and cost of the necessary preliminary training, and the prospects of the young officer, is not so scanty that, if there really existed that ardent desire for a military career among any considerable section of young and educated Indians, they could not easily find the means of obtaining any additional information required. Again, considerable as is the cost of the training at Sandhurst, it is so very much greater than that of the three years' course necessary for a degree at most of the British universities? Yet there are hundreds of Indians at English and Scottish universities at present, studying medicine, law and other subjects. To study the arts of peace at any rate they do not hesitate to cross the sea to a foreign country. It is hardly surprising, therefore, that, in face of what the young Indian is able and willing to do in order to make himself more efficient in his civil career, the military authorities in India should be sceptical regarding the existence at present of any real desire among the educated classes in this country for a military career; and in this doubt they are reinforced by the unanimous verdict of a recent committee, composed largely of Indians, which declared that the military spirit necessary for the foundation of a national army in India was at present insufficiently developed, and must be inculcated into the minds of Indians by a series of stages, which must commence from their earliest youth. Unless and until the Indian boy is taught from childhood ideas of patriotism and civic duty, military ideals and military traditions, no real desire for a military career will germinate in his mind. The only classes in India which have any real conception of military ideals and traditions are the martial classes, and their standard of education is as a rule so low at present, and their means so slender, that a Sandhurst education is unfortunately out of reach of all but a few of their sons.

Besides the problem of finding the officers necessary to Indianise the Indian Army within a reasonable space of time, that of deciding on the best method of giving them, when found, a suitable military education is simplicity itself, resolving itself as it does into the old controversy as to the necessity of founding an institution on the lines of the Royal Military College, Sandhurst, in this country. There are cogent arguments for and against an Indian Sandhurst, and almost everyone is agreed that in course of time such an institution will become a necessity. But on the score of military efficiency, which after all is the chief criterion, military opinion—the opinion which must of necessity carry most weight on such a subject—holds that such an institution cannot be made as efficient a training ground as its prototype in England.

It is, however, a matter for satisfaction that the Government of India has agreed to the appointment of this committee, even if it does not in the end succeed, as some may hope that it will, in bringing about the complete Indianisation of the army within a few years. For it will allow the whole question to be discussed in all its aspects: and those who press for immediate Indianisation will be given a chance of realising, in a manner previously impossible, those difficulties which the military authorities in this country have encountered and are to-day encountering in fostering even that small measure of Indianisation which has so far been undertaken. They will have a chance also of realising that it is not any insincerity on the part of the Government in carrying out its professed intention to Indianise the army, if such a thing is possible without jeopardising the safety of India, that stands in the way of the attainment of the object they desire, but the lack of martial instincts among educated Indians and the lack of education among those Indians who possess martial instincts.

CURRENT TOPICS.

War Secretary to Visit India.

The Times says that it is understood that Sir Laming Worthington-Evans, Secretary of State for War, will pay an unofficial visit to India in the autumn: and that, while there, he hopes to attend the Northern Army manœuvres in November and to have an opportunity of visiting various military centres.

Ango-Indian Deputation.

The deputation from India, which has been sent to represent the grievances of the domiciled Anglo-Indian community, arrived in London on June 13, and were accorded an informal interview with Lord Reading on June 22. It is understood that Lord Reading expressed his intention of discussing the matter with the Secretary of State before leaving for India. The deputation is preparing a statement which they hope to lay personally before Lord Birkenhead, the main points in which are the status of the domiciled community in India, Indianisation as it affects the community, and the position of the community in relation to the Army in India.

High Commissioner at Wembley.

The High Commissioner for India, speaking at a luncheon given at Wembley on July 18 by the Hull Committee, said that the already large trade in oilseeds from India would be assisted by the opening of the new port of Vizagapatam, as this port would serve a very large area in which oilseeds were a staple. India's exportable surplus of wheat should be largely increased by the great irrigation schemes now under construction, and he looked forward to the time when Karachi would double and even quadruple her shipments of wheat. As regards the timber trade, the High Commissioner said that, though she could not provide much soft wood, India possessed many varieties of hard woods thoroughly suitable for commercial purposes.

India's Tea Industry.

The Chamber of Commerce Journal says that India's tea industry experienced an exceptionally favourable period during the year 1923-24, the total quantity exported increasing from 228 to 339 million pounds and the total value from 22 to 31½ crores of rupees. The total shipments of black tea to the United Kingdom rose from 248 to 296 million pounds, and its value from 19 to 28 crores, compared with the preceding year.

At the annual general meeting of the Indian Tea Association held on July 20, the chairman referred to the propaganda campaign in India, America and France, on which about £90,000 per annum was being spent. It was stated that, during the eleven months ending May 31, 1925, the quantity of black tea exported from India to America was 7¾ million pounds more than that for the corresponding period in 1923-24. The chairman described the outlay on propaganda as "something similar to the sowing of seed. When we plant quantities of seed in tea garden nurseries, we do not imagine that this will result in an immediate increase in our tea crop, but we do believe that in time the seed will bring in new areas of production: and so I am hopeful that the long view we are now taking will be fully justified when production has inevitably increased."

Japanese Bank at Karachi.

A telegram from Karachi says that a branch of the Yokhama Specie Bank was opened there on July 20. Two years ago, the number of Japanese in Karachi was only nine: now there are about forty, and it is expected that there will be at least a hundred by next spring. The trade between Japan and Karachi, whence three shipping lines have regular direct sailings to Japan, has greatly increased during the last five years, and the anticipated increase in cotton shipments, from the large area that will be brought under cotton, when the Sukkur barrage is finished, has been the main cause of the establishment of the Bank.

The "Indian Sandhurst" Committee.

Pandit Moti Lal Nehru, leader of the Swaraj Party, has accepted a seat on this Committee. This is the first time that a Swarajist has agreed to serve on a Government Committee. The Pandit was offered a seat on the Reforms Committee last year, but declined it. It is stated that a sub-Committee of the "Indian Sandhurst" Committee will visit England in the autumn in order to study the conditions of training at Sandhurst and Woolwich, and will probably also visit Kingston, Canada. On its return, it will present a report to the Committee, whose recommendations are expected to be made about the end of next March.

Political Parties.

Pandit Moti Lal Nehru, the leader of the Swaraj Party in the Legislative Assembly, has been chosen as the "All-India" leader of the Swarajists: and Mr. Gandhi has announced the abandonment of the "spinning franchise" of the Indian National Congress—under which the electoral qualification was the production of an agreed quantity of hand-spun yarn per month—and has recommended the Congress "to place its whole machinery at the disposal of the Pandit." There are, at present, three Indian political parties in existence—the Swarajists, the Independents, and the Moderates, the latter of whom are not represented in the Indian National Congress, though efforts are being made to persuade them to join it. Both Swarajists and Moderates hope to absorb the Independents, though the latter seem to prefer to retain the position that their name implies; but Mr. Gandhi's surrender to the Swarajists, and the probable transformation of the Congress into an exclusively Swarajist organisation, seem likely to lead to complete coalescence between the Swarajists and Independents: which, if the Moderates can be induced to join the Congress also, would almost certainly extend to them as well. Thus it is at least possible that the near future may bring about a united "Congress Party" which will form "His Majesty's Opposition" in the Indian Councils, prepared to take office for the administration of the transferred subjects and thus to put an end to the present anomalous position in Bengal and the Central Provinces. Though Pandit Moti Lal Nehru, in a published letter to Mr. Gandhi, declares that Lord Birkenhead has "spurned the honourable co-operation offered by Mr. Das," and that it is the "plain duty" of Indians "to challenge irresponsible and insolent authority," it certainly looks as if the Secretary of State's call for co-operation on the part of Indian politicians, and for an honest attempt to work the present constitution as a necessary preliminary to the demand for a further instalment of reform, has not, after all, fallen on deaf ears, and is in a fair way to receive serious attention.

The New Mayor of Calcutta.

Mr. J. M. Sen Gupta has succeeded to the "triple crown" worn by the late Mr. C. R. Das—leader of the Bengal Swaraj Party, President of the Bengal Congress Committee, and Mayor of Calcutta. This is in accordance with Mr. Gandhi's advice, since he gave as his opinion that it was necessary that all three appointments should be held by the same person. As regards the first two, which concerned the Swarajists alone, since Mr. Gupta's fitness to lead the Party in Bengal is not a matter that interests anyone outside it, his selection was a foregone conclusion; but considerable opposition was experienced to the latter, though the Swaraj majority in the Corporation easily carried their man when it came to voting. According to the *Englishman*, the Calcutta Municipal Act lays down that any sitting Alderman or Councillor is eligible for the office of Mayor, and has to be selected by the Aldermen and Councillors from among themselves. The *Statesman* says that Mr. Gupta is not a member of the Corporation; but this does not seem to have made any difference. Mr. Gupta is recognised to be an able speaker, and to have proved a competent leader of the Swaraj Party in the Bengal Council in the absence of Mr. Das; but, outside the ranks of the Swarajists, it was felt that the Mayoralty of Calcutta ought not to be a political appointment at all: and, as regards Mr. Gupta's personal fitness for the post, it was pointed out that he has, so far, taken no part in municipal work, and knows nothing of the duties that it entails.

Production of Indian Cotton Mills.

The report, for the month of April, of the Department of Commercial Intelligence, Calcutta, shows that the total Indian production of yarn, in that month, was 62 million pounds, as against 50 millions in April, 1924. Almost the whole of the increase was in the lower counts (1 to 25), that in the middle counts (26 to 40) being 170,000 pounds (rather less than 2½ per cent.), and in the higher counts (over 40) 40,000 pounds, or nearly 11 per cent. Imported yarn shows a total decrease of 100,000 pounds, in spite of an increase of 230,000 pounds, or nearly 80 per cent., in the lower counts: the decrease in the middle and higher counts being 120,000 and 210,000 pounds, or 7 and 31 per cent., respectively. In piece-goods, production increased by 21 million yards, or about 14 per cent., while imports decreased by 9½ million yards, about 7 per cent.; though the import of coloured goods showed an increase of two million yards, against a decrease of 11½ million in grey and white goods. In only one instance, that of yarn of higher counts, are imports larger than Indian production: though, to judge from the figures (April 1924, imports 685,000, production 387,000 pounds: April 1925, imports 472,000, production 429,000 pounds) this preponderance is likely soon to disappear. The piece-goods figures were almost exactly equal in April, 1924, production being just over, and imports just under, 149 million yards: in April, 1925, production was over 170 millions and imports under 140.

INDIAN EXCHANGE.

London, July 27.

The past week has shown very little change. Rates in the London market have been steadily maintained round about 1s. 6⅛d. to 5/32 for telegraphic; but on Monday a slightly easier tendency became apparent and 1s. 6⅛d. was about the best.

In India exchange has been very steady in both Calcutta and Bombay, with business done at a shade under 1s. 6⅛d. on the Calcutta side. No alteration has been advised this week; but there is next to no business passing, with more buyers than sellers at 1s. 6⅛d.

Forward rates remain steady, and October to January is called 1s. 6 7/32d. with buyers asking for 1/32 higher.

The last statement of the Imperial Bank of India gives a further shrinkage in the trade demand by nearly 2½ crores of Rupees, and private advices received indicate that, although the Bank rate is 4 per cent., the general money market is much easier.

At a conference in Bombay with the Committee of the Indian Merchants' Chamber, Sir Basil Blackett indulged in some plain speaking and appealed for a less suspicious attitude of the Government's efforts to keep the Rupee exchange within reasonable limits.

The New Currency Commission is to be appointed towards the end of the year, and a reference was made to the Cotton Excise Duty which seems fairly certain to be abolished at last.

INDIAN COMMERCIAL NOTES.

The Government of India have recently issued an announcement to the effect that the Indian Tariff Board will re-examine the whole question of the measures required for the assistance and protection of the Indian steel industry. It will be remembered that, in addition to the protective import duties which were imposed with effect from July, 1924, subsidies were granted to the industry to enable it to meet the handicap created by the appreciation of the rupee. Bounties so granted were not to exceed an aggregate of 50 lakhs of rupees during the year October 1, 1924, to September 30, 1925. The Tariff Board is now instructed to consider whether the protection afforded by the enhanced import duties should be supplemented beyond the latter date: if so, for what

Digitized by Google

articles further assistance is required, and in what form, and for what period it should be given.

The announcement indicates the extent to which fluctuations of exchange may upset even the best-laid commercial schemes. Obviously the rise which has taken place during the past year from 1s. 4d. to over 1s. 6d., has given a 12 per cent. advantage in price to the overseas manufacturer. It will be impossible for the Tariff Board to estimate the future course of the rupee; and presumably, therefore, they will confine their advice to the recommendation of measures necessary to meet the existing situation. In actual practice, although the protective duties imposed a year ago must have had a sobering effect on imports, they cannot be said to have seriously damaged trade. This is, of course, largely conjecture, for we do not know what course the import trade would have taken without them; but it can safely be said that the trade has not fallen off. Take, for example, the two years 1923-24 and 1924-25, running in each case from April 1 to March 31. It is true that, in the earlier year, before protection was adopted, the imports of iron goods amounted to 17,000 tons and in the latter year 14,000 tons, of which 4,500 were protected and 9,500 were not.. In steel goods, on the other hand, the imports have risen for angle and tee, from 26,000 tons to 37,000 tons, of which 28,000 were protected and 9,000 were not. In steel bars the rise was from 166,000 to 183,000 tons, of which 116,000 were protected, and 67,000 were not. The imports of iron and steel beams, channels, girders, etc., remain unaffected at 81,000 tons, despite protection.

The fact is that India's requirements of iron and steel goods, apart from pig iron, are much in excess of local production. Purchases from overseas have been purchases for immediate consumption and not for stock, and demands for spot use are no fewer than they were before protection was imposed. No doubt the enhanced production of Indian steel works may ultimately supplant much of what is at present imported, but it will take some years to reach this result.

India, like England, and, indeed, like most other countries, is suffering from serious depression in those particular trades which have been most upset by war conditions. The production of iron and steel goods received a tremendous stimulus during the War, and has not yet had time to adapt itself to new conditions. The output of coal was also intensified during the War, but demand has now fallen off, owing partly to the competition of oil, and partly to that of electricity India's coal industry is suffering at present from just the same forces which have affected the industry in this country. Further points of similarity can be duplicated. There is serious depression in the Bombay cotton mills, which threaten either to curtail wages or to curtail hours.

Another industry which has been seriously hit by new conditions developing since the War, is the hides and skins industry. India has always produced large quantities of hides and skins—the former in great demand on the Continent, and the latter in America. Unfortunately for India, the demand for leather shows signs of falling off, owing to the development of cheaper substitutes. Textile goods are replacing leather for belting for machinery; rubber is largely used to save sole leather for shoes, while shoes themselves are taking the place of boots; the development of the motor-car is undermining the demand for harness and saddlery. What is more, the increased consumption of meat nowadays results in larger quantities of raw hides being thrown on the world's markets and for these an outlet is sought in North and South America, Africa, and Australia in markets hitherto supplied by Indian hides. In spite of these tendencies, India's exports as a whole are fairly well maintained. Wheat and rice, cotton and jute, tea, coffee, and oil-seeds are still in demand in the world's markets and India can supply these in large quantities and at satisfactory prices. So much is this the case that India's exports are still far ahead of her imports, and it is this factor which accounts for the gradual and steady appreciation of the rupee. The trade statistics just received for June show that India's exports during that month reached the very high total of 34,14 lakhs of rupees, a figure more than double the value of her imports, 16,32 lakhs.

This wide gap between the values of exports and imports is partly bridged by India's imports of bullion. During the past six months, the net imports of gold and silver into India have been as follows in lakhs of rupees:—Gold, January 749, February 941, March 1499, April 132, May 316, June 236: Silver, January 257, February 297, March 205, April 263, May 107, June 109.

It will be seen that the imports of gold, which increased during the first three months of the year, have now fallen off, showing that satiety point has been reached. Trade in both gold and silver, which was stimulated by the rise of the rupee sterling exchange, has now fallen back to more or less normal figures.

THE INDIAN MAIL.

An Indian on Diarchy.

In an interesting article contributed to the *Englishman* (Calcutta) the well-known Indian politician, Bepin Chandra Pal, says that, when Mr. Gandhi offered to gain Swaraj for India within a year, it did not occur to anyone to inquire how he would do it. The fact that Gandhi was a "Mahatma," and credited with supernatural powers, was enough for the "mediæval faith and politics" of his followers: and this ascendancy of "magic over logic" was the cause of the phenomenal success of the Gandhi campaign during its early months. When a powerful section of Indian politicians decided to enter the Councils, they still could not shake off the obsession of the idea of "non-co-operation," and deliberately decided on the destruction of Diarchy through non-co-operation within the Councils, in the belief that Government would not take the extreme step of resuming the transferred subjects, and that its only course would be the immediate grant of a further advance towards responsible government. But this ignored the fact that, unless the destruction of Diarchy was followed by a general upheaval of popular discontent against a return to "autocratic" government, such a return would be its certain result. The logic of the Swarajist policy of Council wrecking demanded direct action to follow it—mass civil disobedience, or a no-tax campaign: both of which were perfectly well known to be impossible. Government has already announced its willingness to undo its resumption of the transferred subjects if the Bengal Council shows a genuine desire for it to do so: and the only reasonable course now open to the Council is to agree to grant the Ministers' salaries and thus "help the resurrection of the Diarchy that was killed by their own hands. Our immediate duty is to get back that which has been taken away." After that, it will be time enough to discuss what should be the nature of the proposals for its extension and improvement.

I.S.C. Governors.

The *Pioneer*, in commenting on the Honorary Fellowship of Pembroke College, Cambridge, bestowed upon Sir Montagu Butler, says that it is worth noting that the three top men of the final examination of 1896—Sir William Marris, Sir William Keith, and Sir Montagu Butler—are all now Governors, of the United Provinces, Burma (acting) and the Central Provinces respectively: and that they might well have been joined by a fourth had not Sir Malcolm Seton, of the India Office, who passed second to Sir William Marris in the entrance examination, failed to pass the medical test. Sir Montagu Butler became a fellow of Pembroke after taking his degree, but resigned on passing into the I.C.S. This, says the *Pioneer*, "affords an interesting indication of the changed conditions in India, for it may be doubted whether many men to-day would give up a fellowship to take service here." Incidentally Sir "Monty" Butler is perhaps the most diversely decorated of all the King's subjects, since he is a member of all the "ordinary" orders of chivalry except St. Michael and St. George Knight Bachelor, K.C.S.I., C.B., C.I.E., C.V.O., C.B.E. If the *Pioneer* is right about the "changed conditions in India," the facts given above would nevertheless seem to show that India still holds out the prospect of high honours, and a distinguished career, to the young Englishman who combines ambition with "the right stuff."

The Haj.

Telegraphic information received in India on June 26 shows that the pilgrims had all landed safely at Rabegh and that the caravan arrangements appeared to be satisfactory. The British warship which was supervising the disembarkation of the pilgrims at Rabegh has returned to Port Sudan on completion of its task. A telegram from Jeddah also stated that, on the same date, about 250 pilgrims, mostly Indians, who had drifted to that port by various routes, were allowed by King Ali to pass through his lines in order to proceed to Mecca. This, as the *Pioneer* remarks, seems to show that, if Indian Moslems had brought pressure to bear on those who were carrying on warlike operations in the Hedjaz, many of the difficulties that have faced Indian pilgrims this year might have been removed without the non-Moslem "interference" of which Shaukat Ali and his friends have been complaining.

Slavery in Nepal.

The recent decree abolishing slavery in Nepal has drawn attention to the existence of slavery, not only in that State, but also in other parts of India and Burma: the essence of which, says *The Englishman* (Calcutta) is in fact no more than a contract made by a man who is heavily in debt, to pay the interest by the labour of himself and his family. In India and Nepal the "slave" is generally a man who is so heavily in debt that he can no longer pay the interest on the money he has borrowed. The creditor then takes his services instead of interest; but if, at any time, he can find the money to pay off the capital sum, he is free. In the days of indentured labour in Assam, tea planters were said to "buy" their labourers. What they did was to pay the owner of a "slave" the capital sum owing to him; in return for which the "slave," who had now become a free man, signed an indenture for five years, after which he returned to his home and probably got into debt again and became a "slave" for a second time. "Interfering and ignorant people at Home," says *The Englishman*, "made a great deal of fuss about planters "buying" labourers. An agitation, supported by Indian politicians who knew the real facts but did not intend to disclose them, was set on foot and the indenture system was abolished by law." It was not difficult to do that, because the Indian social system does not include recognition of an indenture system; but it does include recognition of the "slave" system, and no law, that wit can devise, can prevent a landless labourer from selling his labour to his creditor: so that the system will probably persist in the East for many years to come.

The Dark Places of the Earth.

A remarkable case is reported from Mandla (Central Provinces) where a man and his two sons were sentenced to death, and a woman sentenced to transportation for life, for murdering a little girl and causing the death of a boy: of both of whom the man was the father and his two sons the brothers. The girl was killed in order to propitiate the Goddess of Destruction and to save the life of the boy, who was seriously ill: the boy, whose condition was not improved by the sacrifice, died of exposure consequent on being afterwards taken out in bitter cold, naked and bound hand and foot, to be placed at the feet of a holy man. The case was tried with four assessors: who, it is interesting to learn, found all the accused not guilty as regards the boy because his death was not intended, and not guilty as regards the girl because the accused believed that, by offering her as a sacrifice, they were obeying the dictates of a divine being.

Fourth Battle of Panipat.

A Mohammadan divine, annoyed at Hindu attempts to make out that the third battle of Panipat, fought in 1761, was a moral victory, though an actual defeat, for the Mahrattas (on the ground that, since then, the "Kafirs" from beyond the North-West Frontier have never dared to invade India), has issued a challenge to Pandit Malaviya to fight a fourth battle. At the third battle, he says, the Mohammadans defeated a Mahratta army outnumbering them by about six to one: and, to prove the eternal superiority of Mohammadan over Hindu arms, the challenger proposes to "arrive on a fixed date on the plain of Panipat with 700 Musulmans, representing the seventy millions of Moslems in India: and, as there are 220 millions of Hindus, I allow you to come with 2,200 Hindus." He promises to include neither Afghans nor Pathans among his 700, which will consist solely of Indian Musulmans of good families: says it will be proper not to use cannons, machine guns or bombs, but only swords, javelins, spears, daggers and bows and arrows: and calls upon the Pandit to use his well-known influence to induce the Government to permit the battle, at which, if he will not lead the Hindus himself, he should at least appear as a spectator. The challenger expresses the opinion that "the result of the battle will make an end of the present discord and fighting in the country": and presumably hopes that this trial by battle will prove a welcome solution of the communal differences which are now so greatly exercising the Government of India.

A Monkey Detective.

Early in the morning of June 18, passers by in one of the Bombay streets noticed a monkey on a house roof examining a large bundle: and, becoming curious as to what the monkey was doing, some men climbed on to the roof and found that the bundle contained a quantity of valuable silk stuffs. It was then found that burglars had entered a neighbouring cloth-shop during the night, having obtained access to it by breaking a hole in the roof. The proceeds of the burglary were apparently too large to be carried in one journey, and it is supposed that the burglars had hidden part of them on the roof with the intention of removing them later on. The monkey's curiosity led to the recovery of about a third of the stolen property.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

Sudan Trade Progress.

The figures for the trade of the Sudan for the first four months of this year make interesting reading. The value of the imports was E1,663,814, while that of the exports including re-exports and transit trade was £E1,783,432. There was thus a balance of trade in favour of the Sudan of £E119,618 as against a substantial adverse balance for the same period of 1924. There are several features of the trade which call for comment. In imports there was a notable increase in cotton piece-goods, while increases are also shown in the imports of soap, petroleum, and some other commodities. As regards exports, there was an increase of £E285,104 in ginned cotton, which was due partly to larger exports and partly to higher prices, while the only item on the export side that showed a considerable decrease was gum.

The British Industries Fair.

Owing to the British Empire Exhibition people have almost forgotten about the British Industries Fair, which proved so successful in promoting trade until Wembley came along as a counter attraction. But there will be no exhibition at Wembley next year, at any rate, not one that will compete with the Fair, and it is to be anticipated therefore that next February or March will see the Fair in full swing again at its two centres. Last week there was a meeting between representatives of the Department of Overseas Trade and the London exhibitors' advisory committe to discuss the future of the Fair, and it is satisfactory to know that the committee were strongly in favour of its continuation. It has certainly proved its value in past years, and the conditions have never yet been such as to enable it to be of the fullest utility. What foreign countries think of fairs as a medium for trade development is obvious from the number they arrange.

A Cotton Shortage.

The latest American Bureau report makes anything but pleasant reading. Before its appearance it was confidently anticipated that the American cotton crop would again be fully equal to the demands likely to be made upon it in the present trading conditions. Now, however, it appears that the crop will be very considerably below last year's yield which may give rise to a very awkward situation. Of course there is plenty of time for the position to improve, the vicissitudes of the American cotton crop are no new feature. The mere fact, however, that the decrease in the estimate should give rise to anxiety serves to show the unreal position in which Lancashire stands so long as she is in the main dependant on the American crop. There can be no real safety until supplies from other sources, and especially from within the Empire, are so abundant that any danger of a real world shortage of cotton is out of the question.

The Rubber Outlook.

It was inevitable that America should make representations with regard to the rubber restriction scheme, but if we have been so foolish as to make a most unwise debt settlement we are scarcely likely to make the error at the request of our neighbour of interfering with a scheme which was designed solely to save a very important British indust· It has been pointed out in reply to these representations that American manufacturers abstained from buying when they could get cheap rubber and the present price of the commodity is largely the result of their attitude. Mr. Amery dealt at length with the question of the restriction scheme in the House of Commons yesterday, and his remarks can give no one any reason for thinking that the Government has the slightest intention of interfering with it at present. He indicated, however, that if in the next few weeks a situation should arise different from that which exists at present careful consideration will be given to the desirability of a change. That is conclusive enough.

Conditions in Roumania.

The present position in Roumania was dealt with at the meeting of the Bank of Roumania by the chairman, General Sir Herbert Lawrence. It has been one of the anomalies of the post-War position in the Balkans that while most of the countries have steadily progressed on the way to economic recovery, Roumania has lagged behind. The reasons for this have been mainly the exceptional difficulties with which the country has been confronted since the War and the unfortunate policy which has been adopted. In recent months there has, however, been a marked improvement in the country's position and Sir Herbert Lawrence was able to give a not unpromising survey of the country's present situation. He pointed out that the financial position of the country on the whole is improving, most of the State debts abroad having been consolidated, while a great part of the old outstanding commercial debts have been arranged. As regards agriculture the area cultivated in 1924 was the largest since the War, but owing to drought the production was less than that of the previous year. For the current season the area sown amounts to 19,690,000 acres, a total considerably below the previous figures, but the agricultural situation of the country in general is said to be good.

General Development of Country.

Commenting on the general development of the country, Sir Herbert Lawrence mentioned that steady progress is being made by the peasant proprietors. "This fact," he added, "which I esteem the most important factor in the development of the country, should, in a few years' time, have a considerable effect on the national well-being and consequent interest in the country from the point of view of British exporters of manufactured articles." between Great Britain and Roumania is being maintained on a fairly stable basis. The exports from Great Britain to Roumania in 1924 were 76,170 tons, valued at £2,856,000, as compared with 60,500 tons, worth £2,759,000 in 1923. The imports into Great Britain from Roumania in 1924 were valued at £2,202,000 as against £2,360,000 in 1923. It cannot be argued that these figures are satisfactory for there is no doubt that the volume of trade between the two countries should be much larger than it is. But the trend of the trade, as emphasised at the meeting of the British-Roumanian Chamber of Commerce, is in the right direction, and with improved conditions it may be hoped that it will not be long before the figures of Roumania's trade with this country assume a much more important aspect.

COMMENTATOR.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended July 16, state:—

Since our last report the futures market has been quiet but rather steady; the net changes on the week are the following:—Sakellarides: 0.20 dollars down for July, 0.38 dollars down for November, 0.50 dollars down for January, 0.55 dollars down for March. Ashmouni: 0.20 dollars up for August, 0.07 dollars up for October, 0.10 dollars up for December.

The feature of the week has been the larger turnover of business on the spot market as a result of a slight increase in the demand from abroad for prompt shipment. This demand, however, has been met fairly freely by holders of existing stocks which are in general unhedged, and therefore the business put through with spinners did not provoke any operations in futures. It is the fact of the approach of the new crop which is so much cheaper than old crop that makes holders rather anxious for the early liquidation of whatever they still hold. At the July 2 tender no dockets were issued. The week's receipts amount to 1,140 crs., against exports 49,477 crs.: the stock stands at 497,290 crs.

Spot: Minet el Bassal has been a little more active this week and there has been some small improvement in the demand from abroad. Sales amount to about 4,900 B/s, of which we estimate 1,700 B/s Sakel, 3,000 B/s Uppers, 200 B/s Zagora and a few bales of Brown and Pilion.

Sakellarides: Has been in rather better request and a moderate business has been done. A few bales of high grades have changed hands but the bulk of the demand has been for Fully Good Fair and the grades below. Spot differences are inclined to harden except for Good and better, which are unchanged.

Ashmouni and Zagora: Have been in good demand and a good business has been done. All styles have been dealt in but the medium qualities have attracted most attention. Spot differences are generally unchanged.

Brown and Pilion: A retail business has been done in these growths. Spot differences are generally unchanged.

White: Is neglected and no business has been reported. Spot parities are without quotable change.

Crop, 1925: Climatic conditions have been favourable. Progress in all districts has been normal. The hot temperature of the last two or three weeks has greatly helped to destroy the leaf worm. Damage incurred by the plant through this pest is not important. Bolls picked from different districts show that the attack of the pink boll worm has so far affected 15 per cent. of the green bolls. Water supply has continued to be adequate almost everywhere; exceptions are very rare.

Sir Arthur Henry McMahon has accepted a seat on the board of the "Shell" Transport and Trading Company.

It is reported that an agreement has been concluded between the Moscow and Angora Governments for the construction of a coastal line on the Samsun-Trebizond-Ezeroum-Erzindian route. The Soviet Union will advance the necessary capital for the construction and will receive the exploitation rights for the branch line from Ezeroum to Kars.

Monthly Supplement of "The Near East" : No. 6.

THE RISE OF THE DINAR.

Statement by Dr. M. M. Stoyadinovitch, Minister of Finance.

On the occasion of the recent jump of the dinar, which has now reached the rate of 9 Swiss francs to one hundred dinars, the Minister of Finance, Dr. M. Stoyadinovitch, has authorised the following statement:—

Towards the end of 1922 the question, "Why is the dinar falling?" was constantly repeated. Since 1923 the question has been, "Why is the dinar rising?" If we know the causes of the dinar's earlier fall we shall know at once the causes of its present recovery. The causes are the same, only up to 1923 they affected the dinar to its disadvantage and since that time to its advantage.

The first and strongest reason for the dinar's fall was the inflation of currency, which came as a result of the bad condition of the State's finances, the chronic deficit in the Budget, and the continual indebtedness of the Government to the National Bank. As a matter of fact, the Government debt with the Bank of issue grew rapidly and (without counting temporary changes) amounted to: At the end of 1919 to 214 million dinars; 1920 to 2,905 million; 1921 to 4,084 million; and at the end of 1922 to 4,205 million dinars.

In consequence of this debt the currency in circulation also increased suddenly and gave these results, the figures being for the end of each year:—1919, 664 million dinars; 1920, 3,344 million; 1921, 4,688 million; 1922, 5,039 million dinars.

This inflation of the currency destroyed the value of the dinar, so that the American dollar from an exchange value of 10 dinars to the dollar at the beginning of 1919 rose to the terrific height of 100 dinars to the dollar by the end of 1922 and the beginning of 1923.

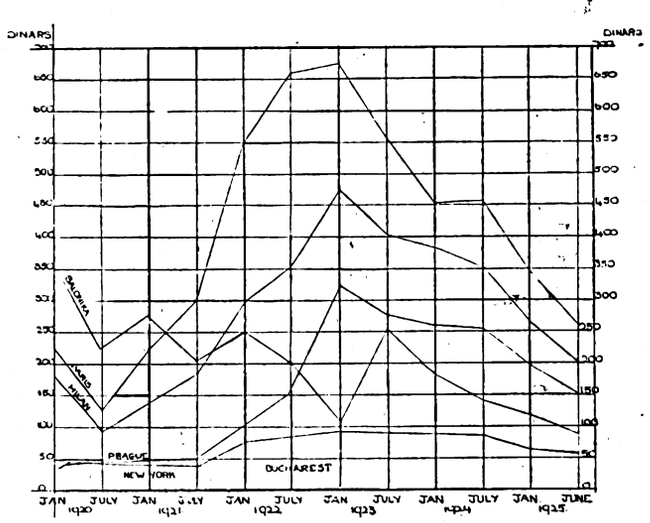
The second reason for the fall of the dinar was the debit balance of international payments. This debit balance arose chiefly as a result of our unfavourable trade balance. In the first days of our union we expended more for domestic purposes than we received, and similarly the whole country imported more from abroad than it produced. Hence the deficit in the trade balance amounted to:—

1919	2.296	Million Dinars.
1920	2.145	„ „
1921	1.662	„ „
1922	2.750	„ „

This deficit in exports means a deficit in foreign currencies, and that automatically affected the value of the dinar.

The third reason for the fall of the dinar is to be sought in the general political situation, internal and external. Numerous unsettled questions—not to enter upon their enumeration—remained to be dealt with and threatened to provoke either conflict abroad or troubles at home.

The fourth reason for the fall of the dinar must be sought in the domain of psychology. The world had begun to lose faith in our national currency. Everyone rejected the dinar, or, as soon as he received dinars immediately turned them into land, house property, factories, goods of all sorts and shares. This loss of faith resulted from the effect produced on the public (both at home and



abroad) by the above-mentioned three causes and also from the official exchange policy of that time. That policy was characterised by the frequent issuing and changing of various regulations of standard rates of exchange, the inquisitorial control of banks and traders, the sale of State gold with a view to the improvement of the dinar rate, and in general by the circumstance that the leaders of our currency policy at that time were treating the symptoms, not the causes of the disease.

Recognising all this quite clearly, at the very beginning of my entry into the Ministry of Finance at the end of

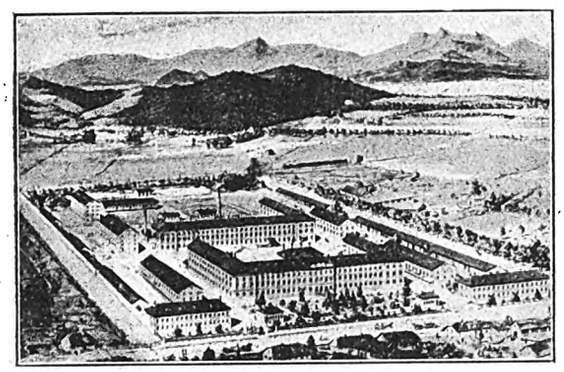
State Monopoly Administration of the Kingdom of Serbs Croats & Slovenes



State Tobacco Factory in Liubliana

Tobacco Culture

The 1924 harvest will yield about 27.000.000 kgs. of leaf. Of this amount about 10.000.000 kgs. will be set aside for export. The tobacco is from Serbia, Macedonia, Herzegovina and Voivodina.

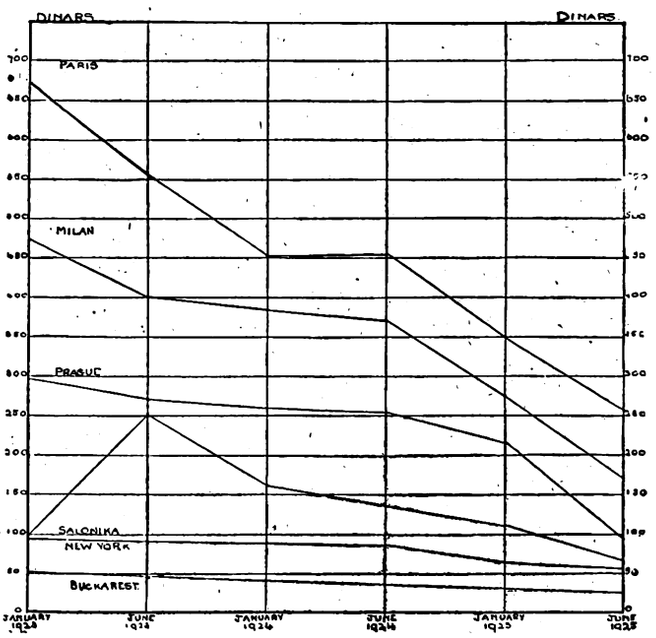
Fermentation and preparation of the crop will be completed in October, when negotiations for sale will begin.

All information can be obtained from:—

The State Monopoly Administration,
— BELGRADE —

1922, I came to grips with the real and main causes of the currency troubles—the condition of the State finances and the strengthening of exports.

In the field of finance we have: the advance of direct taxation by means of the 500 per cent. and the 300 per cent. supplementary taxes, the increase of taxes for the disabled and the introduction of duties on consumption. Further, taxes, costs, tariffs of all kinds and duties have been brought up to gold parity. In a word, all State revenues have been nearly doubled, so that the Government has been in a position to stop incurring debts at the National Bank, and to satisfy a great part of the essential State requirements. By this great financial effort, and it is thanks to that alone, the inflations of currency and the further fall of the dinar resulting from inflation have been checked. It is true the National Bank also took up a decided attitude against the policy of inflation beginning from 1922, but the experience of the whole world proves that Banks of Issue have never been able to save a currency, if Governments follow a bad financial policy. In any case I have always liked to show that in this, as in other questions, I have been in complete agreement with the directors of our National Bank.



In this manner the first and the most important cause for the dinar's fall, the indebtedness of the State to the National Bank, has been removed.

The strengthening of the export trade has received special attention on the part of the Government during the last three years. At the beginning of 1923 prohibitions and limitations on the export trade were removed and export duties lowered. This policy of lowering export duties has been steadily carried out from that time and must be continued also in the future until they are entirely abandoned. This policy with regard to these duties strengthened the productivity of the country and encouraged the people to work and to export.

Further, the Government paid special attention to communications, granting very adequate credits for the building of lines, the extension of junctions and stations, and the repair of engines and wagons. This policy very greatly assisted the strengthening of our industries. The people did indeed work and accomplished much, but the Government aided and facilitated their productive work by every means.

That again is one of its services.

Thanks to all these measures of excise and transport policy, exports in 1923 nearly reached the value of imports, and in 1924 they even surpassed imports to a considerable degree. Also by this means the second important cause of the dinar's fall has been eradicated. It must be added that the Government's success in settling the question of reparations (at the Paris Conference in January of this year and also previously), as well as the State's freedom from debts abroad, has strengthened the credit sale of our international balance of payments.

Digitized by Google

Political conditions during the last three years have considerably improved. The frontiers of our State have been definitely fixed, relations with neighbouring Powers improved, and the reputation of our State abroad has grown. The settlement of the internal political situation is progressing by rapid strides. All this has favourably reacted on the rate of the dinar. Thus the third unfavourable influence has been largely removed.

Finally, we had to await the psychological moment. It began in 1923, openly and frankly, when the true state of affairs was realised and the facts were faced. At the same time means of saving the currency were proposed, but these measures did not include an attack on certain "speculators," bankers, etc., nor the sale of gold and similar prescriptions. In this way the faith of the public was also won back again in favour of the dinar. The salvation of the dinar had begun and faith in it grew.

This, moreover, is also the reason of the dinar's sudden rise. It must not, however, be lost sight of, in this connection, that, at the present time, when the dinar has already jumped from 5.40 (at the beginning of 1923) to 9 Swiss francs for 100 dinars, it is no longer of primary importance that the dinar should improve quickly, but that it should be kept stable for a longer period. The greater part of the industries would prefer the dinar to remain stable rather than to improve too suddenly. I regard the speedy return of the gold dinar, its recovery in a year and its return to pre-War gold parity in two, as some suggest, as the greatest misfortune which could happen to our industries, and I could never propose to follow such a policy. The experience of other States in settling the same problem is the best proof that our currency policy has been on the right road up to the present. The wise politician in dealing with currency matters must take the experiences of others into account and not elaborate fantastic schemes, completely shut off from the rest of the world.

YUGOSLAV MARITIME POLICY.

Continued from p.686 (June 25).

As a result of the union of Southern Slav territories, with the Kingdom of Serbia serving as a firm and vigorous centre, a political and economic unit has come into being, wide in extent and rich in natural wealth. Owing however, to the fact that union was effected at the cost of the economic detachment of certain territories from the political and economic units in which they had long been incorporated, there followed a shifting of economic centres and a change in the direction of economic-commercial currents, in regard to both import and export trade.

Pre-War Serbia, deprived of her seaboard and coastal traffic, had stubbornly endeavoured for decades to open up some kind of road to the Adriatic for her economic produce. Yugoslavia of to-day, stretching to the Adriatic and within reach of the Aegean and the lower stream of the Danube, has inherited from Serbia the great task of establishing, and establishing on a solid basis, a road in the direction from the Danube to the Adriatic, as the most important, although not the only, artery of her economic and commercial expansion. But since the foundation of that main trade route implies the establishment of a great Adriatic port, it is clear that a few decades, at least, must elapse before the task is completed, and even when that main commercial artery has been established all the needs of our export trade will not have been satisfied, inasmuch as some of the districts remote from the Adriatic will still naturally turn towards the openings to the sea which are nearest to them. The economic life of the principal economic centre, formed by Serbia and the Posavina and Danube districts, concentrated in Belgrade, turns to-day in another direction, seeking roads and outlets for its produce on a seaboard which can no longer now be that of the Adriatic. Its trade gravitates partly towards the mouth of the Danube and the Black Sea, and partly—indeed, the greater part—towards Salonika and the Mediterranean. This must be seriously taken into account, because the natural trend of gravitation will not change to any great extent in the future, nor even when the Adriatic route has been completed, for the law of distance will *ipso facto* impose itself.

In the first direction the services of the shipping syndicates along the Danube to Galatz may serve and assist our export trade; in the second direction trade will be facilitated by the opening up and exploitation of the Yugoslav Free Zone at Salonika. Much has already been achieved in both these directions, when it is considered that up to now Serbia has had no outlet or roads leading to the sea; but judged by the real needs of commercial expansion that much must be regarded as all too little. To bring produce to a foreign or even to one's own seaport means little, if that produce is to remain there and become the object of the economic struggle of rival Powers and competing factors; it may be a step in the right direction, but it is only the first step, that can become of full use to commercial expansion only when permanent lines of communication are introduced and adequately maintained, so that the products of industry on reaching the sea can be carried on at once to their place of destination, the world markets.

If these lines of communication are to serve the development of our export trade adequately, they must be regular, permanent and in our own possession. Should our produce pass into foreign hands when it reaches Galatz or Salonika or have to rely for its further transport on international shipping, it is more than certain that the foreigner would very easily succeed in stealing our export trade at its very first step, and in preventing it from getting that success on the international markets which in view of its importance, it might justly expect. It was not without good reason that small pre-War Serbia during the economic struggles with Austria-Hungary, paid a regular subvention to the French shipping company of Fressinet and Co., only to reserve 500 tons of ship space on the company's regular lines touching Salonika twice a month for Serbia's export trade, should there be any. Nor was it without reason that the Government of the Kingdom of Serbia, in addition to the services which the said French company was able to offer and guarantee, tried to form a surer means of transport for the export of her products in the beginning of 1914, when the economic war with Austria-Hungary was in full swing and that she delivered her ultimatum to Austria on the very day that she signed an agreement with one of our coastal groups, which was to furnish and put at the disposal of the Kingdom of Serbia special boats for the transport of Serbian goods, especially live stock, from Salonika to Mediterranean ports. The War changed all that, but it has left an example of wise commercial policy which ought to be followed to-day. If the purpose is to develop Yugoslavia's export trade from the strongest economic centre of the State and to achieve success in face of world competition, it is necessary that Yugoslav products on reaching the coast, should be met and taken over by our own regular steamship lines at Galatz and Salonika, and carried to the world markets, so that they may remain in our own hands from the place of origin to the point of final delivery to the foreign consumer, whether this be on our railways, on our high seas, on our steamship service or on our coastal steamers.

We have numerous coastal steamship services, and they should be drawn into the service of our export trade. Coastal steamship owners should voluntarily undertake the part of transporting the produce of our chief economic centre. The task of organising this steamship service as a permanent system in order to serve the needs and interests of our commercial expansion falls to the State itself. Only in this way can strong and firm connections between the different districts of our country and between the State centre and its outlying districts be created and kept up, so that the unity of the State and the nation may be felt and shown clearly and convincingly. This connecting of economic factors which are working in the outlying districts with the centre of the State, which is the basis of our economic life, has a special meaning and importance at this time when foolish separatist tendencies appear now in one, now in another district.

At such a time as the present our coastal steamship lines ought to place themselves at the service of our ex-

Digitized by Google

port trade and to regard this as their duty to the nation. The only point open to question is whether or not the existing lines are capable of undertaking this important work and of carrying it out.

The shipping companies of Yugoslavia were founded and built their ships at a time when the needs of commerce and communications were different from those of to-day, when the Austrian Lloyd had a monopoly of shipping in the Mediterranean, the Aegean and the Black Sea, and when consequently no field remained for Yugoslavia steamship lines unless it were in the Adriatic. Existing vessels, therefore, may be said to have been built for commercial requirements which ended with the formation of the S.H.S. Kingdom, and neither correspond to our commercial needs nor are able to satisfy them. There is far more shipping than is required, in view of the length and development of our coast, but in spite of the number of vessels, the mercantile fleet from the point of view of type, tonnage and construction is not adapted to the requirements of commerce seeking an outlet at the mouth of the Danube and through Salonika. A regular service of steamers of two thousand tons, of a mixed cargo-passenger type, will be necessary for that trade when it develops, while at the start boats of 1,000 tons would serve quite well. At the very least ten boats of that kind will be necessary for a regular steampship srevice to be established and maintained in the interests of our export trade on the Black Sea, the Aegean, the Mediterranean and the Adriatic, whereas there are only four or five which could be put into use for that service at the beginning.

Owing to the change to which reference has already been made in the economic and industrial currents, the greater part of Yugoslavia's maritime fleet as a result of its small tonnage, and its unsuitable type and construction, has become useless, and cannot satisfy the new requirements and the new routes. For the moment it is not a question of great trans-oceanic steamers for service in widely distant parts of the world; we are considering only the question of small coastal steamers which may be called "Adriatic," and that greater coastal shipping which we will call "Mediterranean."

(To be continued.)

THE BUDGETARY "TWELFTHS."

Statement by the Minister of Finance.

At a recent meeting of the Finance Committee, Dr. M. Stoyadinovitch, Finance Minister, made a comprehensive statement on the "twelfths" carried over from the last Budget and on the general financial situation.

The Minister emphasised the fact that the "Twelfths" showed a saving of 85,000,000 dinars in comparison with those for April-June, i.e., 4,015,000,000 dinars as compared with 4,101,000,000 dinars. This means that attention has been paid to the Finance Minister's appeal for economy. Credits are expended more carefully, so that when something new has to be introduced on the one side an economy is possible on the other.

As regards personal expenditure it has been ascertained that the new law dealing with State officials is costing more than was foreseen. Officials' salaries have been raised, but credits have been likewise increased, in the present "twelfths" at the rate of 45,000,000 dinars. There is also a great increase in pensions, about 70,000,000 dinars. It should be possible to adopt certain measures in regard to the great number of younger pensioners with a view to reducing credits and to enabling them to return to Government service. Effective measures against those who return only in order to receive pensions under the new law have already been proposed in these "twelfths." In regard to widows' pensions it is expected that recourse will again have to be made to the special officials' fund, as previously in Serbia. For

Digitized by Google

the disabled, also, a further extraordinary credit of 100,000,000 dinars is still open.

Special attention is being directed, as regards material expenditures, to credits for building railways, repairing roads and the renewal of army equipment which was damaged and destroyed in the War. In the case of railways, besides the lines which have already been laid, provision is made for the laying of the Slavonian Raca-Sava lines and for building a tunnel under Ivan Planina.

Credits have been increased on nearly all roads, and especially for the main Belgrade-Kragujevatz-Petch-Kotor road, where in these "twelfths" alone credits have been raised to the extent of 20,000,000 dinars.

Economies have reached the sum of 142,000,000 dinars in four months. The recovery of the dinar has made it possible to decrease the National Debt by 100,000,000 dinars annually.

The floating debt is not large, and it is being gradually paid off. On March 31 of the current year Government bonds in circulation amounted altogether to 96,000,000 dinars. All these bonds are being paid off regularly and to date. There are no bonds still in circulation through not being paid off when they fell due. The largest debts have been incurred in the Ministry of Communications—a total of 537,000,000 dinars. These debts, also, therefore are now being paid off to a large extent. The rumour that the floating debt has reached 2 milliards is entirely unfounded and does not correspond with the facts.

Cover for these "twelfths" is to be found in the ordinary State revenues, which almost all along the line show good progress. During the eleven months of the financial year 1924-25 307,000,000 dinars more than the Budget provided for were paid in. At the same time economies in expenditure amount to 101,000,000 dinars. It cannot be said however, that that Budget was not properly drawn up. The surplus from revenues and cuts will make it possible to cover the "twelfths." Moreover, the consumption duties, increased taxes for the disabled, and increase in the price of salt will furnish new revenues of 220,000,000 dinars yearly. Finally the new customs tariff will render it certain that the revenues from duties will not fall in the future.

Currency policy remains the same as before—anti-inflation. The dinar shows a strong tendency to recover, but care has to be taken against a sudden jump of the dinar, since that would be baneful to national production.

Finally the Minister gave information on the new customs tariffs, the negotiationes for commercial agreements and the state of the National Debt and the spending of the 7 per cent. and 8 per cent. loans.

The whole statement set out a policy for the satisfying of State needs with economy, but with faith in the constant progress and improvement of the State's finances.

THE STATE MONOPOLIES.

The State monopolies, the revenues from which served in the first place to pay off earlier State loans of the Kingdom of Serbia only, but now, since the loan from the Blair Group of 1922, are being used to pay off all the Governmental loans of the Kingdom of the Serbs, Croats and Slovenes, show very good progress for the last years. The State receives an annual gross revenue of about 2,400,000,000 dinars from the tobacco, salt, petroleum, matches, cigarette paper, and saccharine monopolies, which in their aggregate figure at the head of all sources of State revenue.

A summary of the revenue received from the monopolies for the period from January 1 1919, to March 31, 1925, will best show the results of the exploitation of the State Monopolies in the Kingdom.

	1.6.1919 to 31.5.1920	1.6.1920 to 31.5.1921	1.6.1921 to 31.7.1922	1.8.1922 to 30.6.1923	1.7.1923 to 31.3.1924	1.4.1924 to 31.3.1925
Tobacco ...	87,114,696	420,329,228	888,593,116	1,052,456,017	1,141,715,451	1,608,947,501

Cigarette Paper ...	4,243,034	12,658,917	38,130,734	69,329,252	108,537,883	130,094,698
Alcohol ...	4,386,459	526,376	3,346			
Saccharine		130,525		225,623	258,021	238,211
Various ...	1,028,705	2,230,113	2,827,171	2,304,060	3,611,009	7,512,693
Total	156,092,206	572,991,945	1,249,271,512	1,577,440,547	1,640,578,512	2,357,181,360

The first column, for the period ending May 31, 1920, represents the revenue from the monopolies in Serbia, Montenegro, the Banat, Bachka, and Baranja only; the other columns show the revenues for the whole Kingdom.

It will be seen from the above table that revenues from the monopolies, especially from the tobacco monopoly, are susceptibly increasing from year to year. Up to 1923 throughout the country there was a general shortage of tobacco products, which resulted from the insufficient production of raw tobacco as compared with the demands of the consumer. From that year on, that shortage has been met, so that in recent years the production of tobacco actually provides a surplus, over and above the demand of consumers, that is exported abroad. Consuming districts have been kept well supplied lately with tobacco products by the opening of many depôts to supply retailers.

The sale of salt, matches, and cigarette paper is also carried out through State monopoly depôts and gives excellent results.

The sale of petroleum, alone, is for the most part carried out by private firms, with the payment of the import monopolies tax.

The alcohol monopoly, which existed only under the monopoly laws of the Kingdom of Serbia, was abolished in 1921.

The saccharine monopoly has up to the present not provided any considerable revenue. It existed formerly only in Bosnia and Herzegovina and has only just been introduced into the other provinces.

EXPORTS IN MAY.

According to the Customs' statistics, exports from Yugoslavia for the month of May of the past and present year amounted to:

	Tons.	Gold Dinars.
May, 1924	318.973	51.418.084
May, 1925	448.836	75.763.366
Excess in 1925	129.863 (40·71%)	24.345 362 (47·34%)

For the first five months of the past and present years the exports of Yugoslavia amounted to:

	Tons.	Gold Dinars.
1924	1,295.157	245.376 567
1925	1,786 640	320.540 594
Excess in 1925	491.483 (37·94%)	75.164.027 (30·63%)

The chief commodities exported in May of this year were: maize, building timber and wood fuel, eggs, beef, copper ore, wheat and wheat products, cement, live horses, lead plates, pigs, and small live stick. Of the new maize harvest, which began on November 1, 1924, 72,612 wagons have been exported so far.

CROP CONDITIONS IN YUGOSLAVIA.

Report for Period June 1 to 15.

The general condition of the crops is very good, both as regards winter and spring sowings. The general condition of the orchards is between good and very good, that of vineyards very good.

Winter Sowings.

Excellent and very good in the Valjevo, Nish, Vranja, Rashka districts. *Very good* in the Maribor, Osek, Bachka, Liubliana, Kosovo, Danube, Drina, Sumadija, Pozharevatz, Timok, Bitolj, Uzitze, Krushevatz, Tuzla, Travnik, and Bihatch districts.

Good and very good in Srem, Skoplje, Zeta, Dubrovnik, and Vrbas districts.

Good in Primorje, Krayish, Zagreb, Bregalnitza, Split, Sarajevo, and most districts.

Spring Sowings.

Spring sowings are developing well in general, with local setbacks in certain districts, where their development has been hindered by wet and cold weather. In other districts plenteous rain would greatly have contributed to the success of spring sowings.

Digitized by Google

Field Work.

Maize, potatoes, and sugar beet were dug over in the first half of June. Some places where there have been floods were reploughed, and late maize and potatoes sown. In the vineyards binding and digging is reported, also a second and in some places a third spraying with Bordeaux mixture against peronospora, as well as sprinkling with sulphur against oidium. In the orchards the cherry, the sour cherry, and early pear harvest is in full progress. Measures to destroy pests are still being undertaken. Meadows are being mown, both clover and lucerne, and here and there even a good second mowing has been obtained. Winter sowings of barley are being reaped here and there, and there are prospects of an excellent harvest (Nish district). In the Bregalnitza district the harvest of winter barley has been completed, and work is being begun with reploughing the stubble, while maize, rice, sesame, and cotton are being sown in damp places. The poppy (opium) harvest is in full swing.

Atmospheric Changes.

In the first half of June the rainfall was by no means uniform in the different parts of the kingdom. As an illustration of the disparity in rainfall it may be mentioned that in the Drina, Valjevo, Timok, Vranja, Primorje, and Krayish districts the land has been soaked with water, while in the Split, Dubrovnik, and Sarayevo districts a great shortage of water has been felt; moreover, in Liubushka (Mostar district) there is a great drought. In the majority of districts the weather has been cool for this season, so that the vegetation is backward in some places (maize is beginning to turn yellow) and warm days will be necessary for ripening the crops. There has been frost in the Vranya district in the parish of Giljan. Cloud bursts, hail, and floods have not been so frequent as in the second half of May; they were only local and involved no special loss.

Pests.

Cryptogamic pests are appearing in somewhat larger numbers. Among the most important is the smut-ball on the wheat ears, especially in the districts where the precaution of soaking the seed in sulphate of copper was not taken. Rust has appeared, mostly on barley on soil under water or on low-lying ground; Ustilago chiefly on barley, in certain districts of the Sandjak, i.e., in the Uzitze district. The proportion of crops affected by disease varies from 15-20 per cent., with even more in places.

Entymological pests are reported on commercial, oil, and textile plants; garden plants are affected to a less degree with blight. Fruit trees have also suffered to a somewhat greater degree in the Mostar and Timok districts. Locusts have appeared in large numbers in Breglana district and are doing considerable damage. Mice are causing considerable damage in the Travnik district, but the necessary measures for dealing with the plague are being taken.

Health of Stock.

The condition of stock is favourable. There is an efficient supply of fodder, and the pastures are particularly productive. Of contagious diseases there is a certain amount of local swine fever, distanum in cattle, pox and scab among sheep and goats, and cholera is present among poultry.

PAYMENT OF CUSTOMS DUTY.

The British Minister at Belgrade has reported that the surtax levied when Customs duties are paid in paper has been reduced from 1,100 to 1,000 per cent. as from July 16, so that eleven paper dinars (instead of twelve, as formerly) must now be paid for each gold dinar of the Customs Tariff. The export duties on cereals, cattle, horses, hides and skins, certain timber, hay and beans were considerably reduced on July 16.

GREEK REFUGEE LOAN.

Hambros Bank, Ltd., have issued the following:—

At the time when the prospectus of the Greek Government 7 per Cent. Refugee Loan of 1924 was issued last December, the surplus of the old revenues applicable to the service of the loan was estimated at Dr.669,834,479 and £20,000 per annum (viz., Dr. 1,304,466,544 and £20,000 subject to various prior charges), and the new revenue (upon which the loan has a first charge) at Dr.514,610,694, making a total of Dr.1,184,445,173 and £20,000. The actual surplus of the old revenues for 1924 (which reached Dr.1,428,681,881 and £19,482) was Dr.735,819,000, and the actual receipts from the new revenues was Dr.569,611,704, making a total of Dr.1,305,430,704.

For 1925 the receipts were estimated at a total of Dr.1,365,028,540 from the old revenues—to yield a surplus of Dr.730,396,465—and Dr.651,327,000 from the new revenues. For the first five months of 1925 the receipts have been: From the old revenues Dr.654,000,016, viz., at the rate of Dr.1,569,600,038 per annum; from the new revenues Dr.277,758,461, viz., at the rate of Dr.666,620,306 per annum.

The yearly service of the Refugee Loan—exclusive of extra drawings dependent upon repayments of capital—requires a sum of about £922,500. For the first five months of 1925, taking as a basis the approximate average rate of exchange for this period of Dr.284 per £, the yield from the new revenues alone would amount to £978,022, viz., at the rate of £2,347,253 per annum, to which sum must eventually be added the surplus from the old revenues referred to above.

BRITISH TRADE WITH ROUMANIA.

Railway Material Required.

At the annual meeting of the British Roumanian Chamber of Commerce on July 23, Lord Oranmore and Browne, K.P., the chairman, in presenting the statement of accounts for the past year, said that British trade with Roumania continued to expand during 1924. The exports from the United Kingdom, including re-exports, were £2,856,460, an increase of £84,000 compared with 1923, the largest item being, as usual, cotton goods to the value of £1,534,800. The exports of iron and steel goods had increased from £230,600 to £463,200. The imports from Roumania into the United Kingdom amounted to £2,202,537, which shows a slight decrease of £151,350 on the figures of 1923. The chief items were:—Grain, £1,423,000; oil, £537,000; timber, £341,000.

It might be noted that the volume of trade between the two countries was maintained, to which, of course, the comparative steadiness of the exchange was a contributory factor. An arrangement had recently been concluded between the Government of Roumania and the National Bank for the liquidation of the Government's debts to that institution, and it was hoped in Roumania that with the carrying out of this progrmme a sensible improvement in the exchange will result. The country was still actively continuing the consolidation of its position and in particular the beneficial effect of the distribution of the land among the peasants was beginning to be felt in a more general and real prosperity of the country taken as a whole.

The principal difficulty at the moment in Roumania was the inadequacy of the transport facilities afforded by the railways, which required large sums for new lines and stock in order to cope with the big traffic which actually awaited. Lord Oranmore paid a tribute to the efficiency of the technical side of the railways, which obtained very good results with the means at its disposal. The prospects for British trade were much brighter than they had been for some time past.

Members of the Chamber were aware of the difficulties experienced by the European Commission of the Danube in carrying out their work during recent years. They had been hard pressed to meet the expenses of dredging operations and lengthening of the piers necessitated by natural cause which had operated to silt up the mouth of the river. The Powers which had previously advanced money to the Commission were now unwilling to put up the required capital, and the Commission had therefore been obliged to finance capital expenditure out of revenue and to raise the dues for the purpose.

M. Titulesco, Roumanian Minister in London, was re-elected hon. president and Lord Oranmore and Browne, K.P., was re-elected vice-president for the ensuing year.

IVORY PRICES IRREGULAR.

Messrs. Hale and Son's report on the quarterly ivory sales held on July 21 and 22, states that they comprised 42¾ tons (against 55 tons same time last year), viz.: 17½ tons Zanzibar, Bombay, Mozambique, East African and Siam, 2¾ tons Abyssinian, 6¾ tons Egyptian (6½ tons Alexandrian, ¼ ton Malta description), 10¾ tons West Coast and Central African, ½ ton Lisbon, and 4¾ tons land carriage; also 1¼ tons sea horse tusks and boars tusks, and ¼ ton mammoth tusks and rhinoceros horns. Total 44¼ tons. Of the above quantities 8½ tons consisted of lots previously offered or indirect import, viz.: 1¼ tons East Indian, ¼ ton Abyssinian, ½ ton Egyptian, 1¾ tons West Coast African, 4¾ tons land carriage.

The following was the assortment of the East Indian description: 11 tons soft tusks, ½ ton hard and Siam, 1 ton billiard ball pieces, ¼ ton bagatelle pieces, ¾ ton cut points for balls, ½ ton cut points off large tusks, ¼ ton under-size and defective points, etc., ¾ ton billiard ball scrivelloes, ¼ ton bagatelle scrivelloes, ¾ ton scrivelloes, 1¼ tons cut hollows, and ¼ ton mixed defective pieces, etc. During the progress of the sales the following quantities were bought in, viz.: 8¾ cwts. East Indian, 3½ cwts. Abyssinian, ¾ cwt. Egyptian, 22¼ cwts West Coast African, 50¾ cwts. land carriage. Total 4¼ tons. The quantity catalogued was moderate, being about the same as at the previous auctions. There was the usual attendance of buyers and with good competition prices generally were well maintained for large and medium tusks, both of the hard and soft descriptions. Ball ivory again showed much irregularity in prices, some lots bringing last sale rates, but in some instances prices showed a decline of £5 to £10 per cwt., and some quantity was bought in. America, the Continent and the Home trade bought as usual.

Egyptian.—Soft, large and medium tusks were steady

Abyssinian.—Large and medium tusks and scrivelloes steady. Hard scrivelloes £3 to £4 per cwt. lower. Ball scrivelloes sold rather in buyers' favour.

An Exhibition of Oil Well Equipment is to be held at Bucharest from September 21 to October 31.

It is reported that the Roumanian Government has agreed to permit the refineries to export fuel oil, the export tax being provisionally fixed at 5 dollars a metric ton.

A sample Fair is to be held at Gorna Orekhovitsa in Northern Bulgaria from September 17 to 27. The British Commercial Secretary at Belgrade states that as this year's harvest is a remarkably good one the Fair may offer an exceptional opportunity for British manufacturers of agricultural machinery to display their goods.

Ottoman Railway (Smyrna-Aidin).—The half-yearly meeting will be held at Winchester House, 100, Old Broad Street, E.C.2, on September 29, at noon. Shareholders intending to attend must deposit their share certificates with the secretary at 100, Old Broad Street, E.C.2; or at the company's offices at Smyrna; or with the Imperial Ottoman Bank, Constantinople, at least 14 days before that on which the meeting will be held.

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

Company Meetings.

FURNESS WITHY AND CO.

The Shipping Position.

The thirty-fourth annual general meeting of Furness Withy and Co., Ltd., was held on July 22 at the registered office of the company, Furness House, Leadenhall Street, E.C. Sir Frederick W. Lewis, Bart., presided.

The Secretary read the notice convening the meeting. Mr. Ralph T. Warwick, of Messrs. W. T. Walton and Son, read the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said: In the midst of the very depressing conditions in which the trade of the country is being carried on, it is a source of satisfaction to your directors to be able to present to you what I think may be regarded as a comparatively satisfactory balance-sheet. It is but natural that our profits should show a reduction, and those of our shareholders who are in close touch with the shipping industry will not be surprised at that fact.

So far as the profit and loss account is concerned, the credit balance as the result of the year's operation is £528,742 5s. 4d., which, of course, is arrived at after paying all expenses and making provision for taxation. As there are no prior charges in the shape of debenture interest, the total disposable amount, which includes the balance brought forward from the previous year, amounts to £745,379 3s. 2d., and, as shown in the accounts, there have already been distributed the two half-yearly dividends on the preference shares, as well as two dividends at the rate of 5 per cent. per annum upon the ordinary shares. As will be seen from the directors' report, we have thought it prudent to transfer £200,000 to depreciation, as, while our assets are of greater value than the amount at which they stand in our books, the steamers and other similar wasting assets should, of course, gradually be written off over the period of their estimated life. After making these allocations we propose to distribute a bonus of 2½ per cent. to the ordinary shareholders, which, with the interim dividends already paid, will make a total distribution of 7½ per cent. per annum, free of income-tax. The balance of £187,259 9s. 1d. will be carried forward to the current year.

Our steamship services have been well maintained, and wherever developments have justified expansion we have not hesitated to provide additional tonnage, even at the cost of building at present high prices. We have just taken delivery of a new pasenger and cargo vessel built by Messrs. Vickers, of Barrow-in-Furness, for the Liverpool, Halifax and St. John's trade. This vessel has been named the Newfoundland, and while, of course, she is not of the same size as the largest Atlantic liners, she is beautifully appointed, and her public rooms and cabins have been designed to give passengers the maximum pleasure and comfort on a boat of this description. She will make the passage between Liverpool and St. John's in five and a-half days, and in order to encourage travel by this route we have within the past two or three weeks placed with the same builders an order for a second duplicate ship. The Digby, which has been a most popular ship in that service, will be transferred to the New York-West Indian service, and is now being overhauled and refitted for that purpose.

Our fleet, including the vessels owned by our associated companies, now totals over 1,000,000 tons, including 100,000 tons of motor vessels and 150,000 tons of refrigerated tonnage. Part of the tonnage we have under construction is engined by Diesel engines and part by steam engines. This does not mean that we have been dissatisfied with our experiments with Diesel engines, but the fact is that, taking everything into consideration, the steam engine is still the most economical in certain trades, particularly in short voyages and dead-weight trades and in trades where oil is expensive. We have among our fleet five different types of Diesel engines, and, notwithstanding the fact that it is now some thirteen years ago that we constructed our first vessel with British-built Diesel engines, we are still more or less in the experimental stage, and one of the most important factors standing in the way of the further development and use of the Diesel engine for marine purposes is the very high first capital cost. Apart from this problem, which will no doubt be solved in due course, and also the question of the cost and supply of oil, our experience leads us to the conclusion that the efficiency of the Diesel engine is firmly established.

The year just past has been one of unprecedented difficulty and depression. Fortunately, we have our interests well spread, and, as is obvious from our balance-sheet, a considerable part of our assets consists of investments in British and Colonial Government and general securities, from which a great part of our revenue has been derived, and which are not so much affected by the depression in our own especial industry. At the same time, while the past year's results of our company have been so far satisfactory, it is impossible to disguise from ourselves that conditions at present governing our principal industries are so acute that they are causing national concern, and the problem of determining what single circumstance or group of circumstances is at the root of the situation, and what is the right solution, is probably the biggest industrial problem with which this country has been faced since the Napoleonic wars.

The resolution was carried unanimously, and after the usual formal business the proceedings terminated.

BANK OF ROUMANIA.

Business Continues Satisfactory.

The annual general meeting of the Bank of Roumania, Ltd., was held on July 22, at Winchester House, Old Broad Street, E.C., General the Hon. Sir Herbert A. Lawrence, K.C.B., presiding.

The Secretary (Mr. F. P. Carrington) having read the notice calling the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said: The balance available, after making provision for bad debts, income-tax, and corporation tax, amounts to £18,551 8s. 6d. An interim dividend of 3s. per share, less income-tax, was paid on December 17 last, and the Board now recommends the payment of a dividend of 3s. per share, less income-tax, which together with the interim dividend absorbs £11,625, and recommends that the balance of £6,926 8s. 6d. be applied as to £3,226 17s. 6d. to the contingency account, and as to £3,699 11s. to the reserve account.

I very much regret to inform you of the death of our manager in Bucharest, Mr. Alexandre Lucasiewicz, at the age of 71. Mr. Lucasiewicz had been a faithful servant of the bank for 56 years and his loss is one which we very much deplore. His high personal qualities and attainments were such as had placed him in the front rank of business men in the city of Bucharest; a fact which I am pleased to find has been recorded in the Roumanian Press in the references to his demise. The Board has appointed Mr. H. R. Saltmarsh, whom we have known for many years, to the post vacant through Mr. Lucasiewicz's death.

I am very pleased to be able to say that the business of the bank continues to be satisfactory, although the stringency of money during the second half of the year 1924 somewhat restricted the scope of our operations.

The exchange on London remained comparatively steady throughout the year, commencing at 850, touching its highest point—just over 1,000—in the middle part of the year, and ending the year at 925.

The financial position of the country on the whole is improving, most of the State debts abroad having been consolidated, and a great part of the old outstanding commercial debts having been arranged.

There has also been concluded recently an agreement arising out of the renewal of the charter of the National Bank of Roumania for a further period of 30 years, by which the Roumanian Government has set out a programme for the liquidation of its debt outstanding to the National Bank. It is hoped that by this arrangement a gradual improvement will be effected in the exchange value of the leu.

The State revenue for the year 1924, which had been estimated in the Budget at 24,000 millions of lei, actually reached 28,000 millions, and 24,390 millions having been expended as estimated in

the Budget, the surplus of 4,518 millions has been utilised for extraordinary credits for the Ministry of Communications, Education, etc. The new Budget for 1925 estimates expenditure at 28,648 millions and revenue at 31,750 millions.

Taking the most important industry first—that is, that of agriculture—we find that in 1924 although the area cultivated (25,381,000 acres) was the greatest since the war, the production was less than that of 1923, owing to the drought in the months of April and May. Less than the usual quantities of wheat, oats, barley, and rye have been exported, but the maize crop was better than that of the previous year. The total export of agricultural products for the year was 1,458,255 tons.

The sowings for the present year cover 19,690,000 acres, which area shows a falling off from the figures of the previous year. From a report issued by the Ministry of Agriculture it appears that the general agricultural situation of the country is good.

With regard to the general development of the country, I am very pleased to record the fact that steady progress is being made by the peasant, who forms such a large percentage of the population of Roumania. The peasant is slowly accustoming himself to his change of status from that of a paid labourer to that of a small landed proprietor, and he has applied himself assiduously to the cultivation of his property. This fact, which I esteem the most important factor in the development of the country, should, in a few years' time, have a considerable effect on the national well-being and consequent interest in the country from the point of view of British exporters of manufactured articles. The possession of the land by so many small proprietors is also a great safeguard against political disturbances, the peasant as proprietor tending obviously to become more and more conservative.

The production of oil in 1924 reached 1,850,751 tons, which figure has only been exceeded once in the history of Roumania—that is, in the year 1913, when 1,885,225 tons were produced. Exports were also the best since before the War—namely, 435,468 tons.

The timber industry reduced its output during 1924, owing to the increased cost of production and high railway tariffs and export taxes; but notwithstanding this, exports have improved and 2,662,700 tons were exported, as against 1,957,586 tons in 1923. Recent reports received from Galatz state that the export grows day by day, and this section of the business at the port of Galatz is quite animated.

The continued comparative steadiness in the exchange has enabled trade between Great Britain and Roumania to be maintained at the 1923 figure. According to British Customs returns, the exports from Great Britain to Roumania in 1924 were 76,170 tons, valued at £2,856,000, as compared with 60,500 tons, worth £2,759,000 in 1923. As usual, the largest item was cotton goods to the value of £1,534,000.

Imports into Great Britain from Roumania in 1924 were valued at £2,202,000 (367,500 tons), as against £2,360,000 (404,800 tons) in 1923, the principal items being: cereals £1,423,000, oil £357,000, and timber £341,000.

The total exports from Roumania to all countries for 1924 reached 4,725,000 tons, valued at nearly 28 milliards of lei, as against 4,878,000 tons, valued at just over 24 milliards of lei in 1923. The total imports from all countries in 1924 amounted to 802,500 tons, valued at over 26 milliards of lei, as compared with 703,000 tons, worth nearly 18 milliards of lei in 1923.

The resolution was seconded by Lord Oranmore and Browne, K.P., P.C., and was unanimously approved.

The retiring director, Lieut.-Colonel Sir Albert Stern, K.B.E., C.M.G., was re-elected, and the auditors, Messrs. Jackson Pixley and Co., were reappointed.

EGYPTIAN DELTA LIGHT RAILWAYS.

The annual ordinary general meeting of the Egyptian Delta Light Railways, Ltd., was held on July 24 at Winchester House, Old Broad Street, E.C., Sir Montagu Sharpe, K.C. (the Chairman), presiding.

The Secretary (Mr. F. J. Horne) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: With your approval I propose, as usual, to take the directors' report and accounts for the year ended March 31, 1925, as read.

In presenting these to you I am pleased to say that, notwithstanding the difficult political position in Egypt, to which I will refer later, and the labour troubles with which we had to contend in July, 1924, which I reported to you at the last general meeting, the traffic receipts for the year show a substantial increase.

This improvement can, I think, be directly traced to a good cotton crop, both as regards quantity and prices realised, and to our policy of reducing fares and increasing the train service on sections where motor-car competition was keenest.

A good cotton crop, as you are aware, always reacts favourably on passenger traffic, as additional money is circulated through the provinces, which enables the fellaheen to travel more freely, and also on the goods traffic, since there is a larger tonnage to be lifted.

As regards motor-car competition, there are, unfortunately, no regulations in Egypt for controlling either the number of passengers which may be carried on any one vehicle or the condition of the vehicles, which are more often than not in a dilapidated and dangerous state. Since only nominal taxes of about £2 per annum per car are collected, every person who possesses a car, in whatever condition it may be, is qualified to run it on the road for passenger service until it is worn out and becomes useless.

It was very difficult in the past years to form a reliable estimate whether this form of competition would become permanent or, as the cars became unserviceable, they would drop out and not be replaced. So far experience shows that competition is increasing, since the condition of the public roads has been so much improved in the last few years. In a recent number of the *Economist* I see that the latest return of the number of motor vehicles imported into Egypt is 2,784, as against 1,586 in the previous year. We have therefore continued the policy of reducing fares and increasing the train service on sections where we are feeling the effects of motor-car competition, and with what we consider to be satisfactory results.

As a consequence of better economic conditions, an improved service, and with a reduction in fares, we have carried an aggregate of 6,679,666 passengers, nearly half the population of the country, or 544,212 more than during the previous year, and our gross receipts total £227,632, as compared with £207,169, an increase of £20,463.

Goods traffic also shows some improvement, the total lifted being 530,217 tons, an increase of 78,501 tons. The gross receipts were £128.610, an increase of £5,111, this being principally in the carriage of unginned cotton and manures. This advance is largely due to drastic reductions in rates over sections where competition by road and water is severe.

As you will have seen by reference to the revenue account, the final result is that our gross earnings for the year amount to £364,557, as compared with £339,475 for the previous year, an increase of £25,082; while by careful and economic working our expenditure has only increased by £1,078, being £249,401, as compared with £248,323, notwithstanding the greater kilometrage run. The percentage of expenditure to gross receipts has been reduced from 73.15 to 68.41.

You will observe that reference is again made in the directors' report to the payment by the Egyptian Government of the balance of the Helouan Railway purchase money, and to the subject of the revision of the Government's proportion of profits.

In February of this year I visited Egypt with a view to investigating the reasons for the long delay in the negotiations with the Government upon these two subjects, and, by personally making the acquaintance of Government officials, to urge them to give our affairs their early consideration. I have every reason to be satisfied with my reception by these gentlemen, who were very kind and courteous, and listened to all I had to say to them. Unfortunately, pressing affairs of State, consequent upon the dissolution of Parliament on the day of its being opened, rendered it impossible during my stay to make definite progress towards a settlement.

You will realise how essential it is that Ministers and their Under-Secretaries and staff should be fully conversant with the details connected with our railway, and a difficulty with which both they and we have had to contend is that, owing to the recent changes in the personnel of the Egyptian Government, questions which we are seeking to have settled have to be resubmitted and again discussed.

Although an immediate solution of our troubles was not possible, I feel that my visit has resulted in bringing the directors into closer and more intimate relation with the Ministers and their officials, to whose friendly reception I have already referred.

While in Cairo, I was presented to His Majesty King Fuad, after which he graciously granted me an interview, which enabled me to draw his attention to matters connected with our railway. The King stated that he was aware of the value of our agricultural lines in the development of the Egyptian delta, and was pleased to hear that we proposed to establish a more frequent train service in several districts.

The impression with which I returned home is that, generally speaking, the political atmosphere of Egypt is clearing, that the anti-foreign agitations from which the country has so long suffered are dying out, and that under the administration of the present Ministry, which, in my opinion, is the best which has yet been formed, we may hopefully anticipate a coming regime of peace and prosperity.

Since my return, we have been informed by our agent and general manager that the Minister of Communications has promised to request the Finance Department to pay us the balance of the Helouan railway purchase money, so I hope we may shortly receive this sum.

The resolution was carried unanimously.

COMPANY NOTES AND REPORTS.

BOMBAY BARODA RAILWAY.

The report of the Bombay Baroda and Central India Railway Company for the year to March 31, 1925, states that the capital expenditure since December 31, 1911, to March 31, 1925, including suspense accounts, but excluding payments on account of liabilitieis incurred prior to January 1, 1912, amounted to Rs.16,90,68,981. Funds to meet this outlay have been advanced by Government to the extent of Rs.16,70,58,981 and by the company to the extent of Rs.20,10,000 and these amounts constitute temporary additions to the preferred capital of the Secretary of State and of the company respectively. The capital expenditure charged off during the year was Rs.1,95,37,844 for the broad gauge and Rs.67,38,790 for the metre gauge, of which Rs.28,46,058 and Rs.30,37,827 respectively are on account of rolling stock. The gross earnings totalled Rs.12,32,28,850, an increase of Rs.41,58,064, and the net earnings were Rs.5,22,94,425, an increase of Rs.42,03,982. The coaching traffic shows a decrease of Rs.4,07,775 on the broad gauge and an increase of Rs.7,39,454 on the metre gauge; the goods traffic shows a decrease of Rs.7,47,703 on the former and an increase of Rs. 41,59,335 on the latter; sundries, increase of Rs.2,58,290 on broad gauge and Rs.1,54,907 on metre gauge; and telegraph, decrease of Rs.1,902 on former and increase of Rs.3,518 on latter. The net earnings amount to Rs.5,22,94,425, but for the purpose of arriving at the share due to the company this sum has been increased by Rs. 31,34,773, representing revenue portion of total refund of Rs. 14,59,454 on account of Customs duty paid from 1920-21 to 1923-24. Out of the surplus of Rs.11,81,326 due to the company in respect of the year Rs.1,78,022 was remitted to England in November, 1924, producing £13,374, and the balance, Rs.9,83,304, May, 1925, producing £73,491. The directors recommend the payment on July 31 of a final dividend of 1¼ per cent., making together with the guaranteed interest of 1¼ per cent. for half-year a total payment in July of 3 per cent., and the return for the year of 6 per cent., compared with 6 per cent. for each of the years 1921-22 to 1923-24.

NATIONAL BANK OF EGYPT.

Position at May 31, 1925, published in conformity with Article 8 of the Statutes. Banking Department: Liabilities:—Share capital (300,000 fully paid shares of £10 each), £E2,925,000. Reserve Fund: Statutory reserve, £E1,462,500; special reserve, £E901,875; current, deposit, and other accounts, £E14,219,292; Egyptian Government, £E19,988,997; Sudan Government, £E430,706; Mixed Tribunals, £E1,693,998; bankers accounts, £292,922; cheques and bills payable, £E323,956; sundry other accounts, £E578,524—£E42,817,770. Assets: Government securities and securities guaranteed by the Egyptian Government, £E28,404,011; sundry securities, £E295,477; advances on merchandise, £E875,296; advances on securities, £E1,949,080; advances otherwise secured, £E379,234; sundry other advances, £E856,772; bills of exchange, £E2,305,834; local bills discounted, £E350,072; buildings and furniture, £E231,005; money at call and at short notice, £E628,875; bankers accounts, £E4,485,493; sundry other accounts, £E140,043. Cash: notes, £E1,376,658; gold, £E34,457; silver, nickel, etc., £E505,463 — £E1,916,578— £E42,817,770. Issue Department.—Notes issued, £E34,000,000— £E34,000,000. Gold, £E3,339,576; *British Treasury Bills, £E13,660,424—£E17,000,000. Securities: Egyptian Government securities and securities guaranteed by Egyptian Government, £E420,262; British Treasury Bills and National War Bonds, £E16,579,738—£E17,000,000—£E34,000,000.

* By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916.)

MORUMS STORES.

The report of Morums Oriental Stores for the year to March 31, 1925, states that the policy referred to by the Chairman at the last meeting, of concentrating all attention on the two large stores in Cairo and the one in Alexandria, has been carried out and has been justified by trading results, but it has been necessary to write off a substantial sum in respect of removal expenses, etc. The loss on trading for the year amounts to £18,523, which, however, is a reduction of nearly £1,000 on the figures in the previous accounts, which covered only nine months' trading. The directors add that they have been approached by various parties with a view to the purchase of the whole or part of the company's business, and negotiations to this end are still in progress.

HANIPHA TEA.

The Hanipha (Ceylon) Tea and Rubber Company has declared an interim dividend of 10 per cent. (actual) (2s. per share on the old shares and 1s. 4d. per share on the new shares), less tax, payable on August 29 to shareholders on the register on August 14.

Before leaving for abroad, M. Vintila Bratianu, Roumanian Minister of Finance, made a statement in which he declared that the Government was drawing up a detailed memorandum on reparations and inter-Allied debts, setting forth the Roumanian point of view (says a Reuter message from Bucharest). The Government, he said, is of opinion that there is a connection between debts contracted in a joint war and reparations, because whenever the time for settling up debts comes each country's capacity to pay will depend a great deal on the political results of reparations.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended July 25 states:—

A somewhat improved tone has been evident this week. Business is still very unevenly distributed over the various classes of goods, but inquiry has shown a tendency to broaden both in respect of quantities and qualities.

Yarn.—During the early part of the week the Federation of Master Cotton Spinners decided to recommend the owners of mills spinning American cotton to stop their machinery for a complete week in addition to the stoppage of one day per week which is at present in force. This decision is, of course, in itself sufficient evidence of the very bad position into which spinners of this kind of yarn had drifted. The news had a strengthening effect but operations are still very curtailed. Egyptian spinnings have been in small demand and there is in some quarters a call for organised short time in this section slso.

Cloth.—Nothing of special interest has transpired. Inquiry has been on a better scale than recently and on the whole a fair trade, for these times, appears to have been done. For India some good lines have been booked and China again has given a certain measure of support; the minor outlets have also contributed their quota.

Raw Cotton.—During the early part of the week there were slight falls in "spot" cotton daily. The figures published by the American Agricultural Bureau on Thursday evening, however, caused a complete change in feeling. The condition of the crop on the 16th instant was given as 70.4 per cent., a decline of 5.5 per cent. since June 25. The yield estimated is 13,588,000 bales as compared with 14,339,000. The deterioration is attributed to drought in Texas and Oklahoma, but it is added that good rainfalls might make a very great improvement in the outlook. Following the publication of these figures there was a rise in prices of a little over ½d. per lb., leaving quotations slightly higher on the week. Reports regarding the Egyptian crop are satisfactory. Closing quotations yesterday were as follows:—American Middling, 14.08; Egyptian Fully Good Fair, 32.65.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Scindia for Bombay (Liverpool, August 7). (For passenger sailings and dates see advertisement.)

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, August 12).

British India Line.—S.s. Hatimura for Colombo, Madras, and Calcutta (London, August 1); s.s. Warfield for Bombay and Karachi (London, August 1).

Cunard Line.—S.s. Cypria for Oran, Algiers, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, August 1).

Ellerman "City" Line.—S.s. City of York for Calcutta (Birkenhead, August 17).

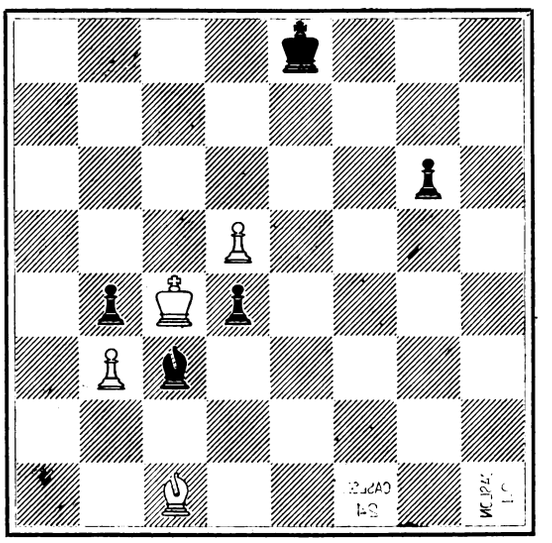
Johnston Line.—M.v. Sycamore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 8); s.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 5); s.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 12).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, August 7); s.s. Nankin for Colombo, Madras, and Calcutta (London, August 8).

Prince Line.—S.s. Soldier Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, and Alexandretta (London, August 12).

CHESS.

By "CARO-KANN."



END GAME No. 8.

White to play and draw.

Solution to end-game No. 7:—1, K—Kt4, K—B; 2, K—R5, K—K2; 3, K—Kt6, K—K; 4, K—B7, K—K2 and draws. If Black plays 2. . . K—K; 3, K—Kt6, K—K2; 4 K—B7, K—K; White loses if he plays, K—Q6 for at his next move he will be forced to play P—K6.

SPECIAL MARKET REPORTS.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

Teheran, June 20.—The market continues very quiet with prices steady. This year's wheat is already being marketed. There is a shortage of water in Teheran town, and the fruit and similar crops are not expected to be up to expectations. Sugar is steady. Opium shows a slight fall in price on the diminution of demand. June 27.—There has been almost complete stagnation during the past week. Belgian sugar is 22½ krs. per batman, while Russian is 21. The market is weak, and a fall in prices is considered possible. Other prices per batman are: tea 44-48 krs., coffee 30-30½ krs.; opium: Tchouneh 345 krs. There are no buyers at these rates.

Basrah, June 27.—The market is quiet. There is nothing particular to report as regards transactions in imported goods. Some sales of dates have been transacted on the London market and at Oran.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Greek Refugee Commission.

A curious situation has arisen in connection with the League of Nations' Refugee Settlement Commission, which is in charge of the arrangements for housing refugees in Macedonia. Several of the higher officials belonging to the staff, of Greek nationality, have been suddenly arrested on the charge of peculation of State funds, and the Commission has suspended for the time being its operations. The Commission takes exception to the manner in which these arrests have been effected. From the fact that one official was kept in prison for seven weeks and then discharged as being innocent of any offence there would seem to be some ground for suspecting arbitrary action. The authorities are not acting under the ordinary criminal law, but have availed themselves of a hurriedly passed measure sanctioning an extraordinary procedure in cases of peculation, or suspected peculation, by State employees. Under this procedure charges may be laid by anyone, whose name need not be made known to the accused; arrest may follow, without any proof of the accused's guilt, and bail is not allowed. The Commission suspects that its officials may have been the victims of dissatisfied contractors or possibly discharged employees. It is not prepared to guarantee the impeccable honesty of all the sixteen hundred Greek employees on its staff, but it does not believe that any serious defalcations could have taken place over any period of time without its knowledge. In any case, it has offered to collaborate in the fullest possible investigation of the charges, but its offer has not been accepted. Sympathy will be felt with any Government anxious to put a stop to a state of affairs in the Civil Service, which, if unchecked, renders good government impossible, but, as far as can be gathered, M. Pangalos' Cabinet have been ill advised in resorting to arbitrary procedure in dealing with an International Commission, in particular one charged with the administration of the Refugee Loan.

The New Yugoslav Government.

There has not been time as yet for Yugoslavia to feel the full effects of the Radical-Raditch coalition in the conduct of public affairs. M. Stefan Raditch, indeed, is still occupied in running after M. Pashitch, with whom he hopes to have a meeting at Carlsbad. Until, therefore, the Prime Minister is able to resume his duties in Belgrade, it will be premature to look for any striking changes in Yugoslav policy, either at home or abroad. The light now thrown by M. Nintchitch on his Government's intentions in regard to Salonika will afford relief to Greece, where considerable uneasiness has prevailed on account of reported troop concentrations on the Greek border for the purpose of manœuvres. The Yugoslav Foreign Secretary not only disclaims any hostile intentions against Greece, but declares that his country genuinely desires to re-open negotiations for an alliance to the mutual benefit of the two countries. It seems most unlikely that Yugoslavia has received encouragement in any quarter to persist in her demands for the handing over of the Ghevgheli-Salonika railway. France is stated to have suggested a compromise with the formation of a joint Serbo-Greek company to be responsible for the administration of the line. No less useful is the admission now made by M. Nintchitch that, "it is generally necessary, when drafting international agreements, to be prepared to make some sacrifice." Unfortunately, the practice of making excessive demands, when intensified, is apt to gain for the country indulging in it the stigma of aggressive imperialism which may not be shaken off before grave harm is done to the country's interests.

Montenegro.

An early change in the British Vice-Consular representative at Cetigne, who was appointed to the newly-created post only last year, has given rise to misgivings in the House of Commons lest the transfer of Mr. Monck-Mason has been undertaken at the request of the Yugoslav Government. Mr. Robert McNeill, Under-Secretary for Foreign Affairs, was rightly reticent in his reply, on the ground that it would be unwise to state in public the reasons for appointments or transfers in the

Digitized by Google

Diplomatic or Consular services. We find it difficult to suppose that the Yugoslav Government would place itself in the wrong by asking for the removal of a British Vice-Consul except for very grave reasons; on the other hand, it is unfortunate that Mr. Monck-Mason should have qualified quite so soon after his appointment to Cetigne for another post. The position of a British Consular official in Montenegro cannot in existing circumstances be an easy one. In spite of any good intentions at the seat of government in Belgrade, local officials are apt to interpret their duties in different ways, and nowhere in the Balkan Peninsula at present is the art of winning over people with grievances understood. To the simple-minded Montenegrins a British representative in their midst will appear as a heaven-sent recipient for the recital of all their woes, whether real or imaginary. Now, with wider administrative experience and knowledge of the world, the Yugoslav official would welcome such a perfectly safe safety-value, in the knowledge that the Montenegrin suppliant would be given nothing but sound advice on constitutional lines. The unsophisticated official, on the other hand, scents a conspiracy in every visitor to the British Vice-Consulate, and the presence of Great Britain's representative, who may be performing most conscientiously his duty to the country to which he is accredited, has the effect of adding to the woes, this time real woes, of the Montenegrins. As there is not likely to be much difference betwen one British Vice-Consul and another in regard to interpretation of the duties of the office, we can only hope that one effort of the new Coalition Government in Yugoslavia will be that a fiat will go forth from Belgrade enjoining a more generous attitude on the part of local officials towards the Montenegrins with a view to making that part of the Kingdom of the Serbs, Croats and Slovenes as contented as Croatia and Slovenia now promise to be.

King Faisal.

As King Faisal's health has for some time past left much to be desired, it is not a matter of surprise that he has at last determined to obtain the best medical advice available in Europe. His visit to England, where Jaafer Pasha al Askiri, the first representative of Iraq under the Anglo-Iraqi Treaty to be accredited to the British Government, has recently arrived, will inevitably give rise to speculation regarding the Treaty; the more so, as the findings of the Commission appointed by the League of Nations to investigate the question of the Turko-Iraqi frontier have drawn attention to the indeterminate position that may be created when the Treaty lapses. For reasons that are explained elsewhere in this issue there would seem to be no ground for discussing the Treaty or possible developments in 1928 at this time. The purpose of the short agreement was to provide an opportunity for adjusting Anglo-Iraqi relations to actual conditions. There has not been time yet for the state of affairs in Iraq to become sufficiently crystallised to call for a radical revision of the Treaty. The chief trouble centres in the question of finance, and a remedy has been proposed in the Report issued by Mr. Hilton Young's Mission. It will be necessary to have Iraq placed on a sound financial basis before there will be any occasion to reconsider her relations with Great Britain. In the meantime modifications are constantly taking place, with the object of strengthening the position of the Iraqi Government and of relieving the burden on the British taxpayer. A reorganisation of the Army is on foot with a view to reducing the strength of the Iraq Levies, which are a charge on the British Exchequer, and to improving the efficiency of the Iraq Army, of which some of the units will have British officers.

Egypt in England.

Although Zewar Pasha's visit to London was of an informal character, it was impossible that Egypt's Prime Minister should be for more than a fortnight in this country without influencing Anglo-Egyptian relations. It may be said without fear of challenge that his visit has done much to confirm the excellent opinion already formed of him from his handling of Egyptian affairs since his advent to office. Zewar Pasha has the courage of his conviction that friendly relations between the two countries are essential for Egypt's prosperity and her successful development; but he recognised that there are difficulties ahead, which can be overcome only by good will on both sides. No less important, he has a sense of humour, which has been sadly to seek in his political opponents. Thanks to the high esteem in which the Egyptian Minister to the Court of St. James's is held as a result of his tactful handling of a difficult situation, and ably supported by the personal hospitality of Aziz Izzet Pasha and Madame Aziz Izzet, Zewar Pasha has been brought into touch under the happiest conditions with the official world in London, and it is to be hoped that he will return to Egypt with the knowledge that whatever may be unpalatable to the Egyptian way of thinking in the British attitude on questions awaiting settlement between the two countries, it will be urged under a conviction of stern necessity and not from a frivolous point of view or from an unfriendly desire to abuse Britain's strength.

THE EMPIRE AT WEMBLEY.

Although the attendance at Wembley is slow in recording the successive millions this year, the exhibition remains a fine embodiment of the British Empire, magnificent in conception, planned with vision. Even its entertainments are on a heroic scale; witness the Circus with five rings in progress simultaneously, and every "turn" a success in itself. There has been vision too behind the Wembley Garden Club, the social centre of the exhibition, situated in attractive grounds, with luxurious Club rooms and a Restaurant not only spacious but able to vie with anything that London itself can provide of the kind. Visitors from overseas may be reminded that membership of the club for the remainder of the Exhibition period costs thirty shillings, and weekly membership 7s. 6d. A ticket for a single day through a member or by direct application to the Secretary costs 2s. 6d., exclusive of the cost of entrance to the Exhibition. From being the social centre of the Exhibition, the Club has qualified as the social centre of London of an evening.

NEWS IN BRIEF.

The following appointments in the Consular Service are announced in the *London Gazette:* Mr. Arnold E. Watkinson, Vice-Consul at Smyrna. Mr. Robert W. Urquhart, O.B.E., Vice-Consul at Athens. Mr. Daniel F. H. Brickell, Vice-Consul at Cairo.

The Alliance Francaise in Bulgaria, which was created in 1919, has opened a new building in the centre of Sofia. On the occasion of the opening King Boris sent a telegram of good wishes.

Presentations of books have been made by the Anglo-Hellenic League and the Greek Minister to the Hon. W Pember Reeves on his retirement from the chairmanship of the League. Mr. Reeves, who is chairman of the National Bank of New Zealand, is about to visit New Zealand.

Major William Morgan Hunt, D.S.O., M.C., died at Kohat, on the Indian frontier, on July 19 from acute peritonitis. A son of Mr. Longford Hunt, he entered the army in 1900, and served in Mesopotamia during the first half of the Great War and on the North-West frontier for the later half.

THE MOSUL REPORT.

The report of the Commission of Inquiry appointed by the League of Nations to examine the question of the Mosul boundary, as far as its contents are known before the actual publication, promises to be a tribute to the industry of the three delegates, even if it prove not to have enhanced their reputations. They were invited to assist the League's Council in arriving at a decision as to where the frontier between Turkey and Iraq should be drawn, in view of the fact that both countries claimed, for quite different reasons, possession of the vilayet of Mosul, and no satisfactory settlement of the subject could be reached between Turkey and Great Britain, the Mandatory Power in Iraq. It should have been possible, one would have imagined, to come to a definite decision on the point at issue. Either the Turkish claim was valid, on ethnological grounds, on historical grounds, or because the bulk of the population of the vilayet desired to be incorporated within Turkey and to be ruled by the Turks; or the Iraq claim held good, for economic or geographical reasons, or because the League of Nations, having accepted responsibility for the creation of the new State of Iraq, could not play false to its trust by imposing on its *protégé* conditions which rendered its continued existence problematical or impossible. The contentions on both sides had been elaborated with a great show of conviction at Lausanne, and it was probably in the minds of the Council of the League, when they appointed the Commission, that the delegates from their investigations on the spot would be able to indicate to which line of argument the more weight ought to be attached in the light of actual conditions. As far as can be gathered from the Commission's findings, the members derived no enlightenment on a complicated subject from their personal inquiries, and contented themselves with an heroic effort to reconcile their own antecedent prejudices. It is certainly difficult to interpret in any other way a Report which makes its solutions dependent on extraneous circumstances. Instead of deciding that the Mosul region belongs strictly to Turkey or to Iraq, the Commission finds that, if it becomes an integral part of Iraq, there must be no question of Great Britain's abandonment of the Mandate at the end of the four years referred to in the Anglo-Iraqi Treaty; if, on the other hand, the British Mandate is to come to an end, then it will be better, acording to the opportunist Commission, for the Mosul region to revert to Turkey. In this latter case the frontier, it is suggested, should follow the course of the Lesser Zab, leaving Mosul and Erbil to Turkey, but Suleimaniyeh and Kirkuk to Iraq.

The net result of a Report of this nature, it may be supposed, will be to throw the Council of the League of Nations back on its own resources. It could well have decided without recourse to a Commission that it would not do to allot the Mosul region to Iraq and to allow Turkey to take it away by force immediately afterwards. The only way to prevent this would be to guarantee Iraq support which would afford her adequate protection against the Turks, in the case of necessity. To this extent the Commission may take unction to itself for having anticipated the obvious, but neither the Council nor Great Britain will regard its recommendations as an adequate offset to the mischief done by the manner in which the Commission discharged its functions. What was required by all parties was a definite ruling based on careful inquiry as to the validity of the rival claims. What the Commission appears to have achieved is, by dabbling in political matters outside its terms of reference, to reopen for Great Britain in 1925 instead of in 1928 the purely domestic question of her relations with Iraq. As is known, the Iraq Treaty, signed at Baghdad on October 10, 1922, stipulated in Article 18 that the Treaty should remain in force for twenty years, "at the end of which period the situation shall be examined, and, if the High Contracting Parties are of opinion that the Treaty is no longer required, it shall be terminated." A subsequent Protocol modified this Article to the extent of providing that the present Treaty should terminate upon Iraq's becoming a member of the League of Nations, "and in any case not later than four years from the ratification of the peace with Turkey." As far as we are aware, there is no authority for the assumption prevalent in certain quarters that at the end of four years Great Britain is committed, either actually or by implication, to evacuate Iraq. All that has been agreed upon between the Iraqi and British Governments is that at the end of four years, instead of at the end of twenty, "the situation shall be examined, and if the High Contracting Parties are of opinion that the Treaty is no longer required, it shall be terminated." Clearly, some other instrument will have to take its place, which will either record the rupture of all relations between Great Britain and Iraq or determine the nature of future relations.

As far as Great Britain is concerned there are two distinct issues in connexion with Iraq, and care should be taken not to confuse them. The first concerns Great Britain and Turkey, the second Great Britain and Iraq. We find it difficult to believe that the Council of the League of Nations will not be able to command a higher degree of intelligence than its Commission could, and that it will issue a ruling dependent on some course of action to be taken by Great Britain three, four, or twenty years hence. Termination of any agreement between Iraq and Great Britain is subject by Article 18, to confirmation by the League of Nations. The situation to-day, therefore, in regard to Anglo-Iraqi relations, remains until the League of Nations endorses a revision. A frontier between Turkey and Iraq, if the League is to be worthy of itself and to live up to its responsibilities, must be based on tangible grounds that have a definite and immediate bearing on the facts of the case. It may not satisfy both parties, but it should at least commend itself to the intellect of a considerable body of thinking people. Both the Turkish and the British Government have agreed to accept the League's ruling, and it will be time enough to impute bad faith to one or the other when actual steps have been taken to challenge or set at nought the verdict. Wherever the frontier is drawn, Great Britain's moral obligations remain the same. She has brought the new State of Iraq into being and can leave it neither defenceless nor penniless. The surest way of inviting trouble, and possibly a war, is to let it be imagined that Great Britain is not prepared to stand up against the world, if need be, for the defence of Iraq. Similarly, the surest way of reducing British commitments in the country is to help Iraq to obtain money for productive expenditure, with a view to making her self-supporting. In this respect the interests of Iraq and Great Britain dovetail into one another. The Iraqis are as anxious to be independent as Great Britain is to be relieved of financial or military responsibilities. A spirit of optimism on both sides prompted the agreement that the time for a reconsideration of the position would arrive in four years. The nature of the relief to be afforded to the one at that date, and the degree of enhanced independence to be secured by the other depend on the amount of real constructive work that both parties in their respective spheres can bring to bear on the task of nation-building in the interval.

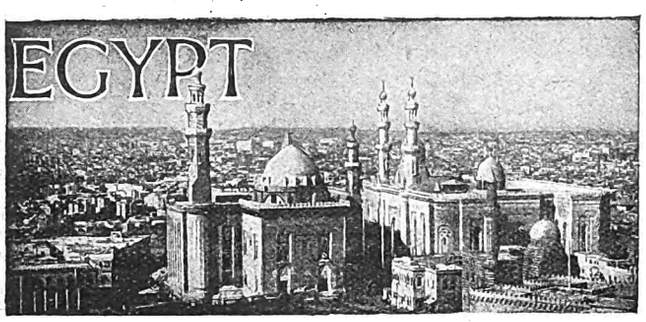
The Near and Middle East*

From Our Own Correspondents.



Cairo, July 25.

The Premier's London Visit.

Zewar Pasha's London visit has provided much material for local leader writers during the past week. While the Government organs see in the Prime Minister's presence in England a good augury for the early opening of fresh negotiations with the British Government, "to remove the effects of the ultimatum of last November, and particularly as regards the expulsion of the Egyptian Army from the Sudan," the Opposition Press professes to believe that Zewar Pasha, in accepting British hospitality, has walked willingly into the trap and is henceforth disqualified to speak on Egypt's behalf. It is, perhaps, worth noting how consistently the newspapers supporting the Government encourage their readers to believe that the British Government will be induced to go back on the steps which it took last November with regard to the Sudan. Nor does the Press, in this connection, speak alone. The Minister of the Interior in a public meeting recently gave utterance to the same hope, which was repeated this week by Mahmoud Azmy Pasha, an ex-Minister of War and one of the chiefs in the *Ittehad* Party. It is true that a Mudir who recently affirmed in a speech that he could assure his hearers that, thanks to the efforts of the Government, the Egyptian troops would soon be back in the Sudan," met with an official reproof, but it is none the less true that the same idea is being constantly repeated at the meetings now being held all over the country in support of the *Ittehad* Party.

Sir George Lloyd and Egypt.

Even more interesting to the Egyptian public just now than the utterances of its holiday-making Premier are the speeches of Sir George Lloyd, and in this connection it is pleasant to record that his address at the dinner of the Overseas League has had an excellent reception here. The Arabic Press sees in the new High Commissioner's remarks an encouraging augury for his work here, the *Mokattam* terming the address "an olive branch held out to Egypt." Not less significant is the opinion of Zaghloul Pasha, who, asked for his view, said, "These are declarations of great importance which denote great political ability and excellent intentions. If the good will which the High Commissioner has said to be the base of the solution of the Egyptian question signifies the desire for a solution in which the rights of Egypt and the interest of Great Britain will be respected, then let there be no mistake that the Egyptians thoroughly share this desire. All they want is respect for their rights, and they will be sincerely friendly towards those who will help them to have their rights respected. Moreover, the Egyptians respect everyone who has here any interest, material or moral in their country, and it is a grave injustice and an obvious mistake to pretend that Egyptians disregard such rights or that they are working against them, especially if and when Egypt is clearly informed of the nature and limits of these interests and is convinced that they are legally well-founded."

The Sirdar's Assassins.

The appeal against the sentences on the nine men found guilty of participating in the murder of the Sirdar, which was heard on Thursday, evoked little public interest. From the first there was small hope of the appellants, ably represented though they were by Loutfy Bey and his colleagues, securing any alteration in their sentences, for their appeals were based on technicalities of procedure which had little relation with equity. By the time these lines appear in print the condemned men, although their relatives have submitted a petition to the King, will have paid the penalty of their crimes.

Islam and the State.

Orthodox Moslem divines have been shocked by the appearance of a book entitled "Islam and the Basis of Government," by Sheikh Aly Abdel Razek, who has run counter to all accepted notions of the relation in a Moslem country of religion to the State. He declares that the two should be entirely divorced, that Islamic laws are for individual observance, not for adoption as a civil code. He has, moreover, strong words on the subject of polygamy, and also concerning the Caliphate, to which he denies the right, at any time, of exercising temporal power and which he considers an institution that the Turks did well to suppress. In fact, Sheikh Abdel Razek preaches little that the Turks have not already put into practice, but the present Turkish Government is regarded in Egypt as little better than a set of infidels, and such heresies have not hitherto been given publicity in this country. Al Azhar was stupefied and begged the Government to confiscate the book, while the redoubtable Sheikh Shaker entered the lists, via the columns of the *Mokattam*, and sought, metaphorically, to put his adversary *hors de combat*. But the Press and the public, rather surprisingly, are almost all on the side of the free-thinking Sheikh Abdel Razek: the Government declined to take action against him, and the Azhar Superior Council was left to take disciplinary steps of its own. At a meeting last Monday no decision was reached, and to-morrow the greybeards will sit again, to decide what is the most appropriate deterrent to such unsound doctrine. Or, maybe, they will decide merely to issue an Ulemistical pronouncement, proving that Sheikh Abdel Razek is all wrong. But, if that be the case, more and more of Young Egypt is falling into error along with him.

Tobacco Growing.

There has been much talk lately of legalising tobacco growing in Egypt, the principal objection being that the import dues on tobacco represent one of the Government's most important sources of revenue. After much discussion on the possibility of raising a similar income from a tax on each feddan of land planted with tobacco,

a new obstacle has been discovered, namely, that good tobacco will not grow on Egyptian soil. That, at least, is the result of experiments up-to-date, despite the sinking of much money and the employment of foreign experts so that a real test might be made.

Floating Mines.

The Egyptian shores are still at intervals visited by reminders of the late War in the form of floating mines, of which three have arrived, and been destroyed, off Alexandria during the last few weeks. The explosion of one of them was such a violent proceeding that all the windows in the neighbourhood were shattered. The commonly accepted theory is that these mines were sown during the Greco-Turkish hostilities, and that no proper steps were taken to sweep them up after the conclusion of peace.

Sofia, July 29.

The Yugoslav Frontier.

Another fortnight has passed by, and the Yugoslav frontier remains closed to all Bulgarians. The Yugoslav Minister in Sofia, M. Rakitch, has returned from Belgrade, and it is believed that he has been given authority to settle this question. The Bulgarian Government have expressed their readiness to pay an indemnity to the family of the Yugoslav subject, Redbovitch, who is missing, believed killed. It is, however, said that Redbovitch's family have declined to accept any indemnity, saying that they want their son back. As this would appear to be impossible, there is a deadlock, which is capable of degenerating into something more serious. For although the actual shutting of the frontier is not a very grave occurrence, because the majority of Bulgarians going to and coming from Western Europe use the Danube route, which is internationalised and requires no visas, the fact of a State's closing its frontier to its neighbour is, to say the least of it, a highly unfriendly act.

It is, indeed, thought that Yugoslavia's attitude may have been caused by a desire to bring about a breakdown in normal diplomatic relations. Certain factors in Bulgarian politics have maintained that similar measures should be applied to Yugoslav subjects desirous of traversing Bulgaria. If such a step had been taken there is little doubt that Yugoslavia would have retaliated with other measures, and the situation might thus have become gradually worse. There are persons, indeed, who hold that Yugoslavia's present policy is to humble the Zankoff Government, cost what it may. Why such a policy exists, if it does, can best be explained from Belgrade, but the fact remains that since Zankoff came into power, Bulgar-Yugoslav relations have never been good. It is extremely doubtful whether they would be much improved if another political group took office in Sofia, but there is just a hope that they would. Meanwhile it is sincerely to be trusted that farseeing Yugoslav politicians and statesmen will speedily put an end to a state of affairs which can do good to anyone, for there are no reasons to doubt Bulgaria's sincere desire to make worthy reparation for incidents which occurred during the period of stress that followed the Cathedral outrage.

Prospects of Governmental Changes.

Autumn is approching, and political prophets are unanimous in saying that a partial or entire reconstruction of the present Cabinet is to be expected. The name of Liaptcheff, a former Minister and distinguished economist is on everybody's lips, and it would really seem that there is something serious afoot. M. Zankoff's men have now been in office for over two years, and it is now an open secret that several Ministers are feeling the strain and require a holiday. Declarations, obviously inspired, have been made that the present Government will remain at its post as long as the Bolshevist menace continues, but these words must not be taken too seriously. Whatever Government comes into power is going to combat the Bolshevist danger, and it would be a mistake to imagine that such is the prerogative of M. Zankoff.

Unfortunately there seems to be an idea that any change of Government will be regarded as a sign of weakness by the extremer elements, who will try to take advantage of it. Such an idea is, in the opinion of the writer, a false one. Now is the time peacefully to evolve in order that the country may be given the tranquillity it so richly deserves and wishes. The harvest is a record one, the peasantry will be contented, and sound legislation, coupled with a certain amount of wise clemency, should go far to bring about a return to normality. But it is a big question and a difficult one to answer whether the actual administration can create such a desirable state of affairs. Even though they be the greatest men Bulgaria has ever produced they have governed during a totally abnormal period and have perforce had to apply abnormal methods. Now would it not be best to try new men, along with one or two veterans, in order to raise Bulgaria from her present plight?

GREECE.

Athens, July 27.

A Balkan Security Pact.

The event of the week which is considered locally to have the greatest importance is the proposal of the Foreign Minister, M. Redis, to conclude a Security Pact with Yugoslavia and Roumania. The suggestion is claimed by the local Press as a whole as a far-seeing statesmanlike move which should of itself raise the prestige of Greece in the Councils of the Balkan States. That it is a broad, wise move nobody will deny, but outside observers feel impelled to agree with the *Estia*, the semi-official organ of the late Government, in its view that it would have been a broader and a wiser move if, instead of confining attention to Yugoslavia and Roumania, the victor States, it had also included Bulgaria, without whose collaboration no permanent cure of the running sores of the Balkans can possibly be complete. The pointed exclusion of Bulgaria and the lame semi-official explanation of the Foreign Minister that her exclusion is due to the fact that Græco-Bulgar relations are regulated by special conventions already in force, rob the present proposal of any likeness to the more important Security Pact between Britain, France, and Germany, to which the more dithyrambic of the local panegyrists of M. Rendis are prone to compare it; and the accusation of the Government's enemies that it has been launched upon an admiring world solely with the

object of blunting the acuity of Serbo-Greek relations by dragging in Roumania as a red-herring is not so far-fetched as may appear at first sight. It would, however, be ungracious not to applaud such a valuable gesture in Balkan politics and not to wish it complete success, especially if it can be broadened in such a way as to get rid of that serious, but ephemeral distinction between the victors and the vanquished in the late War. Greece's intentions are undoubtedly pacific, and the new Government no less than its predecessors is devoting itself in its fashion primarily to the problem of promoting international peace.

"Back to Constitutionalism."

Internally, affairs are passing through a curious phase. While the Government is making great play with the cry "Back to Constitutionalism" and insisting upon a general election at the first possible moment, in order to abolish the present interregnum between Revolution and a normal Constitution, it is at the same time guilty of the most extraordinary lapses. The arrest, trial, and condemnation of two of the directors of a prominent newspaper, the *Eleftheros Logos*, by a military court for unjustifiable criticism of the Government appears indefensible, when it is stated by the Prime Minister that no censure has been imposed and that the arrest of the journalists was carried out by the military police authorities without a mandate from the Government. The fact remains, however, that the journalists were duly and formally sentenced by a regularly constituted military court to a term of imprisonment and the paper has been suspended for a month. Such incidents as these have severely strained the alliance between the Pangalos faction and the Republican Union whose leader, M. Papastanassiou, has a weakness for theoretical freedom of action and expression even when it goes to rather dangerous lengths. Rumour is busy with stories of Sciosism in the Republican Union and of a tendency towards the formation of a *bloc* of political parties of all shades against the present Government. Also, the wholesale permutations in the higher ranks of the Army and Navy are causing much heart-burning.

The Financial Situation.

A very satisfactory feature of the internal situation is the serious and practical manner in which the financial situation is being handled. The repute of M. Kofinas, Minister of Finance, is of inestimable value to the present Government, and there is every reason to suppose that he will be able to carry through his schemes for a drastic reduction of administrative expenditure and an increase of revenue from indirect taxation. There is no doubt at all that individuals in Greece are prosperous and are launching out into large and profitable enterprises to their own advantage and incidentally to that of their country. M. Kofinas is going to divert some of this wealth into the Treasury coffers by readjusting the import duties and placing them on a gold basis, and he is credited with the plan of holding over the heads of his countrymen a mild imitation of the Papadakis Forced Loan of 1922, which consists of a devaluation of the paper money by 10 per cent. Theoretically it sounds good, and it is a fact that M. Papadakis did a good stroke of business when he halved the value of the Greek paper money. The present project savours a little of peddling on a small scale, and we tremble to think of the complications in daily life when one is forced to do a fearsome sum at the booking office on a hot day in a queue of semi-literates all murmuring abstruse mathematical calculations of the same nature.

Miscellaneous News.

Summer has descended upon us with a rush after an unusually temperate June and July. The usual exodus of the Athenian to Kephissia and Phaleron has taken place, and a goodly proportion of the British colony has betaken itself to England or elsewhere to avoid the heat. The long-delayed signature of the contract which definitely engages the British Naval Mission took place last week, and H.M.'s Minister has left Athens on leave.

IRAQ.

Baghdad, July 15.

Parliament.

Baghdad is looking forward with interest to the opening of the Mejliss, which is fixed to take place to-morrow. Yassin Pasha was unable to form a new ministry, and the task was therefore handed by the King to Abdul Muhsin Beg as Sa'dun, lately Minister of Interior. The new Cabinet, which was formally instituted at the Sarai on June 26, is generally considered a strong one, though three of its members are untried. The portfolios are allotted as under:—

Premier and Foreign Affairs...	Abdul Muhsin Beg.
Interior	Rashid Ali Gilani.
Finance	Rauf Beg Chadirchi.
Defence	Sabih Beg Nashat.
Communications and Works ...	Abdul Hassain Chalabi.
Justice	Naji Beg as Suwaidi.
Education	Hikmat Beg Sulaiman.
Auqaf	Hamdi Beg al Pachachi.

The retiring Ministry, though it carried out only a modicum of its ambitious programme, yet officiated very creditably during eleven months of special difficulty. The Turkish invasion of the Mosul vilayet, the investigations of the Frontier Commission and Sheikh Mahmoud's rebellion in Suleimaniyeh, all presented serious problems, while the financial stringency has never relaxed. Among the important and progressive measures which have been passed are the granting of concessions to the Turkish Petroleum Company and the Asfar Group, an agreement with the Anglo-Persian Oil Company for dredging the bar at Fao, and the grant of contracts to a number of British officials. Abdul Muhsin's ministry has now to steer the country through its first efforts at Parliamentary government. It may be noted that neither of the two leading political parties has put forward any programme; the two sections into which the deputies would seem to be divided are animated rather by personal loyalty to the new Prime Minister on the one hand and to Yassin Pasha, the departing Prime Minister, on the other.

As it has been established that the recent strike of Turkish Government telegraphists in various parts of Asia Minor was not due to Communist intrigues, and in view of the good war service of the strikers, the Tribunal of Independence of Angora has been content with sentencing the five leaders of the strike to terms of imprisonment varying from twelve months to three years.

THE WEEK AT HOME

London, Tuesday Morning.

The Coal Truce.

The way in which the Government staved off the lock-out in the coal industry appears to have pleased nobody—except, possibly, the miners. Many of the Conservatives, even, are holding up their hands in traditional horror at the notion of a "subsidy"; and those who in some remote past were taught "history" are remembering with some show of despair the stories of how barbarians were bought off who invaded Britain and Rome. Very certainly the policy of buying off one's enemy is not a comforting one to the Conservative mind.

It may reasonably be asked, however: what else in the circumstances could Mr. Baldwin do? True, the amount which the taxpayers may have to pay for the privilege of seeing the owners and the miners in co-operation for nine months may be anything from ten to twenty millions, but would not a complete stoppage have been even more expensive and inconvenient? It is obvious to anyone that this policy of subsidising an ill-organised industry is not only bad in itself, but dangerous in relation to its effect upon other trades, but it seems futile to talk of the wrongness of the principle when there was no rightness in any principle that could possibly be defended. The Government was in the nastiest of cleft sticks, for it could entertain neither the proposals of the owners nor those of the miners; it therefore did what most other people, would they but confess it, would do—play for time to formulate a policy.

Now by the finding of the Royal Commission which the Government has appointed it will certainly be judged. If it fails to take action in accordance with the recommendations of this expert body—as the Coalition Government failed so badly to act upon the report of the Sankey Commission—it will surely go down to posterity as a cowardly and weak administration. Already its handling of this crisis has, unreasonably as it may be, seriously depreciated it in the eyes of the public. The fact that the Premier, so soon after stating that by no means could a subsidy be extracted from the Government, fell utterly back upon the method of "Danegeld," produced a most unpleasing impression.

Holidays and Trade.

On all sides do you hear the dismallest of yarns about bad trade—the lack of prosperity in these islands is simply appalling—this year must surely be the worst of all years, and so on: and everywhere do you see people rushing away to holidays. To and from London they come and go like so many bees: I, at any rate, have never seen the railway termini so stuffed with holiday-makers. Half Britain seems to be making for the Continent—Boulogne, Ostend, Zeebrugge, Brussels and so on; and the other half is expected to come to Wembley. Certainly everyone is spending more money on travel than was ever spent in previous years.

And yet trade is bad, slumps are universal, bankruptcy is only kept out of the businessman's front-door by the puff of a cigar. What these gay holiday-makers are doing, of course, is to accept their inevitable fate of poverty and starvation in more entertaining quarters than are to be found at home. But if the railway companies and the motor transport services can make all these profits in the bad year, what will they do in the good (if ever we have a good one again)?

Liberalism.

How despondent the Liberals in this country really are is seen by the eagerness with which they have fastened on to the optimistic expression of Signor Nitti made last week at the Liberal Summer School at Cambridge. To take the word of this Italian Statesman, who, it will be remembered, was at least partly responsible for letting his country drift into the mess from which the Fascisti of Signor Mussolini had to rescue it—to take his word upon the prospects of English Liberalism argues an almost pathetic inability to trust one's own reading of the situation. And one knows that Liberals do not really believe in the talk of Liberal politicians—else why should the *Daily News*, a really literary journal, so speak with its tongue in its cheek as to mention "the triumph of a great come-back"?

Parties and the Empire.

The past week has been notable for the claim made by two politicians, Lord Asquith and Mr. Ramsay MacDonald, that the Empire was the especial care of the Liberal and the Labour Party respectively. Liberalism, said Lord Asquith at the fifth Summer School at Cambridge, had been a great Empire builder; and he hotly disputed the claim of Toryism for the paternity of the free communities attached to the Motherland. He instanced S. Africa, Canada, and Ireland as problems which had yielded to the solvent of British policy. And the Labour ex-Premier went so far as to assert that his Party was the first to "take any active interest in the Empire" in the sense of co-operative unity of nations and coming nations.

This, of course, is a very old dispute, which cannot be exactly determined. One may at least grant that the Labour Party did show a surprising interest in Imperial affairs: and for the rest, perhaps it is not too wide of the mark to say that what the Tory Party won for the Empire the Liberal Party prevented our losing. It is improbable, however, that such a verdict could possibly be accepted by any real partisan.

The British Fascisti.

From time to time accounts have appeared in obscure corners of our Press of the doings of the British Fascisti, but now until last week, when a photograph of these strange, if very worthy men, was published in the papers, had the public any real conception of what the Fascisti, apart from the opinion they held, looked like. To be quite candid, the sight of men swathed in black shirts with "plus fours" or "Oxford bags" beneath, and armed with ferocious swords, made one's conviction deeper than ever that Fascism in England can never, at least until Communism is a real danger, develop into a national movement. It is, of course, sickening to a certain type of mind, that Communistic nonsense should be preached with impunity in our public parks, but it is at least doubtful whether public expression of such nausea does not make the few Communists even the more determined.

As readers of these notes will remember, I yield to no one in my admiration of what Signor Mussolini has done for Italy; but we are not in Rome that we should do as the Romans do.

Swopping Games.

For a day or so recently the unthinking sporting world was agog with the news that Mr. Cyril Tolley, the eminent golfer who used to drive an incredibly long ball, was forsaking the "great Gulf Stream" for the fiercer currents of Lawn Tennis. This "swopping of clubs" was immediately transformed into the story that Mr. Tolley intended to train on to represent England against the world at Wimbledon, and fantastic yarns of his present prowness were hastily set about.

It is a distressing sign of the times indeed that a man cannot even change his games without the world's going mad over it. After all, who is there that has played much who has not felt at some time or other that he would "chuck" this pastime for some other? Why, my total aggregate of runs in the last four innings—oh, well, most people get over this kind of feeling sooner or later!

THE STABILITY OF IRAQ.

(From a Correspondent.)

I.

Introduction.

The investigations made by Commander Hilton Young, M.P., and Mr. Vernon show that there are two outstanding reasons for the not altogether satisfactory state of the finances of Iraq. First, the necessity for maintaining the Iraq Army on its present scale places upon the Government a burden too great for its present financial resources. Secondly, the present absence of trade and commercial enterprise in Iraq has effected adversely the general economic condition of the country and has reduced the Government's revenues to a figure considerably below that to which we might aspire. Since the existence of both these factors is attributable to the doubtful security of the Iraq Kingdom, the primary consideration now to be faced is not so much the means whereby the financial situation, in itself, may be improved but, rather, the methods to be adopted for giving the country a peaceful existence in the future by insuring the inviolability of the frontier and achieving, in the interior, the tranquillity of some 250,000 tribesmen armed with modern, or at least serviceable rifles.

II.

Security of the Frontier.

The security of the northern frontier is, at the moment, dependent chiefly upon the decision to be made by the League of Nations as to the alignment of the future boundary between Iraq and Turkey. It seems hardly possible that the Commission appointed to investigate this question can have failed to realise that possession of the Mosul Vilayet is, for economic and strategical reasons, vital to the continued existence of the Iraq State or that it is precisely on this account that the Turks have laid claim to it. It may be assumed, therefore, with some degree of certainty that the boundary decided upon will follow, through the greater part of its length, the present provisional frontier (which, in 1918, the British General Staff selected as being the only practicable Armistice line).

In the region of this frontier, approximately midway between the Persian and Syrian borders and to the north of Amadia there lie the highlands of Hakkiari, claimed by the Turks. Since control over the southern portion of this district is essential not only to the defence of the frontier, but also to the maintenance of order in the Kurdish foothills to the south, the security of Iraq cannot be guaranteed unless that area be occupied by a friendly people. On the other hand, the country in question can be of no use to the Turks except in an offensive movement against Iraq. It may be hoped, therefore, that the Geneva Council's decision will be favourable to Iraq in this respect also.

There have been, however, many indications that the League of Nations' ruling with regard to the frontier will not cause the Turks to abandon, immediately, their dream of bringing about a British withdrawal from Iraq. Since Mustapha Kemal defeated the Greeks in 1922 he has, up to the present, gained every point at issue between himself and the British Government; and, although it is not to be expected that he contemplates open hostilities, it is improbable that he will give way over the Iraq border question without a further struggle. It may be anticipated, then, that there will be a continuation, for some time, of the familiar Turkish policy of resorting to every possible expedient for stirring up trouble in Iraq through those of the more turbulent Kurdish border tribes ill-disposed towards the Iraq Government, and for supporting these and the numerous bands of anti-British and pro-Turkish propagandists by the movement of small parties of Turkish troops on or, if possible, across the frontier. Any initial success resulting from these activities could not fail to have an unsettling effect upon the tribes in the interior. But we possess the means of checking the prosecution of such measures.

The lawful owners of the important Southern Hakkiari area are the Assyrian Christian clans who have been strongly Anglophil since 1886, when the Archbishop of Canterbury instituted measures for their assistance in matters of education and general welfare, and who have served our interests with the utmost zeal since they adopted the cause of the Allies in 1915. After the Armistice they proved themselves a loyal and martial community both as organised troops and tribal auxiliaries, their excellent conduct in the former capacity, while engaged in punitive operations in Kurdistan, speaking for itself. In 1920 their services as irregulars were of great value to us during the Arab rising while, further north, the clansmen encamped at Jujar turned out to a man to deal with a marauding band of the hostile Surki Kurds whom they utterly defeated and drove for sixty miles through dangerous country until numbers perished by drowning in a desparate attempt to escape across the Zab River. Again, two years later, the timely arrival at Amadia of the Bishop of the Jelu, with warriors from that clan, saved the town from falling into the hands of the Turks. Were these people to be concentrated in their own homes and supported there by a detachment of the Government's troops, the most important section of the frontier would be rendered secure against raids instigated by the Turks. Between the Assyrians' country and the Syrian border to the west there is a strong defensive position at Zakho. Were this held, as at present, by our troops and were southern Hakkiari secure, there would remain only the Rowanduz section to be considered. Here there are certain Kurdish leaders who have, to a small extent, committed themselves to us by anti-Turkish action in the past, some being of the family of the Saiyid Abdul Qadir recently hanged by the orders of Angora. Should we render strong political support to these individuals, there should be no reason for serious concern as to their continued fidelity or ability to hold their own, provided that the other two important positions on the frontier remained intact.

There is but little justice in the assertion that last year the inability of the Assyrians to resist the Turks proved that there is a prospect of inevitable failure in any scheme for the defence of the frontier which embodies their co-operation. In September a considerable number of the clansmen had not returned to their homes and many were serving with the Iraq Levies in the interior. Those in the mountains were, for this reason, unsupported except by aerial action which failed to give the assistance necessary to the occasion, owing to the Turks' having discovered the means of protecting themselves against the observation and attacks of air-craft. Thus, the half-measures which have been attempted up to the present should not prejudice the success of the scheme as a whole. The Assyrians cannot be expected to hold their own in their homes without military support sufficient to counterbalance, to some extent, their comparative weakness due to the absence of many of their fighting men in the service of the British Government elsewhere. And, further, it should not be forgotten that the presence of troops in their vicinity would also restrain the ardour of the more bellicose of the clansmen who, left alone, might invite Turkish reprisals by raiding ancient enemies across the border.

A more sympathetic attitude towards the Christians cannot be objected to on the grounds that it would eliminate the prospect of our achieving greater popularity with the border Kurds in general, for, in the present stages of Kurdish development, popularity of a stable government does not, and cannot, exist. Our attempts to placate the border Kurds by leniency have resulted in failure and, very nearly, in disaster; and with but few exceptions the tribal Aghas of those regions have proved themselves unamenable to anything but force. On the other hand, the few in favour of strong government, and those committed to our interests, would welcome any practicable measures which the Government might adopt with a view to strengthening its position.

Although the Assyrians can be relied upon to serve us to the best of their ability, this cannot now be claimed on behalf of the Kurds in general—even by the most enthusiastic of the former admirers of that race. Support of the Christian clans might not increase our popularity

Digitized by Google

but would, at least, induce respect. On the Iraq border, as in many other countries, we can gain far more by assisting our friends than by attempting to satisfy possible enemies.

Should any proposals for a forward movement to the Assyrian country appear unacceptable owing to a shortage of troops in Iraq and the conseqent necessity for embarking on some expenditure, by obtaining a further supply, to render possible the execution of such a project, the Government would be well advised should it examine the practicability of reducing the Royal Air Force squadrons in that country to a number compatible with the performance of only those of their present duties which the experiences of the last three years show that they are able to carry out with satisfactory results, bearing in mind the fact that all the operations carried out successfully in Kurdistan, (as distinct from Iraq plain) since the Royal Air Force assumed responsibility, have been performed, not by aircraft, but by Indian and Assyrian troops. Alternatively, if it be desirable to retain the present number of squadrons in Iraq, in view of the suitability of that country for the training of pilots, the Government might consider the possibility of transferring a proportion of their cost from the Middle East Department's Budget to that of the Air Ministry, thereby releasing funds for the objects for which they are actually intended. But, even if close investigation prove that stronger support of the Assyrians would cause some additional expenditure, it should be remembered that greater security of the northern frontier is a necessary insurance for an ultimate return on any pecuniary assistance given in the future, to the Iraq Government.

While the British connection with Iraq is maintained, and provided that the French deny the Turks a passage for their troops through the Mandatory Territory in Syria, threats to the remaining frontiers of Iraq are not likely to assume greater proportions than those resulting from occasional raids of tribes such as the Mutair of eastern Nejd, which, in the past, have been driven off without difficulty by aerial action.

III.

Security in the Interior.

The inhabitants of the interior of Iraq affecting the political and military situation are separated into two sharply defined divisions: the tribesmen, and those of the Moslem townsmen who are educated or partially educated. The numerous Christians and Jews and the majority of the illiterate Moslem townsmen and non-tribal agriculturalists have little influence over the general trend of events.

The strictures directed against the Kurds of the border districts do not apply to the settled communities in or near the towns in Kurdistan, nor to many of the chiefs of the Kurdish tribes inhabiting the lower foothills at a distance from the frontier; and still less do they apply to a large majority of the Arab sheikhs who lead the settled or partially nomadic tribes of the Iraq plain. Many of these individuals possess great wealth, and being the owners or perpetual tenants of rich farm lands, have a greater stake than any in the peaceful development of their country. The Arabs, being in a great majority, may be considered in some detail.

We should immediately disabuse ourselves of any idea that the Arab sheikhs are likely to be influenced by patriotic sentiment towards the Iraq State or by any "pan-Arab" leanings. Before the War, Miss G. L. Bell, in "The Desert and the Sown," wrote of the pan-Arab movement as follows:—"Of what use are the pan-Arabic associations and the inflamatory leaflets they issue from foreign printing presses? The answer is easy: they are worth nothing at all. There is no nation of Arabs; the Syrian merchant is separated by a wider gulf from the Bedouin than he is from the Osmanli——" These words, if applied to Iraq, are true to-day. Some semblances of pan-Arab feeling were brought into being in the Western desert during the War, through the agency of Colonel Lawrence and his lavish distribution of gold, and are kept alive there by the Zionist policy of the British Government, but in Iraq and the eastern desert such feelings have never appeared and do not now exist except in the imaginations of those inhabitants of the towns known, sometimes, incongruously, as the Nationalists. In Iraq the Arab tribesman is separated by a wider gulf from the Bagdadi than he is from the British officer—or the Turkish official. The sheikhs of Iraq and their 250,000 armed tribesmen, like all Arabs, are opportunists, volatile and devoid of political sentiments; and their attitude may be gauged only from a study of what are, of what they may consider to be, their interests.

The tribal sheikh possesses no autocratic control over his tribe by virtue of heredity or divine right. He holds his position because his tribesmen consider that, by reason of his personality or influence, he is best able to settle their inter-tribal disputes, lead them in war, and act as their representative with the Government. Since the qualifications necessary to the tenure of such a position are largely hereditary, accentuated by the superior conditions in which the ruling families live, a tribal sheikh, on his death, is usually succeeded by the leading personality amongst the survivors in his family—usually a son or brother—but not necessarily the eldest son. This naturally gives rise to interminable jealousies in the ruler's family and causes every sheikh to be constantly aware of the existence of at least one potential rival. Thus, every tribal chief, although normally in good control of his following, must be constantly on the alert to see that he retains the confidence of his tribe. This is his first interest.

The sheikh also controls the lands and crops of his tribe, which, if the latter be of any consequence, are a potential source of considerable wealth to him. Being inordinately fond of money, his second interest, then, is to endeavour to get the full benefit of his position. Since this cannot be achieved unless comparative peace prevails, his influence, unless his lands are so poor as to be nearly unproductive, is, on the whole, on the side of law and order, and he will not raise his war standard unless reasonably certain that he is on the winning side. But, should it appear to him that the weakness of the Government renders general disorders quite inevitable in his neighbourhood, he will immediately take steps to ensure his being, himself, the dominant character in such disorders—maintenance of his status as sheikh of his tribe being, as explained, the chief of his interests—for he and his fellow sheikhs are precluded by inter-tribal feuds and jealousies from setting up an administration of their own to take the place of the Government.

When the British invaded Iraq in 1914 the leading sheikhs assembled their men on behalf of the Turkish Government in order to assist in preserving the peace of their country, but on finding that they were backing the losing side, with the Arabs' ability for a complete *volte face*, they transferred their allegiance to the British Government. The interior of the country enjoyed a comparatively peaceful existence under the administration of the Army of Occupation until an outbreak occurred in 1920, in the middle Euphrates area, amongst small tribes of the poorer sort whose leaders were not interested in the preservation of peace. When the military met with a reverse in attempting to restore the situation, the insurgents were joined by others of their own type who came out for the sake of the loot which might be obtained, the natural inflammability of the tribesmen being aggravated by religious propaganda emanating from the neighbouring Shiah centres at Kerbela and Nejef. The Sheikhs of the greater tribes throughout Iraq were indefatigable in endeavours to keep their men in order in which, with certain exceptions, they were successful. Those who

failed were the sheikhs of the middle Euphrates in the vicinity of the area where the outbreak had occurred, where the reverses to the Government had rendered the naturally turbulent tribesmen deaf to counsels of prudence. Here many of the sheikhs joined the insurgents and became the leaders of the rebellion, in consideration of the necessity for their remaining, at all costs, the chiefs of their tribes and retaining the confidence of their tribesmen, and in spite of the fact that, up to the last possible moment, they had used their influence on behalf of the Government. The rising spread to the small and poverty stricken tribes of the Diyalah area, but the larger tribes of the Tigris below Baghdad, the lower Euphrates and the reaches of the latter river above Ramadi remained loyal under their wealthy sheikhs, thereby saving the British forces from complete disaster. As soon as the insurrection had been suppressed the majority of the sheikhs of the middle Euphrates resumed their loyalty to the British Government.

On the formation of the Iraq Government, after the rising in 1920, the Executive at the capital and the administrative posts in the provinces fell into the hands of the townsmen who were better organised than the tribes for making their voices heard and formed the only element with the rudiments of education necessary for such appointments. From this class, as might be expected, is drawn the small but vociferous Nationalist Party which, oblivious of the impossibility of its achievement, has clamoured incessantly for the complete independence of Iraq. On reaching their posts, the newly appointed officials found themselves confronted by the hostility of the sheikhs, for the latter had a natural dislike for those whom they considered effete townsmen, were opposed to the Government's being handed over to inefficient agitators, and were anxious for the retention of the British connection, failing which the return of the Turks would have best suited their interests. The Nationalists, seeing that the wealthy sheikhs blocked the road to the achievemen of their ideal—complete independence—then set themselves the highly dangerous task of breaking the power of the tribal leaders, ignoring the fact that such a policy, but for the presence of a British force in Iraq and the salutary lesson learnt by the tribesmen in 1920, could lead only to the sheikhs, with their overwhelming strength, turning on the townsmen and driving them from power, thereby giving the Turks an opportunity for re-occupying the country. Officially, the Nationalists based their actions on the theory that a tribal system is inconsistent with the organisation of a government on modern lines. There is some truth in this argument; but a moment's reflection will show that the only safe policy to adopt in this respect is to allow events to take their own course. As the natural resources of the country are developed and the warlike tribesmen settle down to agriculture, the tribal confederations will gradually disappear, while the sheikhs, assisted by improved educational facilities, will find fresh outlets for their natural ability to lead the masses. When this change is complete, and then only, the country will be ready for complete independence.

As matters now stand, the tribal leaders who control the armed inhabitants of the country may be divided into three main categories:—

1. The leading sheikhs. These would be glad to see their country under direct British administration but are prepared to tolerate an Iraq Government under the guidance of British Advisers, provided that the latter check effectively the Nationalists' attempts to undermine their sheikhly influence and accelerate the disappearance of the tribal confederations. Should the British Advisers, for any reason, fail in this task, the members of this class would be compelled to turn to others outside the country for support of their interests. Similarly, should we withdraw from Iraq before a Turkish advance without serious resistance, this element would throw in its lot with the invaders.

2. The leaders of the small and indigent tribes who have little to lose and are every ready to join the promoters of disturbances.

3. Certain rivals of the leading sheikhs. These would turn to any party likely to assist them effectively in gaining ascendancy over the sheikhs now in power.

Those in the first category completely outweigh the other two. The second and third categories will cease to exist as the development of the country begins to give them a personal interest in the preservation of peace, and as the tribal confederations break up; but, in the conditions which now prevail, they are potential supporters of the Turks and others hostile to our position in Iraq. None of them credit the possibility of the Iraq Government's being able to exist, even for the briefest period, without British support; and far less have they any faith in its capability of continuing a semblance of efficient administration without our co-operation.

IV.

Conclusion.

It will be seen that there lies with the British Authorities in Iraq above all others responsibility for the future welfare and political attitude of the tribes and of the hundreds of thousands of now inarticulate townsmen and agriculturists—Moslem, Christian and Jewish,—and for reducing the country to a state of order which will render possible the departure of the British garrison. It is incumbent upon the political officials to see that the good will towards us of the greater tribal leaders is preserved and to employ every practicable means of improving the condition of the smaller tribes in order that they may begin to feel, as soon as possible, the benefits of a stable and progressive government. The military Commander's task is to preserve constant vigilance over the dissatisfied and unruly elements and to stamp out, as rapidly as possible, any incipient disorder. Equally it is his duty to institute the most effective measures whereby the integrity of the frontier may be assured.

We have not altogether escaped our share of odium consequent upon our having sponsored the present form of government by the townsmen, nor the unpopularity due to the promiscuous destruction of life and property by aerial raids on towns and villages in the mountain districts. More especially as these have failed to protect the normally law-abiding inhabitants from the effects of disorder brought about by Turkish intrigues with Kurdish bandits. But, as in other eastern dependencies, the British authorities in Iraq, if they face the situation with courage, will retain as their active protagonists a large preponderance of the most influential and powerful elements in the country—the greater Arab sheikhs, the better class Kurds and the sturdy Assyrians. Wavering will ultimately result in a Turcophil attitude on the part of our present Moslem supporters who, on account of their own psychology and the vagaries of recent history, do not possess that immutability which characterises our chief adherents in India.

Happily, a recent statement of the Colonial Secretary makes it clear to the inhabitants of Iraq and their neighbours that there is no immediate prospect of our weakening in the execution of our self-imposed task. This will lighten inestimably the difficulties of those who carry out our policy in that country. Provided that the latter follow wholeheartedly where Mr. Amery leads, the new kingdom will be assured of security in the future and a rapid improvement in its economic condition.

PERSONAL AND GENERAL

TO-DAY

August 6, 1925 (New Style).
July 24, 1925 (Old Style).
Muharram 16, 1344 A.H. of the Moslem Calendar.
Ab 16, 5685, of the Jewish Calendar.

Count Leon Ostrorog has left London for Constantinople.

Sir Ronald and Lady Storrs left London last week for Palestine.

The Queen of Roumania will remain at Esher until August 10.

Sir Milne and Lady Cheetham have arrived in town, and are staying at Claridge's Hotel.

M. N. Misu, Secretary at the Roumanian Legation, left London on July 30 for Italy on leave.

Saleh Enan Pasha, Egyptian Under-Secretary of State for the Ministry of Public Works, has arrived in London.

Sir Herbert Samuel, the former High Commissioner of Palestine, arrived at Budapest from Bucharest on July 29.

The Maharaja of Patiala arrived in London from Paris on August 1, and will stay at the Savoy Hotel for some weeks.

Field-Marshal Lord Plumer, the High Commissioner-designate of Palestine, will leave London on the 14th inst. for his post.

The Roumanian Minister and Mme. Titulesco, who are now in St. Moritz, will not return to London until the end of August.

Sir Horace Rumbold, the British Ambassador to Spain, and Lady Rumbold, who have been staying in London, have left for the Continent.

M. and Mme. Ivan Stancioff and M. and Mme. Felix Guépin returned to London last week from their trip to Bulgaria and Constantinople.

Mrs. Arthur McGrath will leave 28, Wilton Place, on August 7, for Switzerland and Italy, and will be away until September. She will sail on October 24 for America.

Prince Nicolas of Roumania, younger son of the King and Queen of Roumania, has arrived in London on leave from the Mediterranean, where is serving in H.M.S. Benbow.

The King has approved the appointment of Mr. Govind Dinanath Madgaonkar, Indian Civil Service, to be a Puisne Judge of the High Court of Judicature at Bombay, in succession to Mr. Edward Millard Pratt, Indian Civil Service, who retires on August 29.

The Egyptian Minister has left London for Paris, on leave. He will be away two months. Mme. Izzet Pasha and her son, Abdullah Bey Izzet, will accompany the Minister. Sesostris Sidarouss Bey, Counsellor of the Egyptian Legation, will act as Chargé d'Affaires.

The engagement is announced of Frederick (Eric) Foulkes Capron, Royal Artillery, Jutogh, Simla, second son of Mr. and Mrs. Capron, of Southwick Hall, Oundle, and Betty only child of Sir Denys Bray, K.C.I.E., C.S.I., C.B.E., Foreign Secretary to the Government of India, and Lady Bray, of Knockdrin, Simla.

At St. Michael's Church, Stowe, Shropshire, the marriage took place on August 1 between Mr. Craven H. Walker, O.B.E., Sudan Civil Service, His Majesty's Consul for Western Ethiopia, and Gwladys Muriel, elder daughter of Mr. and Mrs. Coltman Rogers, of Stanage Park, Radnorshire, and Hagnaby Priory, Lincolnshire.

The engagement is announced between M. Jean A. Romanos, of the Greek Diplomatic Service, son of M. Athos Romanos, a former Greek Minister to the Court of St. James's, and Minister for Foreign Affairs, and of Mme. Romanos, and Mlle. Virginie Benachi, elder daughter of the late M. Alexandre E. Benachi, of Alexandria, Egypt, and of Mme. Benachi, 36 Finchley Road, N.W.

The Egyptian Minister and Mme. Aziz Izzet gave a luncheon on July 30 at Claridge's to Anglo-Egyptians at present in London, and a reception in honour of the Prime Minister of Egypt was held afterwards. The guests included:—Sir Murdoch and Lady Macdonald, Sir Hamar and Lady Greenwood, General Sir John Maxwell, Sir Gilbert and Lady Clayton, Baron R. Slatin Pasha, Borton Pasha and Mme. Borton, Colonel Chichester and Mrs. Crookshank, Lieutenant-Colonel and Mrs. C. Beddington, Mr. and Mrs. John Walter, Mr. and Mrs. Frank Cook, Mr. and Mrs. Foster, Mr. and Mrs. J. A. Spender, Mr. Percy Stout, Lieutenant-Colonel George and the Hon. Mrs. Schuster, Mr. L. Grahame Scott, Mr. Richard More, Saleh Enan Pasha, Fair Sabit Bey and Mme. Sabit, Miss Julia Scemama, Mr. and Mrs. Konstan, Dr. Cowley, Dr. and Mrs. Llewellyn Phillips, Mr. and Mrs. J. Beaty Pownall, Dr Ernest Griffin, Mr. Percy White, Sir George Macauley, Sir Malcolm McIlwraith, Colonel and Mrs. Lyons, Sir Herbert and Lady Cohen, Dr. Acland, Mr. and Mrs. A. F. MacCallan, Colonel and Mrs. Elgood, Mr. W. H. H. Thorne, Mr. and Mrs. P. M. Tottenham, the Hon. Mrs. Home, Lieutenant-Colonel R. Owen Pasha, Mr. G. Foster Smith, G. Wissa Pasha and Mme. Wissa, Mr. and Mrs. W. Littlewood, Sir Ernest Dowson, Mr. and Mrs Peckitt, Mr. Leo Weinthal, Mr. and Mrs. A. Yusuf Ali, Sir Flinders and Lady Petrie, Mr. H. A. Humphreys, and Mr. J. Hopkins.

BOOK REVIEWS.

A LOVER ALONE IN THE EAST.

"BY MAIL AND MESSENGER." By T. Comyn-Platt. (London: Constable and Co. 10s. 6d. net.)

Sir Thomas Comyn-Platt has written an unconventional and most refreshing book. He has reproduced some of the letters written from the East to the lady who is now his wife—letters which illustrate the life of a dutiful diplomat and a casual traveller in places like Constantinople, Athens, Aden, Tiflis, Baghdad, Samarkand, Osh, and Entebbe. And the result is that we get, not only able and often very graphic pen-pictures of well-known and little-known places in the East, nor merely evidence of the author's universal pride of the work of the Englishman in the East, but also, and frequently in the guise of tales of native love in the lands which he visits, the fascinating thread of his unwearying and gratifying love for the absent one in England.

The events that are described in this book all date from the tranquil days before the War, that is, before Egypt had become Nationalist ("the day that Cromer's policy is departed from will mark the first stage of our downfall in Egypt"), before Turkey had aimed at becoming a Westernised nation, before Mesopotamia had been transformed into Iraq (though even in these remote days the author could write at Baghdad of "a land where our prestige has practically vanished"), and before there were railways in Uganda. It is all extremely interesting reading, even though we may at times have to rub our eyes to see through the mist which separates the author's day from the changed present. And yet—has the East so very much changed? Is not the Athenian, as Sir Thomas in his time had the perspicacity to see, still the last person on earth by which the Greek nation should be judged? Are not the Russians still anxious that nothing should be known by the Government of India of their activities in Central Asia? Is it not still true of Englishmen that "as colonists there is not a nation to compare with us?" One likes much the intensity of the author's conviction upon this last point, for without making him in the least insular or snobbish—he finds, indeed, rich strains of humanity in most of the races whom he visits—it enables him to write with loving pride upon such types, commonly despised of the diplomat, as the missionary and the trader and the unofficial adventurer.

Quotation from such a volume is impossible, but we do not hesitate to say that more vivid sketches of such places as rural Albania and Greece, round and about Constantinople, Kokand, Entebbe, and so on, we have never read. For those who may dislike the amatory epistle as a form of literature, there is an abundance indeed of excellent travel notes. Decidedly it is a book to be read by those to whom the Near and Middle East is a part of the earth which yet can conjure up romance, for in all probability they will find their own past longings and ardours and experiences strangely stirred.

One last word, and in reference to Sir Thomas's pride in the work of the Englishman wherever he travels or settles down. He attributes to Lord Chesterfield the dictum that one ought never to miss planting an acorn for fear of losing an oak. Was it not Lord Collingwood?

AN INDIAN PILGRIM'S QUEST OF BEAUTY.

"MY PILGRIMAGE TO AJANTA AND BAGH." By Sri Makul Chandra Dey. Introduction by Laurence Binyon, Illustrated. (London: Thornton Butterworth. 21s. net.)

This book is full of interest and of charm, though we feel some grudge against the well meaning friends of the author of whom he tells us that they "patiently endeavoured to put my wild English into some sort of shape." The man is so individual, so charming and so interesting that we feel that, with his "wild English," something precious may have perished, though we are grateful for what is left. If he is a fair specimen of Sir Rabindranath Tagore's pupils, the world owes a further debt to the great Bengali poet.

This is a book which it is no use trying to "criticise," and we frankly give up the attempt. Mr. Dey is a perfect pilgrim. After a period of very strict economy he gradually saved enough money to start, full of characteristic impatience to see the beauty which he had so long yearned for. But he keeps eyes and ears well open during his journey and misses nothing, from the difference in the crops and houses to his meeting in the dawn with the Deccani village milkmaid who "was very lovely indeed"; from the "strong and energetic" Marathi gentleman who by a combination of force and inertia, esconced himself and wife in the compartment reserved for Europeans where our author found himself by the simple plan of wearing European dress, to the wild and beautiful scenery of the glen where the Ajanta caves are found and the snakes and wild animals that live there. No weariness of the flesh can ever delay him a moment from the joys of the beauty he knows awaits him, and, careless of acute physical discomforts and dangers, he rejoices simply and fully in his beloved paintings and sculptures. Having seen them once, he returns home—right across India—to work hard and so earn enough to take him back with a supply of drawing and painting materials and to keep him alive in the presence of beauty as long as may be. And there he lived, actually at the caves, in circumstances which few would venture to attempt, studying and copying day after day till the funds began to run low. Then he packs up and makes a dash to Bagh where there are more paintings. He arrives, not without adventure, has another happy time there and so home with an empty purse but with a rich collection of drawings, paintings and experiences. Indeed a happy pilgrim, full of true simplicity, loving beauty, his art, his religion and his own land, rejoicing in seeing "foreign parts" and full of appreciation of all he sees.

The book is full of photographs of the caves and of the sculptures and paintings found in them. We presume that most of the photographs of the paintings are from the author's careful copies. We only wish that it had been possible to reproduce some on a larger scale. Specially beautiful are the author's line drawings. A book like this should delight all readers who have not been poisoned by the subtleties of some of the productions of the modern press. We trust that Mr. Dey will not be content with his first venture on authorship. We could well do with more.

Indian Affairs.

BOLSHEVISM IN INDIA.

Speaking in Dorsetshire on July 18, Lord Birkenhead referred to Bolshevist attempts to foster revolutionary movements in Great Britain and warned his hearers against those who "preach the doctrine and support the tyranny of Moscow. The theories of Moscow are irreconcilable with the safety of the British Empire. We do not propose, if we can prevent it, to allow the intervention of these poisonous political microbes into our national life. Between us and them there is a gulf, I believe, unbridgable." It is, of course, well known that the Bolshevists regard the British Empire as the chief obstacle to the realisation of their dream of "world-revolution," and that they look upon India as the Achilles heel of the Empire: towards the attacking of which all their efforts at Bolshevising the East are ultimately directed. About a month ago, Stalin, addressing the Communist University for Oriental Nationalities on the subject of the University's political tasks, said that the students represented fifty nationalities and were composed of two groups, one consisting of students from the Soviet's eastern territories and the other of students from the colonies and dependencies of other Powers. Among these latter he specially mentioned India, Egypt, Morocco, China and Japan. Soviet students, he said, "must create a yearning among colonies and dependencies for emancipation." Revolutionary work in India must aim at creating an alliance between the workers and the poorer section of the native bourgeoisie and, for the time being, work along nationalist lines in order to overthrow the Imperialists and the richer section of the bourgeoisie, who feared revolution more than the alien Imperialists. Only such an alliance could make possible the eventual victory of Communism; but Communists, in making use of the nationalist bourgeoisie, must guard against allowing the Communist group to be absorbed by the other elements, since this group must, after the defeat of the Imperialists, have control of the movement and conduct it to the complete fruition of the Communist revolution. The University's task consisted in carrying out a programme of revolution on these lines, and groups of colonial students were being turned out as "genuine revolutionaries armed with the theories of Lenin and provided with practical experience to carry out the task of emancipating the colonies and dependencies."

The first serious attempt of the Bolshevists to start an organisation for the "emancipation" of India ended in definite failure, with the conviction of four "Indian Bolshevists" at Cawnpore and the subsequent dismissal of their appeal by the High Court of Allahabad, last year. The notorious ex-Bengal revolutionary who now calls himself M. N. Roy was the Bolshevist "centre" for India: and had persuaded the Soviet authorities that he had set up a live organisation in India, with ramifications in all the Provinces, which was a worthy object of Bolshevist assistance and was worth the expenditure of very considerable sums of money by way of a subsidy. The trial proved the absurdity of any such claim—that every detail of Roy's alleged "secret" organisation was in full possession of the Indian police, and that Roy's "trusted agents" were persons of no influence whatever whose sole object in entering his organisation was to feather their own nests. A few of these individuals received considerable sums of Russian money which they promptly converted to their own use, and expended in the purchase of land, the erection of dwelling-houses, and the lavish entertainment of their relatives and friends. Indeed, one of the Cawnpore accused submitted an appeal for mercy to the Government of India, supported by a sworn statement in which, while admitting that he had accepted Bolshevist money, he claimed that the effect of his actions was, in fact, anti-Bolshevist, since he had expended the whole of the money on his own gratification and had done nothing whatever to further the Bolshevist cause in India. At the trial of the appeal before the Allahabad High Court, the appellants' counsel put forward, as one of his arguments, the obvious fact that the declared object of the conspiracy for which they were convicted—attempting to deprive the King-Emperor of the sovereignty of British India—could by no possibility have been brought about by the efforts of men like themselves. This, indeed, was patent to anyone who saw them—one would have been justified in taking reasonable odds about their complete success if the object of their conspiracy had been to deprive a cockroach of the sovereignty of a pat of butter. But the High Court's view of this argument was, naturally, that those who play with fire cannot complain if they burn their fingers: and, absurd as were the results of their conspiracy, and ridiculous as were their methods of working it, they were undoubtedly playing with fire, and were engaged in a form of propaganda that contains great possibilities of evil.

It is generally conceded that Mr. Gandhi's ideas were, from the start of his campaign, those of an honest fanatic. Whatever may be thought of the practicability or intelligence of his insistence on Hindu-Moslem unity and the cult of the hand-loom, unprejudiced observers agree that his preaching of non-violence was genuine. And yet, like so many other honest reformers, Mr. Gandhi was anxious to see the results of his own labours: and therefore did not hesitate to appeal to the one instinct in which he saw a chance of immediate unity—racial animosity. Here, however unwittingly, he was making exactly the same appeal as that made by the Bolshevist "Communist International," whose instructions to "the Communist Party of India" were, that they should not preach the theory of Communism, which he would certainly be unable to comprehend, to the ignorant Indian peasant or worker, but should concentrate on his material interests "under the slogan of Land to the Peasant and Bread to the Worker." Roy assured his Indian adherents that appeals for religious unity, and reactionary economic ideas such as that of hand-spinning, were useless—does a Hindu landlord, he asked, exact any less rent from a Hindu than from a Moslem tenant? and that to talk of a non-violent revolutionary was childish—as well might one talk of "a vegetarian tiger." Therefore they should encourage the idea of a Workers' and Peasants' Utopia, in which all the profits of industry would go into the worker's pocket and in which the peasant would own the land that he tilled, free of rent or taxes and with water for irrigation supplied gratis by the State. Those who preached these ideas should foster discontent where it existed, and bring it about where it did not—in particular, should combat the "sinister" attempts of landlords and capitalists to remove discontent by "reformist" improvements and concessions—and should try, at every opportunity, to induce the workers and peasants to strike against their "oppressors." The latter, said Roy, would invoke the assistance of Government, who would intervene, professedly in support of law and order, but actually in support of vested interests: when the "proletariat" would realise that Government was their real enemy, and would bend all their energies to its destruction. To effect this result, "the Communist Party of India" would ally themselves with the nationalist party, though striving their utmost to keep the general direction of the campaign in their own hands: for it was, of course, clearly recognised that the real difficulty was the ejection of the British: and that, if that could be accomplished with nationalist help, the destruction of the Indian bourgeois Government, that would be the immediate successor of the British Government, would be an easy matter, and events in India would follow the same course as in Russia, where the overthrow of "Tsarism" was speedily followed by that of the "moderate" Government of Kerensky. Herein lies the potential danger of Bolshevist propaganda in India. The Utopia preached by Roy is identical with the "Gandhi Raj" preached by the advocates of the Non-co-operation campaign: and, if the Bolshevists could arrange an organisation that would honestly apply their money to such a purpose—a very large "if," in India—a second attempt to start an Indian Communist Party would be much more dangerous than the first.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 16.

Lord Birkenhead's Statement.

The Anglo-Indian and Moderate Press are in agreement in regard to the "inadequacy" of Lord Birkenhead's statement.

The *Bengalee* characterises "the bald statement" as "provokingly disappointing." *Forward's* considered criticism was based upon a declaration by Pandit Moti Lal Nehru in which he said, "We cannot accept the position assigned to us. We cannot co-operate merely to strengthen the hold of Britain in India. . . . So long as those conditions remain unchanged and there appears no real desire on the part of England to meet us fairly and work with us on terms honourable to both parties, there can be no real co-operation." This, says *Forward*, is India's answer to Lord Birkenhead's statement.

The *Statesman* says Lord Birkenhead will read with pain and bewildered surprise the comments of the Press of India, and before "lending its voice to the cause of unity," describes the speech as an essay which reads to India like the effort of an incomplete author to evolve a primer for the infant mind. It is not impossible, however, that the *Statesman* feels a trifle sore that its reiterated forecast of the Birkenhead conversation and decisions has gone so far astray, and this is borne out by an illuminating editorial footnote to a letter published in to-day's issue, which asks in effect "what more did you expect?" One thing has been achieved which possibly will occasion no surprise in the minds of two eminent lawyers with a wide experience of the *nuances* of cross-examination; the universal mixture of disappointment and annoyance has produced a wonderful display of self-revelation. "We did not want this; what we did want is. . ." And a summary of it all confirms a recent note that things are distinctly more tranquil.

Bipin Chandra Pal.

Mr. Bipin Chandra Pal calls himself an independent; the ordinary man may be forgiven if he fails to understand what an independent is; if he judges by their works he will put them down as demi-extremists who are trying to run with both parties to the hunt and in this way their actions offer an interesting barometer of the quotations of extremist stock. Certain it is that they voted with the extremists to wreck Dyarchy; in those days Bipin Babu was the editor of the *Bengalee* but, now that this has become a Liberal organ, he writes in the *Englishman*, and one of his latest suggestions is that the Independent Party should be dissolved. He signed the memorandum urging the immediate grant of Dominion status, but this did not prevent him from describing those who suggested that India was fit for such a thing as borrowing the tactics of shady company promoters. Bipin Babu independence is very like that of the *enfant terrible;* this morning he describes the refusal of the extremists to accept Lord Birkenhead's suggestion that, if they do not want the Reforms, they should say what they do want, as "a confession of our inability to exercise the right of self-determination which we have been claiming." He sums up the situation by saying that the extremists have been playing a pure game of bluff and have been found out; he thinks that Government need have no more fears from that quarter, and also that Government was never more strong, since the last Swadeshi unrest, than it is at this moment. Bipin Babu is a shrewd man and he has never courted unpopularity; such statements from him at this time in the *Englishman* have a special significance.

The Mayor.

After some fireworks Mr. J. M. Sen Gupta was yesterday made an alderman by the Corporation; and so the Swarajists register another display of their incapacity to think for themselves and their blind subservience to any autocrat. In this case it is Gandhi, the autocrat of unreality; but he gives orders and that is a thing which is understood, while pious aspirations to ascertain the will of the governed, to arouse them from their pathetic contentment, certainly are not. The farce will be completed next week by the election of the Mayor, who will then wear the triple crown; but as Mayor, Mr. Sen Gupta has neither the time, the experience nor the capacity to fulfil his duties, and so, in an area where the jute trade alone carries blocks and reserves equal in value to the whole of the rest of Calcutta, we shall have a municipal head who stand for a policy of non-industrialism and a return to the spinning wheel and the handloom. The land of paradox indeed!

Steel, Protection, and Pig Iron.

It is a long way to the end of the tariff road. Tata's ask for more: and now the Bengal Iron Company, lately joined with Burn's Indian Iron and Steel venture, appear and point out that Tata's steel bounties have already enabled them to dump pig iron in their competitor's markets and so destroy the companies who have only this source of revenue, whereas pig iron is a Tata by-product; therefore, says the Bengal Company, restrain them from cut-throat selling or give us bounties also. Exchange and the cheap capital available under the Trade Facilities Act at home have added to the existing complications, and bring new applications before the Board this week from the fabricating companies. Inequalities in the tariff had already in effect given protection to home fabricators as against the local factories, and the firms concerned now ask for two increases on the existing import duties; from 25 to 34 per cent. on general grounds, and an addition of Rs. 28s. per ton on the score of the British Trade Facilities Act. It will be more than interesting to see the decision of the Tariff Board; in the present fog a few points are clear. Tata's are benefited and have no tenderness for other Indian concerns; the latter will probably be given something to keep them quiet; continental steel and hardware may be kept out; the home exporter is bound to be affected and further unemployment there is almost inevitable. The Indian steel and engineering concerns are not content to stand still.

The University.

Since the commanding personality of the late Sir Ashutosh Mookerjee was removed by the hand of death from the Vice-Chancellorship of the Calcutta University, less has been heard of dissensions, to use a no stronger word, in the Senate and elsewhere. The extreme care that is now taken to prevent leakages of examination papers probably prevents the astute coolie in the printer's office from sitting on a "forme" and carring away his impressions of the questions to an all too ready market. But there is still much original work being done on the administrative side; the *Bengalee* states that, at the last Matriculation examination, ten grace marks were awarded to every candidate in the first paper in English, and as a result the percentage of passes rose from 54 to 74. It is further stated that a general grace of 20 marks has been given in a mathematics paper at the last B.Sc. examination and this was decided upon by 12 votes to 11 at a joint meeting of B.A. and B.Sc. examiners. Thus are graduates made.

Markets.

Optimism is the note all round the markets to-day with the exception of piece-goods, as to which the position shows no change. The consolidated statement of the jute forecasts was issued yesterday and there is no change from the preliminary figures. There is a very firm tone all round and in fact the market is excited, with all the mills buying. This has been reflected in the cloth market and prices have gone up all round, although there is an element of speculation in many of the later dealings. The share market is happier, and there has been a large tumour in jutes, particularly in the speculative section. Coal has done better and there is still a strong rubber market. Tea shares are steady. The tea market is distinctly firm and this week's sales have been quite satisfactory. The garden reports indicate a probable all-round increase in July crops. Exchange is rather quieter, but there is no sign of any real weakening; money is abundant and short lenders are even taking one per cent.

JAPANESE COMPETITION.

(By Our Bombay Correspondent.)

Bombay, July 17.

A meeting was held at the end of last week between the millowners and the representatives of labour, and Mr. N. N. Wadia announced the necessity of considering a reduction in the scale of wages to take effect on September 1. It is understood that this question is now being discussed by the men and that they would prefer to go on short time rather than accept a reduction of wages. But it is so clear that the millowners have nothing to lose by closing down altogether, that it is probable that the men will agree to some sort of terms without a strike.

Mr. Wadia attributed the present condition of the mill industry to the Excise Duty and to Japanese competition. The past history and the present position of Excise was discussed last week: and it now remains to put forward the position of the Bombay millowner towards his competitor in Japan.

The position needs some elucidation. For the most part Japan spins Indian cotton bought in, and shipped from Bombay: so that on the face of it the Bombay cotton mills are protected both by the double freight, on cotton outwards and cloth inwards, and by the difference between Customs duties of 11 per cent. and Excise of 3½ per cent.: and it is important to consider how these obvious advantages are neutralised.

The Bombay millowners claim that the Japanese Cotton Spinners' Association, supported on the one side by Government with protection and labour legislation, and on the other side by a combination of bankers and shippers, has developed the most elaborate system of dumping that the world has yet seen. There is nothing quite like it anywhere else. In England the Protectionist finds it difficult to indicate the stage at which, for example, steel, steel plate, tin plates, and the finished article should be protected: and the Free Trader can claim that it is to the advantage of the country that German hops should undersell the British farmer, in order that the public may be able to buy cheaply an indifferent beer, manufactured in accordance with a bad Government specification, and retailed only at hours which were considered convenient when there was a war on. But even the most ardent Free Trader may find the conditions of the Japanese competition with Bombay a bit of an eye-opener.

To begin with, there is the question of freight. Nobody quite knows what freight is actually charged to the Japanese millowner. The freight paid by shippers is of course established, but there are quite certainly rebates, and there is no doubt whatever that all freights and passenger rates, in and out of Japan, are so adjusted as to leave the minimum burden upon the cotton manufacturer.

Next comes the—no doubt temporary—question of the exchanges. During the past eighteen months the yen has fallen and the rupee has risen, the proportionate values being about 154 and 115. That is to say, in February, 1924, the Japanese cotton spinners paid 100 yen and received cotton of the value of 154 rupees. He can now ship back cloth to India to the value of 118 rupees only, and receive his original 100 yen. In his own currency, therefore, he has gained something over twenty per cent. to set against the protection of Bombay. It is obvious that this process cannot be continued indefinitely, and the economists may preach the pure doctrine and point out how splendid it will be for Bombay when the swing of the pendulum brings the exchange into a position unfavourable to Japan. But Bombay's need is here and now, and we cannot afford to wait.

Next comes the more permanent question of labour conditions. Nearly twenty years ago there was a good deal of agitation in England on the subject of labour conditions in the Bombay mills: and the same feeling exists, with ten times more bitterness and ten times more justification, in the relations between Bombay and Japan to-day. There are, as always, two ways of looking at it. One can either weep tears of sympathy for the unhappy Japanese labourer ground down by brutal labour laws, or one can draw a comparison between the happy, frugal, hard-working and efficient Japanese working-man and his opposite number the Indian coolie.

Neither of these considerations weighs very much with the Bombay millowner. What concerns him is the fact that, for some reason or other, the Japanese mills are able to reduce their overhead charges by working for 22 hours out of the 24, and their cost per pound by low wages and by the unrestricted employment of women and children. How far this is in accordance with the Geneva Convention, or what effect it may have on the physique of young Japan, is no concern of his. What affects him is that, for one reason or another, the Japanese mills are able to work cheaper than Bombay, and he is of opinion that their competition may be reasonably considered unfair.

So that his case for protection is based on the fact that the double freight is fully counter-balanced by Japanese conditions of labour, and that the movements of exchange have given Japan an enormous, though admittedly temporary, advantage. And, instead of protection, he receives a penalty. The Japanese have ringed their own possessions with an impenetrable wall of high protective duties: they have obtained the monopoly of China by their low milling costs and their advantage of freight: and it is only their surplus production which is dumped into India under an import duty of 11 per cent.: which, when spread over their whole production, is a very much less serious imposition on the industry that the 3½ per cent. Excise duty levied on the total output of Indian mills.

Few of the warmest advocates of Free Trade can ever have contemplated a system which actually penalises the home producer in his struggle against foreign competition.

CURRENT TOPICS.

India's Foreign Trade.

The trade returns for May show an increase in the value of imports and exports over the previous months: imports rising from 1,847 to 1,892 lakhs and exports from 3,204 to 3,258 lakhs, though re-exports fell from 97 to 90 lakhs. In imports, in spite of the total increase, there was a heavy decline in cotton piece-goods: grey goods fell by seven million yards in quantity and by 37 lakhs in value, white goods fell by six million yards and 34 lakhs, and coloured goods, though increasing in quantity by a million yards, decreased in value by 15 lakhs. Imports of cotton twist and yarn showed a small increase of five lakhs. There were also notable decreases in the value of imports of railway plant and rolling stock (41 lakhs) and of iron and steel (32 lakhs). The chief increases in exports were in raw cotton (208 lakhs), oil seeds (71 lakhs), and raw jute (58 lakhs). The total shipments of raw cotton amounted to 72,500 tons, of which Japan took 29,700 tons, Italy 9,900 tons, China 7,400 tons, and the United Kingdom, France, Belgium, and Germany 5,000 tons each. The share of the United Kingdom in imports fell from 60 per cent. in May 1924, to 53 per cent. in May, 1925, and remained constant, at 17 per cent., in exports. The shares of Germany, Japan, and the United States were respectively six, nine, and eight per cent. in imports, and eight, sixteen, and nine per cent. in exports.

The figures for June, received by cable, show a heavy decrease in the value of imports, the total of which amounted to 1,632 lakhs: and a further rise in the value of exports which, including re-exports, totalled 3,414 lakhs. The visible balance of trade in favour of India was 1,073 lakhs in April, 1,053 lakhs in May, and 1,452 lakhs in June.

In a report dealing with some aspects of British trade with India during the fiscal year 1923-24, the Senior Trade Commissioner says that, for the first time after four years of unprecedented depression, it is possible to sound a note of guarded optimism as regards the outlook in the import trade. He feels convinced that there is an immense amount of latent purchasing power in India which will be translated into actual buying if manufacturers' prices can be reduced and, more important still, if some degree of stability in the prices of cotton goods could be reached, so as to engender confidence. The demand for cotton goods has been insistent during the year, and the relative

Digitized by Google

meagreness of actual transactions is solely due to high and fluctuating prices caused by the constant variations in the price of raw cotton. Clear evidence of India's accumulated purchasing power is provided by the fact that, during the last three years, there has been a net import into India of 6,758 lakhs' worth of gold and 5,150 lakhs' worth of silver.

German Trade with India.

The report on the sea-borne trade of Bengal for 1924-25 refers to the great increase in the trade with Germany, the value of imports into Calcutta from that country having amounted, in the year under review, to 354 lakhs of rupees. The greatest increase was in metals, chiefly iron and steel, the imports of which were double those of the previous year. As regards exports from India into Germany, the most remarkable increase was in raw jute; for whereas, in 1920, the first complete year after the War, German purchases of raw jute totalled 20,000 bales, of a value of 13 lakhs, last year they amounted to no less than a million bales, of a value of 787 lakhs, or more than a quarter of the value of the total jute shipments. In this commodity Germany was India's best customer, Great Britain being the next best.

Indian Cement Industry.

A telegram from Simla says that the Tariff Board's report, recommending a bounty to the Indian cement industry, has been published. The report says that the industry is suffering from over-development and intense internal competition and that, unless assistance is given, more than half of the companies are likely to shut down; but that, if protected for four or five years, the industry could capture the entire Indian market. The need of assistance arises entirely from the consumer's preference for British cement over the Indian product: and the Board recommend a bounty so that, by lowering the price of Indian cement, the preference for British cement may be overcome. To ensure a reasonable profit, an increase in consumption is essential, and any rise in prices, that might check this, would be fatal to the growth of the industry. It gives a warning against internal competition and suggests the formation of a combine: it also recommends tests of samples of cement, to be carried out quarterly, with a view to maintaining the highest quality. The report mentions that the production of Indian cement has increased from 945 tons in 1914 to 263,746 tons in 1924, while imports have fallen from 165,700 tons to 12 4,000 in the same period.

The Government of India have decided to take no action at present on the report, on the ground that the proposals of the Board are dependent on a change in the conditions of the industry, that may very likely not take place: so that they do not consider themselves justified in intervening.

Air Service from Egypt to India.

It is announced that the Air Ministry propose to enter into a contract with a civil firm for a weekly air service between Kantara and Karachi, via Baghdad and Basra. The contract will be for five years and will involve a subsidy of about half a million pounds; though the net result of the establishment of the service will be a substantial saving to the State, since it will result in the termination of the fortnightly mail service at present carried on between Egypt and Iraq by the Royal Air Force, and the consequent withdrawal of a squadron of the R.A.F. from Iraq. It is said that three companies have already tendered for the contract, and a decision is expected next month. Also that it is intended to use two types of machine, one for the conveyance of mails and freight, the other for which special designs are said to have been sent in already—for the conveyance of passengers. The latter will, it is asserted, be a special "express" machine, capable of carrying 24 passengers and of maintaining a speed of from 100 to 120 miles an hour. It is believed that, at first, passengers will only be carried by air as far as Baghdad, as the next stage in the journey necessitates a night in a desert camp: and that they will not be carried right through to India until suitable accommodation has been provided for them in the desert. If these forecasts are correct, it would seem that the carriage of mails by air to India is likely to materialise in the near future; but that the carriage of passengers, to the same destination, will not become a sound economic proposition for some time to come.

INDIAN EXCHANGE.

London, August 1.

For those familiar with the usual course of exchange in India during the monsoon months it is difficult to understand why the strength which has been apparent now for some time should be maintained. It is true that the export season has been prolonged, chiefly in Bombay, where cotton shipments became unusually active towards the close of the season; but we are inclined to think that some of the firmness in due to the falling off in imports into India and possibly to speculation in rupees from this side, which we understand has become more prevalent in the larger markets of recent years. During the rains in pre-War years rates invariably slipped away owing to lack of business, to recover again in the autumn when the crops had to be moved. This year, however, beyond a slight setback early in June, when the rupee fell under 1s. 6d., exchange moved up to round about its present level of 1s. 6 3-32d. to 1s. 6⅛d. and seems perfectly steady. In Calcutta and Bombay, telegraphic transfers are quoted at the lower figure with buyers at the higher, and in the London market there is a good inquiry at 1s. 6⅛d. with no sellers except at a fraction over.

At a time when reports on all hands indicate bad trade, it is cheering to be able to announce that Manchester has had quite a busy week booking orders from India. We hear of one line settled running up to £250,000, and other orders have been placed for comfortable amounts, which will no doubt tend to dissipate the depression which has hung over the market so long.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

The Sudan.

Next week THE NEAR EAST AND INDIA will contain a special section on the Sudan. Articles will describe the progress of cotton growing in the Gezireh and the economic situation in the Sudan. The section will also have a review of the excellent exhibit of the Sudan at Wembley.

The Ranchi's Trial Trip.

The trial trip of the new P. and O. passenger ship Ranchi took place during the week-end. Lord Inchcape Chairman of the company, entertained a distinguished company on board on the voyage which was from Tilbury to Cowes. The Ranchi, which makes a notable addition to the P. and O. fleet, is intended for the London to Bombay Service.

Egypt's Trade.

The figures of Egypt's trade for the first six months of this year, which are now available, make quite a good showing. The value of the exports was £E31,063,943, while that of the exports was £E26,486,537, thus giving Egypt a favourable balance of trade of more than £E4,500,000. For the corresponding period of the previous year the exports amounted in value to £E29,793,458, while the value of the imports was £E30,000,000. Cotton, of course, is as usual mainly responsible for Egypt's export total, its share this time being £E26,916,056, and as there seems to be every possibility that the price of cotton will be maintained in the near future, the trade outlook for Egypt may be described as bright. It is evident from the relation between the values of exports and imports that the country is rapidly increasing its potential purchasing power, and that at the present time buying is on a restricted scale. Emphatically the market is one which British merchants ought to pay special attention to in the future, for there is abundant scope there for commercial expansion.

Some Causes of Trade Stagnation.

A report by Mr. R. G. Glenday and Mr. A. L. Please on "Some Causes of the Present Stagnation of British Trade," which has recently been issued by the Federation of British Industries, gives a most interesting analysis of factors affecting British trade in the pre-War and post-War periods. The main points of the report may be briefly summarised. British industry owing to its early development compared to that of other countries and to the influences which have affected its progress depends for its prosperity on an exceptionally high ratio of exports to imports. Before the War this depended on the increasing investment of British capital abroad, on rising world prices, and on the growth of world trade resulting from these factors. Since the War the process has been reversed, and the factors suggested as the cause of our pre-War trade prosperity have disappeared, while other factors are present which discourage export trade. In an illuminating introduction to the report, Mr. R. T. Nugent, director of the Federation, says that it is for others to judge as to the correctness of the conclusions, and if they disagree to produce some more satisfactory explanation of the circumstances. Some of the factors which have tended to produce the post-War position are, he points out, of a temporary character, but other may prove to be more permanent. As regards temporary factors he cites British monetary policy, the object of which has been the return of the gold standard which is now achieved. In this connection, he remarks that we are now experiencing the effects of the last appreciation of the £, and unfortunately there has been concurrently a depreciation of other currencies which has given a stimulus to exports from these countries. This, he emphasises, must, however, be a temporary phenomenon, and already there are signs that the gap between British and world prices is in process of being bridged. In like manner many of the world conditions favourable to the general expansion of trade are bound to return. The issue is, however, whether the factors which brought prosperity to British trade before the War will return—rising world prices and increasing British investment abroad. He anticipates a slow general rise in the world prices in the near future. As regards the development of investment abroad he points out that it will be necessary to surmount various adverse factors—the loss of interest on investments sacrificed during the War, the loss of investing power represented by debt payments to America, and the adverse effect of heavy taxation. In 1913 the total foreign investment was £200,000,000, while the first two of the above factors account for £110,000,000 at the values of 1913 which is a measure of the task before us. If the theory in the report is correct, he adds, we must either accomplish this task or be prepared for a very drastic orientation of the whole trend of industry.

Suez Canal Record.

The improvement in the traffic and revenue returns of the Suez Canal goes on steadily, and for the first half of the present year the figures for tonnage and receipts are a record. The transits for the period were 2,870 as compared with 2,478 for the corresponding period of 1924 and 2,336 for 1923. The gross tonnage was 19,429,158 and the net tonnage 14,126,632 as compared with 16,772,497 and 12,146,939 for 1924 and 15,820,931 and 11,489,339 for 1923. The total receipts were 102,717,000 francs as against 90,821,000 francs for 1924 and 89,145,000 for 1923. If the progress revealed in these figures is continued for the remainder of the year the figures for the twelve months will show a marked advance on previous results.

Oil v. Coal.

A feature of the returns which is of considerable interest in view of the coal crisis, now happily over for the time being, is the gradual increase in ships using oil instead of coal as fuel. This is a sign of the times, and there is every reason for thinking that the process will tend to continue, thus depriving coal to a further extent of one of its chief

outlets. If this were the only development that the coal industry has to fear, the position as far as our staple industry is concerned would be serious enough, but unfortunately, as I have had occasion to point out on previous occasions, it is only one of a variety of factors which have brought about the prevailing depression. The extension of the use of water power abroad is one of the most important developments, while owing to a variety of causes into which it is unnecessary to enter now, it is possible for other countries to place their coal on the market at much cheaper rates than ours. In view of the combination of factors it is difficult to see how it is possible to take other than a gloomy view of the prospects for our coal industry.

The Cotton Supply.

The latest estimate of the American cotton crop is distinctly unpromising. A yield of considerably under 13,000,000 bales spell the possibility of something approaching a shortage before the 1926 crop is available, even on the limited scale of the present-day world consumption. But as I have had occasion to remark before American estimates are not infallible, and it may be that the next few weeks will see a great improvement in the crop. The point that must not be lost sight of, however, is that whatever the yield of the American crop now and in future years there is no hope from that source of a production which will bring about the reasonable prices for cotton which are essential for the expansion of the trade in Lancashire piece-goods. For years the tendency has been for America to utilise more and more of the cotton she produces herself, and if the process goes on the time will obviously come when America will not be able to find enough cotton for export. It is against that contingency that we have to guard by concentrating on cotton growing within the Empire. It is only by increasing the supply of Empire grown cotton that Lancashire will be assured of obtaining the cotton she requires at a price fair to both producer and consumer.

Imperial Ottoman Bank.

In view of the adverse conditions in Turkey in 1924 the results achieved last year by the Imperial Ottoman Bank can only be regarded as being remarkably good The profits amounted to £198,581, which compares with £131,511 for the previous year. The amount brought forward this time is £128,371 and the available balance is £326,952, but owing to adverse exchange movements since the end of the year it has been decided to make no distribution this time. In the course of his speech at the annual meeting Sir Herbert Lawrence, the Chairman, referred to the outlook in Turkey, and said that there were signs that an economic revival was approaching.

The Rubber Position.

August 1 saw the exportable percentage of rubber raised to 75, while certain concessions have also been made with regard to the estimation of the standard production the effect of which must remain to be seen. It cannot be said that the alterations have so far had an adverse effect on the price of the commodity. In the last ten days or so rubber has displayed considerable weakness as a result of the release of 6,000 tons at Singapore and the threatening labour position at home, but towards the end of last week an upward movement set in, and at the time of writing the price is 3s. 10d. That is much below the highest level reached, but nevertheless denotes a marked improvement. Actually, of course, the present increase cannot affect the position for some weeks; it is believed indeed that it will be well into September before the shipments begin to show an increase. Even then production will be below consumption, so that there is little likelihood of much cheaper rubber for some time to come. While, however, it is a matter for congratulation that the Government has not yielded to the American agitation for a modification of the restriction scheme, it has to be admitted that the present price of rubber is not in the best interests of the industry. With a price of from 2s. to 2s. 6d. per lb. the companies can obtain very good profits, and if rubber can ultimately be stabilised between those two limits the restriction scheme will have proved a great success.

COMMENTATOR.

NEW BRITISH INDIA STEAMER.

The launch took place recently, at the yard of Messrs. Wm. Gray and Co., Ltd., W. Hartlepool, of the finely modelled screw steamer Tuiloa, which they are building for the British India Steam Navigation Co., Ltd., London.

The vessel is built to Lloyd's highest class and is of the following dimensions:—Length, 502 ft.; breadth, 60 ft. 8 in.; depth, 32 ft. 8 in. moulded. She has ample accommodation for a few passengers and for officers and crew, is built with wireless telegraphy, and has an electric light installation throughout. The outfit includes an ice-house, refrigerating machinery for provisions, fresh water distiller, steam windlass and steam steering gear aft with telemotor control on bridge, cellular double bottom, deep ballast tank and fore and aft peak tanks, eighteen derricks fitted on masts and derrick uprights and one 25-ton derrick.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

EGYPT.

Centrifugal Pumps and 80 B.H.P. Steam Engines.—The Mechanical Department, Ministry of Public Works, Cairo, invites tenders for the supply, delivery, and erection of two centrifugal pumps and two 80 h.p. steam engines. (D.O.T.)

Machinery.—The Director of Stores, Frontier Districts Administration, Arsenal, Alexandria, invites tenders for the supply of machinery required by Alexandria Workshops such as punching, milling, planing machines and detachable crane. August 25.

Pumps, Etc.—The Director-General, State Domains Administration, Savoy House, Sharia Qasr el Nil, Cairo, invites tenders for the supply of 4 centrifugal pumps and 1 oil filter. September 1.

Machine Tools.—The Ministry of Education, Cairo, invites tenders for one 50 h.p. Diesel engine, generator, electric motors, and machine tools for the Mansurah Trades School. September 9. (D.O.T.)

Machine Tools.—The Ministry of Education, Cairo, invites tenders for the supply of machine tools required for the Boulac Technical School. September 17. (D.O.T.)

Diesel Engine.—The Ministry of Education invites tenders for the supply of:—(1) One 100 h.p. vertical Diesel engine coupled to a generator of 65 k.w. (2) One n.h.p locomotive multitubular boiler. September 17. (D.O.T.)

Machine Tools.—The Ministry of Education, Cairo, invites tenders for the supply of machine tools required for the Port Said Technical School. September 17. (D.O.T.)

Sewage Pumping Machinery.—The Director-General, Main Drainage Department, No. 2, Sharia Abbas, Cairo, invites tenders for the supply, erection and delivery of sewage pumping machinery, comprising 3 large and 1 small Diesel engines and 3 large and 1 small centrifugal pumps, complete with auxiliary plant. November 2.

Iron Bolts, Etc.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo, invites tenders for the supply of a considerable quantity of galvanised wrought iron bolts with nuts and washers. September 12.

ROUMANIA.

Fire Extinguishing Pumps.—The Roumanian State Railway Administration invites tenders for the supply and delivery of suction and delivery fire pumps. August 14. (D.O.T.)

TURKEY.

Railway Material, Etc.—The British Commercial Secretary at Constantinople has forwarded details of a proposal to form in Constantinople a British Company to represent British manufacturers of locomotives, rolling stock, rails and sleepers, points and crossings, railway machine shop equipment, wood-working machinery, cranes (travelling, breakdown, port and workshop), air brake and signalling equipment, wheels and axles, tyres, etc., boiler plates (steel), copper firebox plates, stayrodding, copper tubes, steel boiler tubes, superheater complete, superheater elements and headers, train lighting equipment, oil engines, suction gas and refuse plants, wayside pumping plants, pumps, sectional tanks, etc., motor coaches and rail cars for inspection, etc., bridges and general steel construction, railway construction and harbour works, electrical railway equipment, paints and varnishes, pneumatic tools and plant, air compressors, etc., carriage and wagon fittings, buffers, couplings, train heating gear. The scheme will be confined to British manufacturers for whom the firm which it is proposed to establish will act as selling agents and technical advisers. The promoters of the firm are stated to have a thorough knowledge of local languages and to possess excellent technical and commercial knowledge. They are willing to offer suitable bank guarantees. Further details can be obtained from the

British Consular Reports

1.—TURKEY.

An interesting survey of the economic administration under the New Régime is given by the British Commercial Secretary at Constantinople, Colonel H. Woods, O.B.E., in his report on the Economic Conditions in Turkey for the year ended April last. He says:—

The acute nationalism of 1923, when the New Régime acquired complete independence and control of the country has tended to become less sharp, though the spirit of "Turkey for the Turks" still remains prevalent. The protectionist policy adopted was not limited to the mere imposition of high duties with a view to protecting the few and struggling native industries, but went so far as to envisage the reservation to the Turks of a whole series of trades, professions and industries.

There has been, however, a slight improvement, but instances occur from time to time which reveal that the New Régime continue to think they can by a clean cut with the past successfully replace those foreign elements which owe such success as they have obtained in the country to the inheritance conferred by generations of experience. A gradual restoration of mutual confidence between Turkey and Europe, once fairly secured, and a consequent improvement in economic legislation would promise a return to more normal conditions. There is no doubt that the New Régime has systematically held to its original policy as regards the development of the country's resources. Progress, although very slow, has certainly been made in this direction, especially in railway construction and the development of agriculture.

Though progress has been made in the execution of the Government's policy of developing the country's resources, it will be a long time before they realise their aspirations, unless they abandon their present idea of carrying out their programme by means of their own limited financial resources. It may be seen from the Government's Budget estimates for 1924-25 and 1925-26 that the Budget cannot be balanced, and it is feared that, owing to military requirements, Government Departments may have to curtail expenditure affected in the Budget for the current year to public works. There have been signs of late that the Government are gradually realising the enormous task of reconstruction and development which they have set themselves, and that, without foreign financial assistance, many years must go by before the Anatolian peasant and the Government itself will derive any benefit from the laudable programme which has been undertaken. Although confidence in the West may be gradually growing, the Government has yet to show by convincing acts that those interested in her welfare can render financial assistance under reasonable conditions of security.

The Customs Administration.

There have been fewer complaints with regard to Customs control of vessels before discharging cargoes, and although formalities relative to the control of manifests and to short shipments, and to goods not manifested through one error or another, have been somewhat harassing from time to time, the Customs Administration, by mutual arrangement with the Maritime Chamber, arrived at a *modus vivendi* pending a revision of the Customs regulations which the Director-General is considering in his scheme of reorganisation. The latter has made a special point of investigating Customs organisations abroad, and made a study of our own Customs Preventive Service on the occasion of his visit to the United Kingdom last year. At a later date he also visited Germany with a view to acquiring information relative to Customs legislation in Germany. In a recent statement to the press, he declared that he proposes to grant every possible facility to trade, and with that object in view he has appealed to the Turkish Chamber of Commerce to form a permanent commission, consisting of Turkish merchants, which will submit to the Customs a report covering any complaints raised by the commercial community in connection with Customs practice. There has already been some improvement in Customs administration, notwithstanding that some measures enforced during the year, such as the use of special manifests and orders of delivery forms in Turkish provided by the Customs, are still maintained. One of the most important ameliorations in the administration of the Customs Service was the establishment of the pre-War statistical organisation. A regular service of statistics for all ports is now published monthly, which will permit of a more expeditious compiliation of yearly statistics. Moreover, comprehensive statistics for the year 1923 have already been issued in Turkish.

There is some question of the transfer back to Angora of the Direction-General of the Customs Administration. There is reason to believe that such a change will be effected, although not in the immediate future. In that event the Galata and Stamboul Customs will be administered by a Director in each of these Customs Houses who will be dependent on a Director-in-Chief. It is not known whether the Statistical Office will be maintained in Constantinople, or whether as a Department of the Director-General it will also be transferred to Angora. The transfer of the Direction-General from Angora to Constantinople was looked upon by commercial circles as a step in the right direction, and it is feared that unless the Director-in-Chief is given full power to act on his own initiative and to settle cases, the solution of which does not involve a matter of principle for settlement by higher authority, the change in question would only constitute the Director-in-Chief in Constantinople as an intermediate post-box between the Constantinople Custom Houses and the Direction-General in Angora, which, in turn, would have to appeal to the Ministry of Finance.

Development of Agriculture.

As the result of the transformation of the Agricultural Department into an independent Ministry, agricultural zones have been formed as in the case of the commercial zones created by the Ministry of Commerce. There is no doubt that every effort has been made by the Agricultural Department to develop agriculture in conformity with the policy laid down by the Government. In pursuance of this policy of agricultural and public works expansion supplementary credits were granted in the Budget of 1924-25. Early in the year it was decided to reorganise the Agricultural Bank and with this object in view this institution was converted into a limited liability company remaining, however, under the control of the State, the Government undertaking at the same time to meet its liabilities *vis-à-vis* the bank by the payment of six annuities of LT.550,000. Both the Ministry of Agriculture and the Agricultural Bank have done a great deal towards the development of agriculture, the latter having advanced £T.15,000,000 to the peasant for the purchase of seed,

Digitized by Google

agriculture machinery and implements, as well as live stock. The Ministry of Agriculture has, on the other hand, as in the case of the previous year, distributed seed and agricultural machinery gratuitously to necessitous peasants. The establishment of a number of agricultural schools is envisaged, and some progress has been made towards the improvement of agricultural methods. There has also been a change in the mentality of the peasant, for whereas he was quite content with his primitive methods in the past, he is now adapting himself to more modern methods, in consequence of which the Ministry of Agriculture is continually appealed to for assistance in regard to the acquisition of modern agricultural machinery. According to information obtained from one source or another, the Government's programme consists, as already stated, in the establishment of agricultural schools wherein free instruction in the use of modern agricultural machinery will be given. It is proposed to construct a large repairing shop for agricultural machinery in Adana, as well as in other centres, such as at Eski-Chehir, Konia, Tchorum, etc.

Turkey is primarily an agricultural country, and is fortunate in having a large variety of crops, such as tobacco, fruit, seeds, opium, nuts, cotton, etc. which have usually immediate sales as soon as the harvest is in. With a wide range of agricultural production Turkey should, by the sale of her crops abroad, increase the exchange value of Turkish money. It was expected that the cereal crops for 1924 would considerably exceed those of the preceding year, seeing that the area under cultivation exceeded that of 1923. Unfortunately, the crops fell very short of expectations, being considered a failure generally. This is attributed to unsuitable seed grain which was used in the sowing season and to bad weather in certain areas. The wheat crop, which was expected to have carried the country almost to the 1925 harvest, could not meet requirements, and large orders had to be placed abroad for wheat and flour.

There has been a marked improvement in the production of cotton. A great effort has been made by the farmers, who, with the assistance of the Turkish Government and local banks, are gradually attaining the pre-War cotton output, which had dropped from 135,000 bales in 1914 to 8,000 bales at the end of the War. Government and bank loans, reduction of railway tariffs, Customs exemption of agricultural machinery have all been factors in the great improvement to be found, especially in the Adana district. The acreage under cultivation in 1924 exceeded that of 1923 by over 30 per cent. It is reported from more than one source that the peasant has worked night and day with a view to intensifying cultivation, and, given favourable weather, the 1925 crop should exceed that of 1924 to some considerable extent.

The total tonnage of vessels discharging in the port of Constantinople and in transit attained 7,646,550 tons last year as against 6,500,178 during 1923. This increase in tonnage in favour of the period under review is due to the greater number of vessels passing in transit and not to an increase in the number of vessels discharging in the port of Constantinople. Although there has been some improvement in port conditions in regard to towage and pilotage, no serious effort has been made to co-ordinate Turkish administrative methods of controlling shipping and port services, which continue to be reserved to Turkish subjects only.

The cost of living for articles of primary necessity, such as foodstuffs and fuel, increased month by month throughout the year, attaining in Turkish currency an increase of 1,588 per cent. in January, 1925, compared with July, 1914, as against 1,398 per cent. in January, 1924. Increased taxation and the imposition of octroi dues are mainly responsible. Although there has been no systematic adjustment of wages to meet the increase in the cost of living the average rise per cent. would, in many cases, appear to correspond with the index figure for the increased cost of living during the month of March, 1925. The Government has given little encouragement to workmen's associations, and there have been no indications of unrest among the workmen employed in essential services. The Government's attitude towards such guilds as those of the hamals and lightermen, who have always claimed the right of monopoly, is of particular interest. Towards the end of July the Hamals' Guild, which acquired its monopoly rights by virtue of ancient custom, was officially abolished, and the abolition of the Lightermen's Corporation was also envisaged. In reality no very great benefit has been derived as the result of these measures, for no effective control exists to ensure the application of municipal tariffs. It is, however, satisfactory to find that the Government, by defining its attitude towards these guilds, is obliged to support the commercial community in the event of any serious trouble arising with the hamals and lightermen.

Adverse Trade Conditions.

With the ratification of the Treaty of Lausanne in August, 1924, traders in Turkey were enabled to know definitely the conditions under which they were to work in the future. It cannot be said that the abolition of the capitulations, under the protection of which the foreign communities had carried on their trade in the past, has resulted in any dislocation of the normal flow of trade to any very great extent. On the other hand, the slow progress of agricultural recovery, due largely to the upheaval caused by the exchange of populations, has continued the state of poverty of the peasant, and consequently has reduced his capacity as a purchaser of manufactures. Other factors which have mitigated against commerce during the year have been: (1) The instability of the Turkish lira throughout the year. (2) The uncertainty as to the interpretation of the Treaty provisions in regard to exchangeable Greeks, many of whom are established in business in Constantinople. (3) Uncertainty as to new taxation—such as the sudden application with retroactive effect in March, 1924, of octroi dues on a large number of articles imported into Constantinople. (4) The decline of restrictions on coastal trade, and the lack of high port dues, restrictions on coastal trade, and the lack of port facilities. (5) The general shortage of ready capital and the lack of credit facilities granted by the banks. Some improvement in this respect was noticeable towards the end of the year. The general effect on trade of the foregoing considerations has been to oblige traders to abstain from forward operations: stocks have been reduced, and have only been withdrawn from the Customs to fulfil immediate demands. Firms in general have successfully weathered the storm, although a large number are carrying on with reduced staffs, and the number of failures and withdrawals has been comparatively small, but there are now a number of empty shops and offices in localities previously in great demand.

In previous reports on Turkey issued since the War it has not been possible to give any exact amount of the distribution of the import and export trade owing to the entire lack of detailed statistics. The Statistical Department at the Customs has, however, now been reorganised, and from the detailed returns issued by this Department for the year 1923 it has been possible to analyse for the first time since 1914 the relative position of the United Kingdom in regard to her foreign competitors in this market.

The import trade of Turkey during the first six months of 1924 was shared principally by the following countries:—Italy, £T17,736,405; United Kingdom, £T14,919,432; France, £T8,899,734; Germany, £T7,201,385; United States, £T5,047,978: Roumania, £T4,002,523.

Of the £T25,000,000 comprising the total value of the United Kingdom's exports to Turkey in 1923, nearly £T20,000,000, or approximately 80 per cent., represent the value of cotton and woollen textiles.

Detailed statistics for 1923 have recently been issued, and an analysis of the returns of cotton goods shows that of the total import under this heading, amounting to 25,030,070 kilogs., valued at £T53,039,768, by far the most important item was that classified in the Turkish tariff as "Cotton tissues, dyed or printed—tissues unenumerated elsewhere, dyed or printed, bright, glossy, damask or figured, cretonnes, reps, striped or flowered tissues, coverings and similar tissues manufactured of dyed or printed yarn, including printed flannelettes."

Digitized by Google

Imports under this heading amounted to 12,404,755 kilogs., valued at £T29,894,748, the principal countries of export being: Italy, 5,531,641 kilogs.; United Kingdom, 2,976,042 kilogs.

Italian competition is very strong on this market, and it is to be feared that United Kingdom manufacturers have continued still further to lose ground since 1923. The principal demand is for cheap flannelettes, in which line Italy can produce an article appreciably cheaper than the United Kingdom, in a variety of designs specially adapted to the tastes of this market. In view of the impoverished condition of the peasant, the first, and from the point of view of the buying public indeed the only, consideration at present is that of price, and the admitted higher qualities of British flannelettes do not at present weigh with the peasant, who buys the cheapest article he can get. The result has been to oblige many importers in Constantinople, after years of exclusive connection with Manchester, to turn reluctantly to Italy for at least part of their supplies. The import of cotton yarns in 1923 amounted to 3,434,000 kilogs., of which 1,544,000 kilogs., or 45 per cent., were imported from Italy and 682,000 kilogs., or 20 per cent., from the United Kingdom.

Taken as a whole, the principal countries from which cotton goods were imported into Turkey during 1923 were:—

	Kilogs.	£T.
Italy	8,152,730 ...	17,218,205
United Kingdom...	7,160,982 ...	16,629,658
Syria	2,554,527 ...	4,984,955
Egypt	941,847 ...	1,611,719
United States ...	767,309 ...	1,965,862
France	731,629 ...	1,875,924
Germany	670,596 ...	2,208,310

The imports shown against Syria represent in reality transit shipments from Syrian ports through Turkish Customs centres, such as Mersina, Urfa, and Kizil Dize.

EMPIRE COTTON GROWING CORPORATION.

A meeting of the Administrative Council of the Corporation was held in London on July 29. In the unavoidable absence of the President, Lord Derby, the Chair was taken by Mr. R. H. Jackson.

The Report of the Executive Committee on the work carried out during the two months only which had elapsed since the last meeting of the Council was held in May was received and adopted.

Mr. Milligan, Senior Representative of the Corporation in South Africa, gave an account of the work that had been done there during the past season.

The chairman reported that the Secretary of State for the Colonies had consented to receive a deputation, organised by the representatives of all cotton interests in Lancashire, to urge the adoption of the recommendations contained in the East Africa Commission's Report with regard to the improvement of transport facilities in Africa. The Deputation proposed to submit to the Secretary of State a proposal that a certain percentage of any sum that might be allocated to transport development in East Africa should be set aside for research and education.

A report was read on the number of post-graduate students who had been elected since the inception of the Corporation's scheme for the award of studentships. It was announced that 48 men had either been trained or were now training under this scheme.

The adoption by the Liverpool Cotton Association of an Empire and Miscellaneous Growths Futures Contract was also reported.

National Insurance Companies.
"BALKAN FIRE AND MARINE"
(ESTABLISHED IN 1895
"BALKAN LIFE AND ACCIDENT" and
General Re-insurance Company, "BALKAN."
Capital - Leva 5,000,000 each.
Total Guarantees: Leva 100,045,000
HEAD OFFICE: SOFIA, BULGARIA.

GENERAL ACCIDENT FIRE AND LIFE ASSURANCE CORPORATION, LTD.

The opening by the General Accident Fire and Life Assurance Corporation, Limited, of Perth (Scotland) and London, of a branch office at Cairo is of more than passing interest to the large community with connections in the Near East, for it may justly be considered a sign of the times, and such a practical mark of confidence on the part of one of our great insurance companies in the commercial future and prosperity of the Near East will be taken as a highly encouraging portent by the whole business community throughout Egypt, Greece, Turkey and Palestine.

The "General Accident" was established forty years ago in Perth, Scotland, but it was not until 1899 that the directors decided to form a general foreign connection, and the wisdom of this decision is evidenced by the important position held to-day by the Corporation throughout the civilised world. Its assets already exceed £10,000,000, its annual income is £7,000,000 and it has paid over £25,000,000 in claims—such figures as these speak volumes for the confidence and goodwill it enjoys amongst the thousands all over the world who buy its policies (which, by the way, are printed in eleven different languages).

The Corporation has, of course, been well known in the Near East for many years, for it started an agency in Egypt in 1903, and subsequently extended its activities to Palestine, Syria and many towns of the Southern Balkans. In 1904 it started business in Constantinople, and in 1920 extended its operations to Greece (both Old and New). It is in order to consolidate its large Near Eastern business that it has now established a branch office in Cairo, under the managership of Mr. A. H. Pearson, supported by a very influential board, composed of Mr. F. W. Lucke, manager in Cairo of the Anglo-Egyptian Bank, Ltd., Mr. T. S. Richmond, director of the Associated Cotton Ginners of Egypt, Ltd., Alexandria; M. Leon Rolin, director of Messrs. Leon Rolin and Co., (Builders and Contractors), and Talaat Bey Harb, manager of the Banque Misr.

The "General Accident" has been operating in India since 1902, and a branch was established in Bombay in 1913, under the management of Mr. G. M. Rose, who is now a director of the Corporation in Bombay, and partner in the firm of Herbert, Son and Company. Since 1923 the Indian branch has been under the managership of Mr. L. G. B. Gould. A sub-branch was opened in Calcutta in 1921, of which Mr. A. G. F. Smith is in charge.

The Corporation is now one of the leading accident companies in India, and is extending its organisation still further. It has agencies in Iraq, Baghdad and Basrah.

BANKING IN CZECHO-SLOVAKIA IN 1924.

(From a Correspondent.)

The year 1924 was marked by economic stabilisation in Czecho-Slovakia, improvement being observed in the industries, while insolvency declined.

For the banks, the year was one of earnings on interest, the granting of credits proving very lucurative in view of the general money stringency. These earnings, however, did not fully make good the falling away of transactions in currency and stocks and shares which had been such a feature of the previous year.

The year of deflation (1922) had brought serious losses to all banks and resulted in an absorption of a good part of the reserves that had been got together in previous good years. In order to restore these reserves the leading Czecho-Slovak banks decided this year to reduce their dividends by 2 per cent., to reduce where possible their staffs and cut down working expenses.

The lower dividends declared for 1924 are also explained by the necessity for the banks to contribute an annual sum equivalent to about 1¼ per cent. of their capital to a special fund which the legislature has instituted for the purpose of giving State aid to banks that get into difficulties as a result of special circumstances such as the currency fluctuations of previous years.

The actual return in dividends made by the Czecho-Slovak banks in 1924, having regard to the price at which their shares are quoted on the Prague Bourse, averages about 6 per cent. The fact that lower dividends are being paid for 1924 has not appreciably affected the Bourse quotations as such reduction was anticipated well beforehand and the reason for it well known.

The prospect for the current year may be regarded as improved. The stringency on the money market has somewhat relaxed, while, as already mentioned, the Banks are taking energetic steps to reduce expenses. The position in the industries, with the exception of the coal trade—is tolerably good.

EGYPTIAN TRIBUTE LOAN.

The numbers are announced of 658 bonds of the Ottoman Three and a-Half per Cent. Loan of 1894, secured on the Egyptian tribute, amounting together to £112,780, which were drawn for redemption on July 14, 1925, and will cease to bear interest from October 15, 1925.

The suspension of the payments for the due service of this loan by the Egyptian Government still continues, and is the subject of litigation in the Mixed Courts of Egypt. Judgment was given in favour of the bondholders by the Mixed Court of First Instance at Cairo on June 15 last, but it is not yet known whether the Egyptian Government intends to exercise its right of appeal to the Mixed Court of Appeal at Alexandria. In these circumstances directions for the time and place for the presentation of the bonds will be the subject of a future announcement.

Messrs. Vickers, Ltd., have now acquired the whole interest in the Vickers-Spearing Boiler Co. Mr. A. H. Spearing has resigned his position as managing director and is no longer connected with the company. The company will be carried on under the name of "Vickers-Spearing Boiler Co., Ltd.," as before. This change also gives Messrs. Vickers, Ltd., the control of Messrs. Tinkers, Ltd., Daisyfield Boiler Works, Hyde, near Manchester.

Near East Markets.

MARKET FOR PREPARED MEDICINES IN TURKEY.

During the last year or so the Turkish Government has opened 150 dispensaries in various districts in the interior and plans to open another 150 in the near future. The public-health authorities are studying various projects for introducing sanitary bodies, granting free doctor's services, and distributing drugs in various districts in the interior where malaria and other diseases are seriously thinning the ranks of the population (says an American Consular report). This task is rendered extremely difficult because of the Government's lack of sufficient means and the very small number of Turkish physicians available. Doctors and druggists are reluctant to accept a position in a remote district. Local wholesalers of drugs and pharmaceutical products, nevertheless, state that they are receiving more orders for drugs and prepared medicines from districts where drugs had never been handled before.

No industry for the production of prepared medicines exists in Turkey. A very few of the larger Turkish pharmacies, however, during the last two or three years have attempted to specialise in the production of certain medicines which are easily prepared, and for which no expensive and up-to-date equipment, particular scientific knowledge, and technical experience are required.

Post-War statistics covering the Turkish importation of prepared medicines are not available. Estimates given by various informants differ greatly. It would appear, however, that the annual imports of foreign prepared medicines during the last two years reached £T1,250,000 to £T1,500,000 (£156,250 to £162,500). Approximately 85 per cent. of this trade was with France, Germany, and Great Britain. Those firms, especially French, who do a large business, have acquired their success as a result of many years of efficient systematic operation in this market, as well as continuous, efficient, and ingenious advertising.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co. report as follows under date August 1:—

Currants.—Market conditions show no improvement, and a very uninteresting state of affairs continues, the business conducted being almost exclusively in specialities and fine Vostizzas. The latter days of the month have been overclouded by the fear of a stoppage in the coal industry, and this, coupled with the fact that this is the week preceding August Bank Holiday, which is not usually a busy one, makes it scarcely surprising that a certain amount of dullness exists. Sales comprised:—Pyrgos 32s. to 33s., Amalias 33s. to 34s., Gulf 36s. to 40s., Vostizza 43s. to 46s., Shade Dried 48s. to 53s.

Some business is reported in New Crop fruit on a c.i.f. basis:—Pyrgos 33s., Amalias 34s., Patras 35s. 6s., September shipment. Quotations:—Pyrgos 32s. to 33s., Amalias and Patras 33s. to 38s., Gulf and Panariti, 36s. to 40s., Vostizza 43s. to 48s., Vostizza Shade Dried 48s. to 53s. Arrivals.—The Cypria and Lesbian with about 500 tons were marketed.

Sultanas.—With prices advancing for new crop Smyrna, owing to reports of damage to the growing crop, more interest was taken in spot parcels, and the remaining stocks of good average were disposed of at 52s. to 53s.; few fine selling 75s. to 80s.

Australian.—Owing to the scarcity of stocks, the fruit from the Commonwealth is supplying the trade requirements, and as it is this season showing a great improvement in colour, quality, and more regularity in grading than previously, it is being appreciated by the trade, although not in active demand. Considerable interest was taken when once buyers realised that the preferential duty would be retained by the Colonies, and we close the period of review with a good steady trade passing. The range of values is 65s. to 75s., showing an advance of several shillings since June 30.

Capes.—The later arrivals show a falling off in quality, and progress is difficult.

Figs.—Old crop Genuines selling at 26s. New crop.—Some business has been done in Genuine Natural, September shipment, 24s., 24s. 6d., c.i.f.; no sellers now under 25s. Calamata (on strings) sold 19s. 9d. c.i.f., September.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ending July 23 state:—

Since our last report the futures market has been quiet but the undertone has remained firm; the net changes on the week are the following:—Sakellaridis, 0.40 dollars up for July, 1.03 dollars up for November, 1.18 dollars up for January, 1.30 dollars up for March: Ashmouni, 0.08 dollars down for August, 0.18 dollars up for October, 0.25 dollars up for December.

Old crops have been rather dull and almost no dealings have taken place. July definitely closed to-day at 60.60 dollars, and no dockets of any size are expected to be issued to-morrow which is the last tender day of this option. The improved demand from abroad for prompt shipment has been maintained and in consequence a fair activity has prevailed in the spot market, but as mentioned in our previous report the bulk of the existing stocks are unhedged and therefore the sale of this cotton leaves the futures market unaffected. New crops have been fairly active and prices have advanced somewhat. Spinners on the whole have shown an increased interest in new crop shipments, but we do not think that the volume of business booked has been of any size owing to the existing wide difference of opinion regarding prices between sellers and buyers. The week's receipts amount to 111 crs., against exports 31,943 crs.; the stock stands at 465,458 crs.

Spot: Minet el Bassal has been more active this week and the improvement in the demand from abroad, which we noted last week, has been maintained. The market has only been open four days and sales amount to about 6,300 B/s of which we estimate 1,750 B/s Sakel, 4,300 B/s Uppers, 250 B/s Zagora and a few bales of White. With the imminent approach of the new crop, sellers have met such demand as there is very well and have offered their cotton fairly freely.

Sakellarides: have been in moderate request and all styles have been dealt in. One fair sized line of high grade cotton has changed hands but, apart from this, the business has been mainly in the medium and low grades. With the exception of Fair and Fully Fair which maintain their parities, spot differences are considerably easier.

Ashmouni and Zagora: have been in good demand. All grades up to Fully Good Fair to Good have been dealt in, but Good and better have been rather neglected. Spot differences are unchanged.

Brown and Pilion: are neglected and no business is reported. Quotations of spot are unchanged.

White: A retail business has been done at last week's rates.

Crop 1925: The weather has been cooler but the progress of the plant has been normal. Leaf worm attack is now over and it may be said that it has not caused more damage than in previous years. Growers of the South and Central Delta complain of deficient bolling in the Sakel plantations; we do not think the complaints are either general or serious. The water supply continues to be adequate.

Company Meetings.

IMPERIAL OTTOMAN BANK.

Negotiations for Prolongation of Concession.

The annual general meeting of the Imperial Ottoman Bank was held on July 29 at Winchester House, E.C.

General the Hon. Sir Herbert A. Lawrence, K.C.B., who presided, said that, in spite of various symptoms of improvement, the year 1924 had not brought that stability which was necessary for the restoration of Turkey. The Treaty of Lausanne did not receive ratification until August 6, 1924, and its execution involved the settlement of various delicate questions which had contributed to disturb production and commerce, and thus to act as a drag on the economic movement of the country. In agriculture, climatic conditions were responsible for results which were less satisfactory than expected in view of the encouragement given by Governmnt authority and the real effort made towards developing the resources of the country. The tendency towards the depreciation of the Turkish pound was explained by the adverse trade balance. It was not the result of speculation or inflation. The latter, indeed, was a policy which continued to be contrary to the views of the Turkish Government. Commerce had to suffer in Turkey from a monetary crisis, which was acutely felt during the second half-year—a season in which heavy transfers of money to the provinces were necessary for the movement of the crops. The Turkish Government could not do better, with a view to improving its exchange, than to concentrate its efforts on the agricultural equipment of the country. It had not failed in this, and there was every ground to hope that the effects of its action would soon be apparent. On the other hand, economies had been made in expenditure, and the Budget deficit had been reduced to £T17,000,000.

The application of the procedure laid down for arriving at the distribution of the Public Debt of the old Ottoman Empire between Turkey and the various successor States had been in progress since November, 1924. It was easily to be understood that each of the political and economic factors to which he had referred had exercised a depressing effect upon the trade of a country which had not yet emerged from a stagnation lasting over a period of years. This situation had affected the activities of the bank's Constantinople office and of its branches in Anatolia. They had been able to do little more than cover their expenses. They had reason to hope, however, from certain more favourable signs, barely perceptible during 1924 but more pronounced in the first half of 1925, that they were near an economic revival in Turkey.

Reviewing the progress made by the bank's branches in other countries, he said that in Egypt, where they had seven branches established, there had been steady improvement in business in the face of keen and constant competition, not only from the other old-established banks in that country but also from a steadily increasing stream of new competitors. In Cyprus, where they had six branches, the bank took a prominent lead. Their relations with the Government, for whom they acted as bankers, were most cordial. In that connexion they would be interested to know that they had recently proceeded with the establishment of an Agricultural Bank in the island, with the Government's approval and support. For the three branches in Mesopotamia the period under review has been one of marking time. In Persia they had three branches, the results of which had been satisfactory, and the prospects were encouraging. In Palestine their five branches showed good results, and, with the prospects of steady development and improvement in that sphere of their activity, they looked to those branches as being likely to show even more satisfactory results in the future. The general situation in Yugoslavia appeared economically and politically to present a more favourable aspect. The Banque Franco-Serbe, in which they had important interests, had profited by the improved circumstances. In Greece they had branches at Salonika and at Kavalla. Those branches developed to an even greater extent the assistance which they have always rendered to the trade of this important export region.

He went on to say that the negotiations for the prolongation of the concession were proceeding and that the duration of the bank had been prolonged by the committee in accordance with the resolution passed in 1906. As regarded the negotiations for the prolongation of the concession, the situation was clearly favourable. Not only had the Government not given them notice to dissolve, but they were informed that the accord was already established between their Direction Generale and the Minister of Finance, and that it would be submitted immediately—perhaps even that day—to the official approbation of the Council of Ministers. They were, in addition, authorised to declare that, while awaiting that decision, the bank would continue to function regularly.

The accounts showed an amount available of £326,951, after taking into account an amount of £128,370 brought forward from the previous year. Taking into consideration the circumstances in which the business had been transacted during 1924, that result was certainly satisfactory. The committee would not have hesitated to propose the distribution of the balance, but, after the closing of the accounts, a period of fluctuations in the depreciated currencies had set in, recalling the need of maintaining the prudent policy which they had followed since the Armistice. The aim of that policy had been, by the constitution of proper reserves, to protect the assets of the bank from the risk entailed by depreciation in foreign currencies included in those assets. That result once achieved—and the profits reserved from the year 1924 justified them in looking for that in the near future—shareholders would reap the reward of their long patience.

The report and accounts were unanimously adopted, and a resolution was unanimously passed authorising the committee to settle all details of the new concession and of the prolongation of the duration of the company.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS UPPER DECK CABINS.
MODERATE FARES.
RECOGNISED BY INDIAN GOVERNMENT,
Indian Government Vouchers accepted.

Passenger sailing dates :—

*SCINDIA, Aug. 11.	CALIFORNIA, Oct. 14.
*MASSILIA, Sept. 1.	*CASTALIA, Oct. 27.

ANCHOR LINE,
48, FENCHURCH STREET, LONDON, E.C.3.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Scindia for Bombay (Liverpool, August 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Imani for Port Said, Colombo, Madras, and Calcutta (London, August 8).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, August 12).

British India Line.—S.s. Foyle for Colombo, Madras, and Calcutta (London, August 15); s.s. Hatipara for Bombay and Karachi (London, August 22).

Cunard Line.—S.s. Sea Glory for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, Catania, Corfu, Brindisi, Bari, Gruz, Angora, Fiume, Trieste, and Venice (Swansea, August 11); a steamer for Gibraltar, Oran, Algiers, Malta, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Glasgow, September 3).

Ellerman "City" Line.—S.s. City of York for Calcutta (Birkenhead, August 17).

Johnston Line.—M.v. Sycamore for Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, August 8); s.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 5); s.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 12).

P. and O. Line.—S.s. Kaisar-i-Hind for Bombay (London, August 7); s.s. Nankin for Colombo, Madras, and Calcutta (London, August 8).

Prince Line.—S.s. Soldier Prince for Malta, Alexandria, Jaffa, Haifa, Beyrout, and Alexandretta (London, August 12).

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended July 10 amounted to £E7,460, making the total from April 1 £E73,304.

During the last two years a start has been made in Southern Bulgaria with the growing of Indian flax from which hashish is prepared (says a Reuter message).

Bulgaria has had a good "harvest" of silk cocoons this year, the total production being estimated at double last year's. The average price obtained has been 105 leva per kilogram (about 1s. 4½d. per pounds). One of the big co-operative societies has bought 100,000 kilos and the Bulgarian Agricultural Bank 60,000 prepared for export (says a Reuter message).

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended August 1 states:—

The better tone which was manifest last week has been renewed during that now closing. Inquiry has continued to develop satisfactorily and the business actually booked shows an improvement.

Yarn.—The turnover in yarns has been larger than for some little time back. Possibly prospective buyers have anticipated their requirements a little in expectation of the great reduction in output which will take place in August if the recommendations of the Master Spinners' Federation are carried into effect. Both for American and Egyptian spinnings more business has been on offer although in many cases the prices obtainable are still unsatisfactory.

Cloth.—There has been quite a fair demand for cloth. India has, of course, been the chief buyer, but for China, also, orders have been placed. The Near Eastern markets have not, however, shown any increased activity and demand is still very slack from those quarters.

Raw Cotton.—The weather reports from the United States have this week been more favourable than for some time past. Rain has fallen in several districts where it was needed and, whilst other places are still suffering from lack of it, the general position is considered to have improved. There has consequently been a fairly sharp fall in quotations. Business on the spot in Liverpool has been very small both in American and Egyptian. Closing quotations yesterday were as follows:—American Middling, 13.53; Egyptian Fully Good Fair, 32.45.

SPECIAL MARKET REPORTS.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

Cyprus, July 11.—It is anticipated that the carobs crop will be between 15 and 20 per cent. less than last year's. Offers for "ventes à livrer" 125s. per ton c.i.f. At the corresponding period of last year the quotation was 105s. to 106s. c.i.f.

Teheran, July 4.—The market is very quiet with little change in prices. The Government are importing a million tomans in silver coins struck at the Moscow mint with dies obtained from the Imperial Persian Mint. The money has arrived at Pehlevi, and is now being taken delivery of by the Persian authorities for the purpose of assay.

COMPANY NOTES AND REPORTS.

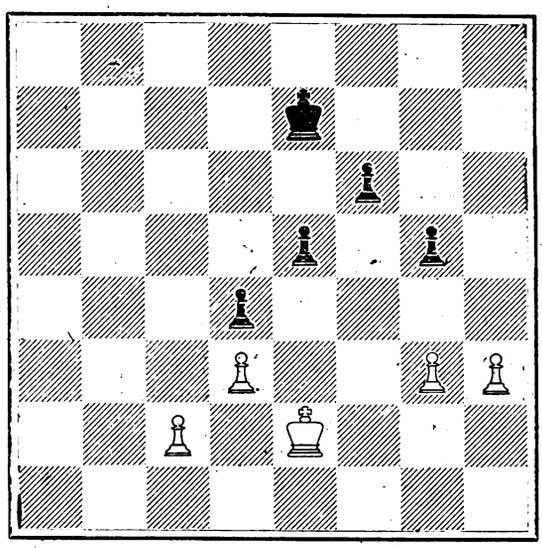
ANGLO-AUSTRIAN BANK.

The report of the Anglo-Austrian Bank for the year 1924 states that the profit was £28,065 after making the usual and necessary provisions and after adjustment of reserves. The balance brought forward from 1923 is £81,653, giving a total of £109,719, which it is proposed to carry forward. As foreshadowed in the last report, drastic reductions in the Vienna establishment have been carried out, involving considerable difficulty and expense. These reductions were effected in the closing months of 1924. Compensation paid, in consequence of legislative requirements, to employees thus retired, amounted to £110,156, and has been deducted from the opening reserve account, reducing it to £265,000. A further reduction, involving further compensation, will be carried out shortly. Several exchange offices and sub-branches which were not profitable have been closed. The Maribor branch has been transferred to the Croatian Discount Bank. A branch in Milan was opened at the beginning of 1925.

Mr. N. Mayers, H.M. Vice-Consul at Beyrout, visited the Manchester Chamber of Commerce recently, and discussed with several merchants and manufacturers questions connected with the export of British goods to Syria.

CHESS.

By "CARO-KANN."



END GAME No. 9.

White to play.—What result?

Solution to end-game No. 8:—1, B—Kt5, K—K (best); 2, K—K3, K—K2; 3, K—B4, K—B2 (if K—K3; 4, B—B4 (ch)); 4, B—B4 (ch), K—K2; 5, B—Kt5 and draws. It is a curious position, for while Black apparently has perfect freedom, actually he cannot advance his King to the halfway line without first sacrificing the Pawn at Kt3. At first sight the position looks hopeless for White, and it illustrates most aptly the fact that the resources of the end-game are almost illimitable.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Mosul Report.

The publication of the full report of the Commission appointed by the League of Nations to investigate the question of the frontier between Iraq and Turkey cannot be said to have done much to remove the unfavourable impressions created by earlier summaries. It would seem as if the Commission had realised that the territory in dispute ought to belong to Iraq, but had lacked the courage to say so *tout court*, and had accordingly hedged its findings round with as many conditional clauses as possible. After ruling that in the interests of the populations the disputed area should not be partitioned, the Commission is of opinion that important arguments, particularly of an economic and geographical nature, and the sentiments of the majority of the inhabitants of the country taken as a whole (influenced by the desire of effective support under the Mandate and by economic considerations) operate in favour of the union with Iraq of the whole territory south of the "Brussels line," subject to the following conditions: (1.) That the territory must remain under the effective mandate of the League of Nations for a period which may be put at twenty-five years; and, (2.) That regard must be paid to the desires expressed by the Kurds that officials of Kurdish race should be appointed for the administration of their country, the dispensation of justice and teaching in the schools, the official language in all these services being Kurdish. The "Brussels line," it will be recalled, is the provisional frontier laid down by the League of Nations in October 1924 as the line behind which the Turkish forces that had invaded Iraq had to withdraw pending a final decision as to the boundary between the two countries.

Facing Both Ways.

For the benefit of the Turks the Commission places on record that "from the legal point of view the disputed territory must be regarded as an integral part of Turkey until that Power renounces her rights," and that Iraq cannot claim it either by right of conquest or any other legal right. It can only advance moral arguments to the effect that the nature of Iraq territory must be such as to allow of the normal development of the State of Iraq. In spite of this emphatic statement the Commission announces that it does not feel competent to decide what weight should be given to these legal considerations, in regard to which it is so confident, and accordingly they leave it to the Council of the League of Nations to appraise the weight to be given to them. Nothing, perhaps, better displays the mentality of the Commissioners than the suggestion that the Assyrians, whose hard lot is recorded and the necessity for whose protection is recognised, should return to their former homes in Turkey under a complete amnesty and enjoy the same local autonomy as in the past. This childlike faith in the capacity of the Oriental lion and lamb to lie down together at the bidding of three wise men does more credit to their hearts than to their heads. The effect of the Report, as was pointed out in these pages last week, is to throw the onus of a decision upon the Council of the League of Nations. That body, it is to be hoped, will show greater courage than the Commission has. Of the conditions laid down in the Report that are to govern the allocation of the Mosul vilayet to Iraq the one that is likely to provoke comment is the stipulation that the territory must remain under effective mandate of the League of Nations for a period of twenty-five years. There should be no question of any attempt to bind either the League, or Great Britain as Mandatory Power, to such an undertaking. The League will, no doubt, take note of the recommendation and, if necessary, bear it in mind. It is under no obligation to take any action in regard to the condition laid down by the Commission, if only for the reason that it has already imposed the status of a mandated territory on Iraq and need not revoke that status until it sees fit to do so. Much may be made of the condition by those in Great Britain who are opposed to the present British connection with Iraq; but it is difficult to see why it should affect the existing arrangement. If the Mosul vilayet becomes formally incorporated in Iraq, that fact will be an im-

Digitized by Google

portant consideration in the negotiation in a few years' time of a new agreement to replace the present Treaty.

Turkey and Britain.

It is urged against the British association with Iraq that it introduces into the scheme of the British Empire, or among our Imperial responsibilities, a long land frontier, very difficult of defence, owing to its distance from the sea. This fear was endorsed by the late Field-Marshal Sir Henry Wilson, and from a purely military point of view cannot lightly be dismissed. It ignores, however, two considerations: first, that permanent hostility between Turkey and Great Britain is not an inevitable and permanent feature in world affairs, and secondly, that Iraq is not being incorporated as an integral part of the British Empire. If in the near future Turkey were to carry out a serious invasion of Iraq, Great Britain would most probably find herself involved in war. On the other hand, after a lapse of years the relations between Iraq and Great Britain may be such that British action might be determined by other considerations than the necessity that exists to-day of setting a new State, for which we are responsible, on its feet. Turkey in any case remains a maritime Power with a vulnerable coast line, and it is for British diplomacy to see that the mistakes of our Near Eastern policy prior to 1914 are not repeated in the future. To-day the policy of scuttle in regard to Iraq is impossible, from the standpoint of fairplay, morality and British interests. Every year, provided that our duty to the country is conscientiously and generously discharged, such a policy becomes more possible, if only because it will be less open to the objections than can be urged to-day. There is, therefore, no need to raise up bogeys which have practically no chance of materialising. The trust which Great Britain has taken over must be faithfully discharged, in the knowledge that each year will witness the gradual reduction of her responsibilities.

The Jebel Druse Rising.

Information from official sources in France regarding the revolt of the Druses remains scanty, possibly because the outbreak is a comparatively small affair from a military point of view, but it is evident that the situation is causing the French authorities considerable uneasiness. The ultimate issue of a rising of this nature should be a foregone conclusion. While it lasts, however, it bids fair to prove for a variety of reasons a source of embarrassment to France out of all proportion to the number of troops involved. The operations against the rebels are being carried out under adverse conditions owing to a serious scarcity of water, and the Druses have been able to secure not unimportant successes at the outset. Two French columns or convoys have been defeated and cut up, and the small French garrison in Sueida is being closely beleaguered. The French Government, having already on its hands in Morocco more than it wishes for, is particularly anxious that this Syrian episode should not have to be invested with the dignity of a campaign; yet failure to strike hard and quickly may lead to a more formidable extension of the unrest.

France's Stewardship in Syria.

More important than the ups and downs of the revolt and its suppression is the question that the incident raises of the relations between France and the mandated territory. This is the sixth insurrection in Syria in six years of French occupation. The Jebel Druse in 1921 was constituted an independent State under a French Governor in accordance with the policy of dividing Syria into a number of watertight compartments; but successive occupants of the Governorate have failed to give satisfaction to the inhabitants and the French have refused to sanction a Druse Governor. The last appointment, a nominee of General Sarrail's, appears to have brought the local discontent to a head by methods which might be appropriate with Senegalese, but caused deep affront to the Druses. A delegation was sent to Beyrout to petition against the return of the offending Governor and to apply for the incorporation of the Hauran in the Syrian union with the States of Damascus and Aleppo. General Sarrail refused to receive the deputation, and the rising followed the attempt of the Governor, Captain Carbillet, to return to his post. As General Sarrail is not popular in his own country, it is natural that there should be an attempt to make him a scapegoat for what has happened in the Jebel Druse. A more profitable subject of inquiry, however, would be the extent to which the basic principle of French administration in Syria is adapted to local conditions. A high tribute can be paid to the material advantages accruing from the French occupation, but the fact remains that the people find themselves, or at least regard themselves as being, in an atmosphere of repression, as though in some undefined way the free development of their interests was held to be inimical to Franch interests. Thus the measure of local autonomy granted by the French was robbed of any merit it might have had by the care taken to check as far as possible any tendency to Syrian solidarity. The French, it would seem, have yet to learn that their Syrian Mandate represents a much more advanced stage in the handling of backward races than any of which they have hitherto had experience. Consequently, unless much more elasticity is introduced into the administration and into the relations between the local authorities and the governed, there is a danger of repeated explosions.

CORRESPONDENCE

The columns of The Near East and India *are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of* The Near East and India.

SELF-DETERMINATION IN THE MOSUL VILAYET.

To the Editor of The Near East and India.

Sir,—There is one point in the forecast of the report of the League of Nations' Mosul Commission which does not appear to have been stressed in the course of British Press comment. It is that the truly amazing suggested boundary of the Lesser Zab would leave within Iraq the strongest centre of pro-Turkish feeling in the country, the largely Turcoman town of Kirkuk, while handing over to Turkey the Arab town of Mosul.

Ethnically and geographically, the Turkish claims have not a leg to stand upon. There remains the claim of "self-determination." The above instance will demonstrate how low that god has fallen since he was deified in the "Fourteen Points."

I should also like to express my appreciation of that excellent article entitled: "The Stability of Iraq," in this week's number of your journal.—I am, etc.,

F. W. Chardin.

Peaslake, Guildford, Surrey, August 5.

POLITICS IN THE BALKANS.

General Pangalos, the new Greek Prime Minister, appears to have come very near to discovering a truth which has hitherto remained hidden from all political leaders in the Balkans. Paraphrasing St. Paul, he has asked: "Who is Constantine? Who is Venizelos? What is a Kingdom? What is a Republic?" and he has proceeded to point out that these are all means to an end. The people, he declares, want tranquillity, order, security, good government, and, above all, new political men. If General Pangalos had omitted the last few words, we should have inferred that his discovery of the truth in question had been complete. It would be nearer to the mark to say that the Greek people, in common with all the other peoples of the Balkans, do not want "political" men at all, whether new or old. There must be members of Parliament for the proper carrying into effect of constitutional government; but they should regard themselves as representatives of the nation and not as "political men," in the sense of being champions of a political party called upon mainly to give battle to those who belong to other political parties. Not the least evil of this latter attitude is that the claims of party inevitably come to override the interests of the State. The Civil Service becomes a party perquisite, and politics is made a whole-time profession embittered by the exigencies of the struggle for subsistence. General Pangalos appreciates the fact that the interests of the people as a whole and of the country at large ought to be placed before those of any particular party, and he has wisely put himself in touch with the provincial life of Greece instead of being content to view the country exclusively through the spectacles of the capital. It is to be hoped that one of his statements will not defeat the purpose that he has in view. He has promised that, if he finds that the Republic has not been a success, he will "consider the matter." Left to themselves, the Greek people will probably be satisfied with that assurance. To the politicians, however, who are already alarmed by the challenge to their position, the mere suggestion may prove a stimulus to fresh action, the Royalists anxious to lose no time in recovering the lost citadel, the Republicans fearful lest inaction should rob them of the victory gained.

Greece's experience is that of the other States of the Balkans. Her political divisions may assume a different character; but everywhere the obsession of politics is the same. Yugoslavia is now making the experiment of a coalition of the two chief political parties, which may enable her to put an end to a situation in which by common consent the development of the country was being retarded by the bitterness of political antagonisms. It is too early to be able to gauge what the concrete results may be; but the attempt to close the nation's ranks commands the approval of all those who have the interests of Yugoslavia at heart. As the dividing line had been racial rather than based on the rivalry of political parties, it was fraught with even greater danger than the conflict in Greece. A coalition between Radicals and the Croatian Peasant Party led by M. Raditch will, however, be of little use, if it is merely to carry on against the Opposition the political vendetta that previously existed between the Radicals and the Raditchists. Here too it is a respite from party politics that the country needs, and there can be little doubt that the bulk of the people is looking forward to the time when the protagonists of the old political feuds will have made way for a younger generation of politicians with political watchwords which are not merely personal battle-cries, but are better suited to the needs of the day. In Roumania the strongly entrenched position of the Bratianu Government has encouraged the conviction that what is in the interest of the National Liberal Party must promote equally the interests of the country. Yet the impression is conveyed to foreigners that the nation is restless under a régime with which it has little sympathy, while lacking the will-power or the machinery to effect a change. Apart from this aspect the party in power cannot be said to have stressed unduly political questions. It is rather the economic hold on the country that the Liberals have succeeded in obtaining which causes misgivings in Roumania; but whether this circumstance is due to the absence of financial ability outside the Liberal ranks or is the result of a policy framed to this end it is impossible to say. Feeling in the country on the subject does not appear to be deep, for in spite of the confident predictions of the Opposition the Bratianu Government has continued in power, and the outside world is left to infer that in this case the disputes of politicians are reflected in no serious cleavage in the Roumanian people as a whole. Bulgaria, on the other hand, has yet to adjust the conflicting interests of bourgeois and peasant before domestic politics are subject to safe lines of division. Recent events have tended to emphasise the existing antagonism; but the forces at work, including the common sense of the people, are gradually helping to bridge the gulf that has separated the two camps.

It is much in General Pangalos's favour that he holds himself above political parties and displays no craving for a successful political career. He has adopted the attitude that Greece was in need of a strong hand and of being freed from vacillations of policy due to political manœuvrings. Believing that he was able to interpret the wishes of the people, he resorted to a *coup d'état*, the immediate success of which helped to confirm him in his opinion, or at least to satisfy him that his countrymen were thoroughly tired of politics. From his political utterances he appears to have made up his mind that, while he remains in power, Greece shall have order and security at home, and that his own political instincts shall be exercised in the direction of strengthening his country's position in the Balkan Peninsula. To this end he is committed to a reorganisation of the Greek Army, and it remains to be seen whether, in this task, he is strong enough to hold back the extremists among his supporters from a provocative military policy. Until this point is cleared up any overtures from the Greek Government to its neighbours are likely to be unproductive of tangible results, for the Balkan States are suspicious of one another and all are highly strung these days. General Pangalos would deserve well of his generation if he could revive the Balkan League as a political or economic federation, with military ambitions kept well in the background. A *sine qua non* for its success would be that it should comprise all the four States, for a League that omitted Bulgaria would fail of its purpose. To-day it is easier to find reasons for excluding Bulgaria than to brave the odium of a proposal for its inclusion. The test of General Pangalos's courage and statesmanship, or common sense, will be in his ability to convince Yugoslavia and Roumania that their security from the obsession of domestic politics and their hope of ultimate prosperity lies in a Balkan confederation or understanding which will allow for the full economic development of a Peninsula wonderfully rich in natural resources and endowed with an invaluable asset in the history of its peasant population

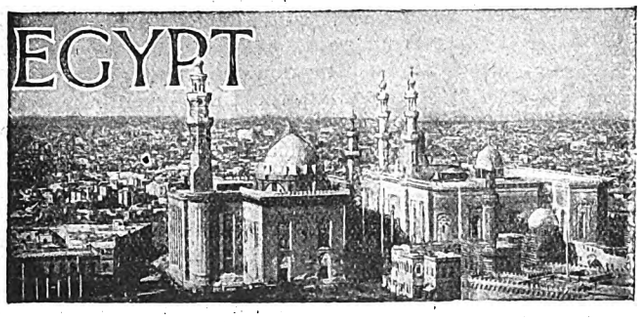
The Near and Middle East*

From Our Own Correspondents.



Cairo, August 1.

The Code for the Press.

When Egyptian journalists rose in protest at the recent amendment of the Criminal Code articles affecting the Press, the Minister of Justice issued a reassuring statement of the Government's point of view. Nothing, he said, was further from the Ministry's wish than to fetter the Press; rather was it the official intention to clear up ambiguities in the previous wording of the Law, thus making it quite clear what was permissible and what forbidden. The editors and newspaper proprietors, however, continued to lament the supposed loss of their freedom, and would not be comforted. Nor does it seem that their fears were ungrounded. Three editors and four other journalists have lately been interrogated by the Parquet concerning articles in their newspapers, and will eventually stand their trial at the Cairo Assizes. The most serious case is that of the *Minbar*, a "daily" newspaper which appears, as do quite a number of the lesser Egyptian publications, at irregular intervals, and which, in its issue last Saturday, published an article on the dispute between the Royal Wakfs Administration and the Daira of the Khedive Mother concerning the Kaha Wakf which was considered by the authorities as offensive towards both the Mekhema Sharia judge who tried the case and King Fuad. The case falling in the category of alleged crimes, the writer of the article, who is the secretary of the Daira, and the editor of the paper, were both arrested, and in prison they remain, pending trial.

Without expressing opinion of any kind regarding the alleged offences which have been the cause of recent official action against local newspapers, it may be remarked that the great latitude allowed the Egyptian Press by the British authorities before the War and even, excepting where the publication of military information was concerned, during the continuance in force of Martial Law, has to some extent "spoiled" the Press for the much less Liberal views on the function of newspapers held by Egyptian Ministers, now that the country's independence has given them liberty of action in dealing with unwelcome criticism.

Traffic in Cocaine.

Much the most encouraging news item of the past week has been hidden away in an obscure paragraph which recorded that the Tantah Native Tribunal had sentenced a cocaine trafficker to eighteen months' imprisonment. No sentence of anything like such adequate nature has ever before been passed on illicit drug dealers here, nor, indeed, has it been possible to inflict punishment of more than a wholly inadequate kind until the recent passing of a new law regulating the sale of narcotics. In this connection, it is interesting to note that the drug habit here may be checked by an altogether unexpected circumstance, namely, the rapacity of the clandestine dealers, who are adulterating their wares to such an extent that they are becoming almost harmless and, therefore, ceasing at the same time to be habit-forming. A well-known British official was driving in an *arabiya* the other day, when a street vendor offered him a phial of white powder as cocaine. Seizing the would-be seller by the scruff of the neck, the official dragged him into the carriage and took him off to the nearest police station, where he was discovered to have concealed about him several of these phials, all bearing the name and trade mark of the German manufacturing chemists whose products are known to cocaine fiends as "the real stuff," the champagne of cocaines. But, on analysis, the contents were found to be entirely innocent of cocaine, or of anything more harmful than boracic powder. The police were in a quandary about what to charge the seller with, and I understand that they eventually released him, possibly on the grounds that, like the man accused of having stolen jazz band instruments, he was really a public benefactor. A medical friend informs me that he has seen several samples of alleged cocaine recently seized and that none of them contained more than 20 per cent. of the drug.

Examination Mania.

Attempts to commit suicide by Egyptian students who have failed in the examination at the close of the school year just ended have become so common that the newspapers advocate holding an official inquiry into the cause of this self-destructive mania. Happily, the lads have hitherto been as unsuccessful in their suicidal attempts as in the previous tests of knowledge. Drinking carbolic acid is the most popular method of attempting to drown student sorrows, and carbolic acid must be a beverage the effects of which are very unpleasant long before they are fatal, since all the would-be victims have set up howls of pain that have enabled stomach pumps and similar instruments to be brought into play before the patient's life has been imperilled. There is, indeed, a suspicion that in some cases the half-emptied bottle of carbolic acid found beside the writhing victim has had the rest of its contents poured down the kitchen sink and that the whole affair has been nothing but a comedy, staged to soften the heart of a parent enraged at his son's lack of diligence in his studies.

ALBANIA.

Tirana, August 4.

Calm in the Country.

It is said that a country without a history is a happy country; and of Albania one can at least say that in the absence of anything of moment to report on the affairs of the youngest member of the European family, the country is enjoying if not perfect contentment, at any rate a period of greatly desired tranquillity. The rumours of brewing

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

Digitized by Google

trouble in the north and in certain districts of the south are, to say the least, exaggerated. That there are numbers of people discontented with the present régime is a fact that cannot be disputed; but that this discontent is virulent is untrue and the elements capable of fomenting it are absent or muzzled. The régime of Ahmed Zogu is meanwhile on its trial, and all that has been done so far has a clear balance on the asset side. A despotism is not in the circumstances an unfortunate thing for a country where a strong hand is needed before all else.

Sveti Naum.

In spite of the somewhat bitter allusions which fell from the lips of the President in his opening address to the Albanian Parliament a couple of months back, with regard to the continuance of the occupation of the Monastery and district of Sveti Naum by Yugoslav troops (allusions which led the observer to suppose that no pact had indeed been been concluded between Ahmed Zogu and M. Pashitch in return for the help accorded to the former towards his reinstatement as the ruler of Albania), an accommodation has now been reached by which the Monastery together with a small portion of the disputed district is to be definitely ceded to Yugoslavia in exchange for another small district in the neighbourhood of Dibra. Medhi Frasheri, who was Minister of the Interior at one time under Elias Bey Vrioni, has accordingly been despatched to Paris, to acquaint the Council of Ambassadors, who are the body responsible for the delimitation of Albania's frontiers of the friendly accommodation arrived at by the two Governments concerned, and to obtain their formal assent, which by the time this letter is in print will in all probability have been accorded.

The Government of Albania claims that the advantages of the accommodation outweigh the disadvantages, since Sveti Naum has only a sentimental importance for the Serbs. On the other hand, a strongly worded memorial, signed by the most prominent leaders of the Opposition in exile, has been handed to the Council of Ambassadors, demanding that the latter should refuse their assent on the grounds that the transfer of territory is an act of treason to the best interests of Albania, in that the possession of Sveti Naum places a point of vital strategical importance in the hands of Yugoslavia, and vitally menaces the security of Koritza. An impartial judgment cannot but consider this view as exaggerated, although undoubtedly Sveti Naum does lie within what is geographically the natural line of demarcation between the two countries at this point.

Rumours of Catholic Activity.

Rumours of the presentation of a second memorial by Catholic notables to the League of Nations, asking the latter to undertake certain responsibilities in the Government of Albania and demanding in the name of Liberty and Justice the institution of a Cantonal system, whereby the Catholic district of Scutari may give expression to its essentially Catholic characteristics, are authoritatively denied. But that the above contains the aspirations of the more influential of the Catholic leaders is undeniable, and that the League has been unofficially informed of this aspiration for their guidance in the event of future trouble necessitating some kind of intervention, is more than probable.

IRAQ.

Baghdad, July 22.

The First Parliament of Iraq.

On July 16 the first Parliament of Iraq was formally opened by His Majesty King Faisal. The King, wearing the uniform of a Commander-in-Chief of the Iraq Army, drove in state to the new Assembly, attended by the Emir Ghazi and members of his Court. The High Commissioner was present, a number of Iraqi notables, and a few senior British officials, besides the Consuls of France, America, Italy, and Persia. The eighty odd deputies and the fourteen members of the Senate or Upper House made an assembly representative of all sections and shades of opinion in Iraq.

The speech from the throne was delivered by the King with great dignity and impressiveness. Its gist was as follows:—

The King's Speech.

His Majesty opened by congratulating the deputies on the confidence shown them by the people, and by asking the blessing of Allah on their labours in guiding the nation towards assuming "the position which becomes it among civilised nations." He referred with gratitude to the good work done by the Constituent Assembly last year; since that time the country had progressed peacefully, a great stride forward being made when the ambiguous mandatory relationship with Great Britain was replaced by a Treaty for a period of four years. This change resulted not only in better relations with Iraq's ally, but in agreements such as those with the Diala Cotton Company and the Turkish Petroleum Company for the exploitation of Iraq's wealth by means of foreign capital. A great development in the latter direction was to be expected when the question of Mosul is settled. King Faisal expressed his entire confidence that a decision favourable to Iraq would be given by the League of Nations, and his earnest desire for the speedy establishment of friendly relations with Turkey. He warmly praised the people in general, and the inhabitants of the northern Liwas in particular, for their loyal adherence to Iraq unity.

His Majesty went on to say that amendments to the Treaty with Great Britain were already under discussion. Diplomatic relations with certain European Powers were "assuming a phase which will lead to the official recognition of our independence."

The Government's Programme.

The programme of the new Government was then outlined. Draft laws, the enactment of which was necessary to the Organic Law, were to be introduced, and existing laws revised. The extension of the powers of local councils with regard to education, communications, and so on, were to be considered, and a permanent cadre of government officials laid down. The Army was to be strengthened, and primary compulsory education gradually introduced. Public works, irrigation and agriculture were to be reviewed "in proportion with the revenues of the country," but the greatest economy was to be observed. The affairs of Auqaf were to be reorganised, and steps taken for combating epidemics.

Referring to the Budget, the King said that the Govern-

ment had "taken into grave and serious consideration" the advice given by the Financial Commission, and had prepared the Budget as far as possible in accordance with it.

In conclusion, he urged the Assembly to give its best attention to such questions as agriculture and commerce, for "there can be no political independence without economic independence." His Majesty then declared the Assembly open.

The Assembly Open.

At the close of his speech, three cheers for the King were called for and given, and His Majesty left the Chamber during a prolonged *feu de joi* of cannon. The oath was then taken by each member, as follows: "I swear by God and by my honour that I will be loyal to His Majesty King Faisal, that I shall uphold the Organic Law, and that I will serve the nation and the country, and discharge my Parliamentary duties to the best of my ability." Rashid Ali Beg al Gilani, Minister of Justice in the last Cabinet, was then elected President of the House a post which involved his resignation of his new appointment of Minister of Interior. This post was later filled by Hikmat Beg. Yusif Beg as Suwaidi was chosen as President of the Upper House. Yassin Pasha al Hashimi leads the Opposition.

Baghdad, July 15.

Suleimaniyeh.

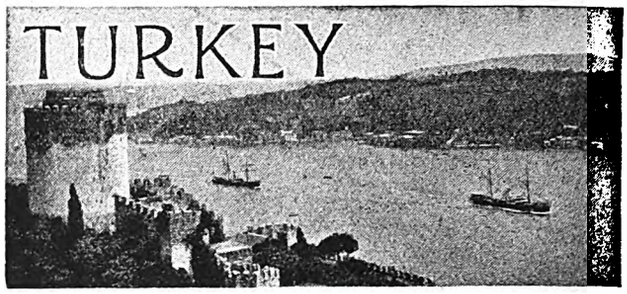
The enemy's inactivity during the occupation of Choartah was only temporary, and was apparently assumed in the hope of drawing the Iraqi forces into the hill country, in which they would be at a disadvantage. A counterbalancing inactivity was therefore adopted, and the enemy was allowed to collect reinforcements undisturbed. A reconnaissance in force was then carried out on June 27, and was completely successful in drawing the enemy on to the prepared defences of Choartah. In the heavy engagement which followed, Sheikh Mahmoud's force lost 20 killed and about 100 wounded, while the casualties of the Iraq Army were only one officer and one man killled and 8 wounded. Another reconnaissance two days later found about 300 of the enemy in occupation of a village six miles north of Choartah; there were easily dispersed, and the village was burned. A large force of the Pizhder tribe, which had lately joined Mahmoud, has now scattered and returned home. Sheikh Mahmoud himself is once more reported to have crossed the frontier into Persia.

General.

His Majesty the King held a levee to receive congratulations on the morning of the *Id al Ahdha*. H.M. the Queen also received the congratulations of a number of ladies, both Iraqi and British.

The title of Iraq Royal Military College was conferred by King Faisal on the cadet training school at Baghdad, at an inspection held on Friday, June 26. The College was founded in 1924 for the training of young Iraqis of good family as officers in the Army; it is noteworthy that a number of the yearly vacancies are ear-marked for the sons of the leading tribal sheikhs. The Royal Military College, Sandhurst, is the model which is imitated as far as possible, and two cadets are sent each year to England to complete their education at Sandhurst.

The Baghdad merchants have not yet recovered from the trade depression caused by the anticipated regulations affecting imports to Persia. They are also suffering considerably from the general decline in prices in the world's markets for the chief exports of Iraq—wool, hides, and skins notably.



Constantinople, July 29.

The Turkish Chamber of Commerce.

As a result of a recently applied law exacting obligatory membership of all business men in Turkey the list of members of the Turkish Chamber of Commerce now comprises 30,000 names as compared with 2,500 last year. Failure to comply with the above law within three months is punishable by prohibition of defaulters to exercise their professions. This exceptional strength permits the Turkish Chamber of Commerce to devote considerable attention to the amassing of commercial and industrial information, and the Information Department of the Chamber is now engaged in the compilation of a directory containing detailed accounts concerning all subjetcs of interest to business men. Should this effort prove successful it will constitute an invaluable work, as statistics up to the present are simply non-existent.

Opera.

Moussa Soureya Bey, the director of the Turkish Conservatoire, apparently wishes to contribute his share and assist in the occidentalising of Turkey. In declarations to the Press he has expressed his desire to form an opera company. He considers opera, being the only means for the propagation of music, as absolutely necessary, but realises that to begin with they must limit themselves to interpretations of existing foreign operas. He has solicited the aid of all the Turkish intellectuals, and in the not very distant future it is possible (in the event of everything going to plan) that with an Opera, the projected Yildiz Casino, and palaces converted into luxurious hotels, Constantinople might be worth a visit merely as a city of pleasure.

A Tourist Company.

According to to-day's newspapers a company, similiar to Thomas Cook's, which is evidently convinced of the possibilities of Turkey as a centre of attraction, is on the point of being formed. The reports state that this company is backed by foreign capitalists and that it has put forward to the Government a scheme in which it undertakes the extensive advertisement of Turkey to Europe and America and assures the authorities that every effort will be made to afford all comforts to tourists. This scheme also makes a provision for a considerable portion of the profits to be paid periodically to the Prefecture. If the projected company secures the approval of the Government, future tourists to Constantinople are assured of a more profitable and satisfactory visit, as the present system of one mad rush round the Mosques, the Bazaar, lunch at Tokatlian's and a trip up the Bosphorus and a scurry back to the boat, can hardly be described as seeing Constantinople.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor St., W.1.

SCHOOL OF ORIENTAL STUDIES, LONDON INSTITUTION

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

Family Names.

A further step forward—small, but one which will denote a great change to those familiar with Turkish customs—is the proposed adoption of a *nom de famille* among the Turks. Up to the present Christian names have been handed down to descendants, and this fact has certainly resulted in considerable confusion. The putting into force of any new system will undoubtedly have many difficulties to surmount, as to the lower class in Turkey the European system has always been a source of annoyance. When once registering at a Constantinople police station a British resident was requested to give the name of his father. On his replying that it was the same as his own the policeman more or less politely, but firmly, intimated that either he was prevaricating or that he was indulging in some out-of-place joke. The Englishman's attitude of gentle persuasiveness as opposed to his interlocutor's declared incredulity naturally changed to one of annoyance at such prolonged doubting, but the difficulty was finally solved by the policeman's giving the parent in question a name which he considered suitable. Various suggestions have been put forward as a solution to this question including the adoption of *zade* like the *vitch* in Russia, but it appears probable, according to declarations of the Director of Schools, that the European system will in the end be employed. Such a change is sure to receive the approval of the whole foreign population.

CYPRUS.

Nicosia, July 21.

The Greek Community.

Summer heat now prevails, and the number of visitors from Egypt to the hills has increased. As the principal matter of general interest relates to the next elections to the Legislative Council, it may be well to say a word respecting the outlook. As is well known, the non-Moslems (mainly Greeks) largely outnumber the Moslem (mainly Turkish); and the Government has recently acceded to the wish of the former that they should be more largely represented in the Legislature. Their number is to be increased from 9 to 12, while the number of the Turks remains, as before, three. But at the same time the number of official members is raised by three. Some years ago the Greek members not only refused to sit in the Council, but endeavoured to prevent others, not holding their "political" views, from becoming candidates. A "National Council" was formed to guide Greek opinion, pass resolutions, etc. In spite of all this, various persons, more interested in moral than in political matters, stood and were elected. The Greek leaders consider seven, at any rate, of the present members as unworthy to represent their community and condemn the course they have taken in co-operating with other members to pass various measures of which they disapprove. Some of them will again offer themselves as candidates, and there is thus, as it were, a division into "national" and "pro-Government" to choose from. The Greeks appear to be getting rather nervous as to the results in some electoral divisions and urge that when any of the "seven" may stand they should be opposed by only one of the National or anti-Government party, so as not to split the vote. Another matter much criticised is that in one division one of the four Bishops, viz., of Kition, proposes to stand. In the past two Bishops, both of Kition, were prominent and very popular representatives of the Greek Cypriots. The candidature of the present prelate does not appear to meet with general approval. Altogether the coming election should be of considerable local interest.

General News.

The cereal harvest has been satisfactory; that of wheat having been about 40 per cent. above that of last year, and of barley about 30 per cent. The present price of wheat in Nicosia is 9s. to 9s. 6d. the bushel, and of barley 4s. to 4s. 5d. The next important event of the agricultural year is the gathering of locust beans (caroubs) which takes place in the latter part of August. Handsome medals have been sent to some of those who sent exhibits to Wembley last year.

The appointment of the Œcumenical Patriarch, Vasileios, has been very well received in Cyprus. Telegrams have been exchanged between His Holiness and the Archbishop, Kyrillos, of the Autocephalous Church of Cyprus. The Patriarch is well known in the island, where he spent some time, having been one of the two Bishops who were deputed to settle the differences which for many years divided the Orthodox Greeks of the island into two parties in connection with the election of an Archbishop.

THE WEEK AT HOME.

London, Tuesday Morning.

The Parliamentary Session.

Parliament rose at the end of last week and will not reassemble until November. This fact will hardly grieve those who, during the last six months, have looked for wisdom upon matters of the day from the men who, if a democratic machine could work in the interests of a democracy, would represent the cream and certainly the main stream of the nation's thought. For, to be quite frank, the Tory Administration of 1925 has been a bitter disappointment. Verbally and spiritually the lofty genius of the Prime Minister has towered over it, and the House, whenever he addressed it, has been as moved as, subsequently, the nation is moved by his fine humanity. But actually, things have been very different. Two men only, Mr. Winston Churchill and Mr. Neville Chamberlain, apart from Mr. Baldwin have given any evidence that the Tory Party is alive in the realm of domestic politics: that grand, enthusiastic resurgence of Conservative ideals which we were promised from the numerous bands of young Tories has simply failed to materialise. Very little has really been done; the very tone of the Administration's conduct has been dull; and the session was prevented from petering out in somnolence only by the amazing shock of the Coal Subsidy. Upon that it need only be said that the House and the country alike received it with bewildered anxiety.

The Government, then, has not enhanced its prospects. It is true that its head stands higher, probably, in common esteem than ever he did, but not even his friendliest critic will pretend that strength and the power of individual decision are his most shining virtues. It is also true that the gifts of Mr. Baldwin would be apparent in any assembly, but not even the most optimistic of his place-

Digitized by Google

men would deny that the charm of his discourses have been more manifest owing to the pathetic lack of quality in the speeches from the Opposition benches. The fact is that the Tory Party is living on a negative foundation, and I have met no one who supposes that the party can exist for more than three years merely upon the strength of the undesirability of the other parties. The ship of State must cleave its way across the ocean, not lie idly waiting the approach of each successive wave and its own uneasy attempt to surmount.

But if the Conservative Party fails to inspire confidence in the country, what shall be said of the Labours and Liberals? Mr. Ramsay MacDonald appears to have given himself over entirely to foreign politics; at least he has been extraordinarily unhappy in his remarks upon the domestic situation. Nor have his followers or critics in the Labour Party made much impression. And of the Liberals there is in sooth little to be said. Mr. Lloyd George appears more often than not in the most untrustworthy and extravagant declaration; of the motley crew who are occasionally behind him, but generally rowing out of time, Captain Wedgwood Benn possesses the neatest stroke, although Commander Kenworthy in a somewhat primitive way demonstrates his reserves of stamina.

The Political Lesson.

The main political lesson of the past Session would seem to be that the economic lever in politics is far more important than the political pull. Quite manifestly it was only the attitude of the labouring friends of the miners which caused the Gvernment so quickly to change from its "Hands Up" to its "Shake" attitude. This does not, of course, mean, as so many timid souls have made out, that revolution is near, but it does mean a swinging away on the part of the more determined "Labourites" from the political fallacies of the Labour leaders to the economic realities of the trade-unionist leaders. To say that State Socialism has been brought nearer may not be true; but it may be true of Syndicalism in regard to the mines.

Now the main importance of this partial success of the miners—a success which seems to have swamped out the memory of the rest of the parliamentary situation—lies in the realising by the country of what precisely are the issues at stake. Is it, as some assert, that the system of Capitalism has definitely failed, that the bolstering up by subsidy is patently wrong therefore and wasteful; or is it that a little reorganisation of the mining industry, such as may be recommended by the Royal Commission, will set it on its legs again, and that the present wild talk of revolution will die a natural death? One thing at any rate is obvious: the present industrial crisis has nothing in the world to do with "Bolshevism," but would have come about had Russia never existed.

Mr. Baldwin has said that the community will always resist the encroachment by a minority upon its privileges, but the whole lesson of the past few weeks, and, generally, of the past few centuries, hardly confirms this. It is a commonplace, in fact, that all great improvements have been the work of a determined minority; and, one might add, all great disasters.

The Bank Rate.

With startling suddenness, like a swift storm on a summer's day, the Bank of England last week announced a change in the bank rate to four and a half per cent. It seems to have caught everyone by surprise; many of those to whom it was most important were, indeed, away on holiday. So very rarely does anything sensational happen financially so soon after a Bank Holiday. The explanation of it must, one supposes, be political; but the relation between low politics and high finance is not one on which I am competent to speak.

Colonel Freyberg.

To have dropped by France into the Channel without any public knowledge of the event, to have come out of it a quarter of a mile from the English coast, and merely to have said that he would be having another shot some other time, is so characteristic of one of our finest soldiers in the War, Colonel Freyberg, that a whole volume or epic could fitly be written on the occasion. Everyone felt really grieved that the Channel just beat him, as it had a few hours before beaten a plucky Frenchwoman, Mlle. Sion. But if ever two swimmers deserved success, these two did. Even in the days of submarines and aviation, elemental feats like this stir the bones.

Barracking at Cricket.

Everyone knows how much barracking at cricket matches has increased since the War; it has even spread outside the County matches where before the War it was comparatively a rare sound. At Old Trafford, however, the Lancastrians recently behaved in such a way as to cause Mr. Jack Sharp, the skipper of Lancashire, to refuse any more to play there. This seems to be an extraordinary course to take, in however good a cause it be, for people who reek of ignorance and bad manners do not often mend their ways with the withdrawal of any particular object of their boorish behaviour. One sympathises deeply with the Lancashire side in the circumstances, but, without going to the extent of saying that every team gets the crowd it deserves, it might yet be the best policy to stand up to these ineffable "fans," and let the "dholes" kill the "wolves."

"Straphanging."

We are all, to change the words of Robert Lowe, straphangers now; so that the indignation against a Government Department's ban upon straphanging in 'buses except during "rush-hours" was universal. The gentle souls who are in Whitehall appear to have been told by somebody that the rush-hour is over by 8.30 a.m., and by 6.30 p.m., but it is the fondest of mistakes to imagine that themselves are the only ones who do no work. At a guess, one would say that the "rush-hours" of London are certainly not over until 9.30 a.m., and 7 p.m. But nothing that Whitehall can do in this matter will solve the traffic problem. Admittedly it does make it a little worse to act upon wrong information in regard to rush-hours, but the 'buses get along a street like the Strand so slowly now that an extra half-hour is scarcely noticeable.

Holiday Books.

No reviewer, be he the acutest judge alive, can even approximately gauge the popularity of books. Look at the list of the season's "best sellers," for instance; how many of them would you have guessed could attain this

rank? Michael Arlen's "May Fair," John Buchan's "John MacNab," Margaret Kennedy's "Constant Nymph," Galsworthy's "Caravan"—these might indeed have been expected; but who would have thought of such works as Thomas's "Lawrence in Arabia," Geoffrey Scott's "Zélide," "Monday Morning," by Patrick Hamilton?

And which of these, do you think, will be read in a dozen years' time? Two, I should say, at the outside.

Disease and Power.

Everyone is now familiar with the theory that malaria was responsible for the fall of Greece, and possibly, of Rome too; Sir Arthur Shipley, I believe has suggested that this same disease is functioning to the same end in Russia. But never, until last week, have I seen it suggested that the Welsh capitulated to the English only because the troops of the West were so undermined with the toxin of tuberculosis. A discussion was proceeding at Bangor upon the prevalence of this disease in Wales, when this explanation was suggested for the downfall of Wales and also for the mournfulness—"those haunting minor cadences so characteristic"—of the Celtic music and poetry.

It is a rather fascinating speculation, although patently it can never be finally disproved. But it would, one thinks, be much easier to prove in the literary and artistic sphere than in the martial world. One did not, in the War, notice anything particularly consumptive about the troops, for example, of the 38th Division. The *Manchester Guardian*, on the other hand, looks at the suggestion from the opposite side, for it says: "Tuberculosis may have had some unascertainable share in the field of Shrewsbury: it would be nonsense to proclaim that it was an essential constituent of an eisteddfod." Upon which it seems necessary only to remark that Literature and Music were what was under discussion—not what is heard at an eisteddfod.

Sea-Side Monsters.

Whether it is merely a sign of post-War sensationalism, or whether it does really signify that our times are out of joint, I do not know, but the number of stories connected with the appearance of sharks and whales and sting-ray off the shores of these islands has been astonishing. The curious part about these stories, too, is that so many people believe them. One sporting buffoon at Eastbourne has only to cry "'Ware Sharks," and the whole company of bathers dashes into the shore—thence in shivering terror to watch a school of porpoises go by. In the Channel Islands, again, somebody is stated to have been killed, in a marine lake, by a sting-ray—a thing which neither stings, nor exists at all north of the Line. (This, of course, may have been an electric ray—a very rare visitor). And finally, we read of the appearance off Bergen of sperm-whales, which have apparently so entered into the spirit of our topsyturvey times as to stray all those miles from their equatorial home. But even if there were really whales, the report of sharks off Britain such as those one sees off Suez is too much. Sharks do, of course, exist in our waters, but like the baby, they are of the type "only a very little one."

Afforestation.

Although the revival of agricultural in this country was in the years of the War a slogan in which everybody was ready to indulge, disappointment among the rural communities of England has subsequently been general. In one respect, however, our much-abused Governments have done something, and that is in the matter of afforestation. In Thetford Forest, East Anglia, for example, the Forestry Commissioners have acquired 20,000 acres, and have already planted 4,000 of these with trees. This land, as anyone will easily remember who visited it before the end of the War, was formerly derelict, the playground merely of hares and rabbits; but decay with surprising rapidity has been arrested, and there is a real revival of rural life. The excellent plan has been laid down of making one small holding for every 200 acres of forest—which enables 100 workers to have about 20 acres each. These men, in addition to their forestry work (150 day's work in the forest are required of them—mostly piecework), engage themselves in light farming. This scheme of the Forestry Commission is a most worthy enterprise, aiming at and obtaining a real return of rural life where formerly there was nothing.

British Films.

Everyone knows who they are who are the controllers of the film industry: they are commonly called "American." Films from the "States" flood our cinema palaces, and nobody, except a few patriotic cinematographers, appears to mind. That, at any rate, would appear to be the inference from the history of wholly British films in this country—films with British actors and actresses and British scenery have a certain, but by no means an assured success.

But if the trade is ever to be taken out of the hands of the "Americans," an appeal must be made on artistic as well as on patriotic grounds. Yet it seems that a deputation which awaited recently on the President of the Board of Trade emphasised the patriotic side—a very optimistic policy.

Now I am no frequenter of the cinema "palace," but recently I went to a film, called "Four Men in a Van," to which the United Films Ltd., sent invitations, pointing out that it was a purely English production. As photography it was good enough, but it was too naif, too prolix and too pointless to attain to any dramatic values. If this were a specimen of British cinematography, it would hardly be unfair to say that if American films are painfully, ridiculously sensational, British films are painlessly dull. This film abounded in negative virtues, but surely we do not want to see merely what is not American?

The Promenade Concerts.

On Saturday was begun the thirty-first season of "Promenade" concerts under Sir Henry Wood at Queen's Hall. This institution with a certain section of the British public has been threatened with extinction every year since the War, but the combination of Sir Henry Wood and Mr. Robert Newman seems too much for the malevolence of any anti-musical financial sprite.

There are to be some changes in the nature of the programmes. First, on the plan of Wagner for Mondays and Beethoven for Fridays, every other Wednesday is to be devoted to Bach and Handel. Next, a return is being made to the works of more moment—works which were temporarily slighted on account of the post-War passion for novelties and brevities. Then the English Singers are to perform every Thursday in September and October—this will give a not too learned public a splendid chance to understand the wealth of music in our madrigals. And last of all—the only retrograde step as far as one can see—the organ is being restored, and there will be organ solos every Saturday night. If there is one thing more than another which characterises the unmusicality of the Englishman it is his passion for the sound of so mechanical an instrument as the organ outside a church.

THE SUMMER SEASON IN ALPINE YUGOSLAVIA.

Yugoslavia's portion in the Central European Alpine region is not large, but it is beautiful and varied in scenery. It extends from the watershed of the Julian Alps to that of the Karavanke, and includes the picturesque Kamnik Alps on the borders of Carniola and Styria. Of the many delightful summer resorts scattered up and down the Yugoslav Alpine valleys, Bled, formerly known by its German name of Veldes am See, is undoubtedly the best-known and the most frequented. Here is the summer residence of the King and Queen of the Serbs, Croats, and Slovenes, a handsome villa overlooking the quiet waters of a small, but surprisingly deep, lake. Always a favourite summer haunt for those who happened to know of it, Bled was almost deserted for a few seasons after the disintegration of the old Austro-Hungarian Empire. Now the annual royal visit is attracting a new public and fresh interest to the pretty colony of villas, hotels, Kurhaus, bands, and all the rest of it, beside the beautiful lake. The chief amusements of the summer visitors are swimming, basking in the sun, and tennis. There are long forest rambles and easy mountain excursions within easy reach; but as a rule the holiday-maker at Bled falls under the spell of the dark green eye of the lake. His most strenuous undertaking is generally to row (or be rowed!) to the conical island near one end of the water, and there to walk up to the quaint white-washed church with the characteristic Slovene tower and to ring the wishing-bell there before coming down again to his boat by an ancient and weather-worn flight of ninety-seven steps (there were originally a hundred, only the lake has nibbled away three), which pious pilgrims of old were permitted to ascend and descend only on their knees. Lovers of quiet are nowadays inclined to prefer Lake Bohinj, at the foot of the Triglav, to the more fashionable Bled. The situation is more remote, the lake larger and more impressive with its background of seemingly impassable cliffs. In some ways Bohinj is oddly reminiscent of parts of the West Coast of Scotland. Hotels are good and not expensive, and there are lovely walks, even for those who are not enterprising enough to attack Triglav himself from that base. But besides these well-known spots there are very many others—delightful old-world little towns and villages where a week or two may very pleasantly be spent. There is Kranj, the former "capital of the hill country"—a notable fortified town in the Middle Ages, past which the Turks could not penetrate when they swept northward on their frequent raids. The old walls and bastions are still fairly intact, and still look impressive to the visitor coming up from Liubliana plain and getting his first view of Kranj perched upon a precipitous rocky escarpment in the angle between wooded uplands along the banks of the Kamnik (called Stein in German), a little town tucked away between wooded upands along the banks of the Kamnik Bistritza, which means Clearstream—and never was river more aptly named. This year the swimming bath and other amenities necessary to a health resort, which had long been out of repair, have been put in order and thrown open to the public again and, best of all, Kamnik is the convenient starting-point for all expeditions into the Kamnik Alps, some four miles away. The still extensive forests near the town and on the lower slopes of the mountains were at one time the haunt and refuge of bands of robbers, called *Rokovniatsi*, who seem to have played in Slovenia very much the same part that Robin Hood and his Merry Men played in Sherwood Forest in their day. The *Rokovniatsi* were a power in the land from the days of the French Revolution until the late twenties of last century; many are the romantic tales told about them, and their hiding-places are still pointed out to the newcomer.

Many more attractive and little-known summer haunts occur to me as a write—Radovljice under the Karavanke, with its Renaissance château and pretty Gothic church; Trzitch, centre of the Slovene cotton industry, but beautifully situated, and now known all over Slovenia as the spot where a British soldier* wished to be given a last resting-place, after spending many happy summer weeks there; Moistrana, at the foot of three favourite Triglav approaches, the most beautiful of which is the Vrata, or Valley of the "Gate," at the head of which rises, grand and forbidding, the famous North Wall of Triglav; Kraniska Gora, the ski-runners' capital in winter, and in summer no less popular with mountaineers; and dear little Ratetse, its rival, just outside the Planitza Valley, which is veritable enchanted ground for lovers of flowers,

Martuliek near Kraniska Gora. Julian Alps.

a fairy glen guarded and blocked by the pinnacles of the Yalovets and his court of precipitous crags. This does not exhaust the list; but it indicates some pleasant headquarters, where the visitor may moreover be assured of finding decent, though simple, hotel accommodation, or, failing that, clean farmhouse lodgings.

Liubliana itself, although capital of Slovenia, and "third capital" of the Kingdom, is not oppressively big for a summer habitation, nor too hot (it lies a good thousand feet above sea-level), nor altogether without resources. Hotels are good, there are open-air restaurants and cafés with the indispensable bands; there is fair swimmers in the rivers Save and Liublianitza, and there is tennis. Among its summer attractions may be numbered the annual Samples Fair, at which, incidentally, the Near East comes for a friendly invasion to this otherwise very western little town. At ordinary times, all trace of the Balkan aspect of Yugoslavia is confined to the Franciscan Bridge over the Liublianitza, where the Bosnian carpet merchants display their wares from Sarajevo or Persia, look emphatically Turkish under their fez or turban, and speak the soft, persuasive Serbian of the south.

Last year the Samples Fair was for the first time made the occasion for several other events run more or less in connection with it. There was a horse show—the first since the constitution of the Kingdom—the main object of which was to recall the fact that Slovenia had long been famous as a horse-breeding region, both for draught and saddle horses. An Arab strain is very obvious in all the local types, and they do not conform to the English ideal as regards the appearance of a horse. They are small

* Colonel Blair, late Military Attaché in Belgrade.

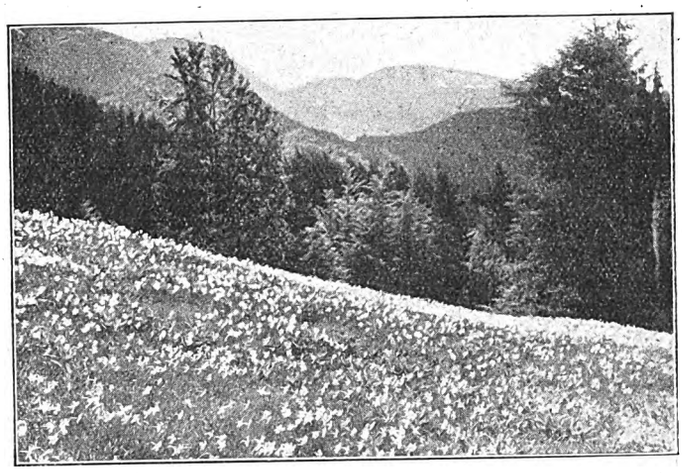
in the head and inclined to be pot-bellied. But they suit conditions in this part of Europe, and form an important item in Slovenia's export trade. With well-justified ambition, the Yugoslav Automobile Club also organised the first international hill-climbing race in Yugoslavia for motor cars and motor-cycles, which took place on August 24, 1924. Some twenty minutes by car from Liubliana lies the small town of Vrhnika, whence the high road rises from the Liubliana Plain to the frontier passes by a series of well-engineered zigzags extending over a distance of six kilometres. It is an ideal course for a hill-climbing race, not inferior to the famous course on the Semmering, and was therefore chosen for the event. A large number of cars entered for the race; the weather was—for a wonder, last year!—propitious; the speeds attained were good. Finally, the victories of M. Yurca (a Slovene from Postumia) in his Ford racing car, and of M. Rado Hribar (Liubliana) on his "Indian" motor-cycle and sidecar, gave general satisfaction. On all grounds, it was decided to make the race an annual institution, so that it will be a pleasant and interesting event to look forward to each summer. Another very interesting novelty in connection with last year's Samples Fair was the Hunters' Pavilion, where visitors to the Fair had an opportunity of finding out all there is to know about hunting possibilities and game in Slovenia. This year that part of the Fair will be enlarged to a Sports Exhibition which cannot fail to prove interesting. Slovenia is still comparatively unknown and hence unspoilt. Mountaineering is within reach, pecuniarily and otherwise, of everybody who cares to enjoy it. Ski-ing, which was introduced shortly before the War (the credit for its introduction is generally ascribed to M. R. Badiura, author of the standard guide-book to the Slovene Alps and a text-book on ski-ing), has developed greatly during the last few seasons and has many enthusiastic devotees. To make the Sports Exhibition really useful and complete, the co-operation of the various touring, sports, and athletic clubs in Liubliana (and there are plenty of them—all very energetic, for the Slovene is a born athelete) has been sought and obtained. One of its features will be a large number of beautiful photographs of Slovene Alpine scenery.

This year the Liubliana Samples Fair will be held from August 28 to September 4.

But when all Liubliana's resources have been enumerated, its chief advantage remains that it is the best centre for excursions into the whole of Slovenia—Lower Carniola and Styria no less than the more romantic Upper Carniola, the Slovenes' beloved *Gorensko*, and a convenient base of supplies as well.

Last year mountaineering, which one is apt to come back to as the main absorbing sporting interest in the country, was something at a discount owing to the weather, which was broken and treacherous. Yet those who had the courage to risk thunderstorms and snow were rewarded with exceptionally clear views and lovely light effects. (I certainly enjoyed some exceptionally fine trips in spite of the bad season). Inclement weather was responsible for one of the saddest fatal accidents that have been recorded of recent years on Triglav. It occurred at the very end of August. Two students, Vladimir Topolovets and Lojze de Reggi, both good climbers, set out from Vrata to make the ascent of Triglav by a certain route, known as dangerous, over the North Wall. Near the summit they were overtaken by snow; the young men became numbed with cold, and Topolovets slipped and fell. A thousand metres or so further down his body came to rest in a deep niche in the face of the cliff. For several days a party of picked cragsmen made every attempt to recover Topolovets' remains, but in vain. Finally, on Sunday, August 31, 1924, the funeral service was solemnly read at the foot of the Wall itself, so that he might rest in a consecrated spot, though far from the little churchyard in Moistrana, where, by old custom, those are buried who perish on Triglav. "With his life he paid for his love of the mountains" as you may read on a certain memorial tablet in the Kamnik Alps, the epitaph composed by one mountain lover for another, his friend. . . .

This season began with an abnormally long spring, which in the valleys blossomed straight out of autumn, without any intervening winter to speak of. Primroses, snowdrops and Christmas roses were with us for months, together with the delicate spring heath. Next followed crocus, white and blue, in unusual profusion. Then come the Whitsun glories: Golitza in the Karavanke decks herself in a lace veil of wild narcissus till the air of her forests is heavy with scent. Orchids, yellow globe-flower and the early blue columbine succeed the cowslips and oxslips in the meadows, to mention none but the most striking among so many lovely flowers. By the beginning of June the gentians have returned to amaze us afresh with their revelation of blue, and already a few blooms of wild rhododendron have appeared. Summer has come in warm and fair and we hope for a good season. The ski-runners had one last glorious outing on the Triglav massif at Whitsun, while ordinary excursionists basked and raided flowers (something will have to be done, by the way, to keep that habit in bounds!) on the lower heights, where most of the Alpine huts are thrown open to the public for the first time on that day.



Narcissus on Golitza (Whit Sunday 1925.)

Of all mountaineering expeditions in the Julian Alps, none is so fascinating or so popular as an ascent of the Triglav, the ancient holy mountain of the Slovenes. There are many ways of going up, and the climb is very attractive, apart from the halo of tradition and the fact that this summit is the highest in the Julian Alps and in all Yugoslavia. Supreme in its setting of a massif of lesser peaks, the crest of Triglav rises from a vast stony pedestal in the folds of which lies eternal snow. South and east the descent is gradual, from snowfield and moraine to stunted pine and mountain pasture, and thence downward, through dense and denser forest, or over a precipitous pass beside the source of the Savitza (one of the parent streams of the Save), where it gushes forth in a great cataract from an angle in a rock, down the shores of Lake Bohinj. But north and west Triglav rises abruptly from his base in the valleys of Vrata and Trenta. Indeed, the northern face is almost one single sheer precipice, from the summit to the Vrata Valley below. It is from there that the ascent is usually made, of course by one of the well known paths which skirt the crag, and not by the latter, which is that redoubtable North Wall which has already claimed many gallant victims.

What with a net-work of excellent marked paths with just enough incidental difficulty to make them interesting, a number of well-appointed Alpine huts, and Badiura's

TOUR TO SLOVENIAN ALPS, BOSNIA & DALMATIAN COAST

Visiting Bled, Zagreb, Banja Luka, Jajce, Sarajevo, Mostar, Gruz, Dubrovnik, Lacroma, Cattaro, Spalato, Susak, Venice.

Commencing Sept. 5th for 3 weeks.

Inclusive cost 34 guineas.

guide-book as consultant authority, matters are made easy in this country for the ordinary tourist and mountain lover. The credit for the upkeep of paths and huts belongs to the Slovensko Planinstvo Drushtvo (Slovene Alpine Society). It is one of the boasts of that body (briefly called the S.P.D.) that there has not been one accident on any of its regular paths up the Triglav since their construction, not even on the steep and narrow ridge of the final crest, which the early pioneers had to take astride. Members of the S.P.D. are entitled to certain reductions at the Society's huts and hotels, and any one desirous of visiting the Slovene mountains would find it worth while to join the S.P.D. even for the sake of a short time and a few trips, especially so, as the subscription is almost nominal, and the Society practically a national institution of the greatest usefulness.

For "serious" mountaineers the question of guides is still delightfully vague, informal, and (incidentally) inexpensive. There are professional guides, but they do not seem to be employed often or otherwise than as carriers. The hunting fraternity is wise regarding obscure and often dangerous tracks which lead to the haunts of blackgame and chamois; and when the Slovene hunter sports the tail feather of capercailzie or blackcock, or the brush of the chamois (what is its technical name, by the way? But it *is* a brush, all the same) in his hat, he proves himself thereby not only a good shot, but a bold cragsman. In the words of the blackcock, as set down for him by a typical hunter:—

"He that would despoil me
Must be fain to dare:
For my curly feather
Is no coward's wear."

Therefore, if you can secure the guidance of a hunter you may be sure of seeing much that is beautiful and interesting and not to be seen close to the little bull's eye in the red circle that is the ordinary tourist's lode-star in the wilderness of forest or cliff. Here and there a herd-boy is the accredited guide for some particular peak. But if, in the ordinary way, a new-comer to this country wishes to see anything off the beaten track, by far the best thing, and the easiest, for him to do is to get into touch with the native mountaineering set, where he will find many climbers, who, though technically amateurs, are competent guides and very pleasant companions as well. The climbers' club *par excellence*, in Slovenia is the Touring Club *Skala*, whose members are bound by the nature of their club to undertake various duties and responsibilitities for the promotion and encouragement of good mountaineering in these parts. For one thing, the *Skala* alone has a Relief Section, which, in the case of an Alpine accident plays a part analogous to that of a volunteer life-boat crew, and the annual work of renewing the marks on the paths and reporting upon eventual damage by weather or avalanche usually devolves upon some of its members.

I have been assured by the President of the Skala, Professor Yanko Ravnik, an accomplished pianist by profession, when he is not mountaineering on foot or on skis, or taking beautiful photographs of the country he knows and loves so well, that members of the Club would also be prepared, within reason, of course, to act as guides to visitors who desire to see something of the more inaccessible beauties of the Slovene Alps. As a matter of fact, there are a good many marked routes even, on which a stranger would be all the better off for the company of an experienced native. Parts of the path may happen to be hidden by snow; there is always the risk of sudden fog, and in both cases safety lies solely in intimate knowledge of the ground. Besides, your native mountaineer knows of many little shelters not included in the S.P.D.'s list of "houses," diminutive shepherd's and woodmen's cots where a storm-stayed or benighted party may spend the time far more comfortably than appearances would lead one to think. I know by experience!

Finally, English-speaking prospective visitors to Slovenia are welcome to apply for information to the Yugoslav Society for the Study of English. Letters (which may be written in English) should be addressed to either of the Secretaries, Mrs. F. Copeland, Gosposvetska cesta, 5, Liubliana, Yugoslavia, or G. Zdenko Suhvigelj, Dalmatinova ulica, 11, Liubliana, Yugoslavia. F. S. C.

BOOK REVIEWS.

ANCIENT EGYPT.

"A HISTORY OF THE PHARAOHS," By Arthur Weigall. Vol. I. The first 11 Dynasties (London: Thornton Butterworth. 21s. net.)

Mr. Weigall has done much in the way of popularising the history of ancient Egypt. He now feels that he can go further in this direction than he has so far ventured. He has convinced himself that he can write a history of the ancient Pharaohs which will be useful alike to student and to layman. We wish that we could share his conviction. Our own view is definitely that the whole subject is still so full of unsolved problems, contentious matter, dark places and difficulties of all kinds that the treatment which is to be useful to the student struggling to blaze a path here and there through the apparently impenetrable tangle can be of little value to the layman and vice versa. It is, of course, possible to write a scholarly popular history of ancient Egypt or indeed of any other country, based strictly on material available, and this, we take it, is really what Mr. Weigall has aimed at. The difficulty lies in presenting a narrative likely to hold an ordinary reader when the material available is small and difficult to arrange.

The great stumbling block to the historian of ancient Egypt has been the uncertainty of the chronology of the early Pharaohs. We all know what enormously varied opinions have been held by the most eminent Egyptologists of this all-important question, and it is clear that the historical conclusions arrived at by them must necessarily be seriously affected by these varying views. In other words we cannot hope for a dependable outline even of early Egyptian history till the question of chronology is cleared. Now, this is what Mr. Weigall claims to have done. It is not possible in the space available here to do full justice to his theory. He believes, however, that the fragments of ancient annals known to us in the broken pieces of inscriptions on stones preserved in Palermo and Cairo are portions of complete annals inscribed by order of the Pharaoh Tatcheres (B.C. 2645-2618) of the fifth dynasty and that they are based on trustworthy information then available. He claims to have discovered the system used in the inscription and to be able with the help of Manetho, the Abydos and Sakkara "lists," the Turin papyrus and the numerous inscriptions found in the course of excavations to reconstruct them almost in their entirety. His claim, if it can survive the criticism of fellow scholars which is bound to follow, is quite clearly an important one. Whether it is justified or not, his working out of the problem is interesting, and there seems to be little doubt that he has been able to fit many of the pieces of the jig-saw puzzlet into his scheme. We wish that he had seen his way to being a little less confident that he must be right and that most other authorities must be wrong, and, incidentally, it must have been painful to him to acknowledge that his own previously expressed ideas of early Egyptian chronology have now been proved by himself to have been wrong.

As we said above, we wish that we could agree that the edifice founded on his solution of the chronological problem is one which the student and layman can equally use with profit. As regards the student, we cannt but feel that the combination of what we can only call "cock-sureness" with statements that are (and often, to do the author justice, are acknowledged to be) pure guess-work must necessarily be repellent. Too much has been sacrificed to make the book "readable" by the layman, and many of the picturesque touches appear to us to have but little evidence behind them. At the same time we must confess that we look forward with some pleasure to the succeeding volume of this work which is marked by enthusiasm and much scholarship. The photographs included are good and add to the interest of the book. C. S.-W.

PERSONAL AND GENERAL

TO-DAY

August 13, 1925 (New Style).
July. 31, 1925 (Old Style).
Muharram 23, 1344 A.H., of the Moslem Calendar.
Ab 23, 5685, of the Jewish Calendar.

Sir Adam Block is staying at the Hotel Crillon, Paris.

The Bulgarian Minister has returned to town from Sheringham, Norfolk.

Viscount and Viscountess Willingdon will leave 5, Lygon Place to-morrow for Scotland.

The Queen of Roumania, with Princess Ileana, was due to leave England on August 12.

Sir Willoughby Carey left London last week, and is travelling by the Mooltan for Bombay.

The Hon. Sir Ronald Lindsay, the British Ambassador to Turkey, has left London for Constantinople.

The Crown Princess of Roumania and her sister, Princess Irène of Greece, left London on Sunday for Bucharest.

Colonel Ion Antonesco, Military Attaché at the Roumanian Legation, has returned to London after attending the Belgian Army manœuvres.

Sir Ronald Storrs, the Military Governor of Jerusalem, has returned there. The Orthodox Patriarch Damianos has also returned there from London.

Sir Milne Cheetham, British Minister at Athens, and Lady Cheetham, who have been staying at Claridge's Hotel, have left town for Redcar.

Miss Muriel de Wend will sail for India on September 25, and her marriage to Mr. Geoffrey Hunt is arranged to take place at Bombay Cathedral on her arrival.

King Faisal is due to reach Marseilles on August 16. It is his intention, first, to proceed to some health resort on the Continent, and, after undergoing a cure, to come to London privately.

Dr. George Djouritch, the newly-appointed Minister for the Kingdom of the Serbs, Croats, and Slovenes, is staying at the Hyde Park Hotel while the Legation is undergoing repairs.

The wedding of the Rev. Cecil John Grimes, Chaplain, Indian Ecclesiastical Establishment, Bengal, and Miss Caroline Blanche Bowen, third daughter of Mr. and Mrs. G. B. Bowen, of Llyngwair, Pembrokeshire, is arranged to take place at Nevern Church on September 10.

Sir Geoffrey de Montmorency, Private Secretary to the Viceroy of India, has passed successfully through his recent operation for appendicitis, and is progressing favourably. Sir Geoffrey, who is now staying at Kingsgate, will resume his duties as Private Secretary next October.

Mr. C. Van H. Engert, who served for a number of years at the American Embassy in Constantinople and who was in charge of the Legation at Teheran in the year 1921-1922, has since last March been in charge of the Legation of the United States of American at San Salvador, Republic of El Salvador.

The marriage arranged between Captain John Sydney Lethbridge, M.C., R.E., eldest son of Lieut.-Colonel S. Lethbridge, O.B.E., late R.A., and Mrs. Lethbridge, and Katharine Greville, second daughter of Sir John Mavnard, K.C.S.I., C.I.E., I.C.S., and Lady Maynard, of Townsend, Simla, and late Bovey Tracey, Devon, will take place on August 15 at Simla.

The engagement is announced between Captain Charles Harold Law, K.G.O. Light Cavalry, only son of L. O. Law, Kassauli, and Viola, only daughter of the late Lieutenant-Colonel E. J. Walthew, M.C., and stepdaughter of Douglas S. Hadow, Inspector-General of Police, Srinagar, Kashmir, India.

The marriage arranged between Conrad Powell Johnstone, of Calcutta, son of Mr. and Mrs. W. Yuile Johnstone, Cotton House, Westgate-on-Sea, and Miss Kitty Read Birchall, younger daughter of Mr. and Mrs. C. H. Birchall, Inveresk, Wallasey, Cheshire, wil take place at St. James's Church, New Brighton, on September 2.

Among the passengers on the Trieste Lloyd liner Cracovia, due to arrive at Venice from Bombay on August 16, are the following: The Hon. Chief Justice Sir Grimwood Meare; Lt.-General Sir H. and Lady Walker; Major-General Sir A. Le.G. Jacob; the Hon. Mr. E. L. L. Hammond, C.S.I.; the Hon. Mr. Justice P. K. Sen; and the Hon. Mr. Justice Lindsay.

The King has given the following officials of the Sudan Government authority to wear decorations of the Order of the Nile conferred on them by the King of Egypt in recognition of valuable services:—Insignia of the Third Class.—Mr. Harold Alfred MacMichael, Assistant Civil Secretary; Mr. Charles Armine Willis, Director of Intelligence; Major Percy Calvert Lord, late Royal Engineers, Chief Engineer, Railways and Steamers; Mr. Arthur Claude Parker, Assistant General Manager, Railways and Steamers; and Mr. George Ronald Storrar, Assistant Chief Engineer, Railways and Steamers.

NEWS IN BRIEF.

A message from Jeddah states that the Wahabis are encamping eight miles from the town.

Severe earthquakes are reported to have occurred last Thursday and Friday morning in the vilayet of Smyrna. The loss of life is believed to be small, but many persons were injured.

The Air Ministry announces that as a result of an accident at Hinaidi, Iraq, to a D.H.9a of No. 55 Squadron on Wednesday, No. 355635 Sergeant John Reginald Gage, the pilot of the aircraft, and No. 353435 Leading Aircraftsman Francis Young were killed.

The Queen has sent a donation to Lady Minto's Indian Nursing Association, to be placed to the credit of the Endowment Fund now being established to provide for the sea voyages of English trained nurses and midwives for the sick and suffering Europeans in India.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 23.

The New Mayor.

The election of Mr. J. M. Sen Gupta as Mayor on Friday last was a farce, and it could hardly have been otherwise. Those who attempted to suggest alternatives were shouted down and the galleries joined in the chorus! While the Deputy Mayor, a Swarajist, smilingly accepted these displays of enthusiasm to the cause, he refused to allow those who opposed Mr. Sen Gupta to give reasons for their proposals. Points of order were raised at each stage of the proceedings and a strong protest was entered against the illegality of the election of Mr. Sen Gupta as an alderman. The minority did their best to secure a ballot, but their motion was defeated, and the election was decided by a show of hands. In his acknowledgement Mr. Sen Gupta, who was accompanied by his English wife wearing a *saree* of *khadder* for the occasion, appealed to his supporters not to overwhelm him by coupling his name with that of the departed leader. He ended his speech by declaring that politics would find no place in the Council Chamber, but *Forward*, the extremist organ, takes all the virtue out of this pious aspiration, even if it was sincerely made, when it says that man is a political animal who cannot be expected to shake off politics when sitting in the Mayoral Chair. Most of the Moderate organs blame Gandhi for engineering the nomination and election of Sen Gupta, but it is suggested in well-informed circles that the latter had made it perfectly clear that he would not accept the leadership of the Swaraj Party unless he were also given the honours of the late Mr. C. R. Das. This may well be true, but clothes do not make the man, nor do "triple crowns" make thrice competent leaders. The election was a farce; the Mayoralty has become a farce; the Swarajists on the Corporation have shown their complete unfitness to be entrusted with any responsibility that involves the capacity to think independently.

The Policy of Swaraj.

The general reorganisation of the affairs of the Swaraj Party, which has become necessary since the commanding personality and ingenious brain of Mr. Das were removed from their counsels, is not marked by any change of policy. It may be that it is desired to pay a further tribute to the memory of Mr. Das by adhering to the sentiments expressed in his speech at Faridpur, but one thing is certain, there is now no inclination to follow a rational course. Lord Birkenhead's suggestion that the Reforms, imperfect as he admits them to be, should be given a trial, is met by a confirmation of the policy of obstruction. It is true the Swarajists express their willingness to reconsider the question of policy if the statement of the Government of India is found "at all adequate to meet the requirements of the situation," whatever this may mean, but they do not pretend to make any constructive suggestion. Lucidity of thought has never been conspicuous in Swaraj councils and at present it is very clear that the party is at a loss for a policy; they find it impossible to meet the new situation by anything more than a party cry which they have learnt parrot-fashion, and the removal of the master mind leaves them aimlessly repeating his earlier, and wilder teachings. It is refreshing to read in the *Bengalee*, "We have had enough of obstruction. We have found it futile and mischievous. . . and as such, we trust that it will be repudiated by the better mind of our people." The Birkenhead speech has cleared the air more than a little; the extremist denies the right of the Home Parliament to design any constitution for India, or to have any part in its government; he refuses to make any suggestions or to co-operate with other Indians in considering any schemes as to how it should be governed. In short he is a true anarchist, whose chief driving force is hysteria.

Tariffs Again.

After some astute questioning of the representative of Tata's the impression given by the opening of his verbal evidence before the Tariff Board was very much altered; it transpires that the three principal companies who are concerned in the manufacture of pig-iron have a selling agreement that covers the whole of India and they are in negotiation for a similar agreement in regard to export prices. It would be interesting to know whether the evidence given before the Board asking for a bounty to pig-iron manufacturers or a restriction upon Tata's output was either a move in the negotiations or part of a concerted attempt to obtain the bounty. Further light is shed upon the working of the tariff and the present bounty scheme by the evidence offered on behalf of the iron-merchants of Bombay; they wish all the duties to be abolished and bounties substituted and they point out that, whereas the Customs returns show realisations of duties amounting to over 2¼ crores of rupees, only 65¼ Lakhs has been paid in bounties. The tariff has risen from 1 per cent. before the War to 30 to 40 per cent to-day and, although the greater part of this falls on the consumers, nothing has been heard in the new council on their behalf; so much for the claims of the Swarajists that they represent "the people" The cry for tariffs in India has been raised from the beginning by indigenous concerns and the Bombay extremist has been their most consistent supporter. The Bombay merchant now states that "instead of the general tax-payer it is the steel consumer who now bore the burden." The Swarajists would appear to have been led into co-operation; Tata's and their shareholders will benefit largely and so will Government; but the masses will pay, and they have no spokesman.

Markets.

There is no sign of any change in the piece-goods outlook. Jute remains firm and in fact looks like continuing so until July shipments are all covered. Reports from up-country indicate the possibility of further rises. The optimism displayed all round the gunny market at the close of last week shows signs of abating, but rates have been maintained with little business passing, although the outlook has brightened this afternoon. The situation has been reflected in the share market where the business doing has been quiet with a falling off in jute shares, especially amongst the more speculative groups; for rubbers there has been considerably less enquiry. Teas have been neglected, but coal and cotton shares are reported as a slightly steadier market. Tea sales, while satisfactory, were without particular features with the best market for teas of good quality. The improvement in London selling figures should tend to stiffen prices here next week. Money for one or two months is abundant and can be had at 1 to 1¼ per cent., but long term borrowers are unable to find accommodation. The trade returns for June show an increase in exports and a decease in imports over the preceding month, with a net increase in favour of exports over imports of Rs. 313 lakhs. The exchange rate, after being easier at the end of last week, closed steady.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, July 24.

The Cotton Industry.

Although the millowners have considerably reduced the cut in wages that was suggested originally, the prospects of a strike in September seem to be growing. Such argument as is going on appears to be a rather philosophical discussion of the cost of living and the extent to which wages can be reduced to give the labourer a fair living wage; but the labour leaders complain that one of the causes that is crippling the industry is indifferent and expensive management, and there may be a good deal of recrimination on this subject before things come to a head.

Digitized by Google

It is to be hoped that recrimination will be avoided on both sides; for we may assume that both labour and management are doing their utmost and that they must try to unite to arrive at the best course in the present situation. As the managing agencies of the Bombay mills are in the hands of Europeans, Hindus, Mahommedans and Parsees in as nearly as possible equal proportions, there is no question of racial animosity in the matter; but the system has been attacked on the ground that there is no exact parallel to it in Europe and that, whether it leads to good or bad management, it is on the face of it an expensive first charge on the profits.

The Managing Agency System.

The system is, that all Indian industrial concerns are floated by the agency of one or other of the big firms, either European or Indian who, in return for their services in the original promotion and ultimate management of the company, receive a fixed remuneration. Up to twenty-five years ago, this remuneration was generally a commission on turnover, but it is now invariably a fixed percentage of profits. In most cases this interest has remained with the original promoters since the inception of the company, but it has occasionally changed hands considering the constant movement of the population of India: and this is not confined to the Englishman's desire for leave home, for very few Indians, from mill manager down to coolie, are prepared to work for three years in Bombay without a considerable spell of absence: there seems to be no other way of securing continuity of efficient management than by placing it in the hands of a firm.

It is true that this brings into the profit and loss account a very considerable item of managing Agent's commission, which is not to be seen in the accounts of an English company; but this item covers a good many of the costs of management which are elsewhere included in general charges: and it is probable that most English flotations include a profit to the promoters in the form of cash, of shares issued in lieu of cash, or of founders' shares, which is at least an equal liability on the general prosperity of the company; while the holders of such benefits are able at their will to sell out of the company and to take no further interest in its welfare. On the whole, considering our climatic conditions. it is doubtful whether any other system is possible, and it is as unfair for labour to base its attack upon it, as it is for the mill owners to attribute their troubles to the inefficiency of Indian labour. While India has a great many advantages, she has the compensating drawbacks of her climate: and, whatever may be the future of India's industries, the backbone of her prosperity must lie in agriculture.

Gandhi's New Campaign.

It is a curious commentary on this that Gandhi has just symbolised his abandonment of industry for agriculture by an effort to substitute the mulberry tree for the spinning wheel, as the emblem of his movement, and has offered to release his followers from their daily trick at the wheel on condition that they will lay the foundations of a great Indian silk industry. It is a pity that Gandhi's well meant efforts to improve the economics of rural India should have taken such a hopeless form as the attempt to compete with the very uninteresting production of the spinning mill. If, instead of yarn, he had used his influence to encourage handlooms, he might have revived a great Indian industry and art, and have seriously helped the lower classes.

Unfortunately, in the impassioned atmosphere of five years ago, what was originally an entirely innocent, if mistaken, attempt to encourage village industries, rapidly acquired a political bias. Someone conceived the idea that the real object of the movement was not to bring a few rupees to the cultivator, but to ruin England by ending India's trade with Manchester. In the long run it may be said that this ridiculous idea has already died out. But, at the time, it was unfortunately taken seriously by the British Press and the British public. Instead of ignoring the political aspect and dealing sympathetically with the scheme on its economic side, they took up the challenge and began a long-drawn and acrimonious argument. The flame, which was not a very powerful one, was fanned by opposition; the wearing of handwoven cloth, or more usually of mill made cloth woven with careful carelessness to imitate the rough output of the handlooms, was accepted as a symbol of the National Party: and it became understood by both sides that the mildest of Hindu clerks could, by appearing in his office in a cap of coarse white cloth cut to a pattern that is only seen in England in the immediate vicinity of Princetown, convey an impression of his reckless passion for Swaraj and, at the same time, of his sense of the inferiority of his employers.

That spirit has not yet died out, but it is dying, and, as it is difficult to see what possible attack on England can be symbolised by the growth of mulberry trees, it is to be hoped that this movement will receive sympathetic encouragement from all parties.

THE COST OF INDIA'S MILITARY DEFENCE.

(By Our Simla Correspondent).

Simla, July 16.

That India is unable to afford as much money every year, for education, communications, irrigation and other objects connected with the progressive development of the country, as her backward state demands is without doubt true. That this shortage of funds for development purposes is in a large measure due to the heavy expenditure on her defence is no less true. But the unreasoning criticisms of the size of the military budget, the oft repeated cry that India pays more per head of her population for her armed forces than any other country in the world, and the claim that British troops are kept in this country for Imperial purposes and not for local defence, cannot be accepted as true statements of fact. No one will deny that the Indian military budget eats up a very considerable proportion of India's revenues, or gainsay the importance of reducing, to the greatest extent compatible with security, the proportion which military expenditure bears to the country's total annual outlay. But a country with a land frontier several thousands of miles in length inhabited by well-armed and warlike tribesmen, to whom Leagues of Nations and Disarmament Conferences mean nothing, must base its measure of defence on the actual strength of its potential enemies and the demands which its forces may be called upon to meet, and not the amount of money left over after projects of development, however desirable in themselves, have been catered for. To cut down the strength of the army below the needs of reasonable safety would mean sacrificing India and the benefits of such development to the risk of invasion. Yet, although those who are responsible for the country's defence stoutly maintain that the army in India has now been reduced to its lowest possible minimum, the politicians, heedless of any dangers, external or internal, continue in season and out to rail at its cost, which they declare is an intolerable and unnecessary burden. This army numbers in all some two hundred thousand men of all arms, of whom one-third are British and two-thirds Indian, a small enough force indeed when it is remembered that India is a vast country, far from united in itself, and that on the north-west frontier alone there are not less than four hunded thousand well-armed tribesmen, who would not be slow to take advantage of any weakness in India's defences. That India pays more per head for her army than any other nation is clearly disproved by a comparison of her military expenditure with that of Japan. In the year 1923 expenditure on defence in Japan approximated to a sum of 20 rupees per head of the population, while in India the cost of defence amounted to not more than 2 rupees per

head. Last year, after the disastrous earthquake, the Japanese military budget was subjected to drastic reductions, and the corresponding figure for 1924 was only 12 rupees per head; in India, too, it was reduced to 1-12-0 rupees per head. It is difficult to imagine a more conclusive argument than this comparison provides, but it carries little weight in India, owing to the widespread belief that the average wealth of the individual Japanese far exceeds that of the individual Indian. India may be a poor country, but it is incredible that in Japan, where wages are lower and the cost of living higher than in India, there exists an advantage in favour of Japan of more than six to one. Nor must it be forgotten in this connection that, despite her lengthy coastline, the total expenditure incurred by India on naval defence is limited to the contribution of £100,000 which she makes annually to the Admiralty budget. If one compares this paltry sum with the present day cost of a single small war vessel, it is obvious at once how extraordinary lightly she escapes the cost which her thousands of miles of coast would entail, were she responsible for her own naval defence. The fallacy that British troops are kept in India solely as a reserve for Imperial purposes is exposed by the fact already stated, that the army in India is at present only barely sufficient for the defence of the country against its potential enemies. It can be argued, however, that British troops are an expensive luxury, and that the upkeep of a British regiment is several times greater than that of an Indian regiment. This is true; but it is equally true, for example, that the Indian Army, if deprived of its stiffening of British troops, would have to be provided with a much higher proportion of officers holding the King's commission and having the higher training which Sandhurst affords, in place of the present Indian officers, whose only training before getting their commission has been in the ranks.

This alone would go far towards neutralising the difference in cost between a British and an Indian unit. But there is a still more cogent argument at the present time for the retention of British troops in this country. Whenever trouble occurs between Hindus and Moslems—and it is a regrettable fact that instances of such outbreaks on a scale calling for the assistance of the military have been by no means rare of late—there is always an insistent demand from both communities for the presence of British troops to keep the peace; and it is hardly too much to say that the presence of the British garrison in the country is the one factor to-day which stands in the way of widespread anarchy arising out of the various dissensions which by their existence go to prove that India is not yet a nation. Indeed there are few even of the most extreme Home Rulers whose idea of Home Rule for India envisages for some time to come at any rate the removal of the British garrison. Unfortunately, however, ignorance and apathy, where matters of defence are concerned, are so profound that the alternative to further drastic cuts in Indian military expenditure is never thought out to its logical conclusion. Vague talk of a Dominion Army or a National Militia is often heard; but the true inwardness of the responsibilities, which will fall on India when she herself has to bear the burden of her own defence, is realised by but few of her leaders.

CURRENT TOPICS.

India's Low Level of Demand.

An article from the Calcutta correspondent of the *Economist* draws attention to the fact that the low level of demand is the primary obstacle to the industrial development of India. The cotton industry is suffering from over-production, the steel industry is only kept alive by the aid of a high tariff plus a bounty, and the cement factories are, in many cases, compelled to close down for half the year. Until Indian demand in such lines shows a great expansion, industrial development must remain subject to limits so narrow as to debar exploitation of the advantages attached to large-scale production. The main problem is to devise measures to raise the present low standard of agricultural productivity in India and therefore the purchasing power of the great body of consumers. But at present the Agricultural Department is financially starved, in spite of the large sum raised by special taxation of agricultural products, such as the export duty on jute. For instance, though a large producer of sugar, India last year paid fifteen million pounds for sugar imported from abroad. "The neglect of an agricultural industry in favour of urban industries sustainable only by high tariffs offers a typical example of the empirical fiscal policies at present operative in India. If the projected Economic Commission rectifies such anomalies, it will render India an inestimable service by helping to revivify agriculture, thereby giving urban industries a more solid and wider foundation than can ever be obtained from tariffs, however high and however prolonged in their operation."

Indian Markets and British Producers.

The first of a series of articles under the above heading, by Mr. George Pilcher, M.P., appears in the *Financial News* of August 6, and is a most important contribution to the discussion of the questions of which it treats.

The article begins by the statement of a fact that is too little realised—that India is the largest customer for British goods. In 1924 the total value of the exports of the United Kingdom was 935 millions, of which India absorbed nearly a tenth. In 1913 the most important customers of the United Kingdom were India, Germany, Australia and the United States, with 70, 41, 34 and 29 millions respectively: in 1924, India, Australia, the United States, Germany and France, with 90, 61, 53, 43, and 42 millions. Before the War, 62.8 per cent. of India's total imports came from the United Kingdom: in 1924 the percentage was 54.1. But Mr. Pilcher shows that these figures are not as good as they seem: for it is necessary to take into account the decreased purchasing power of sterling and the increase in India's purchasing capacity, both actual and potential. He puts the decrease in the purchasing power of sterling at 60 per cent.: and points out that, while India's actual purchases of foreign goods, measured in rupeees, have increased by 69 per cent. over the pre-War figures, her purchases of goods from the United Kingdom have increased by only 28 per cent.; while the volume of India's export trade has expanded by 78 per cent. in the same period. India's buying capacity and her people's standard of living have been greatly enhanced as an outcome of the War: among large classes, earning capacity has advanced by from 70 to 100 per cent. as against a 40 per cent. rise in the cost of agricultural produce which forms the main item of consumption: and the 40 per cent. rise in the amount received by the agricultural classes for their products is counterbalanced only by the rise in the price of cloth. The effect of that rise is shown by the fact that, in 1923, the United Kingdom exported to India 3,066 million yards of cotton piece-goods: and, in 1924, 1,494 million yards. That India is still taking British goods in large quantities is, Mr. Pilcher believes, because India as yet does not know where else to go or how to go elsewhere. Owing to the high price of British goods she is not purchasing them gladly and with the old confidence, but is everywhere seeking cheaper alternatives. High British prices are providing a perpetual incentive both to the creation of new and stronger trade ties with non-British markets and also to the production in India of goods for which she formerly relied on British producers. At present, India is filling the gap between the value of her imports and exports, the latter of which is rising faster than the former, by greatly increased imports of bullion; but, sooner or later, the gap, or at least a large part of it, will be filled by goods obtained from countries that are prepared to manufacture them at prices to suit Indian pockets. Mr. Pilcher says that the natural advantages in Indian trade are still all in favour of the British exporter, and that the opportunities are even greater now than they were before the War; but the adaptation of British prices to Indian pockets is essential, as well as the restoration to British trade of "its old kinetic energy based on effort and sacrifice." Even under existing conditions, Mr. Pilcher sees great opportunities for creating openings for the British manufacturer, in the development of railways, canals, ports and

Digitized by Google

bridges and the improvement of India's present inefficient agricultural methods by the extension of the activities of the co-operative credit societies so as to utilise the peasants' collective credit in the provision of machinery: a subject which he promises to elaborate in a subsequent article.

SURENDRANATH BANERJEA.

It is not so many years ago that Surendranath Banerjea, then hailed as "the uncrowned King of Bengal," was looked upon as a dangerous revolutionary agitator. India has travelled far since then; for, without any serious modification of his political views, he became a pillar of the Moderates, a Bengal Minister under Dyarchy, and a Knight. Of late years I met Sir Surendranath pretty often and found him an interesting and stimulating talker and a most cheery companion. The old gentleman—he was 76 when he died last Thursday—was, in his way, a thorough sportsman: I particularly call to mind an afternoon spent at one of the Simla "country houses" at Mashobra, at which our host produced a gramophone and set it to play "Over There." It was explained that this was an American recruiting song. whereupon Surendranath insisted on having the tune repeated and said, "If I had heard that tune during the War, by Jove! I would have offered myself for enlistment!" It was a great shock to Surendranath when he, a founder of the Indian National Congress and successively holder of such proud and affectionate titles as the Tribune of the People, "Surrender Not," the Uncrowned King, Bengal's Grand Old man, found himself defeated, at the General Election of 1924, by an unknown Swarajist—a similar fate to that which has overtaken every Indian demagogue who has tried to moderate the pace of extremism: the tide swept on and left him submerged. But, though his active political career was closed, Surendranath died in harness: he returned to his old profession of journalism, resuming the editorship of the *Bengalee* which he had first taken up so long ago as 1879, but had resigned in 1921 on appointment as Minister: and it is only a month or two ago that he published his reminiscences, under the rather misleading title of "A Nation in Making"; for the book is, in the main, an essay in self-glorification which even his best friends must have read, not indeed without profit, but not without many a tolerant smile. C. K.

THE INDIAN MAIL.

Reception of Lord Birkenhead's Statement.

The present mail brings the context of the cabled expression of disapproval, extracted from the Indian Press, of the Secretary of State's speech in the House of Lords. It shows that, as is so often the case, the cabled summary gave a wrong impression of the case; for in fact, with one exception, the leading organs of European opinion in the great cities received it with approval. The exception is the *Statesman*, of Calcutta; whose remarks appear to be coloured by the fact that it had previously published an anticipation of Lord Birkenhead's statement and had, in the face of official denial, insisted on the accuracy of its forecast. It may perhaps be presumed, therefore, that the *Statesman* was not referring to the general reading public of India, but only to its own faithful constituents, when it wrote that Lord Birkenhead's speech would be read "with amazement and incredulity" and added "The one explanation that occurs to us is that this is not the speech that Lord Birkenhead intended to make"; since the paper refused to believe that a statesman of Lord Birkenhead's mentality and calibre could have deliberately committed himself to "this jejune display of an embarrassed mind groping amid the perplexities of Indian affairs."

Moderate Indian newspapers are, unfortunately, few and of little influence: some of these discern points for approval in the statement, but characterise it in general as colourless and disappointing.

As for the extremist papers, Lord Birkenhead said himself that he knew that his statement would bring no satisfaction to them: and the result has amply justified this belief. Extremist papers seldom condescend to argue, but confine themselves to criticism, generally trenchant. The following extracts from leading extremist papers show that there is general unanimity in this case: Lahore —"insulting, insolent and offensive": Delhi—"like a blustering outburst by a typical sundried bureaucrat": Calcutta— "an attempt to support what is, with a leaven of high sounding platitudes": Bombay—"an essay in intellectual dishonesty. . . defiant, minatory, insulting . . .which should enable us to realise the fraudulent bankruptcy of British statesmanship": while Madras invites Lord Birkenhead "to recognise how much of the mountebank there is in his composition."

Controller of Currency's Report.

The report of the Indian Controller of Currency for 1924-25 contains some interesting remarks on the import of bullion into India. India's net import of gold in 1924-25 amounted to 73.78 crores of rupees—roughly 55 millions sterling—nearly double that of 1922-23 which was the previous record year. The import of silver also established a record, amounting as it did to approximately 18 millions sterling. The price of gold dropped during the year by nearly 17 per cent., and was over 8 per cent. below the pre-War level; while the rupee was 2d. above its pre-War value and general prices were about 70 per cent. above the pre-War level. These facts combined to induce the Indian agriculturist to spend his surplus cash on bullion rather than on the commodities on which he has so far ordinarily spent it—the price of gold seemed unlikely to go lower, there has been a considerable agitation in favour of the stabilisation of the rupee at 1s. 4d., and an insistent demand for a reduction in the price of British manufactures, piece-goods in particular. The Report says that it appears that most people who had surplus cash invested it in gold and that almost every family in which marriages were likely to occur during the next year or two, took the opportunity to lay in the necessary store of gold while it was cheap: and that it is therefore probable that India's requirements in gold for the next year or two have been anticipated, so that, if the price of gold does not drop still further, the normal annual import in future should be considerably smaller than that of 1924-25. If this is a correct forecast, it may be that increased expenditure on imported merchandise may take the place of decreased imports of bullion; but, if not, a further appreciation of the gold value of the rupee would appear inevitable.

INDIAN EXCHANGE.

London, August 10.

In consequence of the holidays here and in India, this has been a short week and rupee exchange remains much in the same position as that to which reference was made in our last report.

In Calcutta and Bombay business seems to have fallen away, but rates have been perfectly steady at 1s. 6 3-32d., with occasional sales at 1-64 higher, and buyers on the look-out for 1s. 6⅛d.

So far as we can gather the India Government have been prepared to work at 1s. 6⅛d., but in view of the easy tendency of the money market, there has been no inclination on the part of the Banks to sell to the Government.

As usually happens during the Monsoon months, the value of money in the open markets in Bombay and Calcutta has fallen, and short loans are available round about 2½ per cent.

Here we have had a very quiet week with very little business passing. Any sellers at 1s. 6⅛d. found ready takers, and the bulk of the business, which has not been very much, has been put through at 1s. 6 9-64d.

Monday's rates here are quieter, and there are more sellers than buyers of telegraphic at 1s. 6⅛d. for spot.

It might be assumed from Mr. Churchill's speech in the House of Commons on the evening of the 5th instant, that the rupee was already a fixture at 1s. 6d., but whether Sir B. Blackett will concur in this assertion remains to be seen. If India has already determined the rate, there seems little necessity to appoint a currency commission.

PUNJAB SPORTS.

The note on "Punjab Sports" in a recent number of The Near East and India set me "revolving many memories." It must be thirty years ago that "Charlie" Bruce, now of Everest fame, took me to see a wrestling match at Lahore, where the two leading wrestlers of India were to compete for the championship. These were Ghulam, a Punjab Mussulman and Kikar Singh, a Sikh. Bruce was referee, and the contest ended in a draw after nearly two hours' wrestling, neither succeeding in throwing the other, though Ghulam got Kikar Singh down on his hands and knees twice, but was unable to turn him over. Indian wrestling is practically the catch-as-catch-can style, and a legitimate fall needs both shoulders on the ground; Ghulam was said to have once scored a "wrestler's throw" against Kikar Singh, having got one of his shoulders on the ground, but neither had ever completely thrown the other, and the championship remained undetermined between them. Ghulam was a big man, but Kikar Singh was a veritable giant, well over six feet high and 52 inches round the chest. I remember Bruce telling me that, in a previous contest, Kikar Singh had claimed a foul and left the ring, whereupon two stalwart Highland soldiers, who were assisting to keep the ground, had caught hold of him with the intention of pushing him back into the ring. In spite of their utmost efforts, Kikar Singh continued to stroll about unconcernedly, as if they were not there; and there can seldom have been two more astonished British soldiers than those who found themselves thus ignored by a "native." There must, I should think, have been 100,000 spectators at the match that I attended, including a strong following of Moslem and Sikh priests, who kept up a continuous shout of intercession in favour of their respective champions.

Many Indian regiments have evolved quite skilful football and hockey teams; but my own experience in that direction was not encouraging. At first we tried to teach our men Association football; but they looked upon it as a sort of parade, to which they did not take kindly: objecting particularly to any attempt to keep forwards, half-backs and backs in their proper places, either generally or inter se. A friend of mine and I then tried them at Rugby, with even less immediate success: for the Pathans insisted on collaring the Sikhs by their top-knots, which the latter looked upon as not only unfair but insulting. If my friend and I ever collared one another, the whole game stood aside in awe, murmuring that "the Sahibs were fighting one another." When running with the ball, one had to avoid one's own side quite as carefully as the other, for anyone within range would push one over or trip one up, without any regard to the side he was supposed to be playing for. If a player got hold of the ball, he would run with it in any direction that his fancy dictated—forward, backward, or out across country: followed by the whole of the rest of the game until he was caught, while the two officers could only sit down and wait patiently for the ball to return to the ground. Finally, all other classes except the Pathans wearied of the game; and, for the latter, we evolved a game of our own, wherein the goal was the size of a large man, and the only object was, to get the ball through it somehow—hit, kick, push, or carry. This was, naturally, a pretty rough game, and we two officers were not long before we were so knocked about that we deserted, with the immediate result that the game died a natural death: for the goal was less attractive than ourselves, and if one of us was brought down, the whole of the rest of the game, roaring with laughter, would fling itself in a mound on the top of him, leaving the other to pull them off as best he could. When I accompanied the regiment to North China, I tried again to start Association football, but again with very poor success: the men were willing to play, sometimes, in the heat of summer, with the thermometer round about 100 degrees, but would not play in the winter on the ground that it was too cold, and that life was much pleasanter indoors round the stove.

The temperature in North China goes down to zero in the winter and stays there for three months; the sea freezes for about two miles from shore, the rivers freeze six or eight feet thick, and the ponds become a solid lump of ice down to the ground. Considering that Tientsin is the same latitude as Naples, this is a rather remarkable fact. Many of our men had never seen snow before, and none of them had ever seen ice that would bear. At the first snowfall, one of our regimental clerks bottled some of it and posted the bottle to a friend in India, as a sample of the remarkable kind of rain that fell in China.

The first time I tried whether one of the ponds would bear, a Sikh came up to see what I was doing: and, seeing that I was apparently walking on the water, he ran away at top speed—no doubt to avoid being called as a witness, or perhaps even charged with my murder, at the subsequent inquest. We were three years in North China, and throughout that time I tried in vain to instruct the men in simple ice sports—it was impossible to get them even to slide: the moment that any man put a foot on the ice, he fell disastrously, generally on the back of his head or on his forehead: after which, amid the laughter of his comrades on the bank, he would crawl away on hands and knees, often dripping blood from a nasty wound in the affected part. We did, in the end, contrive to teach some of the men to propel a sort of sleigh, known as "paidza," with a spiked stick, though at first they were unable to make them move in any direction except round and round, like a cockshafer on a pin. But, as they grew more expert, they developed an unwarranted confidence in ice; and, when it began to break up in February, they would walk quite unconcernedly into a hole and, when they were fished out wet through and shivering, would revile the ice, and its female relatives for many generations, for having played them false.

NOTES AND NEWS.

170, *Strand, London, W.C.2.*
Tuesday Morning.

The Sudan.

We publish this week a special section on the Sudan, containing articles describing the economic progress of the country, cotton growing in the Gezireh, and the Sudan Court at the British Empire Exhibition. No development in the Empire since the War has been more remarkable than the rapid progress made in the Sudan. The completion of the Makwar Dam, enabling the irrigation of the great Gezireh region, marks the commencement of a new era for the country, as it heralds the time when the Sudan will occupy a really important place among the cotton producing countries.

Trade with Yugoslavia.

On another page in this issue will be found extracts from a most interesting report by the British Commercial Secretary at Belgrade on economic conditions in Yugoslavia. It will be noted that he draws special attention to the improvement that has taken place in British trade with Yugoslavia. There has been, as a matter of fact, a steady increase over the last five years. In 1920 Great Britain's share of Yugoslavia's import trade was 7.05 per cent., while by 1923 it had risen to 9.91 per cent. Great Britain's imports from Yugoslavia have also tended to expand. It cannot be contended, of course, that even now the position is all that could be desired. Trade between the two countries ought to be much larger than it is, but it is eminently satisfactory to know that the tendency is in the right direction, and only a continuance of the present progress for a few years is required to bring the commercial relations of the two countries to a really satisfactory level.

Danube Navigation.

For the economic development of South Eastern Europe it is essential that the fullest possible use should be made of the great trade route provided by the Danube. A report prepared by Mr. Hines, an American expert, for the League of Nations Advisory Technical Committee on Communications and Transit, on the navigation of the river, has now been distributed. It points out that the post-War diminution of traffic was largely due to economic depression in Europe, but was intensified by the breaking up of the wide free-trade area which existed in the Austro-Hungarian Monarchy and which is at present cut across by the tariff barriers of seven different States. This, it is urged, can only be remedied by commercial treaties among the latter. The report states that comprehensive improvements in the river channel are highly desirable, and the reform of frontier formalities to avoid delay is suggested.

Empire Cotton Growing.

My frequent comments in these notes on the need for increasing Empire cotton supplies to the greatest possible extent to avert an always possible shortage owing to our unwise dependence on America for our supplies find support in a resolution passed by the Lancashire Unionist Members of Parliament last week. The resolution expresses the view that "the great cotton industry of Lancashire, and the many important subsidiary industries connected with it, are in grave danger of a permanent shortage of the raw material upon which their future existence depends; and in view of this serious prospect regards what has been done by previous Governments to encourage cotton growing within the Empire as utterly inadequate." The resolution concludes by urging the "Government to take prompt and much vigorous action to avert this danger by stimulating to the utmost in every possible way a rapid extension of Empire cotton production."

The Slump in Rubber.

From 4s. 6d. to 3s. 3d. at which the price of rubber stands at the time of writing is a long drop, and it has taken place even more rapidly than the rise, and that was sudden enough. It is small wonder if quite a number of people scarcely know what to make of the market. As a matter of fact the decline is due not so much to events as to expectations. As my readers know there has been an increasing campaign for a modification of the restriction scheme, and while the authorities have shown no signs of yielding to it, the belief has gained ground that it is always possible that it may be altered, and this has been accentuated by the decision to permit an extension of the standard production. When to the effect of this is added the uncertain industrial situation here it is easy to understand why the price has fallen. I have no hesitation in saying, however, that so far as can be seen there are no grounds for pessimism with regard to the outlook. If the restriction in output was removed now there would be an increase in stocks for some months, but, if the demand for rubber continues to increase as it is doing, this could only be a temporary phase, for it would seem probable that before long the world will need more rubber than can be produced by the existing plantations. As I have said before, however, an unduly high price for rubber is undesirable for the industry, and what is required is that the price should be stabilised somewhere between 2s. and 2s. 6d.

SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows under date July 31 :—

Our last report of April 15 comprehensively dealt with the extent of the yields of sultanas and figs of the past season and the distribution over the various consuming markets.

As the final returns of both yields are since available, based on the Government Tithe Bureau, we believe it will be of some interest to our clients to submit the revised figures of production and distribution for the whole year. Stocks of both sultanas and figs have been cleared and the season of 1924 has been completely liquidated.

Sultanas.—According to the official Government returns, the yield last season reached a total of 52,000,000 kilos., equal to 50,700 tons. The distribution has been as follows (in tons):—North Continent, 27,500; United Kingdom, 12,000; United States, Canada, New Zealand, South America, and South Continent, 6,000; Constantinople, Egypt, and local consumption, 5,200—50,700.

Figs.—The official return of the yield is shown as 27,000,000 kilos., or 26,300 tons. This total is inclusive of Hordas representing the sweepings of the crop, unfit for manipulation, which find a market in Central Europe for roasting and coffee blending. The distribution has been as follows (in tons):—United Kingdom, 12,800; United States and Canada, 9,500; the Continent, 1,500; Australia New Zealand, etc., 450—24,250. The remainder of the yield can be accounted for by local consumption and the quantity of Hordas shipped to Trieste and Hamburg.

Atmospheric conditions have been generally unfavourable during the past winter, a severe and prolonged drought having prevailed from October to March. Rains fell during the spring but the rainfall on the whole has been deficient, and the effects of the drought are becoming very manifest with the advance of the season. Estimates of all crops are being continually lowered. The most recent official forecasts published by the Agricultural Department assess the likely results of the vineyards at 30,000,000 kilos. and of the fig orchards at 18,000,000 kilos. Some information forthcoming from other sources would lead to the conclusion that these forecasts somewhat overestimate the outlook. We shall shortly commence the issue of our weekly reports, and we shall not fail to embody in them all further information that becomes available.

SPECIAL MARKET REPORTS.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

Haifa, July 18.—The grain market is weak, and the fall in prices continues. At the end of the week there were some minor transactions. The tendency of prices at the close was to decline.

Jaffa, July 18.—Prices of cereals have risen slightly during the week owing to the depletion of stocks and the small arrivals.

Basrah, July 11.—The market shows no change. Business is restricted. An improvement in the price of wheat is to be anticipated.

It is reported that the production of the Baku oilfields for the nine months ended June 30 amounted to 204,421,000 poods.

The production of the Minerva (Roumania) Oil Company for July, including oil received from royalty wells, was 945 tons gross.

The production of crude oil by the Phœnix Oil and Transport Co. and allied companies in July was 24,177 tons gross, and the throughput of refineries was 21,746 tons.

The Egyptian Ministry of Agriculture has decided to send Aziz Effendi Bishay to Tunis and Algiers to study the cultivation of date trees there and to import to Egypt some of the best qualities.

A service of Pullman cars is shortly to be inaugurated on certain of the Egyptian State Railways. The new cars, four of which are now nearing completion in Birmingham, are to run on the Alexandria-Cairo and Port Said-Cairo routes. The cars will be double-roofed, and the windows will be of double plate-glass, to keep out dust and sand.

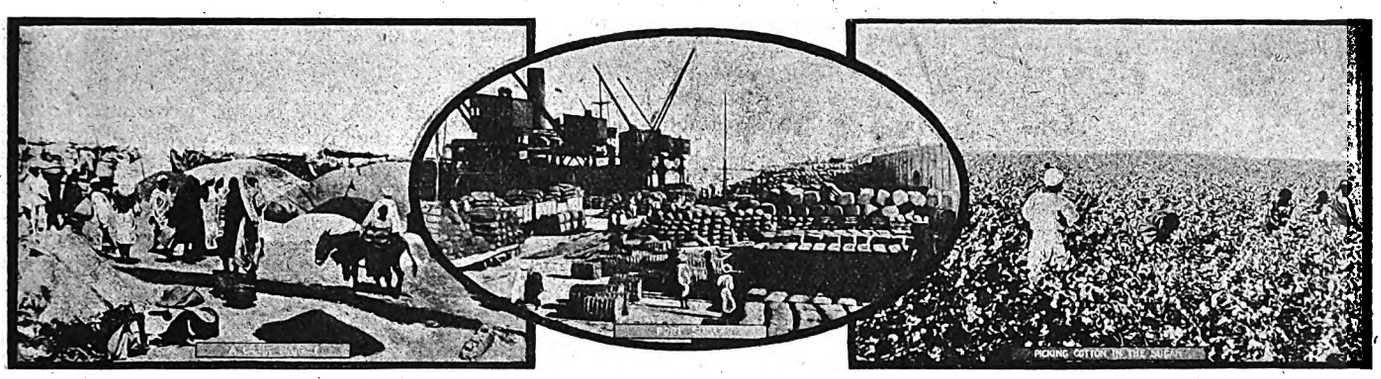
THE PROGRESS OF THE SUDAN



CHANGES IN THE SUDAN.

The year 1925 will always be a memorable one in the Sudan, as it marks the transition from the old Sudan to the new.

Hitherto the country's development has depended on the raising of crops, unaided for the most part by any mechanical contrivance. Much capital has been expended on equipment essential to administration, such as railways, steamers, telegraphs, and the other usual apparatus of Government, but generally speaking this expenditure has not been undertaken in expectation of an immediate profitable return, though the results are patent to see. External trade, for instance, has increased from negligible dimensions to £E9,000,000 per annum. Revenue, in twenty-five years, has grown from zero to about £E3,500,000. The improvement in internal prosperity is visible on all sides, especially to those who remember the country in the early days and can compare the almost naked and destitute people of that time with the well-found condition of most of its inhabitants to-day. This change is most noticeable in the northern provinces, but even in the southern negroid provinces progress has been made, and the people can now enjoy their primitive possessions in peace and are free to take the first steps on the path of civilisation.

Given normal conditions, a continuance at a moderate rate of this general improvement in trade and standard of living was to have been expected. It depended on the gradual increase in population and the extension of the means of transport and communication, and no very rapid progress such as has occurred in the past was to be anticipated. This year, however, a new element has been introduced which should greatly accelerate the rate of progress and stimulate economic activities in the Sudan in many directions. The Sudan has entered a new phase.

The great change which is taking place this year in the country's fortunes arises from the completion of the Sennar Dam and the inauguration of the Gezireh irrigation scheme for the cultivation of high-class Egyptian cotton. The main features of this vast enterprise are well known and need not be repeated.

Its cost alone—about £E12,000,000, this sum having been raised under guarantee by the Imperial Government—is obviously so large as profoundly to affect the future history of the Sudan, and to concentrate in the country widespread interest not only from those whose money is invested in the scheme or whose outlook is directly affected by the production of cotton, but also to focus the attention of those who are looking for openings for investments in other directions beside cotton growing.

The produce of the scheme, which is capable of wide extension, means an addition of some 60,000 or 70,000 bales to the present output of cotton (46,000 bales), and will add £E2,500,000 to £E3,000,000 to the value of the Sudan's exports. It will greatly enrich the inhabitants of a district, whose main source of income in the past has been the cultivation of exiguous crops of grain. This undertaking forms an entirely new permanent profit-earning addition to the country's resources, and by its magnitude dwarfs every other enterprise in the Sudan.

An additional internal market will be created for labour and for the sale of articles of native manufacture, and external trade will be improved by the purchase of imports with the money made in cotton.

The extension of cotton growing during the last two years, though relatively small, has already shown itself in this way. The import of cotton goods, about £E1,000,000 in value in 1924, has already increased considerably, and the consumption of sugar has risen by about 25 per cent.

The tonnage of shipping entering Port Sudan has rapidly increased. Before the War the tonnage (international) was about 750,000 tons. This year it should amount to some 3,000,000 tons. This has necessitated harbour extensions, which are being carried out. A bunkering trade of about 90,000 tons is done at this port.

A good deal of cotton is sold by auction at the Port, which is now connected directly by rail with the Eastern Sudan by means of the new Kassala railway, which was got through to Kassala in April, 1924.

Near Kassala the Kassala Cotton Company is developing the Gash area under cotton; the first season's crop was 7,500 bales. A much larger quantity will be produced as the scheme develops.

A further new asset to the country is the increased cultivation of cotton by means of the rainfall only in the Central and Southern Sudan. A useful beginning has been made, and it is not unlikely that 100,000 bales of this long-stapled American cotton may be produced annually in a few years' time. The future development of this type of cotton cultivation depends very largely on the provision of transport facilities; the extension of the main line of railway when the proper time arrives will do much to improve the output in the Central areas. In the South the solution will be found in the introduction of suitable mechanical transport and the erection of ginning factories.

The population, however, is not large, and this fact will have to be taken carefully into account in future developments. The present high price of cotton has made the crop a popular one, and though a fall in prices will no

Digitized by Google

doubt affect the output, there is every reason to believe that rain-grown cotton will in future continue to be produced in comparatively large quantities.

Transport in such a vast country as the Sudan must remain for many years to come the key to the country's development. For passenger traffic the motor car now performs what 20 years ago would have been regarded as miracles, and cars now penetrate almost every corner of the Sudan's million square miles. Mechanical transport for goods and merchandise unfortunately lags far behind, but it is not too much to hope that before long the necessary facilities will have become available and that further large areas will have been unlocked for profitable development, not only of cotton, but of the other resources of the country, such as oil seeds, gum arabic, and possibly minerals.

During the last two or three years the Sudan has been fortunate in the number of influential visitors who for one reason or another have come out to see the country. The greater the first-hand knowledge and practical interest that the country can give to the general public the better it will be both for the Sudan itself and for those who are directly and indirectly concerned with its successful development. It furnishes the latest example of experiments in tropical administration, which is none the easier for the world events of the last ten years: it grows a product on which the prosperity of one of the greatest trades in England depends, and also provides the manifold interests to be found in fauna, flora, and native life over a tract of country which runs from the borders of Egypt to the Great Lakes of Central Africa, and forms part of the highway to Kenya and Uganda, Abyssinia, and the regions of the Congo.

COTTON GROWING IN THE GEZIREH.

(From a Correspondent.)

A brief announcement was made recently to the effect that the great Sennar Dam had been opened informally on July 15, in the presence of representatives of the Sudan Government, the Sudan Plantations Syndicate, and of local notables. This event marks the beginning of a new stage in the prosperity of the Sudan, for its effects will not alone be covered by the increase of irrigable land, although that, of course, is its primary purpose.

The Dam serves as a bridge across the Blue Nile, carrying the railway from Khartoum into the comparatively undeveloped districts between Sennar and Kassala. With the railway constructed from Kassala to Port Sudan, the new line when completed should prove of enormous value to the country.

Another undoubted effect, although much less direct, is the stimulus that is being given to rain-grown cotton. There is little doubt that the advantages that have already accrued to those natives, who have been tenants on the irrigated cotton fields, together with the inevitable sensation of future prosperity that must have come from viewing the great constructive activity of the last few years, have filled the native mind with the potentialities of cotton as a source of wealth. Consequently the Government's encouragement to grow rain-cotton has been rewarded already and there is promise of great developments in the cultivation of American varieties on these lines. Possibly, indeed, it may be this aspect which will ultimately prove the most important.

In the meantime, however, interest centres upon the direct effect of the Dam on cotton growing. South of Khartoum between the Blue and White Niles lies the fertile Gezireh plain. Here is the "prairie" of the Sudan. As one travels southwards from Khartoum one finds that desert sands are replaced by a dark tenacious silt, a morass in the rainy season and a desolate aching mass of cracks in the hot months. Between is the growing season when for miles the land is covered by the tall native corn, or "durra" or by dwarf vegetation in the untilled areas. Villages, sometimes with a fir tree, break the tedium to some extent; otherwise there is no variation for mile after mile.

Further south, more than 100 miles from Khartoum, the general theme of the landscape varies. Grass is much taller, may rise to the shoulder, vegetation is ranker and acacia forests and scrub break the flatness of the scene. Villages here are generally smaller and corn is much less in evidence, whilst cattle are more numerous.

This is the land that the Dam is to supply with water and, once the town of Hessa Hissa is passed, canals become the prominent feature, branching out from the main canal, which stretches over 80 miles to Makwar, the site of the Dam.

To summarise briefly the situation prior to the present year, cotton was first grown in the Gezireh on some 800, later 1,700 feddans at Tayiba, a few miles north of the provincial capital of Wad Medani. A second station was started in 1913 at Barakat, a little south of Medani, after which development was checked by the War. Both stations were supplied with water by pumps on the Blue Nile and after the War another pumping station was installed at Hag Abdallah considerably farther south, and capable of irrigating about 7,000 feddans. This was the first large scale scheme and was indeed an integral portion of the greater plan as opposed to the experimental nature of the earlier stations. 1923 saw the opening of the Wad el Nau pumping station, irrigating about 10,000 feddans and bringing the grand total up to 20,000 feddans, at which figure it stood until the arrival of the Dam water.

In the meantime the Dam and canalisation scheme were being carried out, the work having been taken over by Messrs. Pearson and Sons, to be finished in time for this year's cotton crop. Numerous accounts have appeared of the construction of the Dam, which was not without its thrilling moments in its race against time. Apart from the Dam, however, there has been much of interest in the canalisation work; the construction of great regulators in the main canal, at heads of branch canals, and in other places where required. The most interesting of these is at the beginning of the cultivation, about 35 miles from the Dam, where no less than six regulators take off from a basin in the main canal, including in the latter an enormous pile of masonry containing six sluice gates.

At the same time an enormous amount of preparation has been required to get the land ready for sowing. To increase the area of cotton from 20,000 feddans in 1924 to 80,000 in 1925 is no mean task when all the obstacles to be overcome are taken into account.

There is the first stage of preparing the land for ploughing. Part of the area was forest, which required cutting and uprooting. This forest land is easily the most attractive part of the Gezireh since, in spite of the trees showing obvious signs of the droughty conditions under which they live, the breaking of the field of vision does much to relieve the monotony, characteristic of the cleared areas.

In the early days of preparation, before wood felling began in earnest and canal construction necessitated the inflow of a large working population, the prevailing fauna was of considerable interest. Gazelle were soon frightened away to grazing grounds that have still to feel the demands of civilisation. To have guinea fowl at one's door was another experience not to be repeated, although, generally speaking, birds continued undisturbed, doing much by the brilliance of their colouring to relieve the uniformity of the scene.

Brilliant colours of bee-birds and rollers; storks, black, white, and the amusing maribou in their seasons; hawks and other birds of prey are some of the larger inhabitants or visitors; cranes, herons and more rarely the secretary bird, which like many another animal requires to be seen in its native habitat for its fineness to be appreciated.

White clouds of the little egret, or more probably its near relative the buff-backed heron form amazingly beautiful visions, whilst there is something equally charming in trees filled with nesting storks and quarrelling egrets.

Fortunately even after clearing is completed most of these birds do not seem altogether to desert the land and with the coming of cotton and its plentiful water supply it is possible to watch the antics of the quaint, black and white kingfisher—his coloured cousin sticks to the river—or the various species of plover.

To return from this brief digression, the work entailed in clearing all this timber was considerable. Nor has the arable land been without its need for preparation. The native system of growing their crops entails the construction of banks by means of which the land is divided into manageable plots and the rain, instead of being largely lost through surface drainage, is retained, and consequently a far larger proportion is forced to sink into the ground, where it acts as a reservoir during the growing season.

These "terraces," desirable for rain grown crops, are obstacles to irrigation and require levelling before the ploughs can be put in. The hardness of the soil, together with the enormous expansive powers of the under soil as it becomes exposed, make this a far from easy task to carry out, especially in a country where an almost imperceptible ridge may have marked effects on growth of cotton or flow of water and will persist for years. Yet this task has had to be carried out over far the greater part of the new cotton area.

With the land cleared and levelled, other questions had to be dealt with. Final surveying was required for the water-feeding channels and for dividing the area into plots or "numbers" generally of 90 feddans, consisting of nine units or "hoshas" of 10 feddans. The crop rotation being a three-year one, consecutive trios of numbers are worked together, one growing cotton, the second a native crop and the third lying fallow.

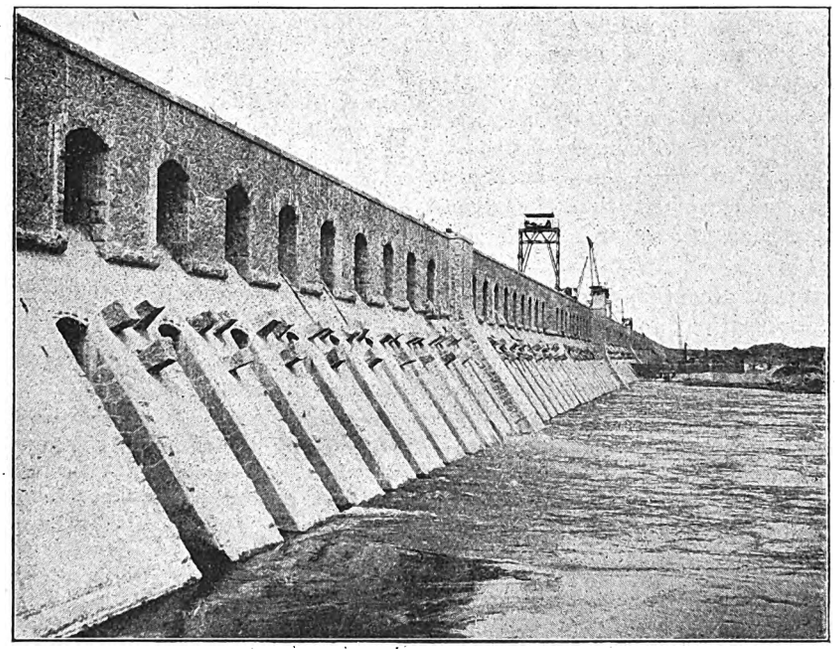
Having demarcated the hoshas, the stage was reached at which the native tenants could be put in. They form the third party in the scheme: the Sudan Government's share is to maintain Dam and canals and supply them with water; the Sudan Plantations Syndicate controls the use of the water for irrigation purposes by the tenants, supplies seed and ploughing implements, gins and markets the cotton and throughout supervises the proper cultivation and harvesting of the crop.

It is the tenant's share to do the general tilling, cultivating, and harvesting and to keep his water channels in good order. Many of them have not the remotest idea how to grow their cotton, however. They have an unlimited faith in the power of water, and left to themselves would inevitably ruin their crop by excessive applications of water. Left to themselves, indeed, no resowing would ever be done to compensate for the inevitable casualties of the rainy season, nor would more than half the final crop be marketed; the balance would be allowed to drop on the ground and get buried in the mud.

In such a large scheme affecting the welfare of a considerable native population, it would have been surprising had its reception been entirely favourable, especially considering the innate conservatism of the average native. Those natives, who had had experience of cotton growing in the preliminary stages were only too glad of an opportunity for their friends and relations to take up hoshas as these became available. The more remote districts, however might be termed distinctly "woolly" and included both the few who were distinctly hostile and the many, who were prepared to maintain a neutral opinion until they could see how they would be affected. It is satisfactory to note that further knowledge has swayed the balance of the favourable side and it says much for the carrying out of the scheme that native opinion is so favourable before the era of profits has begun for the great majority of the tenants.

Difficulties there still are, which will doubtless be overcome as time passes. For instance, many of the new areas have been sparsely populated since Mahdist times and their inhabitants are insufficient to cope with the needs of the busiest periods of cultivation. Much of the labour, indeed, is carried out by a nomad population of Nigerian tribesmen on their way to and from Mecca. As the average Sudani so long as his money lasts, will

To Irrigate The Gezireh



The Makwar Dam

Digitized by Google

employ labour rather than work hard himself, it is not uncommon to see the labourers forcing up prices above their fair level and making full use of the economic truth of supply and demand, until some control is applied to ease the situation as far as possible.

THE SUDAN AT THE EXHIBITION.

It would be difficult not to be impressed by the distinctive note struck by the Sudan Court at Wembley. The exhibits, indeed, give just the outstanding features of a country that is now beginning to find itself and in the concentration in the main on one product promises to make rapid progress towards a prosperous future. Cotton is needless to say the keynote of the Court though the other products of the Sudan are well to the fore. One stand is devoted to the display of various types of cotton, while another shows various models of the Sennar Dam. Here, as at other stands the interest of the exhibits is much enhanced by an illuminated scene in the background, in this case, of course, of the Dam. Elsewhere can be seen varieties of gum arabic and millet, while another aspect of life in the Sudan is indicated at a stand showing some of the wild life of the country. It is not a large exhibition, but its very unpretentiousness serves only to bring into clear relief the factors on which the country depends. The Court is, in fact, *multum in parvo*, and the many thousands who will have seen it by the time Wembley closes will have obtained a clear idea of the Sudan and its potentialities.

Seeing that a bare quarter of a century ago the Sudan was practically without civilisation and had then no external trade at all, the glimpse that the Court gives of a prosperous active community with almost limitless potentialities is little short of marvellous. It shows plainly what can be accomplished by a far-sighted Administration, and it would certainly not be going too far to say that what has been achieved in the Sudan under British rule is worthy to rank with the best chapters in the long history of British enterprise overseas. At first, as was to be expected in view of the conditions with which we were confronted in the Sudan, progress was slow, but the pace of the advance has gradually quickened, and since the War, and especially in the last year or so, the work of development has been very rapid.

It is proverbial that figures talk, and nothing could better illustrate the present position than the figures for the trade of the Sudan. The volume of trade for 1922 was £E6,246,326, while last year the value of the trade was roughly £E9,000,000, and for the current year, if present indications are borne out, it promises to exceed £E10,000,000, and this time there may very well be a balance of trade in favour of the Sudan. In any case time alone is required for that to be a normal feature of the trade returns, and the gradual rise of the exports means the constant increase of the purchasing power of the country, a fact which British exporters would do well to bear in mind. At present apart from purchases of machinery, etc., for the works of development that are in progress, the imports of the Sudan are on a relatively small scale, but the fact that the imports are widening in range is an index of the growing importance of the market, and when the cotton schemes at present in view are in full operation the position will be changed out of all knowledge.

Cotton, as has been said, is the dominant feature of the Court. The Sudan, as a result of the great schemes of development now in progress, has become one of Lancashire's principal hopes as a supplier of cotton in the future. As time passes our dependence on America for the bulk of the cotton we require is seen to be more and more precarious, and so the tendency naturally is for interest to concentrate on what is being done in the Sudan and the other cotton-growing areas of the Empire. The great number of visitors who have passed through the Sudan Court has doubtless been largely contributed to by the desire to learn something of the progress of a region which in the last few years has come to bulk so largely in the public eye, but which, of course, so few have actually seen. So far the figures for the production of cotton in the Sudan are unpretentious. For 1918-19 the total was 15,997 bales, for 1919-20 23,160 bales, for 1920-21 30,519 bales, for 1921-22 24,074 bales, for 1922-23 28,306 bales, for 1923-24 47,652 bales, and for 1924-25 55,286 bales. But it is only this summer that the stage has been reached which brings within reach the immediate expansion of cotton cultivation on a great scale, and next year the Sudan will play a much more important part in the list of the cotton producing countries of the Empire. In the fullness of time there will doubtless be another Empire Exhibition, and were it possible to look forward to that time we should no doubt find the Sudan playing a leading, if not the chief part, in a great Cotton Section showing the contributions of the Empire which have made us independent of external sources for our cotton.

THE GORDON MEMORIAL COLLEGE.

A meeting of the Gordon Memorial College Fund was held recently at the offices of Messrs. Glyn Mills and Co., 67, Lombard Street, Sir Reginald Wingate presiding, to enable the members of the governing body to meet Sir Geoffrey Archer, Governor-General of the Sudan and President of the Gordon Memorial College in Khartoum.

Sir Reginald spoke of Sir Geoffrey Archer's work in the past in Somaliland and Uganda, and of his keen interest in the education of the African native.

Sir Geoffrey Archer said that the system started by the Gordon College 25 years ago was based on the idea of providing the Government offices with native workers, while trying to satisfy the national aspirations and opening a wider horizon for the natives so employed. The aim of the Gordon Memorial College was to turn out as many skilled workers as possible, and the number of workers thus turned out had always been less than the number which could be absorbed in Government offices, not to mention private firms. Out of 1,900 boys turned out by the college, less than 100 were reported as unfavourable.

A discussion followed, in which Sir James Currie, Mr. Crowfoot (Principal of the College and Director of Education in the Sudan), Mr. Wellcome (the donor of the Wellcome Research Laboratories in Khartoum) and others took part. Mr. Crowfoot described the educational progress during the past year, with special reference to the part played by the Gordon College boys, past and present, in the troubles which took place at the time of the murder of the late President (Sir Lee Stack) in Cairo.

British Consular Reports

II.—YUGOSLAVIA.

The steady improvement in British trade with Yugoslavia is commented on by the British Commercial Secretary at Belgrade (Captain Murray Harvey, O.B.E., M.C.), in his report on Yugoslavia, as at April, 1925. We give the following extracts from the report:—

Trade between Yugoslavia and Great Britain has shown a steady increase since 1920 as regards both exportation and importation. Not only is this increase to be seen in the yearly values expressed in dinars (apt owing to exchange movements to be misleading), but also in actual tonnage. Whereas in 1920 the value of imports from Great Britain was 7.05 per cent. of Yugoslavia's total imports, this percentage has increased by 1923 to 9.91 per cent. On the other hand, in 1923 Great Britain took 2.14 per cent. of Yugoslavia's total exports, as against 0.25 per cent. in 1920. Serbian merchants for many years past have drawn a large proportion of the supplies of textile goods for their better-class trade from Yorkshire and Lancashire. In the new provinces the orientation of trade, for many obvious reaons, such as the railway system of the former Austro-Hugarian Empire, which consisted mainly of of radial lines centring on Buda-Pest and Vienna, was chiefly towards those capitals.

The view taken locally is that it will be to the advantage of Yugoslavia's economic development to eliminate Buda-Pest and Vienna as intermediaries for foreign trade, and much as been written on the subject of establishing direct relations between the importer and the foreign manufacturer, particularly with those of countries like Great Britain, where none before existed. Although this movement principally affects the "transit" traffic, which was, and still is, an important part of Vienna's trade, and this as yet more apparent than real, yet as Yugoslavia's economic development progresses, and her ports on the Adriatic are better served by railways than is the case at present, this change should in time lead to greater business with the United Kingdom. It would seem that, when the project for a normal-gauge line connecting Belgrade with the Adriatic is realised, freight rates between the two countries should be lowered, thus minimising the handicap to British trade of high transport costs.

Cotton yarns and piece-goods and woollens are the principal articles imported from the United Kingdom. For many years past the trade in the special varieties of cotton yarns used by the peasants for weaving the white material which forms part of the national costume has been very largely in the hands of British manufacturers. Since the War Italian and Greek competition in yarns and the cheaper kinds of cotton material has been very severe. Although the Italian cotton goods are not equal in quality to the British product, lower prices, longer credit and rapid delivery are strong points in their favour. To these must be added the better facilities the Italian exporter enjoys for visiting his customers, at frequent intervals—a very important consideration, and one, the need for which cannot be overemphasised. Complaints are constantly heard that many British manufacturers refuse to transact business directly with Yugoslav merchants, referring their enquiries to shippers and agents, whose commission, it is maintained here, considerably increases the cost of merchandise. Other important articles of export from Great Britain to Yugoslavia are Colonial produce and rice; coal for use in shipping, and industrial purposes where the low-grade brown coals and lignites which abound in the country cannot be employed; and, to a lesser extent, metals, metal products, machinery and apparatus.

One direction in which it would seem possible to obtain business where little is at present transacted is in the exportation of boots and shoes. The boots and shoes chiefly worn where the peasant sandals have been superseded are, generally speaking, of very poor quality, and made to look at rather than for hard wear. The prices charged for these are very excessive if one compares those asked for ready-made shoes in England. Heavy shoes are rarely worn, and ornate styles and the thinnest possible soles seem to appeal to the local taste. Shoes made to sell in Great Britain, even if of the cheapest kind, would probably be too substantial to meet with general approval here; but, provided British manufacturers would produce styles suited to the local market, from the writer's own observation, the question of the price should not be a difficulty.

The comparative stability of the dinar and its marked recovery augur well for the future. Another aspect of the exchange question, the return to gold currencies of some of our Continental competitors, is also encouraging, as it would seem reasonable to suppose that it will tend to remove the disability Great Britain felt in competing with countries having depreciated currencies. In considering Yugoslavia as a market for manufactured goods, the comparatively low earning power of the greater part of the population, who are agriculturists, must not be overlooked. The principal demand is for goods, textile or otherwise, of the cheaper qualities. The United Kingdom is here always regarded as a source of supply for cloth, etc., of the highest qualities, and doubts are always expressed of the British manufacturer's ability, or perhaps willingness, to adapt his machinery to produce the cheaper articles, such as the cotton prints, printed flannelettes, etc., worn by the peasants, at competitive prices. On the other hand, Germany especially and other countries display great ingenuity in copying the patterns of high-class British woollens. Among the articles exported to Great Britain timber takes the first place, represented by the fine oak of Slovenia and the Bosnian soft woods. Eggs from Slovenia and prunes from Bosnia and Serbia are also exported in some quantity to the United Kingdom.

There are in Yugoslavia some seven and a half million hectares of land covered with timber, of which some five and a half million hectares is old forest. This represents some 30 per cent. of the total area, or 41 per cent, of the productive area of the country; hence the timber industry is one of the most important and highly developed industries. Water power is very largely employed to drive the sawmills. During the first part of 1924 the Yugoslav timber industry prospered, and a great deal of both soft and hard woods was exported. The soft woods of Bosnia and the well-known high-grade Slavonian oak found a ready sale abroad. Sleepers and other hewn and sawn timber were exported to the United Kingdom. Oak is prepared and exported in all forms, including quarter-sawn planks and staves for barrels. The dry distillation of wood is carried on at two establishments, and cellulose, tanning extracts, bent-wood and other furniture are also produced. During the latter part of 1924 the rise in the exchange value of the dinar

of which the intensive exportation of timber during the first part of the year was itself a contributary cause, reacted upon the timber industry and caused stagnation in the export trade in soft woods. Hard woods, especially oak, owing to their high quality, were not affected to the same degree. Conferences have been held in order to inquire into the causes of the difficult position of the timber trade, and it was decided to ask the National Bank to increase the credits it grants to this industry as well as to discount bills in foreign currencies in addition to those in dinars, and to endeavour to obtain further concessions from the Ministry of Communications, particularly in regard to its scale of charges for the carriage of timber.

Agriculture.

The results for last year of this, the staple industry of Yugoslavia, were, on the whole, good, the principal crop, maize, having yielded, it is estimated, some 20 per cent. more than in 1923. No figures are as yet available, but it is probable that the total production of maize exceeded 3,000,000 metric tons. The forecasts for the 1925 harvest are not promising, although, of course, it is as yet too early to form any very definite opinion. The use of artificial fertilisers is not by any means extensive in Yugoslavia, and the land is for the most part dependent on the winter frosts for the function fertilisers perform in other countries. The circumstance that the winter of 1924-25 has been unusually mild does not, therefore, augur well for this year's crops. The dry and mild winter has also been the indirect cause of much damage done to the autumn sowings by field mice. The winter wheat crop of 1924 was poor in quality, but in quantity probably equalled that of the preceding year, for which the figure given was about 1,600,000 metric tons. The spring wheat crop was good, and amounted, it is estimated, to some 50,000 metric tons. Barley gave a good yield. Like maize, the crop exceeded that of 1923 by about 20 per cent., and probably amounted to 260,000 tons. Very little good malting barley is grown in Yugoslavia, the breweries importing this principally from Czecho-Slovakia. The oat crop gave a normal yield, estimated at 320,000 quintals. Rye, which is not extensively grown in Yugoslavia, gave a fair yield, estimated at 150,000 tons. Hops gave an excellent yield in 1924, the production being about 9,000 quintals. The vintage of 1924 is of good quality, but in point of quantity is much below average. The difficult period through which the wine-growing industry has been passing seems to have come to an end, and the large reserves which had accumulated at the principal centres where this industry is carried on, such as Vrsac in the Banat, have been disposed of. There was very little export of wine during 1924. There is an increased exportation of poultry, including turkeys, and eggs from Yugoslavia. Switzerland, the United Kingdom, Czecho-Slovakia, Germany, and France take Yugoslav eggs and poultry. Poland has of late become a keen competitor for this trade.

The number of cattle in Yugoslavia on January 1, 1924, showed a reduction as compared with that at the beginning of 1923, owing to the great shortage of fodder during the latter year. The year 1924 having been a good one for forage plants, the number of oxen has probably again increased. At January 1, 1923, the number of cattle was given as 4,053,115, while on January 1, 1924, it was put at 3,869,985. In 1923 over 206,000 cattle, to the value of nearly 846 million dinars were exported, while in 1924 168,100 head, valued at about 75 million dinars, were sent abroad. The exportation of fresh meat remained stationary; that of meat products showed a diminution during 1924. Austria, Italy, Czecho-Slovakia, Turkey, Hungary are Yugoslavia's principal customers for cattle, in the order named. Bulgaria, Germany, and Switzerland also take some of Yugoslavia's cattle exports. The Ministry of Agriculture and Waters has taken steps for the improvement of the cattle, and to that end has lately purchased bulls of the Siementhaler race from Switzerland for the Government stud farms.

AGRICULTURAL AND INDUSTRIAL EXHIBITION AT CAIRO.

An Agricultural and Industrial Exhibition is to be held in Cairo from February 20 to March 6, 1926, under the auspices of the Royal Agricultural Society of Egypt. The Industrial section will comprise engines and motors, agricultural implements and machinery, transport for agricultural produce, and modern types of farm buildings and methods of construction suitable for use in Egypt.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India the ports of departu e and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Massilia for Bombay (Liverpool, August 20). (For passenger sailings and date see advertisement.)

Anchor Brocklebank Line.—S.s. Malakuta for Port Said, Colombo, Madras, and Calcutta (London, August 22).

Bibby Line.—S.s. Yorkshire for Port Said, Colombo, and Rangoon (Birkenhead, August 26).

British India Line.—S.s. Foyle for Colombo, Madras, and Calcutta (London, August 15); s.s. Hatipara for Bombay and Karachi (London, August 22).

Cunard Line.—S.s. Pavia for Gibraltar, Oran, Algiers, Malta, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, September 5).

Ellerman "City" Line.—S.s. City of York for Calcutta (Birkenhead, August 17).

Johnston Line.—S.s. Kenmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 5); s.s. Quernmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 12); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 17).

P. and O. Line.—S.s. Ranpura for Bombay (London, August 21); s.s. Nagoya for Colombo, Madras, and Calcutta (London, September 5).

Prince Line.—S.s. Burmese Prince for Malta, Alexandria, Jaffa, and Haifa (London, September 12).

The quantity of gold extracted from the mines in India during May amounted to 33,061 ounces valued at Rs.18,67,950.

Steaua Romana (British), Limited, are advised that the production of Steaua Romana, Bucharest, during July was 26,470 tons.

The condition of the cotton crop in Egypt is as follows (says a Reuter message):—Lower Egypt 96, Mid-Egypt 102, Upper Egypt 98 percentage of normal.

The British Commercial Secretary at Belgrade has forwarded the following official rates of exchange (in dinars) for the payment of port dues in Yugoslavia during August:—1 gold napoleon, 220; 1 Turkish lira, 248; 1 pound sterling, 276; 1 American dollar, 56.75; 1 Canadian dollar, 56.25; 1 German mark, gold, 13.50; 1 Polish zloty, 9.40; 1 Australian schilling, 8; 100 French francs, 267; 100 Swiss francs, 1,102; 100 Italian liras, 209; 100 Belgian francs, 262; 100 Dutch florins, 2,278; 100 Roumanian lei, 27.50; 100 Bulgarian levas, 41.30; 100 Danish crowns, 1,200; 100 Swedish crowns, 1,530; 100 Norwegian crowns, 1,020; 100 Spanish pesetas, 823; 100 Greek drachmæ, 91; 100 Czecho-Slovak crowns, 168; 1 million Hungarian crowns, 800.

COTTON CULTIVATION IN TURKEY.

An interesting paper on cotton growing in Turkey was presented by M. N. Husni Bey, of Messrs. Husni, Sons and Chinassi, representing the Department of Commerce of Turkey, at the recent International Cotton Congress at Vienna. The following extracts are taken from the paper:—

Up to now, in the reports presented to the Congresses regarding Turkish cotton, emphasise has been laid on the production of Adana district only. Although Adana is, and will always remain, the main cotton-producing centre of Turkey, it is not the only cotton district within the boundaries of the Turkish Republic. Owing to the climate and the nature of its soil a large proportion of Asia Minor is very favourable to cotton cultivation. In the Smyrna district, Turkey possesses a province which is only second in importance to Adana for its cotton potentialities.

The cotton of Smyrna, which is known to the Continental spinners under the name of "Souboudga," is of an excellent colour. One may look forward in a short number of years to its attaining the high level which was reached during the Civil War of America, when in 1864 her export to Liverpool alone reached 64,000 bales.

In the Smyrna district the pre-War production fluctuated from 30,000 to 45,000 bales. During the War it considerably shrunk, and during the Greek occupation it fell to 5,000 bales. After the end of the occupation 9,500 bales were obtained, and during the present season the crop has amounted to 27,000 bales. It is expected that a crop of 35,000 to 40,000 bales may be obtained during the following season. Large uncultivated areas are available in this district. The greatest obstacle to a rapid expansion of cotton cultivation is the presence of very high profit-yielding crops, such as good quality tobacco, and other products for which Smyrna is renowned.

The Adana and Smyrna districts are not the only places in Turkey where cotton cultivation is possible. At the present time experiments in cotton cultivation are being made even in Adrianople. In fact, almost the whole cultivatable area of Turkey may be considered as suitable for cotton cultivation. From Adrianople in the north to the Adana district in the south cotton is cultivated now and then as a household commodity to cover the needs of the peasant, and now and then on an intenser scale, as in the protected valleys and hills of Gallipoli, and also along part of the River Sackharia. Some of the best quality of cotton produced in Turkey is obtained in these outlying districts. The methods used are as yet primitive and the cost of production high. One may venture, however, to think that with some financial help to the peasants, rapid progress may be attained, as they may be easily induced to prefer the cultivation of cotton to that of other crops. A great advantage possessed by these districts is that communications are quite easy.

In the eastern provinces of Turkey, near the Persian, Russian, and Iraq frontiers, also, cotton is grown on a small scale, but over a very large area. But in these districts easy methods of communication are not available at present, and the expansion of cotton cultivation depends in the first place on the completion of the railway construction projects energetically being pursued by the Republican Government.

In short, the total area suitable for the cultivation of cotton in Turkey is immense, and at present beyond the possibility of measurement. But although the production is increasing in all these districts, undoubtedly the largest and most rapid extension will continue to take place in Adana district, where the livelihood of its population is dependent mainly on its cotton crop.

It would, therefore, be interesting to inquire briefly what is the present cost of production of cotton in the Adana district, and how far cotton cultivation may be considered a profit-yielding investment. At this point, however, it may perhaps not be too pedantic to point out that the phrase "cost of production" in the case of agriculture has not and cannot have the same meaning as in the case of industry. In the case of the cotton industry in particular, by means of the precise methods of costing employed, the important factors that go to make up the final cost of production are clearly distinguished from each other, the unknown factors isolated, the degree of their probable variation estimated, whereby a remarkably precise estimate of the probable cost of production can be made, and at the same time the individual deviations from the average reduced to a minimum. But such a strict definition would certainly be inapplicable to the phrase "cost of production" in the case of cotton cultivation, where so much depends on rain, sun, insects, and worms, which are factors beyond the control of man. When, therefore, one speaks of the cost of production of cotton cultivation, it has to be remembered that, quite apart from the difference of cost arising from differences in the methods of cultivation employed, such a great deal depends on quite uncontrollable weather factors that not only does the average cost of production vary very much from year to year, but also in any given year the result obtained in any one farm may very much deviate from the average result.

The average cost of production per acre of cotton in the Adana district under favourable weather conditions may be estimated as follows:—Ploughing, 20s.; preparation of the field, 4s.; seed, 5s. 6d.; sowing, 3s. 6d.; hoeing, 20s. Assuming that the average yield of cotton in an average farm in normal conditions is 300 lb. per acre, the cost of cultivation may be estimated to be about 2½d. a lb. To this cost must be added the cost of gathering, which, in Turkey, is paid in kind, and generally amounts to 10 per cent. of the crop, so that the cost of the cotton at the farm is on the average of 2.75d. a lb. of lint.

In the above estimate we have assumed that the ploughing is done mechanically by means of the tractor, and the other processes by hand. This is the manner in general use. The actual cost of the ploughing, however, very much depends on the kind of tractor or steam plough employed. If oxen are employed the cost of ploughing is 20 to 25 per cent. higher. The use of tractor and steam ploughs is increasing at a very rapid rate and becoming almost universal. The larger farmers are purchasing generally mechanical tractors of 60 to 80 h.p.

In recent years the cost of production has been very much reduced by the use of the method of sowing in straight lines by means of the planter, which at the same time is rendering possible the use of the mechanical cultivator. The cost of sowing is reduced to about 1s. 6d. per acre, and that of hoeing to 5s. The increasing use and popularity of mechanical methods bids fair to revolutionise the method of cultivation. The importance of the mechanical method, however, is not only in the reduction of cost obtained but also in the fact that by saving time and labour it renders possible the extension of the area cultivated. The most hopeful point about cotton in Asia Minor is the increasing popularity of mechanical methods.

Most of the members of this Congress who are acquainted with the Turkish cotton will be aware of the fact that 90 per cent. consists of the native variety, the characteristics of which are that the bolls do not open at maturity, but are harvested with their capsules, the separation from the husks taking place at the houses.

One of the greatest drawbacks in the expansion of cotton culture in Turkey was the difficulty in distributing these cotton bolls to the various homes, and the redelivery to the ginneries for the separation of the lint from the seed. In years of abundant crops sufficient labour was not available to undertake its separation, and part of the

crop was always under the danger of being left over until the next season. We may hope that the question of separating the bolls mechanically is now definitely solved.

We regret to report that the Adana district, which was up to the last year absolutely free from any insect pest of importance, has lost this privilege, and that pink boll-worm and the cotton boll-worm have made their appearance in the Adana district.

The Government has taken steps at once to fight against the pink boll-worm. Heaters have been imported, and the method of fighting against this evil by a German preparation called Cyclon also tried. A large quantity of seed has been introduced to Adana for plantation purposes from such districts as Smyrna and Guive—which are immune from pink boll-worm—as the machinery arrived too late for a full and regular campaign against these pests during this season.

Through the excessive rain which we have had in Adana district, and the damage caused by the activity of the cotton boll-worm and the pink boll-worm, the cotton crop had suffered very severe losses, and the hope of a large crop was disappointed; under these circumstances the crop of Adana did not exceed 90,000 bales.

It does not seem to be at present part of the policy of the Government of Turkey to grant special privileges for cotton growing in the shape of guaranteeing interests and capital, but on the other hand an immense amount of help is being given to the cultivator in the shape of financial advances through the agricultural banks, reduction of taxes, custom-free admission of agricultural and ginning machinery, sale of agricultural machinery on credit, and at very reduced prices. At the present time tests are being made with different kinds of seeds, and on the effect of fertilisers. In short, apart from granting bounties the cultivator of cotton is being in every way encouraged.

One of the drawbacks of the Turkish cotton has been its careless classification and its irregularity. The Government is fully aware of the necessity of having the Turkish cotton properly classified, and to ensure its shipment in a regular and proper manner. The Liverpool Cotton Association has been kind enough to state its willingness to admit the standards of the same to the Arbitration Rooms in Liverpool.

As Turkey is an important consumer of cotton piece goods, the development of its agricultural resources naturally increases its buying power, and the spinners of Europe by using Turkish cotton will not only be helping the extension of the outside growth for the development of which so many resolutions have been taken by the meeting of this Congress, and such valuable help has been extended in the past, but at the same time will be increasing the outlet of their manufactured goods in Turkey.

IMPORTS & EXPORTS

The financing of the world's commerce has become one of the most intricate of machines ever constructed, and under the banker's hands lie all the cogs and controls necessary for its efficient running. It is of the utmost importance that the merchant should clearly understand the working of its mechanism in order that he may make the fullest use of the bank's facilities, not only for his personal benefit, but also for the increased commercial prosperity of the country. To assist its customers, the Westminster Bank has now prepared a booklet explaining the many ways in which the commercial man may use the bank for the furtherance of his business, and how he should proceed so as to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and combine with progress and enterprise the necessary security and caution.

Copies will be issued on application to the Secretary, Head Office, Westminster Bank Limited

41 LOTHBURY, LONDON, E.C.2

COMPANY NOTES AND REPORTS.

ORIENTAL CARPET MANUFACTURERS.

The report of the Oriental Carpet Manufacturers for 1924 states that trading has been rendered difficult by the strenous conditions and the margin of profit has been reduced. The turnover, however, has been increased, and the advantages derived therefrom have preventd any falling off in earnings. The situation of interests in Turkey is as satisfactory as could be expected. There has been an increase in activity and the directors are hopeful that the rate of progress will be maintained. In Persia the situation continues to be satisfactory, and the year has seen a considerable increase in the business carried out by the company in that country. In India interests are now firmly established and all production is meeting with a ready sale. The directors have considered it advisable to form an Indian limited liability company to carry on the business of the woollen mills completed under the name of "The Oriental Carpet Manufacturers (India), Ltd."

The aftermath of the War has brought about many changes in the East, and certain privileges enjoyed in the past are no longer of any practical value. Although the company's collection of designs and patterns must always be regarded as of inestimable value to the business, however it does not carry the intrinsic value that other assets of the company possess. Therefore the directors recommend that the amount of £43,647 be appropriated out of the earnings of the present year to amortise the asset of "Concessional Rights, Designs, and Patterns." The net trading profits, after deduction of all charges amount to £111,041; add the balance brought forward, £81, making £111,122. The directors recommend a dividend at the rate of 5s. per share, £60,960; to directors £2,400; depreciation of concessional rights, designs and patterns, £43,647; to extraordinary reserve, £3,744; forward, £371.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

EGYPT.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company, in their report for the week ended July 30, state:—

Since our last report the futures market has been rather active but prices on balance have remained almost unchanged; the net changes on the week are the following: Sakellaridis, 0.12 dollars up for November, 0.07 dollars up for January, 0.28 dollars up for March; Ashmouni, 0.18 dollars up for August, 0.30 dollars up for October, 0.30 dollars up for December. The week opened very firm as a consequence of the substantial rise which took place in New York upon the publication on 23rd inst., of the American Bureau report giving a condition of 70.4 with an estimated crop of 13,588,000 as against 75.9 and 14,339,000 a fortnight ago. The firmness of our market, however, has been only ephemeral; the trade is still keeping out of the market and a few liquidations for profit taking have sufficed to make prices cede the advance just gained. The demand from abroad for prompt shipment has been much smaller than the preceding week, with the result that prices on the spot market have fallen considerably. With November at 47.00 dollars a week ago Fully Good Fair Sakel was worth 62⅜ dollars, whereas to-day with November at 47.12 dollars it is worth 59⅞ dollars. We consider the difference still too big, and we think it is bound to narrow as we approach nearer to the new crop. At the third July tender 1,500 Crs. dockets were issued. The difference between October New York and October Ashmouni Alexandria has narrowed sharply this week: it stands at 7.56 as against 8.65 a week ago. Nevertheless spinners still consider the present difference too big and in view of the good prospects of the extra staple American crop they expect it to narrow still further. However, one must not lose sight of the fact that this year's acreage in the Delta under Zagora has been considerably curtailed, and whatever the increased production in Upper Egypt may be it will not suffice to bring the total production of Ashmouni to last year's figures. The week's receipts amount to Crs. 1,855 against exports Crs. 56,400; the stock stands at Crs. 410,873.

Spot: Minet el Bassal has been considerably quieter this week and last week's demand from abroad has not been maintained. Sales amount to about 3,400 B/s, of which we estimate 1,500 B/s Sakel, 1,700 B/s Uppers, 100 B/s Zagora, and 100 B/s White.

Sakellarides: Has been in fair request. As for some time past, such demand as there is has been for the low and medium qualities. The grades above Fully Good Fair have been rather neglected. Spot differences are generally considerably easier.

Ashmouni and Zagora: Have been in fair demand and a moderate business has been done. Very little interest has been taken in Good and better, the demand being principally for the medium and low qualities and, for a certain amount, up to Fully Good Fair to Good. Spot differences are without change for the grades from Fully Fair to Fully Good Fair, appreciably dearer for Fair, and rather easier for Good and Fully Good.

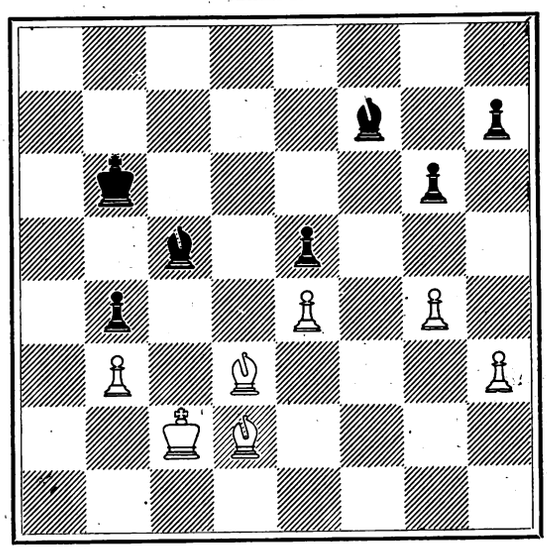
Brown and Pilion: Are neglected and only one small lot of Pilion has changed hands. Spot differences for both growths are without change for the medium qualities and rather easier for the better grades.

White: A small business has been done in the medium qualities. Spot differences are generally appreciably cheaper.

Crop, 1925.—The weather has been favourable. In the Delta, the condition of the Sakel variety is on average not as good as that of last year, whereas that of the other varieties (Zagora, While, Pilion, etc.) is better than last year. In Upper Egypt, the crop is maturing normally; the first arrivals are expected to be down in Alexandria towards the second week of August. The water supply has continued adequate everywhere. The percentage of bolls attacked by the pink boll worm is about equal to that of last year.

CHESS.

By "CARO-KANN."



END GAME No. 10.

White to play and win.

Solution to end-game No. 9:—1, P—Kt 4, K—K3; 2, K—B2, K—Q4; 3, K—B3, P—K5 (ch); 4, PxP K—K4; 5, K—B2, KxP and wins. If 1, K—B3, P—B4; 2, P—R4, PxP; 3, PxP, K—B3; 4, K—Kt3 K—Kt3; 5, K—R3, K—R4 and wins, for White cannot defend his own Pawn and at the same time effectively deal with the threatened advance in the centre.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended August 8, states:—

There has been no special development during the past week. The principals of many firms made the August Bank Holiday extend into two or three days and this has had its effect on business but the tone has, on the average maintained the improvement noted during the past week or two. The reduction in the Bank Rate is welcomed as, of course, it will lessen the charge for borrowed money.

Yarns.—Holidays in various places and organised short time have had a strengthening effect on the section spinning American Counts and a steadier resistance is being shown to the low offers made by some buyers. Weak selling is less in evidence. For Egyptian spinnings there has been a slightly improved inquiry, but it is still very difficult for Spinners to secure satisfactory prices.

Cloth.—Business has not been quite so active as in the preceding week or two, but in view of the break caused by the holiday, this was only to be expected.

A fairly large inquiry has come from India and moderate purchases have resulted. There is nothing special to report with regard to China for which country a small business is still going through. For South America rather more has been done than recently but Near Eastern markets remain very quiet.

Raw Cotton.—Quotations have moved within very small limits but the tendency has been downward. Weather reports from the American Cotton States have been better and there appears to have been a fair amount of rain in districts where it was needed. A further Bureau Report is to be published to-day, but will not be available here during business hours. It appears to be generally anticipated that an increase in the estimated crop will be indicated. There is nothing calling for mention with regard to the new Egyptian crop. Closing quotations yesterday were as follows:—American Middling 13.35; Egyptian Fully Good Fair 32.00.

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen & Co., The North-West Tannery, The Empire Engineering Co., and the Nani Tal M T. Co. These Firms, by pooling their resources and centralising control form a corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots and all kinds of equipment of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LALIMLI PURE WOOL

Makers of the famous Lalimli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Greatcoat Cloths. All requirements in Wool at lowest prices consistent with quality.

CAWNPORE WOOLLEN MILLS CO., CAWNPORE

Kakomi Cawnpore

These Mills produce the well - known Kakomi Cotton Goods.
The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

CAWNPORE COTTON MILLS CO., CAWNPORE

COOPER, ALLEN AND COMPANY

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.

Everything in Leather.

COOPER, ALLEN & CO. CAWNPORE

Dhariwal

Manufacturers of Dhariwal "Long Life Wool Wear."

Productions include:
Serges, Tweeds, Broadcloths, Blankets, Rugs, Worsteds, and Woollen goods of all kinds.

The New Egerton Woollen Mill Co. DHARIWAL

BUSINESS DIRECTORY.

ASHWELL & NESBIT, LTD.
Barkby Lane, Leicester.
Makers of the
RUNWELL SEMI-ROTARY PUMP.

CANVAS, PAINTS,
MANILLA AND WIRE ROPES, Etc.
J. McMillan & Bolton, Ltd.,
Dashwood House,
London, E.C.

EMERY STONE.
The Levant Mineral Co., Ltd.
Largest Importors in United Kingdom.
Open to receive offers of high-class qualities.
Address: 29-30 Broad Street Avenue, London, E.C.2.

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Mosul Report.

A perusal of the full text of the Report of the Commission appointed by the Council of the League of Nations to investigate the question of the northern frontier of Iraq throws light on the peculiar finding of the Commission, but does not win conviction for the way in which the members have interpreted their duties. Let it be said at the outset that the Report leaves nothing to be desired from the point of view of fulness. The Commission has taken itself very seriously and has evidently aimed at producing a classic work on the Mosul Vilayet. Whether that is precisely what the Council of the League of Nations required may be left to the judgment of the latter. A document of more practical utility, it might be urged, would have been produced, if the Commission had not proved to be lacking in two important respects: it appears from the Report to be wholly lacking in imagination, and secondly, it has ignored the results of the Great War. In regard to the former characteristic, the implicit confidence that seems to be placed in the *ipse dixit* of anyone who has been dead long enough inevitably creates misgivings as to the Commission's capacity to sift the evidence of living witnesses. In putting on one side the verdict of the Great War the Commission is candid to the point of *naïveté*. To the British contention that Iraq was taken from the Turks in war and formally handed over to or reserved for the Arabs the Turkish delegate at Lausanne replied that "the undertaking given by the British Government could not constitute an argument against Turkey, in view of the fact that Turkey had not, by any international instrument, renounced her rights over the vilayet. That would be tantamount to disposing of someone's else territory in favour of a third party without the consent of the legitimate owner." As a Turkish attempt to counter an unanswerable contention the reply commands respect, but we imagine that not even Fethi Bey would have expected to be told in the words of the Report that "the superior force of the Turkish argument seems so obvious that there is no need to analyse the cases of the two parties." Again Turkey tried to dispose of the argument based on the right of conquest by saying that this right "can no longer be recognised in the twentieth century," and urged in its place "the argument of durable peace." The Commission is so impressed by the wisdom of this that it italicises the expression, and points out that in any event the argument based on the right of conquest is open to question "because, some time after the Treaty of Sèvres, the political situation underwent so radical a change that it was thought necessary to summon a new conference and do over again all the work that had been done at Sèvres. This change of situation was the outcome of the Turkish military successes, which, although they were gained in a different theatre of war, set up a new military position for all the territories which belonged or had belonged to Turkey." In defeating the Greeks the Turks disposed of Greek claims to Asia Minor, but, except in the opinion of the three members of the Commission, they did not upset the verdict of the Great War.

A Discursive Document.

The Commission would seem to have developed such a keen interest in its task that it was betrayed into going beyond the requirements of the case. To enable it to discuss the word Iraq the members state "we have consulted the early Arabian historians and geographers, a long series of Arabian maps, hundreds of European maps ranging from the sixteenth to the twentieth century, travel books of every period, authoritative geographical works, and the geographical text books in use in the Arab secondary schools in Egypt," and four foolscap pages follow devoted to what some of these authorities have to say on the subject. Yet the salient points bearing on the task that they undertook are few in number and briefly expressed.

Digitized by Google

The greater part of the population of the disputed territory (about five-eighths) is undoubtedly Kurd.

The Kurds are neither Arabs, Turks nor Persians, though they are most nearly related to the Persians.

Yezidi are not Moslems . . . they are not related either to the Turks or to the Arabs. They have some affinities with the Kurds.

The frontier claimed by the British Government is topographically a very good one . . . is an excellent strategic frontier.

Although the disputed territory does not constitute a distinct natural region, it has none the less a certain unity.

From the purely economic point of view, the Commission thinks that the most advantageous settlement for the disputed territory would be to attach it to Iraq.

The Commission recognised the impracticability of a plebiscite as a means for determining the wishes of the inhabitants, and hoped to find a better guide interviewing individuals. The total number of persons questioned individually, we are told, was about eight hundred; but of these the Report states: "Several witnesses appeared incapable of judging the question . . . Certain witnesses who were consulted twice reversed at the second interview the opinion they had given on the pervious day . . . In short, it was difficult to estimate the importance of the various witnesses and the value of their statements." In spite, however, of its practical findings and of the impossibility of gauging the real opinions of the inhabitants, the Commission was constrained to go off at a tangent into political matters with which it was not concerned. Thus we have the ruling that "Turkey retains her legal sovereignty over the disputed territory so long as she does not renounce her rights," and the recommendation that a decision in favour of Iraq must be conditional upon a definite continuance of the Mandate. Although the Council of the League of Nations may not feel called upon to follow the Commission in the multifarious paths along which it has sought to blaze a trail, there can be no doubt that the Council's library has received a useful acquisition in the Report.

Egypt to India by Air.

A provisional agreement has been signed by the Air Ministry and Imperial Airways Limited, for the establishment and operation, under a five years' contract, of a commercial air service between Egypt and India. Although steps will be taken at once to prepare for the inauguration of this service, it is not expected that it will be in actual commercial operation until the autumn of 1926. In view of the special character of the route there is good reason why the authorities concerned should firmly set their faces against a premature start. With adequate organisation the service can be made as simple and as safe as the Paris air mail; but it would be foolish to ignore the fact that its organisation is a much bigger problem. The reported decision that only three-engined machines are to be employed will, it is to be hoped, prove true. Atmospheric conditions between Egypt and India, over the Syrian Desert and across the Persian Mountains, impose a greater strain on machines than they experience in Europe, and it is essential that the risk of forced landings should be reduced to a minimum. Another point to be borne in mind is that the exploits of individual airmen in long distance flying should not be allowed to form the standard for the pilots of a commercial company. It is one thing to fly "on one's own" one or more special journeys, and a very different proposition to undertake the work of routine flying. The Egypt-India Air Service must be equipped with a large staff of experienced pilots, who must not be overworked.

Coalition in Yugoslavia.

The official seal has been set on the coalition of Radicals and Raditchists in Yugoslavia by the visit of King Alexander to Zagreb on the occasion of festivities in connection with the millenium of the first Croat-King. Although the weather marred the proceedings, the people of Zagreb were able to testify to their endorsemnt of M. Raditch's abandonment of his republican views. His republicanism in all probability was never a serious conviction. Antagonism to Serbian centralisation was his guiding principle, and being carried away himself by his eloquence quite as much as his hearers, he could embrace any theory at a moment's notice with an amazing display of wholeheartedness, provided that it promised to help him in his fight against M. Pashitch. All that has now passed. M. Raditch is as eloquent a monarchist as ever he was a republican, and no little credit is due to King Alexander for his tactful handling of a peculiarly difficult situation. In Zagreb, it is to be hoped, he has been given convincing proof of the unity of the Kingdom. The opposition in Croatia to M. Raditch has undoubtedly been strengthened by his political *volte face* and his acceptance for his party of portfolios in a Pashitch Government. But this opposition is mainly personal, and, as far as is known, is not anti-monarchist. The test of the coalition will come when the period of M. Pashitch's convalescence is over, and an attempt has to be made to reconcile divergent views regarding the relative merits for Yugoslavia of centralisation and a greater degree of local autonomy.

The Black Sea Fleet.

A year ago the report that the French Government proposed to hand back to Russia the ships of the Black Sea Fleet that have been interned at Bizerta caused considerable uneasiness at Angora and was responsible for the decision of the Cabinet to strengthen the Turkish fleet. The ships have not yet been handed over, but it is again announced that they will be shortly. In the interval steps have been taken to improve Turkey's position at sea. As far as can be gathered from spasmodic information the advocates of a unified fleet have lost the day and the politician has been allowed to override the naval expert. Turkey will obtain a battleship from one country, a cruiser from another and will go to a third for her submarines; technical advisers will be obtained from a variety of nations mainly under the guiding principle of not allowing one to know what the other is doing, and the Turkish Navy will suffer from all the disadvantages of a heterogeneous collection of units lacking uniformity. Responsible officers of the Navy realised that, if the Turkish Fleet, which cannot be a big one, was to attain the highest possible standard of efficiency, it must be in close touch with a live Navy, and they made no secret of their desire to bring their Fleet into line with the British Navy. Unfortunately for them, they are ahead of Turkish politicians in their grasp of essentials in regard to world politics. For one reason or another—the chief is the Mosul question—Angora is unwilling to "encourage" Great Britain, and the Turkish Navy pays the penalty.

خالجي **WM. P. CUTLER,**

Oriental Carpet Broker.

ROOM 31, 73 BISHOPSGATE, LONDON, E.C.2,
AND AT CUTLER ST. WAREHOUSES, PORT OF LONDON AUTHORITY.

Best market prices obtained on consignments of Persian, Indian, Turkish and Chinese Carpets and Rugs. Prompt settlement. Brokerage 2½ per cent. Turkey Carpets made to order in any size or colouring. Valuations for Fire & Probate.

Bankers:
The Imperial Ottoman Bank, 26 Throgmorton Street, London, E.C 2

'Phone: London Wall 7367. Telegrams: "Khalidji, Stock, London."

M. Politis, the Greek Minister in Paris, has been recalled to Athens by his Government.

The Albanian Government last week closed the Greek-Albanian frontier on the ground that there is plague in the Piræus.

The Indian Pavilion at Wembley has just been enriched, states the *Morning Post*, by the loan of a collection of water-colour paintings by the Indian artist, Mr. S. Fyzee Rahamin, of Bombay. Two of his paintings have been acquired by the National Gallery, and on his last visit to the Pavilion the Earl of Birkenhead also bought two of them to hang at the India Office.

THURSDAY, AUGUST 20, 1925.

THE REVOLT OF THE JEBEL DRUSE.

Although it is doubtful whether so much would have been heard of the revolt in the Jebel Druse had not the French people and Press been so bitterly divided into Clerical and anti-Clerical camps, the incident is, quite apart from its repercussions upon the domestic politics of the mandatory Power for Syria, not without importance. The fact that the eight hundred casualties which the French have suffered were mostly of soldiers of Asiatic or African origin is little consolation to a State which prides itself that men from its possessions in the two Continents nearest to Europe can compensate for its own declining birth-rate; nor is the reported conduct of these troops in face of hostile action a very good bolstering up to the hopes of those abundant Frenchmen who ardently desire an increasing limitation to their commitments overseas. There is, also, another aspect of this rebellion, to which little attention has yet been drawn; we refer to the apparent innocuousness of the French aerial operations in depressing the Druses. Command of Middle Eastern countries by the aerial weapon is, it would appear, seen more and more obviously to be an advantage limited to the plains, or at least to level ground: in the mountains of the Hauran, as in the mountains of Kurdistan, the advantage is rather with the bombed than with the bomber. These things apart, however, there is no sense at all in exaggerating the military importance of the Druses' revolt. Stories to the effect that Bedouin from such tribes as the Anaizeh and the Roalla are staunchly behind the inhabitants of Bashan in resisting the French will certainly vanish into water with the rains of October, if not before, for no cause on earth would keep these fickle Bedouin from moving to their deserts when the rains begin. Nor is it reasonable to suppose that the Druses will receive anything more than passive sympathy from the majority of Moslems inhabiting Syria, for the Arabs have not forgotten that four years ago, when they received such a drubbing from the French, the Druses withheld their assistance. And lastly, it is well to remember that this is no revolt of the whole Druse population in the Hauran, but only of a disaffected portion.

Not for its own sake, then, but rather for the possible effects that it may have on the rest of mandated Syria, is this rebellion in the Jebel Druse to be considered by the student of the Middle East. Already vague and enormous rumours—as vague and as enormous as the desert from which they spring—are being set about of general unrest in the Arab world, and that the French authorities themselves have not been unmindful of the potentialities of the situation would seem to be proved by their attitude of suspicion towards the Nationalists of Damascus. If, owing either to the lack of water in the Jebel Druse, or to the unreliability of the troops at General Sarrail's command, or to the difficulty of finally accomplishing anything by the aerial arm, this Druse revolt is but slowly crushed, the loss to the French of the harvest of the Hauran, which is the granary of Syria, may be the least of their evils. As is well known now, the separation by the French of Jebel Druse from the rest of Syria was, in the eyes of the local population, but barely compensated for by the granting to it of autonomy; the independence of the Lebanon the Syrians could understand, if only for historical reasons, but the division of the rest of the country into the States of Syria, the Alaouites, and the Jebel Druse has, apparently, never been comprehended by the natives except as a move to check the growth of national unity. Particularly will this sympathy with the Druses on the part of the Moslem and Christian population of Syria be liable to grow if continued and fruitless bombing of villages is indulged. The situation calls indeed for most tactful and, one is inclined to add, generous handling.

But, as we have already indicated, we are not disposed to overestimate this revolt in Syria. It is pertinent to remember that of few of those six previous revolts in Syria of which the decriers of French colonial administration are now making so much, was anything heard at the time of their happening. In other words, it is because an atheistic French Government is now in power, and because General Sarrail, the High Commissioner for Syria, is an atheist, that so much wild writing has been indulged. Certainly, the difficulty of administering Syria has not been minimised by the changes of attitude which the successive High Commissioners have exhibited. For whereas General Gouraud (whose troubles with Transjordan were at least partly the fault of the Emir Abdullah's State) and General Weygand (who was on extraordinarily good terms both with Palestine and Transjordan) leaned beneficially upon the Christian element in the Syrian population, General Sarrail has rather flouted the Christians, and has endeavoured to conciliate the Moslems. Sufficient evidence of this is to be found in his treatment of the instigators of the Damascus riots at the time of Lord Balfour's inappropriate visit. Yet, despite this rather bewildering difference, which to the Syrian Christians is nothing less than a *volte face*, there is insufficient evidence at present available that General Sarrail alone is responsible for this outbreak of Sultan Pasha el Atrash. Not only did he retain at Sueida the nominee of General Weygand, Captain Carbillet, who in some quarters is regarded as being solely responsible for the trouble, but so recently as last April he was received with every appearance of welcome by the population of the Jebel Druse. Whether, at the beginning, a few weeks ago, of a local agitation by this mysterious people for a wider autonomy or a change of governor, he could have been more generous, is an affair upon which it is perhaps indiscreet for Englishmen to judge. There are always some people ready to make mountains out of mole-hills. And this brings us to the final point which we should like to emphasise, a point which it is gratifying to observe has already been made by the French Government; we refer to the attitude of complete good-will on the part of the British authorities in Transjordan and in Palestine. Whatever be the ills of, and whosoever be responsible for, the division of the present Syria into four autonomous provinces, the responsibility of the greater ill of dividing the traditional Syria into three distinct parts remains with the Allies, and it is, therefore, the equal interest of France and of Great Britain that unrest in any part of this region should be quickly dissolved. The time is happily gone when refugees from justice could seek a safe asylum in Transjordan, where, indeed, the authorities are now doing invaluable work in the cause of peace. No doubt the British are better beloved of the Druses than are the French; no doubt in times past the French may have had some legitimate grounds for accusing the British of indifference to their troubles in Syria. Matters now, however, are on a very different footing, and that Anglo-French co-operation in the Middle East upon which we have so often insisted is at last becoming a reality. It may be that France would prefer that a race like the Druses should be brought within the polity of nations, where this country would try to bring it within the comity of nations: but the main desirability of the moment, as is happily perceived by both British and French representatives on the spot, is, peace, which, moreover, we have little doubt will be shortly secured.

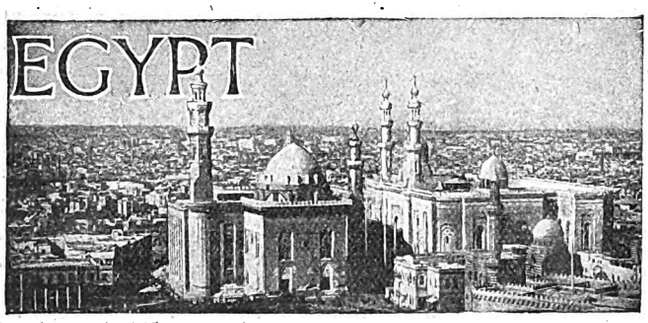
The Near and Middle East*

From Our Own Correspondents.



Cairo, August 10.

The Flood.

The second week in August has brought the Nile flood to Cairo, and the piers of Kasr el Nil bridge are now washed by a turbid, swirling stream, heavily charged with mud. Unfortunately, the flood, after an excellent early promise, now proves to be disappointing, and there is a prospect of much *sharaki* land going waterless this year. The only consoling thought for landholders so affected must be that, in three or four years' time, the new works at Gebel Aulia and Nag Hamadi will have been completed, when there should be much more abundant supplies of summer water than are now available.

Journalistic Offenders.

Journalists have been in the limelight again this week. The editor-proprietor of the *Minbar* and the contributor who wrote the article, referred to in my letter last week, criticising the administration of the Royal Wakfs, were on Wednesday ordered by the committing magistrate to be kept in prison pending trial at the Assizes next month, while, on the following day, the proprietor of the *Mahroussa*, which journal published a similar article to that of the *Minbar*, was also arrested and thrown into jail. He, too, will probably have an enforced holiday from editorial troubles, pending his trial.

Supplementary Examinations.

The present Government has shown much courage in tackling a number of problems that had long needed resolute handling, but which previous Ministries had shirked because applying the required remedy might not always have been a popular proceeding. No member of the present Cabinet has displayed greater resolution than the Minister of Education, Aly Pasha Maher. To him and to his predecessor, Rifaat Pasha, there is due infinite credit for taming the insubordinate schoolboys, whose idleness, insolence, and conceit had, during the last few years, increased to an astounding extent, until, under the Zaghloul Ministry, the students, encouraged by the Government of the day to form themselves into a kind of Zaghloulist Fascisti that roamed the streets, intimidating opposition, wherever encountered, were completely out of hand. Rifaat Pasha and Maher Pasha changed all that, and now a further excellent decision has been taken, namely, not to hold supplementary examinations for boys who failed in the tests held at the end of the school year, just closed. It was also under Zaghloul Pasha's Ministry that the scandal of supplementary examinations attained its worst level, but Maher Pasha has put his foot down hard, and declared that there shall be no supplementary examinations whatever. Moreover, he has requested newspaper editors, who have previously filled many columns at this time of year with schoolboy complaints, to publish no more of these juvenile petitions.

The Abuse of Education.

This is not the only excellent decision of the present Minister, who, convinced of the necessity for the presence of foreign schoolmasters and mistresses in the State schools, has engaged several new foreign teachers, in the face of fierce opposition from no small section of the Egyptian Press and of the Egyptian school staff. Moreover, when he discovered that certain Egyptian masters and mistresses were fostering the anti-foreign agitation and were themselves contributing to the Press articles on the subject, Maher Pasha did not hesitate to take severe disciplinary action. Perhaps it is difficult for anyone who has not lived in Egypt during recent years, and been aware of the anarchy previously prevailing throughout the whole educational system, to appreciate the courage necessary for the carrying through of so firm-handed a policy. Maher Pasha has shown himself not only courageous, but also always willing to listen to advice from anyone who can speak with authority on educational subjects, and for his admirable work during his few months in office Egypt has much reason to be grateful now, and, in the future, will doubtless appreciate even more fully the wisdom of the new policy.

Traffic in Drugs.

Tanta has been giving the rest of Egypt a lead in applying the new law regarding traffic in drugs. Over 300 convictions have been secured in two months, which seems to show that the evil had attained alarming dimensions in the Delta town. The official vigilance seems to have stirred the wives of Tanta's dope fiends to individual action against drug-taking husbands, if a story published in the local Press is to be believed. A workman of the town not only spent all his wages on cocaine, but had sold all his furniture, too, with the exception of the double-bed, which remained the sole survival of the equipment with which he and his wife had begun married life. Having no money, and feeling the cocaine craving strong upon him, he proposed to sell the bed also. But at this his wife rebelled, a scene ensued, and blows were exchanged. The quarrel was patched up, and the husband, weary of wrangling, lay down to rest on the bed which had been the bone of contention. As soon as he was asleep, the wife, thinking to cure him of his fatal habit, seized his razor, and with one well-directed blow sliced off the nose, up which, in the form of white powder, had disappeared all her furniture, and her peace of mind with it. It will be interesting to hear whether, when fitted out with a new olfactory organ, this Tanta husband retains his cocaine-sniffing desires.

ALBANIA.

Tirana, August 12.

The Ceded Territory.

Detailed particulars of the cession of territory by Albania to Yugoslavia are now known to the public. In addition to the compromise effected with respect to the Monastery of Sveti Naum and its immediate district, whereby the village of Piskopeia is definitely attributed to Albania, Vermosch in the extreme North has been granted to Yugoslavia.

This cession is causing considerable bitterness at Scutari. The district comprises the upper waters of the River Vermosch, which flows eastwards into the Plava Lake, where lie the two townships of Gusinje and Plava, inhabited by fiercely independent Mohammedan clans of Albanian nationality. It will be recalled in this connec-

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Palestine, Iraq, and Persia.

tion how, when Gusinje and Plava were attributed to Montenegro by the Treaty of Berlin, the latter were unsuccessful in their attempts to obtain effectual possession, with the result that the Powers again intervened, and after long negotiations ordered and effected an exchange of territory by which Dulcigno, on the coast, came into the possession of Montenegro, while Gusinje and Plava remained Turkish.

Actually, these townships lie north of the great barrier of the North Albanian Alps (highest peak about 8,000 ft.), which forms Albania's natural frontier in these parts. When Montenegro eventually acquired Ipek, the importance of controlling Gusinje and Plava became manifest, as the shortest and only convenient route between Ipek and Podgoritza and the sea passes through Plava. The claim of Albania, therefore, to the district (always granted that Ipek was to remain Montenegrin) could hardly be sustained.

Vermosch, likewise, remains beyond Albania's natural frontier; but on the one hand it is a *cul-de-sac* affording no through route of any value to Montenegro, and, on the other hand, forming part of the territory of the Catholic Clan of Klementi, who for centuries have made use of it for the pasturage of their flocks in summer, when their own bare limestone mountains are deprived of water and grass. Its cession to Yugoslavia is, therefore, a very serious matter to this Clan.

The Klementi form one of the group of clans known as the Maltsori (High Mountaineers), composed besides of the clans Hoti, Gruda, Kastrati, Shkreli, and a few other smaller units. Under the provisions of the Council of Ambassadors it was decided to leave Hoti and Gruda in Montenegro, a decision both unjust and impolitic, since it divided this age-long tribal federation between two sovereign States. The majority of the population is, moreover, Catholic, and the whole is purely Albanian. Catholic and Albanian Scutari is their natural capital, whereas Podgoritza, the alternative market centre in Montenegro, is Orthodox and Slav.

Nevertheless, there are arguments of a geographical character which might have justified the transfer of the whole of the Maltsori group to Montenegro. The natural frontier of Albania in these parts does, in fact, follow the line of high mountains descending from the North Albanian Alps towards the Lake of Scutari, which happens to be also the traditional line of demarcation separating the Maltsori group from the neighbouring Albanian group of Clans (known as the Pulati) to the South. The division of the Maltsori group into two, however, has no valid defence whatever.

An Unstable Settlement.

If the Council of Ambassadors had consulted the desires of the local inhabitants and had taken the few elementary geographical facts more into consideration, a compromise for which a good deal could have been said might have been brought about by an exchange of territory on a wider scale—that is, by the granting of Dibra to Albania (and with this town, which is an indispensable market centre for the population of Eastern Albania, the natural geographical and tribal boundary of Albania in the East) in exchange for the sacrifice of the Maltsori. As things are, conditions of great instability have been perpetuated, and the cession of Vermosch only makes matters worse. Only if the cession could be regarded as the thin end of the wedge, leading to a settlement on the above lines, would there be something to say for it.

In that it now inflicts a great hardship on the Klementi clansmen, it may indeed result in an agitation for the transfer of the whole of the Maltsori to Yugoslavia. Thus an opportunity of reopening the whole question may be given; and it is not beyond reasonable conjecture that Ahmed Zogu, who would not be averse from weakening the Catholic element in Albania, has actually agreed to the cession as a first step whereby Dibra should be eventually restored to Albania.

Meanwhile it should be noted that the feelings of the Catholics in Scutari, who are for the most part opposed to the present régime, have been outraged—a fact which may well result in the course of time in further trouble of a serious kind.

GREECE.

Athens, August 10.

Disaffection with the Government.

The various political parties are very busy adjusting themselves and their programmes to the new and surprising situation created for them by the unexpected success of the Pangalos *coup dètat*. From their point of view the accession to power of the present Government constitutes a serious breach of their caste privileges, and they are actively engaged in repairing the breaches between the parties in order to be in a position to deliver a general assault upon General Pangalos when the propitious moment comes. The briefs of the Constitutional parties are numerous and the vigorous actions of the Administration in arresting deputies of the National Assembly, in condemning journalists and suspending their papers for alleged improper comments, in dealing with a heavy hand with the principal leaders of the Communist Party, have aroused indignation amongst the political friends of the victims. The feelings of the Army and Navy are also said to be unstable; there have been a large number of permutations in the senior ranks and the Government is accused of "sacking" competent and experienced officers to make room for their friends who have not seen a shot fired in anger since 1912, if then.

Old Party Lines Disappearing.

The development of this situation is manifesting itself by signs of a very serious set of political alliances. The old antagonism between the Venizelists and the Royalists is gradually fading and ceasing to be the party touchstone. There are signs of a *rapprochement* on the one hand between the Moderates of both the Right and the Left including the Royalist, and on the other between the extremist republicans and the extremist Royalists. The latter group forms the main support of the present Government and the former of the Opposition. It would appear on the face of it that in personnel at any rate the Opposition is immensely stronger than the Government faction, but all the parties, especially of the Left, are more or less split by the intrusion of this new element in party politics, and it would not be surprising to see a reasonable success of the Pangalists at the polls, if it is decided to hold elections in the early autumn. If the elections are delayed unduly, and the Government is carried on too long by "unconstitutional" decree this will operate to the advantage of the present Opposition. Nobody knows when the elections will be held, probably not even General Pangalos himself, and the reports concerning the Government's intentions in this respect contradict themselves on the average about twice a week.

Governmental Activities.

Meanwhile the Government is doing things; it has put through the much-discussed order for 100,000 rifles for the Army—and given it to an Italian firm—it is pushing ahead the question of the machine guns; it has carried out a number of fiscal changes; it is keeping a very tight hand on the subversive elements and generally putting a

"jerk" into the administration, a most unusual state of affairs in the heat of summer. It is justifying its sobriquets of "Fascist" or "Council of Action" which are being applied according to the political predilections of the critic.

Schemes of M. Rendis.

In foreign affairs M. Rendis, who is certainly one of the weightiest members of the Cabinet, has been energetic and ingenious. His proposal for the conclusion of a pact of compulsory arbitration between the Balkan States (always excluding Bulgaria) fizzled like a damp squib, for only the ostracised Bulgaria deigned to take any serious notice of it. He has since propounded an ingenious scheme for bridging over the gulf which separates Athens from Belgrade on the crucial question of the Salonika-Ghevgheli Railway. In brief it comes to this, that the control of the line should be handed over to a French administration and be in a sense internationalised, with the proviso, however, that this control shall extend right through to Bucharest and Prague. The plan may have been inspired from outside or it may be the native product of M. Rendis' brain. Whichever it was, the choice of France as the controlling Power and the buffer shows considerable acumen, for the influence of France is not negligible in Belgrade; also the proposal to extend the control of the railway communication as far as Prague and Bucharest is a cunning move to draw the attention of those capitals to the fact that their one line of communication with the Aegean is dependent upon the goodwill of Yugoslavia, and a Yugoslavia that has lately surmounted some of its prinicpal internal difficulties and is credited with the ambition of playing a preponderating rôle in the councils of the Balkans.

Refugee Settlement Commission.

The difference of opinion between the Greek Government and the Refugee Settlement Commission which is a *dépendance* of the League of Nations has caused a certain amount of stir and incidentally raised a pretty point of international law. Financial irregularities in the administration of the Commission's funds are alleged to have taken place in Macedonia, and some officials of the Commission have been arrested by the authorities and are to be brought to trial. The Greek Government, in its best Fascist mood, wishes to apply in this case the provisions of its recent decree in virtue of which the embezzlement of public funds is indictable before a military court and punishable by death by hanging. The Commission on the other hand, while not impugning the right of the Government to hale alleged criminals before the Greek courts, maintains with some show of reason that its defaulting functionaries should be tried by the ordinary civil courts under the civil code. There has been a good deal of ink-slinging; the Greek has naturally enough ridden to death the stock argument about the unjustifiable infringement of Greek sovereignty, while the Commission's supporters have also naturally enough made some play with the argument that the money has been supplied by means of the influence of the League of Nations, that the Commission is responsible to the League, and that, while disclaiming any intention of interfering with Greek sovereignty, it feels justified in protesting against the application of such measures by the Greek Government as will place their officials in such a position that the legitimate work of the Commission will be impeded. There is something to be said on both sides, and a compromise has now been reached by which the delinquents in the present instance will be tried under the extraordinary decree by the Military court, but that this shall not constitute a precedent and in future cases they will appear before the civil courts under the provisions of the civil code.

ORIENTAL TYPES.*

The Water Carrier.

By F. W. Chardin.

What is more typically a home-bred oriental growth than the *saqqa* or water carrier? With his water skin on his own or his donkey's back, he is known from Morocco westward throughout all North Africa and most of Southern and Central Asia. What is more redolent of the dusty East than the sound, conjured up in the mind of the returned traveller, of the metallic clapping of his two brass cups together as he forces his way through the crowded lanes of the market place with his refreshing burden on his back? With strident and insistent calls of poetic phraseology, he addresses the passers by in words that remind one irresistibly of the Bible "O ye that are athirst, come ye to the water," and many a parched passer-by whose throat is full of choking dust, purchases for a minute sum, a drink of the tepid, doubtful-looking liquid.

The *raison d'être* of the *saqqa* is, of course, municipal inefficiency and corruption. Very few cities or towns of Turkey in Asia have ever boasted of a water supply since the days of Assyria and Babylon. Official incapacity and lethargy had never conceived of a thing so beneficial to the public being advisable, and private enterprise had never been able to overcome the dead weight of officialdom, and so, in countries where water, freely supplied, was perhaps a more vital necessity than in any other countries of the world, water was a costly and precious commodity. In some of the more important cities, the coming of the European armies has brought in its train a water supply. Such has happened in Jerusalem and some other towns, and one sees in such places, pipes in the streets where men, women and children come to fill jars, pots and skins, for only the wealthy can afford water "laid on" in their houses.

The advent of a water-supply in the East, although it would make for health and cleanliness, would deprive the *saqqa* of the greater part if not all, of his picturesque task, and what the city would gain in well-being, it would lose in interest to the stranger. The passing of the *saqqa* would deprive the Eastern town of one of its most picturesque figures, and many would look back on the days when he carried on his moist task with regret.

There are several grades in the profession, from the water contractor or *quntratji* owning many animals and employing a number of hands, to the humble fellow with a swollen goat skin or sheep skin, its legs and all holes tied up, lashed on his back.

Of course, the very poor cannot afford to buy water in this way, and the womenfolk of the household, from the bent, tottering old grandam to the little girl of six years of age or so, may be seen going down to the water at the river bank in all weathers and returning with a soaking skin or earthernware jar on their backs, the water saturating the thin garments covering their legs and their backs from their shoulders downwards. The hardship of this, in cold weather, can only be imagined, and must make for a great deal of rheumatism and consumption. The Arabs are, however, a hardy race, far hardier than we ourselves with our warm fires and windows which keep out draughts. The writer has seen women and girls in the process of washing their clothes on the river bank, stand-

Digitized by Google

ing in the icy water up to their breasts and with only a loose cotton garment on, calmly rinsing their washing in the river and chatting and joking with their neighbours on the bank the while. These mermaids seemed in no hurry to come up out of the water; perhaps they found it warmer than the bitter wind which was blowing, making the northern Englishman turn up the collar of his "British Warm." The *saqqa* himself is a hardy fellow, all the year round he must be in and out of the water, and sometimes, when he is loading up a number of beasts, he must stand in the water for a long period of time, pleasant enough in warm weather, but horrible enough in cold. Then, if he carry the water skin himself, he must bear the saturated thing on his back all day and every day. It is indeed a marvel that the human frame can stand such conditions and remain in good health. For the *saqqa* is, as a rule, a man of extraordinarily good physique with particularly well developed legs, due, doubtless, to his running up and down the river bank with his burden and to his generally physically active life.

Other members of the craft own donkeys which carry, lashed across their backs, ordinary undressed water-skins, or else earthenware bottles fixed in a wooden frame and hanging on both flanks of the beast. Others, more important still, possess a number of ponies of poor breed and small value and which carry a water receptacle worthy of a description. This is a large bag of thick tanned leather fastened at the edges with copper bolts; it is wide at the bottom and has a narrow elongated opening or mouth. One of these hangs on each side of the pony, supported by means of a leather crosspiece across its back. The mouth of this water jacket is hooked up to a hook on the pony's harness; when it is carrying the water it is unhooked and held up for the water to be poured in and down for it to be poured out. Each water-jacket is filled by means of a sort of leather bucket, wider at the bottom than at the top, with a jug-like lip and a wooden handle runnning down one side, with which to scoop up the water of the river and to tip it into the narrow mouth of the jacket. These ponies are, as often as not, driven by small boys, sometimes absolute children, who sit on the leather cross piece and guide their patient beast with a rope or chain attached to its mouth. They seem to spend their time shrieking and belabouring the animal with a stick, or, sometimes, a chain, or prodding some wretched sore on its back. Driven thus, particularly when the water skin is returning empty, the pony will gallop or canter rapidly over the cobbled streets, yet these children, sitting cross-legged on its back, never seem to fall off, so accustomed are they to the habit of the country of riding by balance. The filler, who generally seems to be the man in control, stands in the river up to his knees filling and refilling the ponies' water-jackets as they arrive.

Needless to say, the condition of ponies and donkeys engaged in this work, is terrible; it must almost needs be so when one considers the nature of the burden borne for hours on end. Owing to that burden, one cannot see often the sores on its back, but a look at its tortured eyes is generally enough. Their condition, however, when animals of this kind are brought to the veterinary hospital for treatment, is unbelievable. Beasts doing this class of work generally belong to some contractor in a good way of business, and he would hold such contracts as watering the main roads in summer, providing water for the various *hammams* or public baths, or filling the water cisterns of large households. Smaller houses are served by donkey or man-borne water, the donkey driven by a small boy as a rule. Each *saqqa* has his regular clients, and generally he takes payment of a few pence per skin of water on delivery and gives no credit at all. Of course the fellow who peddles the water through the streets, gets a better return per skin of water carried, especially in summer, but in the cold winter his trade must be small. The man with the regular clientele at so much per skinful for household purposes has, however, the more regular and satisfactory returns. Of course, if the pedlar is in luck, some Believer, wishing to perform a pious act, will buy up a whole skinful and instruct the *saqqa* to deliver it gratis to all comers, particularly beggars and poor folk, this is quite a common way of practising philanthropy. Sometimes indeed, the *saqqa* himself, with the sublime charity of the poor to the poor, will give to such wretched ones free of charge receiving in return the blessing of Allah.

The water delivered in the town by these agencies, is usually in a condition which defies description, and a bacteriological examination would, one has reason to believe, disclose the germs of most internal diseases. At any waterside approach, one may see cloths being washed, sheep, donkeys, horses being bathed, personal ablutions, involving a prodigality of soap, being performed, household refuse and filth of all descriptions being thrown into the water and a yard or two away, not necessarily upstream, waterskins being industriously filled. The marvel is that human life can exist at all and that enteric and similar diseases claim comparatively so few victims. Doubtless however, physical immunity is obtained through long usage; yet the well-known "Baghdad Boil" or "Aleppo Button" so disfiguring in its effects, is said by some to arise through drinking bad water.

The water delivered at the house by the *saqqa* is generally very muddy, and no wonder, when one considers the agitation that the water nearest the river banks is subjected to. It is therefore put through a *hub* or filter. This consists of an enormous jar of porous clay usually quite large enough for Marjana to hide her robbers in, although there are many sizes, the smallest holding perhaps a gallon. This jar rests in a four-legged wooden framework so that its round or pointed bottom is a foot or two above the ground, under it a smaller non-porous jar or other utensil being placed to catch the water as it percolates through the filter. It is then used for household purposes and may be considered clear of mud, but not, unfortunately, of germs. It is this *hub* that the *saqqa* pours his water when he arrives with his full skins. After a short time, the coating of slimy mud inside the *hub* becomes very thick and the water percolates with difficulty; the receptacle must then be discarded and replaced by a new one.

The water purveyed by our picturesque friend, the itinerant water seller of the market streets, is in truth, *eau naturel* although it is certainly not *aqua pura*. The liquid which flows from the hole in the untied foot of the goat-skin, which had hitherto been covered by a broad thumb, has, most probably, not been even through a *hub*, and the same may be said of that of the more well set up tradesman who possesses a long, decorated brass spout attached to his skin. The water which flows into the brass cups, contains enough bacilli to slay an army, and the European who essays to drink it is a bold man indeed.

Until the East becomes modernised, the *saqqa* will remain and perform his vital public duties, but the days that see the flotation of water supply schemes are bad days for those of his craft. In the future life doubtless, he will rest for ever from his very laborious days, for is not Paradise described in the Quran as: *Jannatin tajri min takhtiha'l anhar*—"gardens through which flow streams of water," and the *saqqa* will not be needed, a water supply being already installed.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor St., W.1.

SCHOOL OF ORIENTAL STUDIES, LONDON INSTITUTION

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

Book Reviews and Notes.

FROM SYRIA AND NEJD.

'THROUGH INNER DESERTS TO MEDINA." By the Countess Malmignati (London: Philip Allan and Co., 10s. 6d. net).

The value of this book lies in the fact that it is the record of an attempt made to reach the great uninhabited region of Arabia known as the Ruba el Khali, the "Empty Quarter" that was the unattained ambition of explorers like Wellsted, von Wrede, Halevy, and Leo Hirsch, and, to come to our own day, of Mr. St. John Philby. That the intrepid lady who is the author of this volume should have failed in her quest is, in view of the experiences of earlier travellers, hardly to be wondered at: the marvel rather is that a European woman should have dared to hope to cross a desert which it is not certain that even an Arab has traversed. And so of this great South Desert we still, in the words of Dr. D. G. Hogarth know "about as much as Istakhri knew in the tenth century, and about as little as Hajji Khalfah recorded in the seventeenth."

Some time before the War—no dates are mentioned in this work—Countess Malmignati set out from Damascus with the intention of penetrating the Syrian Desert and Nejd and so of getting through to the Indian Ocean. To this end she employed the assistance of Mahmoud Bassam—the same old Arab, presumably, who once helped Miss Gertrude Bell in her wanderings and who now is of infinite assistance to the Nairn Transport Company. Through his offices she attached herself to the Roalla tribe (a section of the Anizeh) who at that time were round Palmyra. Under the special protection of the Sultan Al Tayar, she moved with the tribe southwards to the Hamad Desert, and thence though the El Wadian Desert on to the wells of Mbehara, which were the *dirat* of the Roalla. The party was now approaching real desert, east of the Wadi Sirhan, and it was somewhere, apparently (the authoress's geographical indications are far from precise, and her one map is, in consideration of the importance of her journey, ridiculously inadequate) in the neighbourhood of Jof, that a fight between the Shammar tribe and her Roalla might have earlier frustrated the expedition. However, the Roalla were sufficiently victorious for the trek south, through the inner deserts and along unbeaten tracks, to be resumed. Aim was made for the Wadi-al-Umstarri (the Wadi Rumma?), and is was now learned from the Sherrarat, friends of the Roalla, that big events were taking place at Hail, and that fighting was universal throughout the country. (It is curious that no direct mention is anywhere made of the Wahhabis, nor of their country, Nejd). The great purpose was nevertheless held to, although the authoress confesses to having felt qualms on having to move with the Sultan to Zilfi (near Boreidah, in Nejd), where he wished to exchange camels for horses. The country she was in is familiar to readers of Palgrave, Doughty and Philby. She was now half-way to the Ruba el Khali; another nine hundred miles, or two months' marching, and the northern fringe of the Empty Quarter—the fringe which possibly no European has ever seen—would be reached. The lack of fanaticism of the northern Arabian tribes had so far enabled her to do more than probably better-equipped male explorers who tried to approach the Sandy Desert from the south or the Red Sea could with the fiercer southern tribes.

On, therefore, through the Dalma Desert, across the Wadi-al Mustarri, they moved; and at last they came to Zilfi. Here they stopped; and the Countess noted that "the Arabs there were unfriendly; they had not the proud, open look of the Bedouin, but had sly, cunning, shifty eyes." And, as it happened, it was there some Arabs—doubtless Wahhabis—who prevented the "Roumi" from passing another step south. Not without some trouble, however, did they deter her from her purpose, for she attempted flight into the Dahna Desert (hoping to rejoin the Roalla at Safáh). But the Arabs of Zilfi captured her and brought her back to their town, whence the Roalla tribe had by this time disappeared. She was taken to Boreidah, and westwards through Shabitiyah, Rass, Zirzawaiyah, Hanakiyah, Sabiyah, to Medina. Here the severely tried explorer succumbed to a serious fever, from which she had by no means recovered when she took the train back to her beloved Damascus.

Hers was a worthy quest, indeed, and magnificently essayed. But of her recounting of it one cannot speak except with restraint. It is at times graphic, although it is to find any passage that is meet for reproduction; but her narrative is too loose, discursive, and, it must be admitted, too fulsome to enable her book, which might so easily have been of the highest value, to rank with the classics of Arabian travel. Perhaps she may, in her next book—and it is gratifying to learn from her that she intends again to make for the Ruba el Khali—remember that science is no less a necessary ingredient than poetry of the "mistresspiece" of travel. Yet, although no serious student of Arabia can fail to be disappointed with this story of a journey through the inner deserts of the Peninsula, there is none that can afford to miss reading so unusual and daring an adventure. One should add that the photographs in the book are supplemented by some naive but curiously attractive drawings by the author. One or two of her sketches of the desert—"God's great caravanserai"—are worthy of her pen pictures of the same moving subject.

LORD PLUMER.

Field-Marshal Lord Plumer embarked at Tilbury on the P. and O. liner Cathay on August 14 for Palestine, where he will take up the duties of High Commissioner. Accompanying him was Lady Plumer, and Major Brooke, his son-in-law, who is acting as his A.D.C. Captain Drummond, his private secretary, is following shortly. Amongst those present to bid farewell to the new High Commissioner were:

Major-General Sir John Hanbury-Williams (his Majesty's Marshal of the Diplomatic Corps), Colonel Weston Jarvis, Lady Rookwood, Mrs. Hamilton, Air Vice-Marshal J. M. Steel (representing the Air Ministry), Sir Samuel Wilson, Permanent Under-Secretary (representing the Colonial Office), Admiral Sir Alfred Chatfield and Lady Chatfield, Major and the Hon. Mrs. Orpen, Mr. W. Brooke, Mrs. Bairstow, Captain Plumer, Miss Plumer, Miss E. Plumer, Mrs. Mackenzie Lowe, Captain and Mrs. Gubbins, Mr. Rideout, and several others.

KING FAISAL.

King Faisal of Iraq, accompanied by a few members of his suite, arrived in London on Auugst 17, having travelled from Paris *via* Calais. He was received at Victoria Station on behalf of the King by Sir John Hanbury Williams, Chief Diplomatic Marshal. Others present included Sir Percy Cox (former Administrator in Mesopotamia), Mr. Nigel Davidson (late Judicial Adviser to the Iraq Government), Major H. W. Young (of the Colonial Office); and Colonel de Satgé (representing the Colonial Secretary). King Faisal entered a Royal carriage which was awaiting him and drove to the Hyde Park Hotel, where he will stay.

PERSONAL AND GENERAL.

TO-DAY

August 20, 1925 (New Style).
August 7, 1925 (Old Style).
Muharram 23, 1344 A.H., of the Moslem Calendar.
Ab 23, 5685, of the Jewish Calendar.

Princess Nicholas, of Greece, left London on August 12 for Paris.

Sir L. Worthington-Evans, the Secretary for War, has cancelled his intended visit to India.

Field-Marshal Viscount Allenby and Viscountess Allenby arrived last week at Stanley, Perthshire, for fishing.

Lieutenant-General Sir Harold and Lady Walker have arrived in England from Bombay.

The marriage of Mr. Hugh Whistler and the Hon. Joan Ashton will take place in Bombay on October 1.

Sir Edward Grigg, the newly appointed Governor of Kenya, and the Hon. Lady Grigg, will leave London for Kenya on September 4.

General Sir Ian Hamilton has left 1, Hyde Park Gardens on a visit to the Mediterranean Fleet, where he will be the guest of Admiral Sir Roger Keyes in H.M.S. Queen Elizabeth.

Prince Nicolas of Roumania left London last Sunday for France to join his mother, the Queen of Roumania, who is staying at St. Briac.

Major-General the Maharajah of Patiala had the honour of being invited to Luncheon with their Majesties at Buckingham Palace on August 11.

The marriage arranged between Mr. R. E. Gibson, C.I.E., I.C.S., and Mrs. E. K. Gordon will take place on August 28, at Long Bennington, Newark.

The Master of Elibank and the Hon. Mrs. Gideon Murray left town last week for Vernet-les-Bains, where they purpose making a stay of a few weeks.

The marriage between Mr. Percy Ball, Sudan Political Service, and Maraquita Laura (Tiny) Phipps will take place at Bromham Church on September 10.

The marriage of Mr. Maxwell Elrington, the Border Regiment, and Beryl Joan, daughter of Mr. D. G. Ommanney, Indian Police, and Mrs. Ommanney, of Karachi, India, will take place on September 5, at Loughborough.

The marriage arranged between Captain J. L. Carter, M.C., 4th (Sikhs) Battalion, 12th F.F. Regiment, and Joyce, second daughter of the Rev. and Mrs. Cockerton, Musbury, Devon, will take place on Friday, Sept. 25, at Bomaby.

The engagement is announced of John Robert Vaughan-Russell, H.B.M. Vice-Consul, Damascus, son of the late Mr. John Stanley Vaughan-Russell, of Merthyr, and Charlotte, daughter of the late Mr. William Kirkaldy Willis, J.P., of Cardigan House, Richmond, and Mrs. Kirkaldy Willis, of Albany Park, Kingston.

The engagement is announced, and the wedding will take place shortly, of Charles George Cooper, of Calcutta, eldest son of the late Mr. C. H. Cooper and Mrs. Cooper, Redington, Northwood, Middlesex, and Audrey, youngest daughter of Mr. and Mrs. E. S. Holman, Queen Anne's Mansions, London, S.W.1.

The marriage arranged between Captain John Sydney Lethbridge, M.C., R.E., eldest son of Lieut.-Colonel S. Lethbridge, O.B.E., late R.A., and Mrs. Lethbridge, and Katharine Greville, second daughter of Sir John Maynard, K.C.S.I., C.I.E., I.C.S., and Lady Maynard, of Townsend, Simla, and late Bovey Tracey, Devon, took place last Saturday at Simla.

The Empress Marie Féodorovna of Russia and the Crown Princess of Roumania were sponsors at the baptism of the infant daughter of Mr. W. B. Leeds and Mrs. Leeds (Princess Xenia), which took place on August 12 at the American Cathedral, Paris.

A marriage has been arranged, and will shortly take place between Captain Arthur Iron Sargon, D.S.O., of Mosul, Mesopotamia, and Miss Hilary Margaret Stratton, daughter of Mr. and Mrs. H. Duncan Stratton, of Enton Lodge, Witley, Surrey.

The marriage arranged between Mr. Maysmor Nowill, of Athens, younger son of Mr. and Mrs. John Nowill, of Sheffield, and Muriel, only daughter of Mr. and Mrs. Arthur Travers, of Godalming, Surrey, will take place on September 1, at Compton, near Guildford.

Major-General Sir Richard William Ford K.C.M.G., C.B., D.S.O. (late R.A.M.C.), of King's Hotel, Brighton, who saw service in Egypt, in Burma, and in South Africa, and died on March 31, aged 67, left estate of the gross value of £15,297, with net personality £15,193.

A marriage has been arranged, and will take place next April at Quetta, India, between Captain Charles Douglas Ogilvie Pugh, R.A., only surviving son of Mr. Cecil Pugh, Briarwood, Broadstone, Dorset, and Mrs. Pugh, and Enid Mary, youngest daughter of Mr. H. A. Rose, I.C.S. (ret.), Milton House, St. Brelade's, Jersey, and Mrs. Rose.

PROMOTIONS, APPOINTMENTS, ETC.

Colonel C. Kirkpatrict has been appointed to command temporarily the brigade area at Zhob.

Major-General D. J. Collins, C. B., C.M.G., has been appointed to officiate as Director of the Medical Services in India during the leave of the holder of the appointment.

Colonel C. G. Fuller, Commander of the Devon and Cornwall Territorial Infantry Brigade, succeeds to the command of the brigade at Alexandria next month.

Mr. Kumar S. Roy has been elected President of the Bengal Legislative Council in succession to Mr. Evan Cotton, defeating the Swarajist candidate by sixty-seven votes against sixty-one.

Major-General Sir Herbert C. Holman, K.C.B., C.M.G., D.S.O., has been posted as officiating General Officer Commanding-in-Chief of the Southern Command, India, whilst Lieut-General Sir Harold B. Walker is on leave.

THE WEEK AT HOME.

London, Tuesday Morning.

A Coal Commission.

It is arguable whether the modern tendency of Cabinets to hand over their problems to non-political bodies is good, but, granted the principle, it is not open to doubt that the Prime Minister, in his endeavour to find a solution of the Coal Question, has been absolutely right in in inhibiting the presence of mineowners and of miners on the Royal Commission which will begin work next month. To gather a small group of able and impartial men, and so to get a unanimous report—that is the aim of Mr. Baldwin.

Neither side, of course, approved of his decision to exclude partial representatives. On the whole, however, it has pleased the miners more than the owners, who appear to attribute the whole trouble to "British Reds." Naturally, both the owners and the miners will be called to give evidence, but if they were actually on the Commission it is fairly obvious that no unanimity of judgment could be secured. With this exception, however, the Commission is to be constituted on the widest possible basis, for its terms of reference include nationalisation, royalties, unification, coke, by-product industries, and the relation of the coal industry to other industries. From which fact alone is manifest the sincere desire of the Government to arrive at a just solution or decision.

Subsidies.

One would not have thought that there were many who approved of the Government's resolve temporarily to subsidise the coal industry apart from its being a warding off a hideous lock-out, but it appears, from a letter that Mr. John Wheatley, Minister of Health in the Labour Government, has sent to the Press, that there are political observers who approve of subsidies on principle. According to this argument, a nation is wise to pool its economic resources. "The coal department is poor. The beer department is rich. Agriculture is starving. Pleasure cars are booming. The number of super-tax payers is increasing. Engineers cannot get a living wage." This, from the author of last year's Housing Act, is both ingenious and ingenuous.

But it is not convincing. The normal Englishman, who remains at heart an individualist, will certainly not consent to the prescription of subsidies as a regular thing. He has consented to a subsidy for coal, only because he feels, and always has felt, that coal is a far more national industry than is anything else—he feels, incidentally, that the coal industry will never be divorced financially from the State again. But to suggest that he is complacent about it would be untrue.

Catholicism and Christianity.

Few weeks can elapse nowadays without some symptom of the strife that is being incessantly waged between the Anglo-Catholics and the "broader" type of Anglican churchman. The latest dispute concerns a sermon preached by the Bishop of Birmingham in Westminster Abbey last June—a sermon to which the Anglo-Catholics took great exception, and concerning which they wrote to the Archbishop of Canterbury. It appears that Bishop Barnes introduced the contention, more familiar, possibly, in the nineteenth than in the twentieth century, that the Christian Sacraments originated at least in part in Pagan mystery cults—a contention which would, it is claimed by the English Church Union, be deadly to historic Christianity if it could be sustained. What also appears to have riled the Anglo-Catholics is the Bishop's allegations (1) that "Catholicism" and "Christianity" are different and mutually opposed systems, and (2) that Catholics worship a God who is not reasonable and loving. In face of such statements as this, what, the English Church Union asks, is the good of talking about *rapprochement* with the Holy Orthodox Church of the East?

The Archbishop of Canterbury's reply is typically English. It is strictly non-committal: "I realise the importance of the matter . . . you will realise that I do not regard the matter lightly." Whether one should glean from this that Dr. Barnes will soon be wishing that he were again a mathematical tutor at Trinity, or that the Anglo-Catholics should consider themselves as having been politely snubbed, I leave you to decide.

The Achievement of Hobbs.

The agony of Hobbs that for so long and stupidly the newspapers have described is at last at an end, and his equalling at Taunton of W. G. Grace's record of 126 centuries has been greeted by all cricketers with the admiration it deserves. Hobbs is not only a great bat—no man could possibly bat better, though there will always be some to say that men like Victor Trumper or Woolley or Macartney were more attractive—he is, as all his captains have been quick to realise, and what some at least of his predecessors have not been, a most likeable man and a sporting cricketer. He is on the field not only when he is batting, for even at the age of forty-two he is the equal of any cover-point that we have. But all these things are perfectly familiar to all followers of *the* game, and the news of his great achievement will certainly have reached the most distant parts of our Empire long before these lines are read. His name will now, more than ever, be an Imperial watchword.

The New Waterloo Bridge.

It has been extremely fascinating to watch the engineers at work on the new Waterloo Bridge, and now that it is finished one can but look with pride on this English accomplishment. It was opened to traffic last week, and the experts have stated that they are quite pleased with it. To the ordinary pedestrian there is something queer about the quivering of the bridge, even though he knows that the oscillations are intentional. For, being built on "cushions," the bridge in its early stages is bound to suffer very considerable vibration, but when it has settled down this shaking will probably decrease.

An immense difference in the traffic is already visible. Everything going South uses the new bridge, but things will, of course, be just as bad if the Vandals have their way with Rennie's Bridge.

Broadcasting Dead Voices.

One of the most interesting enterprises that the British Broadcasting Company have tackled is their reproduction by arrangement with the gramophone companies, of the voices of dead artists and celebrities. This reproduction will have all kinds of interest, and is a very different affair from the freakish attempts to reproduce the sounds of cats and elephants and birds and human crowds.

Indian Affairs.

CURRENT TOPICS.

The New Delhi.

Miss Cornelia Sorabji, in a letter to *The Times*, pleads for a great pageant to mark the opening of New Delhi for occupation by the Government of India—"it would be both a tragedy and a blunder if the Government were to slink into Delhi . . . and to leave such an occasion unpageanted and unsung would be to write ourselves down as utterly without the larger imagination."

There is a strong party in India that believes that a Royal Prince—perhaps even the King himself—will preside over a stately and formal opening of the new Capital: and that this function will take place in the near future, probably during the coming winter. It is, however, permisible to express the hope that they are mistaken. Building operations on the Secretariat and the Council Chamber have been pressed on, to the neglect of those on Government House, which certainly cannot be ready next winter, and quite probably not by the winter after. There have been recent occasions when the formal opening of an exhibition has been marred by the fact that it was not by any means ready: an unfortunate state of affairs that has led to humorous or sarcastic comment, harmless enough in such a case, but not to be faced in the case of the Capital of a great Empire. And, even when all the public buildings of Delhi are finished, the new Capital will still be only in the nature of dry bones; the living city that is to spring up round it shows little sign of arrival—perhaps it will grow with the trees that have been planted along its roads, and one may expect them both to reach maturity together. But, whatever the decision may be, as regards the formal opening of New Delhi—for it is indubitable that it will have to have a formal opening—there is everything to be said against the presence of the King-Emperor himself to preside over it. It is not because their Majesties laid the foundation stone of the new Capital in a place many miles away from its present actual site; though, in a country with a mentality like that of India—or, for that matter, in any Oriental country—that counts for a good deal: it lies more in the great change that has come over articulate Indian opinion in the intervening years. Nobody who was present at the King's Durbar can ever forget the magnificent reception accorded to His Majesty—the whole-hearted, almost fanatical, loyalty that greeted him: but the more recent Royal visits had a sadly different spectacle to show. No one can doubt that the heart of India is still in the right place, or that the traditional loyalty of India to her Emperor still burns as brightly as ever; but, at the King's Durbar, there were no malcontent politicians to lead the honest peasantry astray, as there were in 1921 and 1922 and as there would undoubtedly be in 1925 or 1926. The ordinary Indian word that we translate as "loyalty" is, literally "truth to salt," and that is the only form of loyalty that can be offered to an impersonal alien Government—so long as its hand holds plenty of salt, so long may it expect to be loyally served; should another hand appear, offering a larger supply of salt, it might well expect to supplant the first. But in India there still is real loyalty—untranslateable into Hindustani, perhaps, but truly existent none the less: loyalty to the idea of the King, loyalty to the person of the King Emperor. Let us not give to the malcontent politician the opportunity of undermining that true and real feeling which found such splendid manifestation in 1911 but which, one can but fear, would not be allowed to repeat itself in 1926. The masses of India still remember, and still talk about, the coming of the Great King and the wonder of his visit; let them keep their personal loyalty, the greatest asset that British rule in India possesses, and do not let us expose them to the peril of lessening it or finally, perhaps, losing it altogether, through the machinations of malcontent politicians.

Swarajist Defeat in the Bengal Council.

The Swaraj Party in the Bengal Council have suffered a defeat in their first trial of strength since Mr. Das death, their candidate for President of the Council having been defeated by an Independent. The voting was close, the Independent winning by 67 votes to 61, all the other parties in the Council having combined to vote against the Swaraj candidate. The result is certainly a set-back to the Swaraj Party's hopes of absorbing the Independent Party in the Council, and some observers see in it a probability of the fusion of the Liberal and Independent parties in the Council into an anti-Swaraj bloc. It is, however, one thing for the Moderates—who did not run a candidate of their own—to give their votes in favour of an Independent, and against a Swarajist, in a matter of personal selection such as that of the President of the Council, and quite another for Independents to give their support to Moderates when the question at issue is assistance or opposition to the "bureaucracy"; so that it would not be wise to lay too much stress on the incident. The most that one can see in it is a revolt against Swarajist domination, very probably brought to a head by the frankly political election of a Swarajist Mayor for the Calcutta Corporation: and a reminder to the Swaraj Party that, though the strongest party in the Council, they still cannot command a majority without Independent help.

Indian Markets and British Producers.

Mr. George Pilcher's second article on the above subject appears in the *Financial News* of August 11. The immediate result of the separation of the Railway Budget has been a considerable programme of fresh railway construction, for the first time since the outbreak of the War. Before the War, railway expansion had proceeded but slowly in India, during the War it was non-existent, and since the War all the money that could be found for railway expenditure was needed for the rehabilitation and improvement of existing lines and the completion of lines already in hand. But one of the most crying needs of India is increased railway construction which has, in the past, invariably been followed by rapid increase in the productivity of rural areas and the consequent expansion of land revenue. The Railway Board has put forward a programme which will extend to the construction of over two thousand miles of line, to be completed by 1932, at a total cost of about 33 millions sterling; but, with British prices what they are, it is a question whether, with justice to the Indian taxpayer, even a considerable proportion of the money can be expended in Great Britain. If the British Government were to accord a loan, on specially favourable terms, to the Indian Government in respect of a large programme of railway construction, with the proviso that the money was to be spent in Great Britain, the result would be of the greatest value to India, whose urgent requirements in railways are vastly greater than even the imposing addition now proposed by the Railway Board, and of almost equal value to Great Britain owing to the extra employment accruing in the iron, steel and engineering trades: and the expenditure of the British Government, in granting such a loan, would be immediately offset by the reduction of outlay in respect of extended unemployment benefits under the Insurance scheme.

It is interesting to note that the programme of new construction, referred to in Mr. Pilcher's article, includes the connection of the main Bengal-Nagpur line between Calcutta and Bombay with the new port of Vizagapatam, now in process of construction. This will open up an area of 125,000 square miles in the Central Provinces, at present wholly without railway communication. The first independent railway budget, says the *Financial News*, "for the first time brings into foreground view the fact that the possibilities of transport development in India are still large." This is, indeed, to understate the case—the possibilities are much more than large: but, if the first independent railway budget has brought even so much of the real facts prominently into view, it has done a very great service, on which, one may reasonably hope, it will improve in the years to come.

THE INDIAN REFORM ACT.

By COLES PASHA, C.M.G.

[This article was written before the publication in England of Mrs. Besant's "Commonwealth of India" scheme.—ED.]

Seeing that we had all been led to believe by the Press that Lord Reading's presence in England would enable the Cabinet to come to some decision as to the future working of the Montagu-Chelmsford Act, Lord Birkenhead's declaration of policy in the House of Lords was somewhat disappointing. All he told us was that no decision had been reached and nothing would be decided for the present as the Act must have its full ten years of trial. His Lordship hinted, however, that we might possibly hear more of the Cabinet's policy when Lord Reading was once more in Simla and had consulted the Council of India. We were also given to understand that any alternative scheme which might be put forward, with the full support of the Swarajist leaders, would receive a sympathetic hearing: and, although it was subsequently explained by Lord Winterton in the House of Commons that this must not be taken as an invitation to make such proposals, there can be little doubt that Lord Birkenhead meant what he said, and we shall probably hear more later when Mrs. Besant arrives in England. But what seems to the present writer the most remarkable part of Lord Birkenhead's speech is the statement that, at the close of the ten years' trial, everything must necessarily be "thrown into the melting pot." Now, if anything can be gained by a continuation of the Diarchy experiment, it surely is that, as experience is acquired, more and more subjects will be transferred to Indian administrators, till finally the whole machinery of Government is Indianised. At least, that is how many of us have interpreted the object of the Act; it is surprising, therefore, to learn that the Act is not what we imagined it to be, but is only a temporary expedient having no connection with the future constitution, which will have to be entirely re-cast at the close of the experiment. Could the late Mr. Montagu have heard that his pet project was destined for the "melting pot," he surely must have turned in his grave. It seems remarkable also that Lord Chelmsford, the joint author, took no part in the debate and had apparently nothing to say in the defence of his scheme.

Alternative Schemes.

But we must all agree with Lord Birkenhead that co-operation is essential whatever constitution may eventually be evolved and, if this co-operation can be obtained, any scheme of Home Rule, short of our immediate departure, is surely worth consideration.

It is many years since the present writer served in India and, apart from what he has learned from the Press, he has no knowledge of what Mrs. Besant or any other Swarajist leader is likely to propose. But when Mr. Montagu was framing his scheme, he failed, in the writer's opinion, to attach sufficient importance to the composition of the existing units of Government, notwithstanding that it is just this organisation which is in reality the crux of the whole Home Rule problem. For it must be borne in mind that these units of administration were not originally thought out for the better government of the people, but are the result of accident rather than design, the fact being that the old East India Company, partly by conquest and partly by bribery, kept adding to its dominions till what was a Fort became a Presidency, and Native States were absorbed into Provinces as their rulers were disposed of or bought out. After the Mutiny the whole show was taken over by the British Government as a going concern, and it was no one's business to inquire whether the grouping of the various units of Government could be improved on. There was indeed no necessity to do so, as at that time there was no question of Government by the people for the people. It may reasonably be asked, supposing that these provincial units have been strung together in such a haphazard fashion, how it is that our rule has been so successful, and the majority of the people are (or were) so contented? The answer is simple: the organisation of the district unit saved the situation; whatever the higher grouping may be, the districts are homogeneous and are administered in their own vernacular by the most able Civil Service in the world. The man in the mud-hut was sure of a hearing in his own language, and soon learned to look upon the district officials as specially delegated by the Almighty to look after his interests. The Provincial Units might be composed of half a dozen different races speaking various languages, but what did it matter to the man in the mud-hut, so long as the district Officers administered justice and the Pax Britannica did the rest? But, directly you introduce self-government, the whole temperature is changed and the composition of the electorate becomes of paramount importance.

Reconstruction of Provinces.

This Mr. Montagu failed to realise: he had made up his mind that diarchy was all that was required, and diarchy it became. Those who disagreed with him, and argued that, before democratic rule could successfully be introduced, these Provincial Units must be reconstructed, were told that, "it would be very unwise to unite the sufficiently difficult task of revising the Constitution of India with the highly controversial labour of simultaneously revising the political geography of the entire country."

The writer maintains that our first task should have been to break up the Provincial Governments into homogeneous States, to each of which self-government could have been granted with some hope of success. The "man in the mud hut" might then have been asked to elect representatives to form a Parliament or Council to rule each State. There need have been no diarchy, but, until able to walk alone, the respective State Cabinets, selected from the elected Parliament, might have been controlled from above, the division of authority being horizontal, not vertical. The Members might have been elected by a direct suffrage, the possession of a mud hut or other property being a qualification for a vote. Mr. Montagu was strong on the subject of a direct vote, and rightly so, provided that the constituencies are not too large. But, in a country like India, where the seat of government is often remote, even from the District Headquarters, it is absurd to expect the electors to have any influence on their representatives except perhaps in the District Councils.

It is true that the larger the constituency the better chance there is of obtaining able representatives, but the vote is then governed by party organisations: you cannot have it both ways. It is a parody of democracy to ask the "man in the mud hut" to elect a representative in even a Presidency Council, much more so when he is called on to select a Member for the All India Assembly. The "man in the mud hut" had far better be called on to vote direct for the village Elders alone—for all other bodies the vote should be indirect.

An Example.

But let us see how this proposed reconstruction can be carried out, say in the Bombay Presidency. This Presidency contains roughly 18,000,000 inhabitants grouped in four divisions, and each division has a distinct language of its own—Marathi, Guzarathi, Sindi, and Canarese. There are, of course, many dialects spoken, but these four languages are all recognised as official for administrative purposes, in their respective spheres.

The people composing these groups are quite as distinct as the nations of Europe, though a century of British rule has given them one form of Government and may have created certain other common conditions of life. It would seem clear, therefore, that, if the inhabitants of this Presidency are to reap any real benefit from self-government, there must be four States each with a Parliament or Governing Body of its own. The only question is, whether these four States should form a Western Confederation of States or should be directly under the Government of India. The writer is of the opinion that although, as a temporary measure, whilst the States are under tutelage, the control of the Presidency Government

Digitized by Google

must continue, in the final Constitution there should be no governing authority interpolated between these States and the Government of India. As already stated, in these State Parliaments there should be no diarchy: each should have its own Ministers or Cabinet selected from the elected Parliament, administering all subjects other than those reserved for the Government of India. The reserved subjects might be Army, Customs, Coinage, Post, Railways, Board of Trade, Penal Code (not regulations), Appointment of Judiciary (other than Magistrates), Change of Constitution. The Government of India might delegate the administration of certain of these reserved subjects to the Presidency Government as a temporary measure. But no provision should be made for a Presidency Constitution, as, when the States can stand alone, the Presidency Government would entirly disappear and the several States would (under the scheme suggested) be federalised into one Government of India. But this might be reserved for future consideration. For the moment we should concentrate on creating these self-governing State units and mothering them until they can walk alone.

Supervision.

Whilst under tutelage, the States' Government might be supervised by the Governor of the Presidency (in Council). As regards legislation, the Presidency control should take the form of a Senate or Second Chamber with powers of revision and veto. As regards general administration (apart from the reserved subjects, the administration of some of which the Government of India might delegate to the Presidency Government) the Presidency control should consist largely of inspection and report by British Inspectors attached to the Presidency Government. Moreover, during the transition stage, the Government of India should reserve to itself (or to the Presidency Council) the right to suspend the legislative powers of a defaulting State by the simple process of dissolving its Parliament and refusing to convoke another, the duties of the Ministers dispensed with being, for the time, taken over by officials nominated for that purpose. At the expiration of the tutelage, a Senate or Second Chamber within each State would take the place of the legislative control, and the general supervision exercised by the Presidency Government would be handed over to a Resident Political Officer. Under this system the control which would be brought to bear from above would be more effective than Diarchy. At the same time, as long as a State Government did not abuse its power, the controlling authority would have no cause to intervene. Some States might obtain their independence earlier than others whose Ministers were less competent; but complete independence is surely a goal which all will do their best to attain, and the transition stage would soon pass.

It is contended that this form of Home Rule will give the local leaders not only ample opportunity for demonstating their ability for State Rule, but will also better qualify some of them for All India Government later. Moreover, it will enable the "man in the mud hut" to be introduced to the mysteries of democracy, and taught to take an interest in the administration of his District Council and State Legislative Assembly, or whatever they may be called.

What is perhaps still more important, this decentralisation will lessen the chance of the whole machinery of Government being captured by foreign extremists to further their own ends. Last, but not least, the control brought to bear from above will be general and not partial, as it is at present. Moreover, the Ministers will feel that the subjects reserved for the Government of India are reserved for a Federal Government, not because they are not to be trusted. They will, too, soon realise that, in this hierarchy Government, as long as they do not abuse their power they will not be interfered with from above, as they themselves will not interfere with the District Councils below.

Indian States.

In connection with the constitution of these States and their future confederation as a Federal Government of India (when we are no longer there to control) there is another very important question which no one in authority appears so far to have considered. Native States ruled by Princes, and small Republics (as British India will then have become), are a somewhat incongruous mixture for confederation.

So long ago as June 1923, the present writer ventured to deal with this side of the problem in an article which he contributed to the *Contemporary Review*. Seeing the important part which Monarchs have played in all Eastern Governments of the past, the idea suggested itself to him, that we should create from British India a series of Constitutional Monarchies, resuscitating if possible the heirs of the reigning houses of the past, or permitting the adoption of others, if the heirs are not to be found. In this way we should have (on the Bombay side) once more a Peshwa in the Deccan, a Rajah of Bijapur, an Amir of Sind (there were many Amirs in the past, but one would suffice now), and a ruler in Guzarat, possibly the present Gaikwar of Baroda. This would bring the whole of India under one form of Monarchic Government, though British India would be Constitutional Monarchies and the remainder absolute Monarchies.

It was considered that by the force of our example, and possibly with the assistance of promises of an extension of territory, we might be able to persuade the rulers of the existing Native States gradually to adopt our methods and themselves develop into Constitutional Monarchies. The Council of Princes might then perhaps be the first step to confederation, and serve a more useful purpose than it does at present.

But until these States, whether Republics or Monarchies, are all going concerns, "Hands off the Government of India" should be our declared policy. There might be an advisory Council of Indians and frequent conferences of State Prime Ministers, but the Government of India should remain purely bureaucratic till we had devised some stronger ties than sentiment and the English language to bind the several States to each other and to the British Empire.

Indianisation.

The English language has in a measure been our undoing, as the ability to debate in English has given the Pundit classes an inordinate idea of their own importance, whereas the martial races would give them very short shrift were we to depart. Lord Birkenhead in the House of Lords dwelt on the Cabinet's determination to continue the Indianisation of certain regiments and explained the difficulties in this connection. But to the writer it seems strange that we should be still relying on Sandhurst and not long ago have created Military Schools in India after the Egyptian model. Undoubtedly this Indianisation of the Army is a very important factor in this Home Rule problem, and we will return to it later. Before doing so let us inquire to what extent the Civil Service has been affected by Mr. Montagu's scheme of diarchy, as no one can pretend that we can achieve success without the support of the British Civilian, whom the Indian Politician is endeavouring to supplant. Human nature being what it is, one can hardly expect the Civil Service as a whole to take an enthusiastic part in its own obsequies, although the novelty of governing by explanation and discussion may have attractions for individual members.

The Civil Service.

This Civil Service problem comes under two heads—(1) the welfare and contentment of existing members: (2) the method to be adopted to keep up our supply of recruits. The existing members must be assured that, whatever may be the eventual fate of the Service, the individual will not have his official life shortened and, financially speaking, he will be no worse at its close. The recommendations of Lord Lee's commission should help considerably to reassure them. As regards recruiting, University graduates must be equally convinced that although they may not, as of yore, be able to reach exalted official posi-

Digitized by Google

tions, which must be reserved for politicians, they may nevertheless be sure of a periodical rise in pay irrespective of how or where employed: and, further, that their prospects will not depend on the reports of Indian Ministers. Judging from the lists of candidates offering for competition, the Universities are not altogether satisfied on either score. In the matter of this open competition the writer holds somewhat strong views, as he considers that it was a mistaken policy, in the past, ever to have allowed natives of India to compete for the I.C.S. and that to continue to do so now is absolutely wrong. A superior Civil Service is certainly required for India as it is for England, but this service should be recruited in India from the Secondary Schools and Universities as is done at present in Egypt. The I.C.S. is, however, something apart and above a superior civil service as its members are (or were) called on to govern rather than confine themselves to ordinary clerical work. The I.C.S. still requires British recruits (though in restricted numbers) capable of governing. Indian youths with special aptitude in this respect have now a political career opened to them and it will not help matters to have a governing Civil Service of Indians as well as governing Indian politicians. Moreover, the pay of the I.C.S. is (or was) calculated to attract the best British manhood to a life of exile in unhealthy surroundings and climate. India, being a poor country, cannot afford to pay its superior Native Civil Service at such liberal rates. Let us then reduce our demand for British recruits to suit the requirements of the *new* conditions, but let us reserve the new I.C.S. for British born. In fact, as the men we now require must be endowed with exceptional qualities of tact, etc., it might even be wiser to close down the competitive examination altogether, leaving it to a Board of Selection to appoint a certain number of Honour Graduates from each University, as has been done with great success for many years for the Egyptian and Sudan Civil Services.

Further, apart from a fixed salary with periodical rises, the selected candidates must be covenanted with and assured that they are the servants of the Government of India and, if serving in an Indian State or under an Indian Minister, they will still remain subject only to the Government of India as regards disciplinary measures that may affect their future career. This does not mean that the Indian Ministers are not to be trusted, but is intended to encourage many would-be recruits who now hesitate on this account.

In the space of an article it is not possible to discuss all the details of the new service (and it is a new service that is required); but, briefly speaking, all Englishmen serving in the Provincial or State Governments should be regarded as servants of the Government of India and liable for duty wherever sent. They should be brought on to a general list, and all their rights and privileges should be guaranteed by the British Government; though this would not prevent any Englishman from severing in the future his connection with the Government of India and taking service on his own in one of the new States. Indeed, seeing the gradual liquidation of the Service which is in view, they should be encouraged to do so.

This may sound paradoxical: on the one hand to seek to attract recruits, on the other to encourage others to leave by granting them favourable conditions to do so. But one must recognise that the experienced officials seeking service in a Native State on their own are likely to promote honest administration quite as much as the young Englishmen whom these States will still require, but who are now fearful of trusting themselves unless protected. Moreover, an Egyptian experience teaches one that Native Ministers are more willing to obtain expert foreign advice when unhampered by any right of appeal, which they regard as detrimental to their authority. We should, therefore, encourage men to cut themselves adrift and replace them by younger men under protection whom we should do our best to attract.

Briefly there should be two classes of Englishmen serving in India in the future: (a) those holding covenants with the Government of India, (b) those who have been engaged direct by Native States or who have remained in the service of Native States after severing their connection with the Indian Government.

The Army.

But, if the organisation of Provincial States and the creation of a new Civil Service offer no insuperable difficulties, it is quite another matter when we get to the Army, the Indianisation of which we have latterly heard so much of. If the States are the foundation on which the superstructure of the Government of India has hereafter to be erected, the Army is the bedrock on which depends the holding together of the whole construction. Indianisation is the problem, but not the Indianisation that the Indian agitator is clamouring for. The separate States would not be allowed to keep up armies of their own, beyond military police for the maintenance of internal order. What is required is the creation of an Army which will owe allegiance to the Government of India and the Government of India only, and which will take the place of the Pax Britannica. The magnitude of the task will be realised when we remember that, since the Mutiny, our policy has been to have no officer class in the Indian Army. Until quite recently there have been no Military Schools, as we have thought it safer that all subordinate Officers should be promoted rankers, and that all above Company Commanders (Subedars) should be British. An officer class has therefore to be created without the assistance of the traditions which have proved so helpful in fashioning the British Regimental Officer. We are endeavouring to create this tradition by sending Indian Cadets to Sandhurst, but the regimental training is the great difficulty, as we must either spoil the young officers by making them Company Commanders straight away, or, if they come in as subalterns, they must associate with British officers in their mess, and be commanded by rankers on parade, a combination not conducive to discipline. Perhaps it would be wiser to attach them to British regiments until qualified for Company Commands.

But our difficulties by no means end here, as the best fighting forces of the Indian Army are regiments recruited in the north, southern regiments even having Punjabis and Pathans to stiffen their ranks. The Deccan Mahrattas, who proved very reliable during the War, are the exception. Will these northern regiments accept orders except from officers of their own race? Must fighting qualities be sacrificed by a mixture to prevent the northern regiments developing into a Pretorian Guard when we are gone?

One gathers from the Press that, apart from the Military Schools, the Government is endeavouring to create an Officer Class by granting special facilities for the education of youth of the martial races. This creation of an Army Conscience, if we may call it so, seems to be rather asking for trouble for the Governing Politician when we are gone. However, sufficient unto the day is the evil thereof: the first thing we have to create is an Indian Army which will be loyal to the Government of India and subsequently to whomsoever we hand over as the Federal Government.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, July 29.

The Den of Lions.

Mahatma Gandhi was the guest of the European Association at their meeting this week, and anything further from Daniel in the den of lions and lionesses—as he put it—could hardly be imagined. He had accepted an invitation to explain why he had made Mr. Sen Gupta the Mayor of Calcutta, and, by so doing, he had accepted the responsibility for the appointment. He was perfectly frank; he stated that his prime motive had been to give more power to the leader of the Swaraj party; his hosts were equally frank, and described the appointment as pure political jobbery, and Gandhi, while disliking the terms, apparently was unable to pretend that it was anything else. There

Digitized by Google

was an ingenuous atmosphere in the room, and this probably accounts for the fact that nothing happened when Gandhi impressively insisted that he was "dying to co-operate with the Europeans." What does it all mean? Is he the delegate of the Swaraj party with an olive branch concealed in the folds of his *dhoti*? Is he a leader who has given up hopes of leading the party which has already left him, and is seeking new disciples with more stability of outlook? Or has he been brought down to earth by Lord Birkenhead and begun to understand that some form of Government has to be maintained in the country? It appears clear that he is doing more than putting out feelers in the direction of co-operation, for he has since met some prominent members of the Anglo-Indian community and discussed politics with them, and these may be the first steps to an attempt to work up a conference which shall consider a draft constitutional scheme in response to the suggestion of the Secretary of State.

Negotiations?

Considerable stir has been caused in Swarajist ranks by the publication in the *Bengalee* of an article which alleges that, prior to the death of Mr. Das, he had been engaged in secret negotiations with Lord Lytton for the working of the Reforms on certain lines. The article states that a Ministership had been offered to Mr. Das, which he had tentatively accepted, but, as he could not make his followers see eye to eye with him, he had been constrained to refuse the appointment by letter. After the Ordinance arrests, the matter was revived, and an agreement was arrived at, but, as the terms of settlement contained no reference to the release of political prisoners, the disturbance at the Faridpur Conference resulted. It is stated that Mr. Das, in his last letter to Pandit Motilal Nehru, set forth at length the terms of settlement, and this letter has been referred to by the Pandit as "the last will and testament" of Mr. Das. The *Bengalee* states that, following a conference with Mr. Gandhi, the Pandit offers himself in place of Mr. Das in the furtherance of the scheme. The terms of settlement include the transfer to Ministers of all subjects with the exception of the Police, and agree that Diarchy is to be worked until the 1929 Commission. It was only to be expected that the Pandit would at once declare that the account was "an entire perversion of the truth," and he is backed by Mr. Sen Gupta. Mr. Gandhi, however, admits that communications were going on between Lord Lytton and Mr. Das, although he would not call them negotiations. Although *Forward*, as the recognised organ of the Swaraj party, denies the allegations, the *Amrita Bazar Patrika* rather welcomes the idea, and, in view of the acceptance of a seat on the Skeen Committee by the Pandit, further developments will be watched with interest.

The Swarajist in Power.

The Swarajists are actually governing and running the Corporation; and they are establishing a policy and a practice which will be familiar to those who know India. It is impossible to transact any business expeditiously, particularly in those departments which have Swajarists at their heads; among the executive there are still a few of the old school who privately deplore present conditions, but for obvious reasons they do not publish their opinion that affairs are approaching a point at which normal working will be impossible. Swaraj councillors regularly interfere directly with the executive, who now work in an atmosphere of continual intrigue, and a new type of obstruction takes the form of keeping matters off the agenda of the meeting which should approve them; in a recent case the whole file had been lost by a councillor, who took it home to read, because it interested him! It is not surprising that a feeling of distrust has arisen which makes heads of departments diffident in giving a decision, even on minor points, and the result is that matters of the slightest complexity are delayed inordinately by references to committees. In short, the Swarajists are giving an object-lesson in the working of a Western form of government by an Eastern mind which refuses to accept advice or control, or to co-operate with experience. The hand of a strong man is required at the helm of the Corporation, and it is yet to be seen whether Mr. Sen Gupta can carry out the assurances he gave at the time of his election. His first duty is to keep the Councillors in their proper place, and the task is one which will not tend to make him popular, but the course is one he must take if he is to save the face of his party.

Protection.

At last Government have taken a step which appears to show that they have not altogether sold themselves body and soul to the Protectionists who up till now have found the ear of the Tariff Board always wide open to listen to their demands for financial salvation at the expense of the pockets of the general public. The Cement Companies demanded a bounty, and, in recommending that this should be granted to them, the Tariff Board read a homily on the suicidal effects of price-cutting competition carried to unreasonable limits. It is by no means clear that the companies have had much choice in the matter; cement making and distribution is a highly organised industry, and it is probable that more than a little dumping takes place in countries where it is necessary to maintain markets in the face of attempts to establish new industries. There are several powerful companies manufacturing in India, and in the end it appears probable that they will be forced to come to terms with their competitors who have had an uninterrupted field until recent years. The Indian market is by no means negligible, and it will not be given up by home interests without a struggle; in the end the consumer will probably have to pay more, as he usually does, but Government have refused to take any action at present in the direction of a bounty for local manufacturers.

Markets.

There is but little change in regard to jute to record this week. The market is still very firm, although little trade has been passing, and the mills appear to be holding out for a weakening on the part of the sellers. Up-country prices are no longer rising, and buying for the July shipments appears to have been completed. Gunnies show practically no change, although at the time of closing there is a very slight easing in hessians. The Share Market reflects confidence in jute, and there have been more dealings in the current week, particularly in the investment stocks. Prices closed somewhat better than for last mail. There has been some activity in coal shares, but this is chiefly confined to the Yule group, the market apparently considering that recent railway contracts promise well for these. Tea shares are quiet, and, having regard to the satisfactory state of the tea market and the reserves which have been created in the last few years, the present quotations appear to be attractive. Rubber shares are attracting less attention. The prominent feature of the Share Market during the week has been the increased attention paid to sound investments.

The tea market does not alter; enquiry is limited to the better grades, and anything good in them is at once sold. There is no chance in the piece-goods market, and the Bombay mill-owners are demanding protection against foreign competition; if it is impossible to distinguish between the countries of origin they would have an import duty on all goods. Exchange has remained steady throughout the week, but there has been very little business passing, and this applies also to the money market; there are no takers of short money at one per cent.

INDIAN LABOURERS' WAGES.

(By Our Bombay Correspondent.)

Bombay, July 30.

At the end of last week the *Indian Daily Mail* in a leading article attacked as thoroughly unreasonable the refusal of labour to consent to a reduction of wages. It pointed out that wages still stand at about 75 per cent. above the pre-War standard; that the cost of living, as modified by the Rent Act and the fact that mill hands can draw most

Digitized by Google

of their clothing at cost price, has not risen in anything like the same proportion: and it finally insinuated that the only benefit the coolie got from high wages was that he could work for shorter hours and still have more money to spend on drink.

The *Indian Daily Mail* is controlled by a member of a family of Indian mill owners, and its views are not likely to be very sympathetic towards labour, but there seems to be a good deal of truth in its statement of the present position.

It is no longer possible to speak of the Indian industrial labourer as the most miserably paid man in the world. A good weaver in a Bombay cotton mill draws anything up to £4 per month. This is no doubt a great deal less than his opposite number in Lancashire, but for reasons of climate alone it goes, or ought to go, very much further.

In the case of a man with a moderate family, most of the difference disappears at once over the necessaries of clothing and firing. Omitting the women's clothes, the Indian coolie can dress himself and his three children on the equivalent of half a dozen cheap cotton shirts a year: that is literally all: and, if it is considered that he has no need of any fuel except for a small cooking pot, the margin available for house rent and food is not so very greatly in favour of the Englishman.

And when it comes to house rent the margin disappears entirely. It is for the present impossible to believe that the Indian coolie has any conception at all of a European standard of comfort, privacy or decency. When quarters are found for a labourer—and many of the cotton mills both under Indian and European management have attempted the problem—which are known to be well within his means, he, without exception, fills them to the brim with friends, relations and paying guests, while the accommodation provided for them is left vacant.

When it comes to food it is not really an argument in favour of the poverty of the Indian workman, that his *vis à vis* in Lancashire has a better and more varied table. The Indian has what he needs, and what is suited to the climate, for far less than is necessary to support an Englishman. And the conclusion seems clear that, after providing for the necessaries of life the Indian coolie on £4 per month has a much larger surplus than an Englishman who draws much larger pay.

Very much lower down the scale of employment, this is proved by the case of the people who are supposed to be the worst paid in the world: the agricultural labourers on gardens of every kind. Their pay is very small indeed: but practically everything is found for them: and, when every six months or so they return to their villages for a holiday, they take with them their savings to an average of £5 a piece. It is surely safe to assume that the ordinary farm labourer at Home cannot save more than that.

And where do the savings go? A great deal is, of course, locked up in India's annual purchases of gold and silver which disappear into the hut of every coolie in the country: a great deal goes in wedding ceremonies, drink and gambling: and the balance simply maintains the coolie in idleness till it is time for him to earn a bit more money.

It is claimed for Prohibition in America that it increases the working man's efficiency, and enormously improves his standard of living. Some years ago, a crusade of total abstinence had a good deal of success on the Bengal coalfields. The result was to decrease the output of coal by 25 per cent. The coolie found that, by giving up drink, he need work only three days a week.

The *Indian Daily Mail* is, therefore, very probably right in thinking that a reduction in wages would do the working classes very little harm. But, while its contention is that wages are too high, it would probably be much more just and truthful to say that the standard of living is too low. Bullion to the amount of £70 million passed through Bombay last year. Yet in all the quarters of the mill hands there is not a single picture, even cut out of an illustrated paper, and not a single stick of furniture which would escape burning in an English slum.

Questions are at this moment being asked in the House of Commons about the miserable conditions under which labour exists in India: and it is perfectly true that those conditions ought not to be tolerated by any European country, though whether they are in fact much worse than those of many English slums is doubtful. But the conditions are very far from being the fault of the employer alone. Even from the most sordid point of view, it would suit the mill owner just as well to employ men with an interest in improving their standard of living: and in fact much has been attempted in the way of solving the housing question both by the mill owners themselves and, on a grand scale, by Sir George Lloyd's Development Directorate.

INDIAN EXCHANGE.

There is little change to report in this market, although a temporary weakness in Bombay towards the end of the week, was reflected here and business was feasible at 1/64 under 1s. 6⅛d. There has however, been next to nothing doing, and the reports to hand from the Indian markets indicate a similar state of affairs there.

Forward rates, however, do not seem to show any signs of sagging, and September telegraphic is quoted at 1s. 6 5/32d., with higher rates for delivery further ahead. October is called 1s. 6 3/16 and November to January 1s. 6 7/32d. with no inquiry except at 1/32 higher. Monday's rate in London was steady at 1s. 6⅛d. for spot, buyers, but no sellers under 1/64th over. The latest forecast of the Jute Crop is far short of the bumper yield which some optimists predicted. Various estimates put the outturn in the neighbourhood of 93 lakhs of bales and as all markets are practically bare of stocks, there is no reason to anticipate any further setback in the price which should rather show some early signs of recovery. It may be safely assumed that the Continent will endeavour to obtain supplies without delay, as they were caught short at the end of last season.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

170, Strand, London, W.C.2.
Tuesday Morning.

Sudan Trade Expansion.

The figures for the trade of the Sudan for the five months ended May 31, which are now available, show that the improvement that has taken place during the early months of this year has continued. The value of the total trade for the period is £E4,654,629 which compares with £E4,311,760 for the corresponding period of 1924. Of this total exports account for £E2,302,073, re-exports for £E129,530, and transit trade for £E46,438. The corresponding figures for 1924 were respectively £E1,932,430, £E86,391, and £E21,173. The value of the imports was £E2,176,588 as compared with £E2,271,766, the total comprising Government imports of the value of £E728,680, a decline of £E165,065, and public imports of the value of £E1,447,908, an increase of £E69,887. The figures above show that this year the total and that there may be a not unimportant balance of trade in favour of the Sudan. When the developments now being carried out in the Sudan are borne in mind the significance of these figures will be readily appreciated. As was emphasised in these columns last week in the special section devoted to the Sudan this summer marks a turning point in the country's economic history. The opening of the Makwar Dam will have many other consequences besides enabling cotton growing in the Gezireh. It means that the country now has a new source of wealth at its disposal which will help to raise the standard of living and by so doing will immensely increase the importance of the Sudan market. As Great Britain takes increasing supplies of cotton from the Sudan so the Sudan in its turn will import goods on a constantly widening scale. The market is one, in fact, which it behoves British traders to watch most carefully in the future, for if our trade is to expand as it should it will be by catering for the market's changing and increasing requirements.

The Sudan Market.

Representation is, of course, a vital matter as regards the Sudan market. The question is referred to in the current issue of the monthly journal of the Sudan Chamber of Commerce, mention being made of the growth of applications during recent months from British and Continental manufacturers for suitable agents. "Until quite recently," it is pointed out, "it appeared to be considered quite satisfactory that an agent in Egypt should cover both countries, the important fact of distance apparently being overlooked. Very few realise even now that the earliest reply to a letter posted from Egypt on a Tuesday may only be expected by the following Sunday week."

Harvest Prospects.

If the expectations for this year's harvest are borne out it is evident that the economic situation in South-Eastern Europe will undergo a great improvement. Last year in the Balkans the harvest was generally indifferent, and Yugoslavia alone was able to export agricultural produce on an extensive scale. This time the reports are fairly good from all quarters, in particular from Roumania where it is anticipated that the production of grain will be far in advance of last year's totals. The result of a bountiful harvest in South-East Europe will be that the region as a whole will require to import a greatly increased supply of goods, and, given adequate enterprise by British traders, I shall look to see the figures for British trade with the Balkans in the next twelve months show a marked improvement. The stagnation of world trade, which has existed so long to the embarrasment of our manufacturers, and which has been very marked in some of the Near Eastern markets, has been due in the main to the lack of purchasing power. A few good harvests would go far to restore that vital factor in world economics.

Anglo-Austrian Bank.

At the general meeting of the Anglo-Austrian Bank the Chairman, Sir Herbert Lawrence said that in the past year slight but definite progress has been made in Central Europe toward the restoration of normal relations, and he added that "in the Succession States in which we operate it is possible to state that there has been a definite improvement." During the past year the bank took a leading part in arranging for the provision of substantial amounts of short-term credits for financing industry in Austria, the movement of crops in Hungary, the production of sugar in Czecho-Slovakia and tobacco in Yugoslavia. The general position of the bank, Sir Herbert Lawrence stated, is greatly improved and stabilised. "Everywhere," he continued, "excepting in Austria, we are earning good profits, and in Austria we believe that, in the near future and with an improvement in the industrial situation, our prospects are reasonably good."

Overseas Banking.

News of the most notable consolidation of banking interests that has taken place for a considerable period was forthcoming last week. It was announced that with the passage of the Colonial Bank Bill the Colonial Bank will be re-incorporated. Its name will be changed to Barclays Bank (Dominion, Colonial and Overseas), and it will proceed to carry out arrangements which have been made for the acquisition of the businesses of the Anglo-Egyptian Bank and the National Bank of South Africa as soon as the special resolutions which will be submitted to the shareholders of those banks have been passed and certain legal formalities have been carried out. Thus will be brought about an extensive consolidation of banking interests throughout the greater part of the African Continent, and it is justly anticipated that this policy is calculated to promote development and further the interests

BANK OF ROUMANIA LIMITED

of Imperial trade. Barclays Bank have held for some time a controlling interest in the Colonial Bank and in the Anglo-Egyptian Bank, as well as an interest in the National Bank of South Africa, and when the consolidation has been completed Barclays Bank will hold a controlling interest in the institution. Barclays Bank and Barclays Bank (Dominion, Colonial and Overseas) will work in close co-operation. Mr. F. C. Goodenough, chairman of Barclays Bank, will be chairman of the re-incorporated bank, while the deputy-chairman and vice-chairman will be Sir Herbert Hambling and Mr. Edmund Henry Parker respectively, who hold similar positions in Barclays Bank. The existing board of the three overseas banks will act as local boards for each institution, and certain members of each local board will join the central board.

The Rubber Position.

Developments in the rubber market during the past week have been in accordance with expectation. We are now in the period when the demand for rubber is at its lowest, hence the relative weakness in the quotations for the commodity. I say relative because the present price is actually of course, most satisfactory for the industry, and one which it could not expect to maintain for any length of time. In the last quarter of the year buying is usually on an extensive scale, and in view of the strong position of the commodity it will not be surprising if we have a further period of firm prices before the end of December. What will happen next year depends entirely on the expansion of demand. If it goes on increasing at the present rate it is perfectly evident that the production will be unable to keep pace with it, but if the price is raised unduly then it is obvious that consumption will be checked.

Indian Banking.

Elsewhere in this issue will be found the full report of the Imperial Bank of India for the half-year ended June 30 last. The period was marked by a number of changes in the bank rate, which was 6 per cent. at the beginning of the year, and in January was raised to 7 per cent., being subsequently reduced to 6 and then to 5 per cent. These changes have their inevitable repercussion on business, and the results obtained by the bank must be regarded as satisfactory in the circumstances. There was actually a reduction of Rs. 4,00,531 in the gross rereipts, while expenses rose by Rs. 5,41,508. The net profits were Rs. 69,39,660, and the dividend is maintained at 16 per cent. per annum free of tax, Rs. 10,00,000 being allocated to the reserve and Rs. 5,00,000 to pension funds, making the carry forward Rs. 21,97,874. Nine new branches were opened during the half-year leaving fifteen to be opened before the end of January next for the completion of the bank's undertaking to open a hundred new branches within five years.

Rubber and the Suez Canal.

It is interesting to note that the Suez Canal has been appreciably affected by the increasing demand for rubber in recent years. In 1919 the shipments through the Canal amounted to 186,000 tons. The total was 371,000 tons in 1922, while last year it was 411,000 tons. This year the figures will obviously be much higher.

Commentator.

COMMERCIAL CORRESPONDENCE.

EGYPTIAN COTTON.

To the Editor of The Near East and India.

Sir,—The importance of cotton-growing in the Sudan, so well described in your issue of August 13, is proved by the demand in this country for Egyptian cotton at a fair price. At the 28th annual meeting of shareholders of the English Sewing Cotton Co., held in Manchester on July 22, the Chairman (Mr. T. F. Tattersall)) attributed the reduction in the Company's earnings largely to "the high prices of raw material, especially Egyptian cottons and yarns." He added "that most of our products are made of yarns spun from the best qualities of Egyptian cotton."—I am, Sir, yours, etc.,

R. R.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.)

EGYPT.

Electrical Installation.—The Ministry of the Interior, Savoy House, Cairo, invites tenders for the supply and installation of an electric power station and distributing system for the town of Minieh. The contract comprises the supply and installation of diesel-driven generator sets and cables, etc. October 1. (D.O.T.)

Machine Tools.—The Ministry of Education, Cairo, invites tenders for the supply of machine tools required for the Port Said Technical School. September 17. (D.O.T.)

Diesel Engine.—The Ministry of Education invites tenders for the supply of:—(1) One 100 h.p. vertical Diesel engine coupled to a generator of 65 k.w. (2) One n.h.p locomotive multitubular boiler. September 17. (D.O.T.)

Sewage Pumping Machinery.—The Director-General, Main Drainage Department, No. 2, Sharia Abbas, Cairo, invites tenders for the supply, erection and delivery of sewage pumping machinery, comprising 3 large and 1 small Diesel engines and 3 large and 1 small centrifugal pumps, complete with auxiliary plant. November 2.

Machinery, Etc.—The Controller, Technical, Industrial and Commercial Education, Sharia Qasr el Aini, Cairo, invites tenders for the machinery and machine tools required for the engineering and the carpentry also the metal plate sections of the new Mansurah Trades School (September 9); hand tools and machinery required for the Workshops of the School of Engineering (September 17); supply of Diesel engine, generator, switch board, etc., and locomotive boiler, for Assiout Model Workshops; machinery for the Engineering and Carpentry Section, for Port Said Trades School; machinery for the Engineering Section of the Bulaq Technical School (September 17).

Trunk Record Table.—The Superintendent of Stores, Cairo, invites tenders for the supply of a trunk record table. Copies of the specification may be obtained on application, against payment in advance of 500 milliemes (not acceptable in postage stamps) at the Stores Department, Saptia (Cairo), or Gabbary (Alexandria). September 10.

Iron Bolts, Etc.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo, invites tenders for the supply of a considerable quantity of galvanised wrought iron bolts with nuts and washers. September 12.

TURKEY.

Machine Tools and Furnaces for Metal Smelting.—The "Commission d'Achats des Postes et Telegraphes," Stamboul, Constantinople, invites tenders for the supply of lathes, milling machines, shearing machine press, etc., also metal smelting furnaces. September 8. (D.O.T.)

Machine Tools.—The Department of Marine at Constantinople invites tenders for machine tools. September 8. (D.O.T.)

YUGOSLAVIA.

Various Goods.—Tenders are being called for in Belgrade for cylinder boring machines, closing date September 3; boiler plates, closing date September 3; chemicals, colours and varnishes, drugs, cotton wool, bandages and gauze. (D.O.T.)

A DALMATIAN RAILWAY.

The New Lika Line.

(From Our Own Correspondent.)

Liubliana, August 13.

July 25 was a day of rejoicing for all Dalmatia, because upon this day the new Lika Line, as it is called, was thrown open to public traffic with all the pomp and circumstance appropriate to the occasion—the first railway line of note to connect Dalmatia with the interior beyond the mountains. And Dalmatia had waged a long and weary struggle for this connection.

Even as under the domination of Venice she had fought hard, and practically in vain, for road connection with Bosnia, so she strove for decades, and scarcely less vainly, under Austria-Hungary for the same connection by rail. "All commerce must gravitate towards Venice," was the watchword of the Republic of the Lagunes; and "All commerce must go to Trieste and Fiume," was the policy of Austria-Hungary. And so Dalmatia, with her magnificent natural harbours, remained neglected, and the considerable natural wealth of the province was unexploited.

The only gleam of light in Dalmatia's history was the short Napoleonic interlude, when Dalmatia was incorporated with the Kingdom of Illyria. With equal zeal and efficiency the French built roads in all directions, and Dalmatia was given at least the most necessary connection with the interior. There is a characteristic anecdote told with reference to this road-building activity of the French. It so happened that the Emperor Francis Joseph visited Dalmatia, and several times found occasion to ask who had constructed this or that excellent road. "The French, Your Majesty," was the invariable reply, until at last the Emperor remarked, "What a pity they didn't stay here a little longer."

Dalmatia's fight for railroad connection dates from 1850. In that year the Diet of Dalmatian communes, chambers of commerce, and business corporations passed a resolution recommending the construction of a Dalmatian railway line. Every year this resolution was passed afresh, but the Austrian Government remained deaf to all appeals. Not until she had lost Venice, in 1866, did Austria begin to consider the question of a Dalmatian railway.

Years passed, however, before anything definite was done in the matter; but at last, on April 30, 1873, the Vienna Parliament passed a Government measure whereby the concession for the construction of a Dalmatian Locomotive Railway" was duly granted. But that very year the financial crash on the Vienna Exchange prevented the carrying out of the concession. It was impossible to raise sufficient private capital for the scheme, and so a second Bill was passed, in the following year, whereby the State itself undertook the construction of the line.

The first part to be built was the section from Split to Perkovitch, then the section from Perkovitch to Sibenik; and on October 4, 1877, this 70 km. section was opened for traffic. This, however, meant no more than that Split and Sibenik were now connected by rail, whereas Dalmatia as a whole remained as much cut off from the interior as before. And now began the real struggle for the continuation of the construction of the Dalmatian line. As Bosnia was at that time still under Turkish sovereignty, it was decided to take the line through Lika, and for that reason it came to be referred to as the Lika Line.

The Dalmatians were most eager in their agitation for the completion of their line. Not once did the Vienna Parliament or the Austro-Hungarian Delegation meet but the Dalmatian deputies would urge the construction of the Lika Line. All the same, work progressed but slowly. In 1883 the line was carried from Perkovitch as far as Knin. But here fresh difficulties arose, because now it was necessary to secure the favour and permission of the Budapest Government as well for the line. After lengthy negotiations the continuation of the line was again resolved upon in 1907, and finally, under the pressure of the military crisis, work was actually resumed in 1912.

In 1914 work upon the line was in full swing, and in October of that year the new section from Ogulin to Plaski was inaugurated. Then the war once more delayed operations, and further construction was suspended until 1917. The Revolution in 1918 brought yet another setback for the Lika Line. There followed the Italian occupation of Dalmatia, and all the material for the practically finished line was removed and taken away.

As soon as the Italians evacuated Dalmatia, work was once more resumed, and by 1922 the Gospitch-Gratsatz section (45 km.) was open to traffic. Next to be finished was the long section (117 km.) from Ogulin to Gratsatz, and finally the 64 km. section from Gratsatz to Knin. Hereby Dalmatia is at last linked up with the Continental world market, and Split, its most promising harbour, is placed in direct railroad connection with Belgrade, Zagreb, Liubliana, and Prague.

Not unconnected with the opening of the new and most important Yugoslav line is the highly interesting Adriatic Exhibition at Split, which will be open for a few weeks more. Visitors to the exhibition are entitled to the usual half-fare on all Yugoslav railways accorded to all visitors to fairs, etc., in this country.

On August 15, M. Duca, the Roumanian Foreign Minister, opened at Sinaia a conference attended by representatives of the Press of Czecho-Slovakia, Yugoslavia and Roumania. A permanent bureau is to be formed which will work at Bucharest, Prague, and Belgrade in turn, and will deal with problems common to the Press of all three countries with a view to settling them by mutual agreement. The Press bureaux of the Foreign Offices of the three States are to work in close liaison with this Permanent Bureau.

Cotton and Cotton Goods.

THE EGYPTIAN COTTON MARKET.

The Alexandria Commercial Company in their report for the week ended August 6, state:—

Since our last report the futures market has been quiet, the undertone being weaker; the net changes on the week are the following: Sakellaridis 0.57 dollars down for November, 0.40 dollars down for January, 0.38 dollars down for March. Ashmouni, 0.70 dollars down for August, 0.57 dollars down for October, 0.55 dollars down for December. The weaker tone of our market may be attributed to the drop of about 1 C/ at New York and the very poor trade demand for both prompt and new crop shipments. The conditions of the textile industries in England and on the Continent are not at present altogether satisfactory either on account of threatened labour troubles or exchange depreciation, etc., and this naturally is not conducive to purchases of cotton on a free scale on the part of spinners. The activity of our market has been the result of straddling operations. November Sakel and October Ashmouni have been sold against purchases of Egyptian in Liverpool and American in New York. At the August 1 tender Crs. 3,250 dockets were issued. The week's receipts amount to Crs. 338 against exports Crs. 45,768; the stock stands at Crs. 365,443.

Spot: Minet el Bassel has been a very dull market this week and demand from abroad has fallen off still further for prompt shipment. Sales amount to about 2,800 B/s of which we estimate 1,200 B/s Sakel, 1,500 B/s Uppers and 100 B/s other varieties.

Sakellarides: has been in moderate request. The medium and lower grades continue to attract what little demand there is and the good grades continue neglected. Spot differences are unchanged for the medium grades, rather stiffer for the lower grades and somewhat easier for the good qualities.

Ashmouni and Zagora: have been in fair request and a moderate business has been done principally in the low and medium qualities, high grades being neglected. Spot differences are without much change except for Fully Good and Good which have eased somewhat.

Brown and Pilion: No business has been done in Brown and a retail demand has been met with for Pilion. Spot differences of Brown are quotably unchanged but for Pilion they are rather dearer except for Good Fair which is unchanged.

White: A few bales have been done. Quotations of Spot are nominally a little stiffer.

Crop 1925: Climatic conditions have been in general favourable. The present state of the crops tends to indicate that whereas the average yield of Sakel may be somewhat lower than in 1924, that of all the other varieties—Uppers, Zagora, Pilion etc.—will in all probability be quite equal to that of last year. The critical period of the water supply question is now over; it has passed without any real serious shortage being noted. The pink boll worm attack is developing; the proportion of bolls attacked varies considerably from field to field, 5 to 25 per cent. being the proportion found at present; on average, the attack may be considered as normal.

The Report of the Alexandria General Produce Association for July reads:

Lower Egypt.—The temperature during the month of July has been favourable to the cotton plants. They have made satisfactory progress, they look well but they have not developed as much as last year at this time. Flowering is general but from 8 to 15 days late, according to district. Generally speaking there are less flowers and fewer bolls on the Sakellarides plants than last year; as regards the other varieties the flowers and bolls are more abundant. Leaf worm has disappeared, the damage done by this pest is insignificant. Bollworm and pink bollworm have made their appearance but examination shows that the number of bolls attacked, to date, is less than in previous years. Water for irrigation has been sufficient.

Upper Egypt and Fayoum.—Under the influence of the favourable temperature experienced during the month of July the plants have continued to make satisfactory progress, they look well, flowering is finished and in general the trees are well covered with bolls. Some cases of bollworm have been reported. Water for irrigation has been sufficient.

The Report of the Ministry of Agriculture for July reads:

Weather was on the whole favourable to the growth of the plants and formation of bolls. The crop is, however, still about one week backward. Demands for water increased this month owing to irrigation of sharaqi. Some complaints were received of shortage of water; these came chiefly from localities at tail ends of canals. Such complaints were duly taken into consideration by the Ministries of Agriculture and Public Works and necessary compensation was given. Despite some hatching which did but slight damage, the cotton-worm attack is under control. The attack of wilt has not spread any further since last month: it has been most noticeable in lands under Sakellarides in Behera, Gharbiya and Daqahliya Provinces. The boll-worm infestation is not more, if not less, this year than at the corresponding date of last year.

MANCHESTER COTTON MARKET.

The Manchester Cotton Trade Review of the Imperial Ottoman Bank for the week ended August 15 states:—

During the past week there has been some falling away in the volume of business transacted. This is attributed to the decline which has taken place in raw cotton prices, and a feeling which prevails that still lower levels may possibly be reached. Spinners and manufacturers have, however, cut down their prices to such an extent that they are sure to fight hard to retain for themselves the benefit of cheaper cotton, and it appears doubtful whether, in the long run, buyers will reap any advantage from their present cautious attitude.

Yarn.—Business has not been so active as in preceding weeks, but the better feeling then noted remains. The annual holiday in the Oldham district is now very near, and will, of course, mean a considerable temporary curtailment in supplies. Quotations are slightly lower, but not to the full extent of the fall in raw cotton. Shipments of yarn in July amounted to 14,044,700 lbs., as compared with 13,272,800 lbs. in the preceding month and 12,665,000 lbs. in July last year.

Cloth.—Inquiry has been on a fairly extensive scale, but there is a reduction in the business actually carried through. An interesting feature has been the reports of large sales to the Russian representatives now in this country. India has taken a certain amount of light goods, but the heavier lines are difficult to move. A moderate business has been done for China, but little for Egypt and the Near East. Shipments of cloth during July amounted to 370,841,700 sq. yds., as compared with 337,963,300 sq. yds. in the preceding month, and 383,760,900 sq. yds. in July last year.

Raw Cotton.—The American Agricultural Bureau Report published on Saturday last gave the condition of the crop on the 1st inst. as 65.6 per cent., and the estimated yield at 13,566,000 bales This was not so good as expected, but the weather reports since the date to which the report was made up have been favourable, and prices, instead of moving up, have declined Business in Liverpool has been restricted both for American and Egyptian. The news with regard to the new crop of the latter continues to be favourable. Closing quotations yesterday were as follows:—American Middling, 12.93; Egyptian Fully Good Fair, 30.45.

Near East Markets.

SPECIAL MARKET REPORTS.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

Basrah, July 18.—The market is quiet. Business in colonial produce has been limited. Some business has been done for Mosul in wheat and rice. Some weakness has been shown in the European markets for dates, offers being made at prices that are not encouraging.

Jaffa, July 28.—There is nothing of special interest to report. Owing to the bad crops, considerable quantities of barley, maize, hay, etc., have been ordered from abroad.

Teheran, July 11.—There has been another week of stagnation, with no appreciable change in prices. The Government are considering the introduction of a Stamp Act. The draft has not yet been sent before the House, and it is considered unlikely that it will in its present form, which is very vague. It allows for a 5 shahi (0.25 krans) stamp on all commercial documents payable at sight; also 5 shahis for each 2,000 krans on other documents not at sight, such as commercial bills payable to bearer, bills of lading and other transferable documents. It also insists on commercial and stock companies depositing copies of their statutes and paying to the Government ½ per cent. of the capital of the institution before they may trade in the country.

Teheran, July 18.—The Teheran district is experiencing the hottest weather known for a number of years past, and this, with the very serious lack of water, is adversely affecting crops. The temperature in Teheran has risen to 107-108 degrees. Another result is a very considerable increase in the cost of animal transport.

AGRICULTURAL CONDITIONS IN IRAQ.

The following extracts are taken from the Agricultural Bulletin of Iraq for the month ended July 15:—

The calender month of June was comparatively cool particularly towards the latter end of the month. This coolness was accentuated by continued low relative humidity.

The unprecedentedly low level of the Tigris and Diala rivers is causing the greatest anxiety to cultivators. On the lower Tigris canals a great shortage of water is being experienced and pump-owners are almost all in difficulties.

In spite of a very efficient temporary dam at Table Mountain all the Diala canals are short of water, and this shortage is being particularly felt in the left bank areas where cultivators are seriously considering abandoning part of their summer crops. At the Departmental Experimental Farm on the Diala the position is very acute. The lift for the pumps is at present 27 feet and the river continues to fall. There would appear to be little hope of any amelioration of these conditions.

Threshing of winter cereals continues. Progress in this has been slow and delayed in some districts by revenue assessments, and the crop is by no means completely threshed. Prices have remained fairly steady during the period under report and are therefore still high, wheat varying from Rs. 380 per ton at Mosul to Rs. 200 per ton at Basrah, and barley being Rs. 275 per ton at Mosul and from Rs. 90 to Rs. 120 per ton elsewhere. High prices are being paid for new season's tibn, but animals are being largely grazed on stubbles.

The cotton crop is progressing favourably. In no plantation has the spotted boll-worm done any damage this year, and freedom from this pest must be attributed to the severity of last winter. The pest Platyedra Vilella, which caused some anxiety early in the season by an apparent tendency to migrate from holly-hock, its normal host plant, to cotton seems to have suffered from the hot dry winds, and is now almost entirely absent. The areas put down to cotton this year are small, but the yield per acre over the country will probably be higher than last year. A number of specially selected early strains have been sown in the Mosul district by cultivators in an experimental way, to determine the possibility of obtaining remunerative yields, if sown after all danger from locusts has passed.

One of the reasons for the lower acreage under cotton has been the universal desire to grow summer food grains such as maize millet, and rice. This desire is of course caused by the high prices ruling for all food-stuffs, and in some cases fantastic prices have been paid for seed of these crops.

It is reported that as much as Rs. 1,000 per ton has been paid for maize. The issue of millet seed to cultivators in the North whose winter cereals were a complete failure has checked the tendency shown by these people to migrate.

Good reports are to hand of the Basrah date crops; the palms have set an unusually heavy crop of fruit, and

yields are estimated well above those for next year. The high winds of late June and early July, caused a good deal of shedding, but this amounts to little more than a much needed thinning. Some growers feared an attack of Hashaf disease but an examination of the fallen dates showed only a very small proportion to be attacked by insects. Ghubber disease made its appearance in exposed plantations in late June. It is much later than usual and is probably too late to spread seriously.

The investigations into the locust pest continue. Over 11,000 acres of breeding grounds have been located and experimental work has elicited the fact that each acre may be expected to contain at least half a ton of eggs. The limited utility of egg-buying is distinctly indicated by these figures.

The life-history of certain insects parasitic on locust eggs is being studied and specimens have been sent to the Imperial Bureau of Entomology for confirmation of identification.

Following the exceptionally cold winter stone fruit has been exceptionally good in both quality and quantity. Figs and grapes are now coming into the market and the crops are reported to be good.

The July 1924—June 1925 exports of wheat from Iraq were 1,207 tons and of barley 31,359 tons, total 32,566 tons, as compared with 186,982 tons exported during the same period last year. The August 1924—June 1925 exports of dates from Iraq were 142,931 tons valued at Rs. 1,85,27,952 as compared with 124,076 tons valued at Rs. 1,57,01,581, exported during the corresponding season last year. The July 1924—June 1925 exports of wool from Iraq were 19,259 tons, as compared with 7,720 tons exported during the corresponding period last year

SUDAN PRODUCE.

The following extracts are taken from the report of the Central Economic Board of the Sudan Government for the month ended July 1:—

Cotton.

Blue Nile Province, June. Great progress has been made by the Sudan Plantations Syndicate in preparing the new land in the Gezireh Scheme now coming under cultivation for the first time. The seed for next season's rain cotton crop has been distributed.

White Nile Province, June. 1,273 sacks of American cotton seed have been distributed for rain cultivation. Great interest is shown everywhere, and, provided rains are good, the prospects are excellent.

Kassala Province, June. Land allotment is commencing. Applications received correspond to an area of 75,000 feddans, but land available is only 25,000 feddans. The indigenous tribes show greater enthusiasm to cultivate this year than last.

Red Sea Province, June. The total cotton crop was 31,450 kantars.

Upper Nile Province, June. Cotton is being planted in the Central District (Shilluk) and natives are being encouraged to plant in the southern portion of the district and on the Sobat river.

Berber Province, June. Over 3,000 kantars of cotton were brought in in the season 1924-25 at Shendi, of which a small amount was watered by private pumps, and the rest by sagias. This is more than double the previous year's figures. Also about 1,000 kantars of cotton were sold privately and despatched by special permit. The demand for seed for 1925-26 season has increased, and if conditions are good, a larger output can be anticipated next year. The Director of Agriculture hopes to be able to institute local auctions next year at Shendi and possibly at Berber.

Cotton Yield in Berber Province 1924-1925. Government pumps, 9,403 kantars of 315 rottles. Sagia cotton brought into Government Collecting Stations (including a small amount of privately owned pump cotton), 5,119 kantars of 315 rottles. Cotton grown by privately owned pumps and despatched by owners by special permits. Estimated at 17,615 kantars of 315 rottles; total 32,137 kantars. For the coming season, a larger amount of seed has been asked for, and given normal conditions, a larger crop is anticipated.

Miscellaneous.

Kassala Province, June. During the period May 28 to June 17, 394 ardebs of sesame were imported into Gedaref and 951 into Mafaza. Exports were 345 and 949 ardebs respectively. The average market prices were:—Gedaref £E1,525 m/ms. Mafaza £E1,507 m/ms.

Darfur Province, May. A May report states that the tobacco crop this year has been excellent. Nearly 3,000 kantars were exported during the month and it is evident this year's figures will far exceed those of any previous year.

Kassala Province, June. Imports of cattle for the season at Gallabat up to June 6, reached a total of 4,650 head. 231 sheep were exported from Kassala to Port Sudan. 134 cattle were exported from Gallabat.

COMPANY NOTES AND REPORTS.

IMPERIAL BANK OF INDIA.

The report of the Imperial Bank of India for the half-year ended June 30, states that with the Bank Rate at 6 per cent. when the half-year opened, and money in strong demand, it was soon found necessary to strengthen the cash resources by throwing a further two crores (in January) from the Paper Currency Department against trade bills, the first two crores having been borrowed on December 23, 1924. The Bank Rate was raised to 7 per cent. from January 22, and pressure for money increasing, a further four crores were borrowed from the Paper Currency Department in February. There was considerable tightness of money from then onwards until the end of April, when, indications of easier conditions becoming apparent, the bank repaid two crores to Government, followed, as pressure subsided, by further repayments of two crores each on the 18th, 23rd, and 26th May respectively. The Bank Rate was reduced to 6 per cent. as from May 21, and again reduced to 5 per cent. from June 18. The average rate for the half-year was 6.585 per cent.

The net profits of the bank for the half-year amounted to Rs. 69,39,660-11-7 which with Rs. 12,58,213-12-7 brought forward from the half-year ended December 31, 1924 made a total of Rs. 81,97,874-8-2. This sum the Governors of the bank disposed of as follows:—1, in payment of a dividend to the shareholders at the rate of 16 per cent. per annum free of income-tax Rs. 45,00,000; 2, transferred to reserve fund Rr. 10,00,000; 3, transferred to pension fund Rs. 5,00,000; 4, carried forward to the profit and loss account of the current half-year Rs. 21,97,874 8a. 2p.; total Rs. 81,97,874 8a. 2p.

Since the publication of the report for the half-year ended December 31, 1924, nine new branches have been opened, viz., Ellore, Gaya, Kasur, Khamgaon, Muzaffarnagar, Purnea, Thana, Tirupur and Wardha. This leaves fifteen branches to be opened before January 27, 1926, in accordance with the undertaking to Government to open one hundred new branches within five years.

AFRICAN AND EASTERN.

The directors of the African and Eastern Trade Corporation, Ltd., are recommending to the shareholders the payment on October 1 of a final dividend on the ordinary shares of 4 per cent., less income tax, making with the 4 per cent. interim paid on June 8, a total dividend of 8 per cent., less income tax, for the year ended December 31, 1924. The report and accounts will be posted to shareholders on the 18th inst., and the annual meeting will be held on the 28th inst.

The Air Ministry regrets to announce that as a result of an accident near Ur, Iraq, to a D.H. 9.A. of No. 84 Squadron at Shaibah on August 12, Pilot-Officer John Jellett FitzGerald, the pilot of the aircraft, was killed, and No. 348,244 A.C. 1 Frank Edward Leatherdale was slightly injured.

PORT CONSTRUCTION IN TURKEY.

The question of the construction of ports at Mersina, Trebizond, and Samsoun has been under consideration for some time past (says the British Commercial Secretary at Constantinople in his annual report). Rights were acquired by the National Bank of Turkey in 1911 in connection with the survey and the optional construction of the ports of Samsoun and Trebizond.

In July, 1924, a law was promulgated relative to the construction of a port at Mersina. According to this law:—(a) The survey work is to be carried out by the end of the financial year. (b) At the end of each year an estimate of the value of the work to be carried out in the following year will be made, and a corresponding credit will be provided for in the budget. (c) A credit of £T200,000 was provided to cover preliminary expenses in connection with these works.

Little progress has been made since this law was promulgated, but it would appear that previous to the promulgation of this law a French group had been negotiating with the Turkish Government. These negotiations had progressed to the extent that a draft contract was submitted by the group.

It was stated that as the result of a recent visit to Mersina of the late Minister of Works the question of the construction of the port was again under consideration and that the Turkish Government would be prepared to consider proposals from any responsible group.

Shipping Conditions.

Although there has been some improvement in port conditions in regard to towage and pilotage, no serious effort has been made to co-ordinate Turkish administrative methods of controlling shipping and port services, which continue to be reserved to Turkish subjects only.

The Government has had the opportunity of examining the reports submitted by such bodies as the Turkish Chamber of Commerce and the "Union Nationale de Commerce Turc," and although it would seem from above, no changes have been effected in maritime taxes certain measures based on the recommendations submitted by these organisations, such as the unification of port control, with the exception of a draft law governing certain port services, the administration of which is to be undertaken in Turkish ports by Turkish manutention companies, which will be held responsible for the loading and unloading of vessels, nothing effective has been done to date.

Certain advantages would be derived by the institution of competent institutions of the nature described above if the same are made responsible for (a) the adherence to manutention rates; (b) maintaining discipline in the ranks of the lightermen; (c) the safeguarding of goods in lighters.

In the meanwhile port control orders are continually being changed, and shipping companies find some difficulty in keeping up to date in respect to these changes.

Attempts have been made, however, to abolish guilds such as those of the hamals and lightermen. The hamals' guild has been abolished officially and tariffs revised, but no effective control exists, and, therefore, no very great improvement can be recorded. Tariffs have also been drawn up for the boatmen in the port of Constantinople, but here again there is no proper organisation to see that these tariffs are respected.

Further storage accommodation has been found by the Customs, but, as already stated, private transit sheds have been closed, and it still remains to be seen whether the Customs Administration can grant advantages equal to those acquired hitherto by the use of private transit sheds. If Customs charges are higher, if stevedoring is defective, and if proper precautions are not taken against theft and pilferage and for safeguarding merchandise from exposure to rain owing to defective upkeep of sheds, and if, as the result of lack of proper organisation, difficulties arise in connection with the insurance of goods stored therein, the acquisition of further Customs storage accommodation resulting in the closing of private transrt sheds may be prejudicial to trade.

Rates for Sanitary Dues.

In April, 1924, certain changes were effected in the rates for sanitary dues. The new rates are as follows:—Two piastres per ton on vessels up to 250 tons. Vessels over 750 tons now pay sanitary dues on the scale of 4 piastres per net registered ton, and although Turkish shipping no longer enjoys a preferential rate, the graduated scale of tariffs, which is 2 piastres per net registered ton in the case of vessels of below 250 tons and 3 piastres for vessels from 251 to 750 tons, is in favour of merchant vessels under the Turkish flag, as a large proportion of the present merchant fleet consists of vessels of small tonnage.

With the exception of the sanitary dues mentioned above, no changes have been affected in maritime taxes furnished in last year's annual report, but an ad valorem tax of 10 per cent. in the case of first-class tickets, 7½ per cent. in the case of second-class tickets, and 5 per cent. in the case of third-class tickets is imposed on the cost of tickets purchased for any journey in Turkey.

The situation as regards cabotage remains unchanged. Representatives of the allied concerns which, in virtue of the Lausanne treaty, are called upon to negotiate with the Turkish Government the conditions under which they may eventually be authorised to continue cabotage beyond the two years provided for in the Treaty, were requested to proceed to Angora in this connection, but no useful purpose was gained by this visit.

Since the nationalisation of port services and the reservation of cabotage to vessels under the Turkish flag, quite a large number of vessels were purchased by Turkish shipowners in the hopes that the dawn of a new era of prosperity was at hand. Their hopes were, however, of short duration. Most of their capital was sunk in the purchase of vessels for which freight is lacking, and in some cases owners have been obliged to lay up some of the vessels of their fleet.

Private Turkish shipowners complain that the growing development of the Seiri Sefaine Steamship Co. is paralysing their activities, and they have consequently formulated certain proposals to the Government which would entail considerable sacrifices on the part of the aforesaid company.

The Maharaja of Patiala visited the International Headquarters of the Salvation Army in Queen Victoria Street last week.

The Yugoslav delegation to the forthcoming session to the League of Nations will be headed by M. Ninchitch, the Foreign Minister.

The doctors attending M. Pachitch, the Yugoslav Premier, who is taking the cure at Carlsbad, state that his health is now completely restored.

According to *The Times* Cairo correspondent, King Fuad has ordered the establishment of a naval training school, and has given £E12,000 towards its expenses.

Mr. Sperling, British Minister to Switzerland, on August 11, signed on behalf of India at the Secretariat of the League of Nations the instruments of the Second Opium Convention (Geneva, 1925).

The heavy rain has caused floods in the principal rivers in North India. The latest report shows that the River Ravi has flooded the northern outskirts of Lahore, and the municipal waterworks are under water, resulting in the stoppage of the water supply to the city.

Company Meetings.

ANGLO-AUSTRIAN BANK.

Sir Herbert Lawrence's Speech.

The Third Ordinary General Meeting of the Anglo-Austrian Bank, Limited, was held on August 14 at Winchester House, Old Broad Street, London, E.C. General the Hon. Sir Herbert A. Lawrence, K.C.B., chairman of the company, presided.

The Secretary (Mr. M. McK. Turnbull) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: In the balance-sheet laid before you you will notice a general increase in the figures as compared with last year. Generally speaking, this may be taken to imply a steady expansion of the business of your bank.

I propose to refer in detail to two figures which seem to require explanation. The rest speak for themselves. You will see that the bank premises and fittings now stand at £320,000, as against £165,000 last year. This increase is accounted for by buildings purchased in Vienna some time ago, for which payment has now been made, and by premises in Trieste, which we were obliged to acquire and remodel. Our building in Budapest has also been rebuilt and made into a very valuable property.

Our opening reserve account stands to-day at £265,000, as against £375,165 5s. 2d. a year ago. This is accounted for by the payment of compensation according to law to employees in Austria who have been retired. Although the process of reduction is not yet completed, the charge is a non-recurring one, and is, in our opinion, properly charged against our reserve account. The reduction in our profit for the year is what might be expected in view of the conditions obtaining in Austria. However, when our plans for reduction of staff in Austria are completed, as we hope they will be by the end of this year, we see no reason why our branch in Vienna should not regain some of its former prosperity.

With regard to the economic situation in Central Europe, the past year has witnessed a slight but marked progress towards the restoration of normal conditions. There have been no upheavals, no violent fluctuations of currency such as characterised the years immediately succeeding the war, and in the Succession States in which we operate it is possible to state that there has been a definite improvement.

Czecho-Slovakia has made a notable effort to extricate herself from the crisis which overtook her industry as a result of the drastic deflation policy inaugurated in 1922, and, although it would be rash to prophesy that the crisis had been entirely overcome, there is every reason to believe that the worst is past, and that she will now reap the benefit of a policy which in itself was sound.

In the Czecho-Slovak Republic our interests, as you know, are represented by the Anglo-Czecho-Slovakian Bank, the steady progress of which gives us great satisfaction, while in Yugoslavia the results already achieved have fully justified the action of your board in acquiring a large participation in the active and ably managed Croatian Discount Bank, to whom we have transferred our Maribor branch.

Thanks to the resolute policy of the Yugoslav Government, the State finances of that country have been put on a sound basis. Borrowing from the National Bank has ceased; taxation has been raised in a high degree; the Budget has been balanced, and a policy of deflation is being carried out with praiseworthy perseverance. As a result of these measures a certain economic crisis has arisen, but this crisis is a healthy one, and forms an inevitable stage in the financial recovery of the country.

Our position in Austria is, unfortunately, not so satisfactory. The year 1924 was a further period of trial, and a severe stock exchange crisis, combined with industrial stagnation and unemployment troubles, placed a heavy burden on the financial resources of the country. The Austrian currency, however, has maintained its stability unshaken. The public revenues have continued to be favourable, and the Budget is nearing the equilibrium provided for in the League of Nations reconstruction scheme. The position of the National Bank is satisfactory, while the new Bill, prescribing the drawing up of gold balance-sheets for all joint-stock companies, will help to restore public confidence.

I said last year that it was our intention to extend our business in Italy. The branch in Milan was opened in January. This is the first new branch to be opened since 1922 and Milan, as the financial centre of Italy, is a necessary link in our foreign service. We have also opened a small exchange office in Grado for the benefit of travellers, and propose to follow the same course in Venice. The functions of these offices, however, will be strictly limited to exchange business.

In Hungary we have had a good year, and we note with satisfaction the successful effort which the Hungarian people have made during the last 12 months to rehabilitate their economic position. In May of this year, Hungary completed the first year of reconstruction under the League of Nations scheme. Hitherto the results have been gratifying. The currency has been stabilised; an independent Note Issue Bank has been established, and an equilibrium in the Budget has already been attained. This substantial progress has not been achieved without considerable sacrifice, and heavy taxation has imposed a serious burden on commerce and industry. The economic crisis, which stabilisation has produced in Hungary, is a natural phenomenon, coming as it did after a period of reckless inflation, and must be regarded as an unpleasant but essential part of the process of financial regeneration and of the return to normal conditions. That the Hungarians will emerge successfully from these difficulties, few will doubt. The great majority of the population is engaged in agriculture—a fact that in itself is a guarantee for the country's stability, and, provided that Hungary continues to advance along the path of normal and steady reconstruction, she should not fail to secure the foreign credits which are required to restore industry and agriculture to a healthy state and to enable the country to fulfil its obligations.

Our branches in Roumania have had a satisfactory year, but, in view of the uncertainty which prevails in that part of Europe, we are pursuing a policy of steady consolidation.

To sum up, the general position of our bank is greatly improved and stabilised. Everywhere, excepting in Austria, we are earning good profits, and in Austria we believe that, in the near future and with an improvement in the industrial situation, our prospects are reasonably good.

Mr. M. Spencer-Smith, D.S.O., M.C. (the vice-chairman), seconded the resolution, and it was carried unanimously without discussion.

On the motion of Mr. F. S. Arnold, seconded by Mr. Franz Petschek, Messrs. Binder, Hamlyn and Co., chartered accountants, were reappointed as auditors of the company for the ensuing year.

The proceedings then terminated.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Liverpool, August 26). (For passenger sailings and dates see advertisement.)

THE P. & O. AND OCEAN CRUISING.

The P. and O. Company's new steampship Ranchi of 16,600 tons, left London on Saturday with five hundred passengers on a cruise to Norway and the Northern Capitals. In pre-War days the company ran, every year, an extensive programme of pleasure cruises and this voyage marks their regular resumption of the practice. A programme embodying six cruises for the middle months of next year is to be announced at an early date. The Ranchi will leave London for Bombay on October 2, on her initial voyage in the Indian mail service.

NEWS FROM ALL SOURCES.

The exportation of olive oil from Greece has been prohibited.

British engineers are supervising the erection of a beam wireless station at Poona.

The production of Hamilton's Oil Concessions (Roumania) for July was 3,360 tons.

It is reported that large areas of new orange groves are to be planted in Palestine during the coming season.

The production of crude oil by the British Burmah Petroleum Company and the Rangoon Oil Co., Ltd., for July amounted to 60,916 barrels.

It is reported that considerable congestion prevails at Piræus owing to delay on the part of many consignees in taking up delivery of their goods.

The Radio Technical Council of the Greek Ministry of Marine recommends the installation in Greece of the Marconi wireless telegraphic system.

The production of the Indo-Burma Oilfields for June was 3,684 barrels, being 2,444 barrels from Yenanma field and 1,240 barrels from Padaukpin field.

The traffic receipts of the South Indian Railway Company for the week ended July 18 amounted to Rs. 4,41,854, making the total from April 1 Rs. 1,63,21,811.

The value of Bulgaria's imports for the first five months of 1925 was 3,004,000,000 levas, that of the exports being 2,177,000,000 levas.

The Bombay, Baroda, and Central India Railway has placed an order for 40 motor-cars and 120 trailer cars with Cammell, Laird and Co., Limited.

The directors of the National Bank of Egypt announce an interim dividend of 8s. per share, payable September 1, on account of the profits for 1925.

An order has been obtained by Joseph Foster and Sons, Preston, for the boiler-house plant for the Gya power station and Dhanbad power station of the East Indian Railways.

Old machinery and old parts of installations or complete sets for industrial use may not be imported into Roumania unless previous authorisation has been obtained from the Minister of industry and Commerce.

The Egyptian Ministry of Agriculture proposes to ask the Egyptian Minister in Brazil to report on the methods of cultivation of pine-apples in that country.

The interest on the Egyptian Guaranteed 3 per Cent. Loan, due September 1, will be paid by Messrs. N. M. Rothschild and Sons, St Swithin's Lane, E.C., on that day and on each succeeding day (Saturdays excepted) between 11 and 2 o'clock.

Sir W. G. Armstrong, Whitworth and Co., Limited, have entered into a working agreement with Breitfeld Danek, Limited, of Prague, for their technical co-operation in the erection and installation of beet sugar factories in the United Kingdom and throughout the British Empire.

The contract for the erection of an electric power station at Plevna has been given to the Bergmann Electricity Works of Berlin.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended July 20 amounted to £E8,108, making the total for April 1 £E81,502.

The Dacia Romano Petroleum Company reports that well No. 10 Moreni has been brought in with an initial flow of 60 to 80 tons per day. After continuous flowing for some days this has decreased to 30 to 40 tons, and cleaning will shortly be necessary. No 9 Moreni has passed final water test. A further well at Moreni, one at Baicoi, and two at Runcu are nearing completion.

CHESS.

Solution to end-game No. 10:—1, B—B4, B—Q (the only alternative is BxB, which will be dealt with subsequently); 2, K—K3, B—B3; 3, P—Kt5, B—K2; 4, P—R4, B—B3 (B—R6 is replied to by K—Q2); 5, B—Q3, BxB; 6, KxB, K—B4; 7, B—Kt7, and wins. If 5 . . . . B—K2; 6, BxB, etc. If 1 . . . . BxB; 2 P x B, K—R4; 3 K—Kt 3, B—Q2; 4, P—Kt 5, B—B4; 5 B—Q, B—Q2; 6, P—R4, B—B4; 7 B—Kt3, B—K5 (best); 8, B—R2, B—B6 (forced); 9, B—Kt, B—K5; 10, B—R2, B—B6; 11. B—Kt3, B—K5; 12, B—Q, B—B4; 13, B—K2, B—K3, 14, B—K3, B—B; 15, B—R7, B—K3; 16, P—B5, B—B2; 17, B—Kt6 (ch), BxB; 18, PxB, KxP; 19, KxP, and having the opposition speedily wins the pawn at Q4 and the game.

Monday saw the commencement of the British Chess Federation Congress at Stratford-on-Avon. The entry for the British Championship includes several players who have not previously taken part in this competition. Sir G. A. Thomas, Bart, is unable to play this time, while other notable absentees are Mr. R. H. V. Scott, and Mr. R. P. Michell Mr. H. E. Atkins is defending his title, and Mr. F. D. Yates is also playing, and the championship, in my opinion, lies between them, with the result probably depending on their individual game. Since the last Federation meeting, many modifications in the openings have been introduced, and it will be interesting to follow the opening strategy on this occasion. In due course I shall hope to give a number of the games played at the Congress.

The King of Roumania celebrated his 60th birthday on August 12.

The Yugoslav Government, on August 11, decided to close the Græco-Yugoslav frontier in view of the appearance of plague in Greece.

It is stated from Brussels that the King and Queen of the Belgians will leave shortly on a visit to India, and will not return before the end of October.

A circular has been issued by the Turkish Minister of the Interior laying down that all officials must refrain from wearing any head covering indoors, abolishing the graceful *temmenah* salute, in which the hand is carried to the head, and substituting a slight stiff bow.

The British and Foreign Bible Society is preparing copies of St. Mark's Gospel in Tibetan, which are to be printed in Calcutta, in size and form similar to the literature used by the Buddhists. The paper on which the Gospel is to be printed will be made at Bhutan, and will be of the tough fibrous kind used in native books.

THE BRITISH INDIA CORPORATION LTD. CAWNPORE :: INDIA

The British India Corporation, Ltd., comprises an extensive group of industrial concerns including the Cawnpore Woollen Mills, The New Egerton Woollen Mills, Cawnpore Cotton Mills, Cooper, Allen & Co., The North-West Tannery, The Empire Engineering Co., and the Nani Tal M.T. Co. These Firms, by pooling their resources and centralising control, form a corporation which is able to supply Government Depts., Railways, Police and Armies, with every form of woollen and cotton clothing, boots and all kinds of equipment of a quality and price which would not be possible for an individual undertaking.

Reference to the particulars below will give an idea of the Corporation's activities. Correspondence is invited from wholesale merchants, and may be addressed to the Corporation or direct to the Branches. Inquiries and applications for samples will receive immediate attention.

LALIMLI PURE WOOL

Makers of the famous Lalimli Pure Wool Products. Manufactures include: Rugs, Blankets, Lohis (shawls), all classes of Knit goods, Flannels, Tweeds, Serges, Worsteds, Broadcloths and Greatcoat Cloths. All requirements in Wool at lowest prices consistent with quality.

CAWNPORE WOOLLEN MILLS CO., CAWNPORE

Kakomi Cawnpore

These Mills produce the well-known Kakomi Cotton Goods.
The following articles are among their manufactures: Cotton Yarns, Twills, Table and Bed Linen of all kinds, Tents, Durries, etc.

CAWNPORE COTTON MILLS CO., CAWNPORE

COOPER, ALLEN AND COMPANY

This Company is one of the world's largest manufacturers of Army Boots, supplying the armies not only of India, but the world. Makers of all types of Boots, and every kind of Saddlery and Leather Equipment.

Everything in Leather.

COOPER, ALLEN & CO. CAWNPORE

Dhariwal

NOTES OF THE WEEK.

NEAR AND MIDDLE EAST.

The Jebel Druse Revolt.

Earlier reports last week indicated that the end of the Jebel Druse revolt was about to be reached by settlement rather than by arms. Naturally an attempt would be made to represent this solution as a blow to French prestige in Syria; but we should be inclined to regard it as more likely in the long run to improve France's position in the mandated territory. Suppression of the rising by force could easily be attained, but it would inevitably leave bitter memories and sow the seeds of future unrest. If a friendly arrangement can be reached, both parties will be able to benefit by experience. The French, it may be supposed, will appreciate the wisdom of listening betimes to local grievances, and there will be less encouragement among subordinate officials to play the satrap over the inhabitants confided to their charge; the Syrians will have the satisfaction of having vindicated their accusations and will be shrewd enough to infer that in future they will stand to gain proportionately more by constitutional procedure, without the necessity of resorting to arms.

An Uncertain Position.

Later information, however, appears to throw doubt on the sudden collapse of the rebel movement; but this may be merely an erroneous deduction from the fact that in sending supplies to the Sueida garrison the French lost an aeroplane, which caught fire over the citadel and came down in flames. According to earlier statements the Druses had raised the siege of Sueida and had set free a number of French prisoners captured early in the month in the attack on a French relieving column. A garrison, it may be pointed, might still need supplies, even if the besieging troops had been withdrawn. General Sarrail, according to the same account, having recognised that Captain Carbillet, *fons et origo mali*, was not the man for the Druse post, had transferred him to Alexandretta, and had liberated a number of Druse leaders who had been arrested or taken prisoners. A settlement by agreement on the lines indicated would have reflected credit on both sides; but it was difficult to believe that more than a truce had been reached in view of the demands that the Druses were alleged to have made. Their "terms," it was reported, included the evacuation of the Jebel Druse by French troops, the limiting of French control to five French officials, the rebuilding of all villages destroyed by French aeroplanes, and—an ominous condition—unrestricted commerce in arms in the Jebel Druse. Throughout the rising there has been a marked contrast between the scarcity of French information, whether official or unofficial, regarding the movement and the steady supply of news through other channels. In the circumstances, it will be well to await the official termination of hostilities before an attempt is made to gauge the full significance of the rising.

Towards a Balkan Understanding.

It is all to the good that projects for compulsory arbitration or any other kind of pact should be discussed in the Balkans. In this direction lies the ultimate salvation of the Peninsula, and to this end those responsible for this journal have planned and worked from the earliest days. An essential preliminary, however, is to realise the difficulties in the way, and to have a clear understanding of the goal that it is sought to reach. Only in this way can obstacles be overcome and practical results achieved. The subject is once more to the fore as the outcome of certain overtures on the part of the Greek Minister for Foreign Affairs. As far as can be gathered, M. Rendis has proposed an Arbitration Board for the Balkans, a conference of representatives of the different States, meeting at Constantinople, to which all questions affecting Balkan interests could be referred for settlement. The proposal in itself is an admirable one, but it is only necessary to note the reception accorded to it to understand that M. Rendis has not been happy in his choice of the time for putting forward his scheme. Negotiations between Greece and Yugoslavia for a treaty of alliance have recently broken down owing to the impossibility of reaching agreement over the problem of the Yugoslav Free Zone at Salonika and the railway line leading to it. The first

Digitized by Google

question asked in Yugoslavia, therefore is whether Greece is working for the good of the Balkan Peninsula as a whole, or, is seeking a means of checkmating what are regarded as the legitimate aspirations of the Yugoslavs.

The Question of Motive.

Another flaw in M. Rendis' scheme, as far as public opinion outside the Peninsula is concerned, would seem to be that it is not intended that Bulgaria should be an original member of the Arbitration Pact, although her subsequent participation is not excluded. If the effort to come together on the part of the Balkan States is to be made at all, it is worth while trying to round it off completely at the outset. There can be no finality for any arrangement that still leaves open sores in the Peninsula, nor would the end in view be attained. Yugoslavia is hardly likely to cut herself off from Salonika for all time merely to see Bulgaria kept out of Dedeagatch or Kavalla. She is much more likely to be impressed by the altruism of the Greek Government's motives, if the latter can show that Greece is prepared to make sacrifices herself, in order to bring about a state of affairs that will benefit Yugoslavia as much as it does any other Balkan State. One possible way of compensating Yugoslavia for abandoning her aspirations to Salonika would be to enable her so to increase her revenue that she could afford without difficulty to construct an adequate port on the Adriatic and a more or less cheaply run railway to feed it. A real Balkan alliance, political and economic, might achieve this for Yugoslavia in a few years, but such an alliance requires sacrifices on the part of each Balkan State. Until a State is prepared to lead the way in the matter of sacrifice, it can be sure that its motives will be questioned whenever it proposes co-operation to its neighbours. M. Rendis is also reported to be contemplating something like the pooling of the Balkan railway systems. Again, an admirable scheme, which might very easily be put through with great advantage to all the participating countries, but one that can hardly be realised, until all hostility and mutual suspicion have been eliminated. Finally it may be hazarded that the real Balkan Pact will come as a result of private negotiations between the respective Governments rather than in the wake of an exchange of recriminations in the press of the Peninsula.

The Fate of the Hejaz.

As soon as the Pilgrimage month had come to an end in Arabia it was reported that hostilities had been resumed in the Hejaz. In spite of the unconvincing operations against Jeddah, Sultan Ibn Saud appears to have in hand the reduction on more or less systematic lines of the whole of the Hejaz. His main objective now is Medina, which, it is stated, is being subjected to a bombardment that has already done damage to the dome of the Great Mosque containing the Prophet's tomb. If this report be true, and any serious destruction be inflicted on the Holy City by the Wahhabis, Sultan Ibn Saud can hardly fail to lose the sympathy of the articulate Moslem world that the shortcomings of King Hussein had bespoken for him in his early successes against the Hejazis. It is difficult to follow the argument of Ex-King Hussein, who, in a letter from Cyprus to *The Times*, refers to the interruption of communication with Medina as a result of the transfer of Akaba and Maan to Transjordan and predicts its fall on this account into the hands of the Wahhabis. As what strength the Hejaz still possesses is at Jeddah under King Ali, it would appear that Medina will have to be left to its own devices, unless relief can reach it from Jeddah by way of Zambo rather than by the circuitous route, Akaba-Maan. The only hope that the Hejazis can now have must be that the Wahhabi tide will recede before it has flooded their whole country. The transfer of Akaba and Maan to Transjordan should save those towns from capture. For the rest, ex-King Hussein will doubtless find time to reflect that the measures taken by him in the heyday of his power to provide for the security of his country were singularly out of proportion to the comprehensiveness of his claims. If Sultan Ibn Saud had been able to continue to show the respect for orthodox Moslem opinion with which he was credited as a result of his moderation in the capture and occupation of Mecca, and if he had made a point of introducing real reforms into the management of the Pilgrimage, there would be little question of sympathy for ex-King Hussein in the loss of his kingdom.

NEWS IN BRIEF.

The Postmaster-General announces that dutiable articles may now be sent in packets prepaid at the letter rate of postage among other countries to Egypt, Greece and Morocco (French Zone).

After inspecting the aeroplanes of the Afghan Air Force recently the Ameer was taken for a flight over Kabul. His retinue, comprising civil and military officers, followed him throughout the trip in 11 other machines.

So far, 14 Bulgarians have been expelled from France in connexion with the assault on MM. Kouleff and Varsoff, in the Avenue des Champs Elysées, on August 18. Two Italians and two Spanish Communists have also been expelled.

Fifty Fokker aeroplanes, ordered by the Roumanian Government from Holland, arrived last week at Constantza. These machines, together with a number of French aeroplanes of the Potez type already in service, will form the fighting squadron of the Roumanian air fleet.

According to a Reuter message from Teheran, great uproar, ending in hand-to-hand fighting between the Socialists and the supporters of the Government, broke out in the Mejliss last Sunday, following upon Socialist protests when the new Minister of Justice was introduced by the Premier.

According to a Press message, what is stated to be the most serious fire Basrah has ever known broke out on August 18 in the most congested area of the city, owing to the fusing of an electric wire. Whole streets were burnt to the ground. So far the total damage is estimated at £75,000.

The Army manœuvres in India, which are to be carried out by General Sir Claud Jacob, of the Northern Command, have been fixed for November 26, 27, 28, 29, and 30, after the preliminary training of the formations. The central point of the exercises will be Attock. There will be a Tank demonstration, massed artillery in the attack, and Air Force co-operation with mobile forces. A great review will conclude the work.

THURSDAY, AUGUST 27, 1925.

MOSUL AND THE LEAGUE OF NATIONS.

If the Council of the League of Nations allows it, there will be in the coming session at Geneva almost as interminable a discussion on the question of the frontier of Iraq as there was at Lausanne, when, owing to the impossibility of reaching agreement, the subject was relegated to separate negotiations between Turkey and Great Britain. On the breakdown of these latter negotiations the dispute was referred to the League for arbitration. The Commission appointed by the Council to investigate the question on the spot has reported, and at the session which opens at Geneva next week a settlement will have to be propounded. Both parties to the controversy have pledged themselves to accept the League's ruling, but, before a decision is reached, it is to be presumed that both the Turkish and British delegations will be allowed to elaborate their respective cases again. This circumstance has led to a very animated discussion in Turkey, which seems to ignore the Turkish Government's undertaking to accept the League's findings. Thus in one quarter it is declared that, unless the frontier is made safe, Turkey will be unable to accept any settlement—a curious and, one must infer, ignorant statement in the face of Turkey's pledge to the League. If the Council is wise, it will not thresh out the subject in public debate with the idea of finding a solution which will be acceptable to both parties. The Commission emphasised the desirability of peace by agreement, but could not discover the basis for one. In the end it offered several conditional solutions, which are calculated merely to annoy both parties, because its indecision invites challenge, whereas a settlement delivered with a show of conviction must go far to silence the loser. In the absence of peace by agreement a durable peace can best be assured by a "safe" frontier from the point of view of the party that is liable to attack. Whatever the Commission with its strange mentality may have had in view, the League of Nations will not be able to anticipate Iraqi designs on Turkish territory. On the other hand it has abundant evidence of Turkey's will to upset any verdict that does not give her all that she asks for. Even the Commission ruled out the Jebel Hamrin line that the Turks have claimed, and could not bring themselves to contemplate a frontier farther south than the Lesser Zab. In these circumstances it is to be hoped that the Council of the League will find overwhelming arguments for deciding in favour of the boundary line asked for by the British, which has been pronounced even by the Commission to be topographically sound and an excellent strategical frontier.

The reason for the thunderings of the Turkish Press at this time are not far to seek. Post-War conditions have produced in unlikely quarters in Great Britain advocates of the policy of scuttle, a kind of bastard Little Englander, who has not the principles of the latter to fall back upon, but bases his agitation on the most sordid of appeals, the bogey of cost. For his purpose the vapourings of a Turkish newspaper to the effect that Turkey will decline to accept an adverse ruling of the League of Nations bring much unction in their train, for they enable him to conjure up a protracted war, which perfervid eloquence easily invests with the dimensions of the World War, fought at a thousand miles from a sea base and costing the British taxpayer unlimited hundreds of millions of pounds. The bogey overreaches itself. There is a strategical frontier in the Kurdish mountains; there is none for the defence of Basrah. If the Turks are set on driving the British and Arabs out of the Mosul vilayet, they must be credited with the same determination and power to drive the British alone out of Basrah, and a withdrawal to-day to the latter would be not less humiliating than at the point of Turkish bayonets. The blow to British prestige, however, would be infinitely more serious. Indifference can be affected towards a refusal, for definite reasons, to stand up to an inferior enemy; but no sophism could exonerate the British Empire for a betrayal of the trust that it has taken upon itself in connexion with the Arabs of Iraq. A wiser policy, therefore, would seem to be to test the fulminations of the Turks. That they are sincere in their desire to prevent, if they possibly can, the partition of Kurdistan admits of no doubt; but it will not be the first time that the accomplished fact has been accepted with fatalistic resignation in Turkey, if the Angora Government declines to make the inclusion of the Mosul vilayet in Iraq a *casus belli*. Pinpricks, very probably, will be indulged in; there were raids into the administered territory before the Brussels line was fixed, but the League's ruling in that instance was accepted. It will at least be more dignified to deal with the Turks as they show themselves to be, than to accept the interpretation that it suits our Little Englanders to place on their intentions.

A danger of the Geneva deliberations may be that the Council will allow itself to be drawn into a discussion on the mandatory system, whether as a whole, with special application to Syria, Palestine and Iraq, or in relation to the Commission's attempt to bespeak a prolongation of the British mandate over Iraq. The subject has nothing to do with the Mosul frontier. When the latter point has been settled, there will be time to consider at what particular period in the history of the mandatory system its reconsideration should be undertaken. When it is undertaken, it should be at the instance of the League itself and not at the prompting of a country outside, or in an effort to settle a subject entirely unrelated to it. There is nothing either sacred or novel in the system. It represents an attempt to codify, as it were, for wider application a practice long in vogue in the dealings of the British Empire with backward people. The association with the League of Nations alone is new. As the system is originally derived from British practice, it may well be that Great Britain's experience, with Iraq for example, may determine what, if any, modifications of the system will be considered desirable in the future. Place for a treaty between the Iraqi and British Governments has already been found under the Mandate, and in 1928, when the present agreement lapses, the new treaty that will take its place may introduce still further modifications of the existing relationship between the two countries. That the settlement of the Mosul frontier should be made contingent upon the precise form of the new treaty need not be taken into serious consideration. Great Britain's trust in regard to Iraq is conditioned by her own sense of honour, and does not require to be circumscribed by rulings of the League of Nations. Let the latter only do its duty conscientiously and fearlessly, and all will be well in the Middle East.

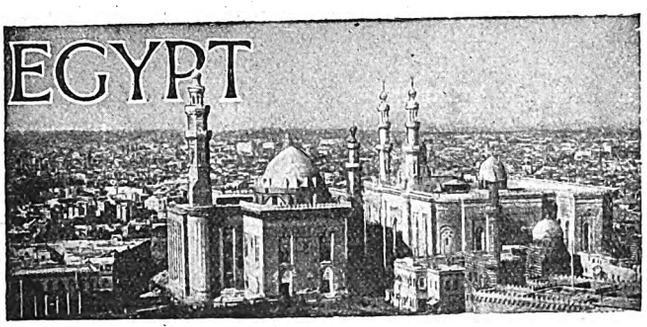
The Near and Middle East*

From Our Own Correspondents.



Cairo, August 15.

The Ulema Trial.

Twenty-five ulema, with the Rector of Al Azhar as their president, on Wednesday sentenced Sheikh Aly Abdel Razek, Radi of the Mansoura Mekhema Sharia, to dismissal from the ulema's corps for publishing heretical doctrines in his book, "Islam and the Bases of Government." If it would be hyperbole to suggest that Sheikh Abdel Razek, in suffering thus for his opinions, has lighted in Egypt such a candle as shall never be put out, it is none the less true that he runs some risk, willy-nilly, of becoming the head of a new school of Moslem thought, and it is at least certain that he has inaugurated a controversy of which the last will not be heard for a long time to come, and which may do much good in letting a little fresh air and light into the fusty corners of the dungeons of mental mediævalism in which the leaders of Egyptian Mohammedanism have buried themselves for centuries past.

From one point of view the affair has nothing to do with anyone excepting Moslems; but since the trial and judgment are as essentially an instance of the age-long struggle between the desire of the human mind for freedom of thought and the equally human fear of innovation as was the notorious Dayton process, it is impossible for anyone interested in the evolution of the human race not to wish to know the pros and cons of the dispute which has led to the condemnation of this Moslem Luther. As has been previously pointed out in this correspondence, the essence of Sheikh Abdel Razek's book is its plea for an entire separation between Church and State. The Caliphate he rejects as an institution unauthorised by the Koran or the Traditions, and, incidentally, as the principal hindrance to the progress of Moslem countries. The delusion that, in a Moslem country, temporal and spiritual power are inseparable, and that the civil laws must be based upon what theologians have considered to be the teachings of the Koran, has been, declares Sheikh Abdel Razek, the obstacle that has hitherto prevented Mohammedan countries from developing constitutional forms of government.

The Sentence on Sheikh Abdel Razek.

Sheikh Abdel Razek's training was unusual, for, after completing his fifteen years at Al Azhar, he studied in the Egyptian University for another two years, and then went up to Oxford, in 1914, to work on political economy. Then came the War, and he left the University after being there little more than a year; but it is permissible to suppose that the twelve months so spent were not without their effect. His trial has been as unusual as his training, nothing like it having been known in Egypt before. The article of the law governing Al Azhar under which he was condemned was inserted some years before the War, during the reign of the Khedive Abbas Hilmi, and provides for the expulsion from the corps of ulema of any alim whose conduct is scandalous and unbecoming to his position. The very existence of this article was unknown to Sheikh Abdel Razek and to most other people until the Superior Council based their judgment upon it. Hitherto there has been but one course open to a tribunal which has found a Moslem guilty of heresy, namely, to declare him a *kafir* (infidel), a sentence which has had results varying in accordance with the advance of civilisation. A hundred years ago such a judgment would have involved a painful death; to-day its most serious consequence would be the nullification of the heretic's marriage, if he happened to possess a wife, since a Moslem woman cannot be the wife of an unbeliever. But the present sentence, in the opinion of many people, is in defiance of one of the first principles of Islam, which is the non-existence of anything in the nature of a priesthood. Al Azhar, although its students spend much of their time in memorising the Koran and studying religious subjects, is not a religious institution, but a secular university. Its degree, conferred upon students who have completed their studies, and carrying with it the title of *alim*, is equivalent to the degree conferred upon the graduate of any other university. Ulema have no status, religious or civil, not possessed by any other Moslem. The decision of the Superior Council is unprecedented, since it implies that ulema are, in a sense, called to Holy Orders, and, for failing to conform to orthodox religious views, can be dismissed, just as a priest of a Christian Church can be judged and dismissed by his religious superiors. This implication of a Moslem priesthood is emphasised by the critics of the Azhar Council's action.

There is a further point, namely, that the obscure regulation, mentioned earlier, entails the dismissal of Sheikh Abdel Razek from his present position as Kadi, and disqualifies him from ever holding any other Government post, even as an ordinary official in a lay capacity. This, it is urged, is an infringement of the rights of the Minister of Justice, in whose Ministry the Sheikh is an official, and who, in the case of an intended prosecution of one of his officials by a civil court, must give his consent before the proceedings are begun.

These are only some of the points raised by the numerous supporters of Sheikh Abdel Razek, but they are sufficient to indicate that in his conviction there has been provided all the material needed for a very pretty controversy, over which tongues will wag and ink flow for many a day to come.

Miscellaneous News.

Four hundred and four American tourists disembarked at Alexandria on Thursday night, from the s.s. "Tuscania," now making its annual summer cruise in the Medi-

terranean, and are giving themselves up to the sights of Cairo. These summer cruises grow in popularity, and there have been more during the past few months than in any previous year.

The sale of All Saints' Church has been concluded, and delivery of the site has to be effected by November 15. The church will probably be closed in the latter part of September, for removal of windows, memorials, and furniture, prior to total demolition. £70,000 has been obtained for the site, and this sum will not only pay for the building of a new pro-Cathedral, the location of which has not yet been settled, but will also leave a handsome amount over for endowment.

A Hundred Years Ago.

One of the Arabic newspapers has lately adopted the custom of London journals of having a "100 years ago" paragraph daily, and on one day this week unearthed the following gem from the diary of Sheikh Galal el Din, a literary light of the days of Mohammed Ali the Great:—"On Shawwal 21st, 1268 (A.H.) it was reported in Cairo that those who rolled themselves on a plot of ground, close to the tomb of el Sayida Rabiha el Adawia, would be cured of their diseases. Patients, rich and poor, hastened there, some wearing outer cloaks in order not to soil their clothes. Five days after it was found that the news was false, and public criers went round the streets announcing the fact, and warning the public that those who went near the spot would receive five hundred strokes of the lash."

Zagreb, August 19.

The Internal Situation.

The pessimistic forecasts regarding the short-lived nature of the present Coalition Government are being belied, and never so emphatically as on the occasion of the Millennium Celebration of the Kingdom of Croatia. Scarcely six months ago this jubilee was regarded as an extreme manifestation of Croatian separatism, calculated to imbue the Croats with fresh courage and energy for the strife with Belgrade. Yet the celebration has in fact been turned into the most brilliant demonstration of Serbo-Croat unity, and the credit for this marvellous and most profitable metamorphosis must go, in the first place, to M. Stefan Raditch. For a totally new situation has been created by the conclusion of M. Raditch's agreement with the Radicals. All the old ravings and ragings against Belgrade have been consigned to the limbo of oblivion. Belgrade, on its part, has buried its partisan anti-Croatian policy, and former hostility has been converted into present alliance.

And now the Zagreb celebrations have shown that this alliance has found firm support in the heart and mass of the nation itself. The acid test of the agreement was the distrust which necessarily lurked on both sides as a consequence of the bitter struggle of several years' duration. "Are the Croats really in earnest over the agreement? Have they indeed given up their republicanism? Or is their true object, to strengthen their ranks by the agreement, so that they may later on attack with redoubled vigour?" Such were the questions asked with pardonable anxiety in Belgrade; they were provided with a final and definite answer last Saturday.

The Millennium Celebrations.

Clear and unequivocal was this answer, and convincing. Only at the last moment was it announced that the King and Queen proposed to attend the Millennium Celebration officially in person; nevertheless the King was given such a royal welcome as even Alexander of Yugoslavia, who is accustomed to triumphal welcomings, has not yet experienced. And if any one were still dubious, his doubts must have been resolved a little later, when the great thunderstorm broke. The Sokols had just begun their exercises, when suddenly a violent storm, accompanied by a terrific downpour, burst over Zagreb. In a moment the grounds were under water; the public, the sokols, all were not only drenched to the skin, but those in the arena were up to the knees in the sudden flood. Yet they never troubled about the rain, but stood in the water and cheered their King. The grand stand was struck by lightning, three persons were killed, but no particular notice was taken,—all eyes and minds were set upon the King. Even the most cynical onlooker had to admit that this was not enthusiasm made to order, but spontaneous, and that the Croatian people are hailing the new situation with sincere joy.

The Belgrade press, too, unanimously admits that at the Zagreb Millennium Celebration the new Serbo-Croat agreement received the sanction of the Croatian people. And herein lies the great significance of the festival. The enemies of the new Government have insisted that Raditch had fallen out of favour with his public, on account of his compromise with the Radicals; that his position was, in fact, badly shaken. This talk was likewise definitely given the lie by the Zagreb celebration, for the leading personality of those festival days was M. Stefan Raditch. Strong and unshaken in their loyalty, the mass of the Croatian peasantry stand behind him, and his position as Croatian leader seems as safe as ever.

As the position of the Government has been so greatly strengthened by the effect of the Zagreb celebration, it is free to set about carrying out its programme unharassed. First of all comes the work of the Budget. We are told in Government quarters, that the new Budget will be thoroughly revised and that the collaboration of Radicals and Raditchists in it will be very evident. We are also told of a partial reconstruction of the Cabinet, and it is even said that M. Stefan Raditch will become a member of the Government. In that case, however, considerable formal difficulties will have to be surmounted, as his mandate has been cancelled. Nothing of great importance is to be expected in the immediate future. For one thing, it is holiday time; for another, the Raditch Ministers must get used to the new position. At the moment, the Government's chief attention is turned to personal questions, full agreement having not yet been reached between Radicals and Raditchists in regard to the new political officials.

The Convention with Italy.

But if there is nothing special to report in internal affairs, several most important steps must be recorded in

foreign politics. With the signing of the Convention of Nettuno, all outstanding questions between Italy and Yugoslavia have been settled—and from a general point of view this is a matter for congratulation. But there is little satisfaction in Yugoslavia over the Convention. A Raditch Minister actually contemplated handing in his resignation by way of protest, but in the end this was prevented.

The Geneva Session.

Great preparations are being made for the September Session of the League of Nations. M. Stefan Raditch himself is to go to Geneva as delegate for Yugoslavia. Not so very long ago, this same M. Raditch addressed a memorandum to the League of Nations, requesting its interference on behalf of Croatia. By the very fact that he is now going to attend the Session as delegate for Yugoslavia, he is furnishing a conclusive *démenti* of his memorandum of those days, and also proof that Yugoslavia will suffer no interference—not even from the League of Nations—in her internal affairs. The whole episode shows most distinctly the importance of the agreement that has lately been concluded, and is at the same time a proof of the progress of Yugoslavia's consolidation.

BULGARIA

Sofia, August 18.

The Coming Session.

On September 1 the Sobranye will begin its autumn session, and after a two months' lull political currents are again asserting themselves. M. Zankoff, Prime Minister, has spent the last month at Rila Monastery, where he has been visited by a number of prominent politicians. It is now an open secret that a strong section of the Democratic Entente (the party in power) deems it advisable that a reconstruction of the Cabinent should take place. Representations to this effect have been made to the Prime Minister, but up to the present he has given no sign of his intentions.

It is, however, understood that M. Zankoff is very reluctant to part with any of his colleagues, because he feels that the present Cabinet, which came into power as a result of the *coup d' état* on June 9, 1923, should stand or fall together. He feels, perhaps, that any changes amongst his Ministers may quickly lead to an entire change of Government. His critics, and they are not wanting, maintain that events which have occurred, both abroad and at home, during recent months make it imperative for certain Ministers to leave the Cabinet. But none of the Ministers in question shows any signs of resigning, so it will be for the Prime Minister, advised no doubt by the Chief of State, to enforce the changes, if he thinks that the interests of the country necessitate them.

In the meantime a somewhat violent press polemic has broken out regarding the question of a Cabinet reconstruction. Practically all the papers representing political groups who support the Democratic Entente have made it clear that they consider a reconstruction necessary. The newspaper, *Free Speech*, a Governmental organ, has accused the other newspapers of wishing to return to a state of party politics which has done Bulgaria so much harm in the past. It is fairly common knowledge that M. Todoroff, Minister of Finance, and formerly a journalist, has a good deal to do with the policy of *Free Speech*, and the leading articles which have recently appeared in this paper leave little room for doubt that M. Zankoff is defending himself against his critics through the medium of its columns. It is certainly to be regretted that this press polemic has occurred, because with all her internal troubles Bulgaria can ill afford to let her rulers waste their time criticising and quarrelling with one another.

In all probability the question of a Cabinet reconstruction will come to a head during the next few weeks. The Sobranye may provide the scene, but it is more likely that it will be decided outside. But, to quote the words of a well-known Bulgarian statesman who is at present holding himself rather aloof from party politics, "What is necessary is to get on with the job; if there is to be a change in the Cabinet, let it be done quickly, so that all the routine work so essential to the progress of Bulgaria may proceed on normal lines."

To Geneva.

In ten days' time the Bulgarian Delegation to the annual assembly of the League of Nations will leave for Geneva. It will probably comprise M. Kalfoff, Foreign Minister, and M.M. Ivan Madjaroff and Danailoff. It is somewhat remarkable that, although the agenda of the Assembly includes several European Minority problems, no reference is made to Bulgaria's Minority difficulties. This is, perhaps, Bulgaria's own fault; but it is very likely that something will be heard of Bulgaria's refugees, whose position still remains very serious. The Government has hoped that an external refugee loan may be raised, but before this can be done Bulgaria must submit a plan to the League of Nations. There are several indications that, if this plan was well thought out and well presented, quite a good chance would exist of foreign help being forthcoming. A sum of approximately one and a half million sterling is needed, if any real good is to be done. There are well over a hundred thousand refugees who require assistance, and with winter now in sight their situation will tend to become worse than has hitherto been the case.

Miscellaneous News.

The Duchess of Aosta, accompanied by her two sons, recently paid a visit to King Boris.

Steps have been taken to found an Automobile Touring Club in Bulgaria, which is one of the few European countries that lacks such an institution.

IRAQ.

Baghdad, August 12.

The decision of the Frontier Commission on the question of Mosul was eagerly awaited in Baghdad; but now that the announcement has been made no very great stir is apparent in the political world. It is clear that public

opinion was fairly confident that Mosul would be retained, and was prepared on the other hand for an extension of the Treaty period at the end of the four years at present agreed upon; but that the one would be made conditional on the other is evidently a surprise. Probably no one had contemplated an extension for so long a period as twenty-five years, and the Nationalists will doubtless have something to say on this point; they alone of the politically-minded, and perhaps only the extreme members of their party, had seriously envisaged a complete severance of treaty relations with Great Britain at the end of the four years. To the people at large an extension of the Treaty will not be unwelcome, however bitterly they might, prompted by their Baghdad mentors, have opposed it a few years back; relations between Iraq and her Ally have never been more cordial and more friendly than they are at present. It is unfortunate for Iraq that her rulers at the time of the Frontier Commission's visit allowed themselves to be carried away by a sort of panic which impelled them, against the advice of the High Commissioner, to encourage demonstrations of school-children and other rather puerile forms of propaganda which, instead of impressing the Commissioners, caused them to doubt the judgment and sense of proportion of the Government, and consequently perhaps to undervalue the undoubted progress which Iraq has made towards stable and responsible self-government.

King Faisal.

The King's medical advisers having recommended a complete holiday in Europe, His Majesty left on August 5 by desert overland route for England, where he intends to consult London specialists before taking his holiday on the Continent. H.H. the Emir Zaid, who is expected to return from Oxford in the course of the next week or so, has been appointed Regent by a Royal *iradeh*, which stipulates that the Regent has no power to dissolve Parliament, to ratify treaties, nor to select a Prime Minister, unless with the prior approval of the King.

Parliament.

On July 24 the reply of the Iraq Assembly to the Speech from the Throne was handed to the King. The Assembly admits that the Treaty with Great Britain has "enhanced the prestige of Iraq in the world of nations," and that the improvement in her international status is "entirely attributed to our Ally Great Britain," with the contributing influence of the efficiency and administrative independence shown by the Government of Iraq. The reply closed with an expression of the Assembly's willingness to give favourable consideration to the recommendations of the British Financial Mission to Iraq.

The validity of the Parliamentary elections in certain places having been questioned, after some debate a resolution was passed by the Assembly that all the elections should be held to be valid.

On the retirement of Rashid Beg al Gilani in consequence of his election as President of the Assembly, the post of Minister of Interior was held temporarily by Abdul Muhsin Beg as Sa'dun, Prime Minister, in addition to his other duties; the portfolio of Interior has now been handed to Sulaiman Hikmat Effendi, whose place as Minister of Education is to be taken by Abdul Hassain Chalabi, Minister of Communications and Works. The Minister of Defence, Subih Beg Nashat, will take over Communications and Works as well as his own Ministry.

Miscellaneous News.

Before the War, a concession for a power station and electric tramway scheme in Baghdad was given by the Turks to a London group of financiers, and is held to be still valid. An engineer in the employment of the Company is now in Baghdad, and it is hoped that the first section of the tramway, from North to South Gate, may be in working order within the year.

A meeting held under the Presidency of the High Commissioner on June 15 at the Alwiyah Club was addressed by Mr. Duignan, an officer ex-patient of St. Dunstan's. As the result of this meeting, a cricket match was arranged for the three evenings of July 31, August 1, and 2, on which by the various devices usually employed on such occasions the respectable sum of £300 was collected for St. Dunstan's.

On Saturday, July 26, the foundation stone of the new Masonic Hall at Baghdad was laid by the High Commissioner—an impressive ceremony which was attended by a large gathering of the British community.

A packed meeting of Kurds was held in the Maude Gardens on the night of July 26, to protest against the ill-treatment of their nation by the Turks. A number of impassioned telegraphic appeals for help to the League of Nations and the Great Powers were drafted.

leading members have left for the constituencies. The last matters dealt with before the Mejliss dispersed were the Bill for the engagement of the German forestry expert, Herr von der Hagen, which was approved, and the Bill for the Cancellation of Firmans. The latter Bill is a loosely drafted measure, and expression to the general disapproval with which it is regarded in its present form was given by the venerable leader of the Right Party, who proposed its postponement for further consideration.

The Local Press.

With the absence of Parliamentary news the Press has been forced to develop fresh topics, and one or two specially interesting subjects of an educational character have been discussed. One that has aroused special interest has been a series of articles on railway development appearin one or two papers. That education of the public is needed in such matters is shown by the propositions previously put forward in responsible quarters for the building of a State Railway by sections. Public opinion is now veering towards recognition of the necessity of loans for public works, and the advantages derived from interesting foreign capital. Another profitable subject of discussion has been the sanitary needs of the country and the necessity of action to combat malaria. The energetic pioneer of the new Red Crescent Society in Teheran has also done much to interest the public generally in these subjects. The question of economic development is another subject attracting much attention, and the papers are full of puff advertisements for agricultural machinery. A Russian company in its anxiety to help the cause of agriculture is offering to lease agriculture machinery and to train volunteer operators on a salary during instruction.

The *Radios de Paris*, to the general regret, has stopped publication, but the enterprising publisher proposes to issue a newspaper in French and English, embodying the telegraphic news of Reuter's Agency and all other international News Agencies, together with extracts from the best Persian daily papers and parliamentary news.

Diplomatic Corps Movements.

The new Egyptian Minister, Abdul Azim Rashed Pasha, formally raised the Egyptian flag on July 20 in the presence of a large and distinguished gathering of officials and non-officials.

The new Polish Chargé d'Affaires, M. Hempel, has arrived and established the new Polish Legation pending the arrival of the Minister.

The new Belgian Minister has arrived at Beyrout *en route* for Teheran and will be shortly followed by the American Minister, Mr. Philipps.

Mohiyeddin Pasha, the Turkish Ambassador, is leaving for Egypt, and the Turkish Embassy is being subsequently reduced to the status of a Legation.

Mr. Smith Murray, Chargé d'Affaires of the American Legation, left Teheran recently on transfer to Prague, and he has been succeeded by Mr. A. Murray pending the new Minister's arrival.

Military Operations.

News regarding the punitive operations against the Turkomans is very meagre, but the Turkomans are said to have been well punished and several leaders, including the Khan of Bujnurd and his brothers, have been hanged; 65 rebel leaders remain to be hanged. Simultaneously with these operations disarmament of the tribes all over Persia is in progress and the country is correspondingly tranquil. All roads are now safe and motor traffic to all parts is opening up the country in a most surprising way. Provided that more money can be spent on roads and possibly on railway development, the country side should benefit very considerably in finding markets for surplus produce, which are now badly needed.

News of the recent small revolt or raid of Arabs in Khuzistan is not generally known, and no mention of it has been allowed in the newspapers, which are still under military censorship. It is recognised that the raid was due to fears regarding the results of the Financial Commission now touring in Khuzistan, and steps were at once taken to reassure the local Arab population.

Air and Motor Services.

A new Bill has been approved by a Commission and submitted to the Mejliss for approval, giving the Junkers Aeroplane Company a monopoly of civil aeroplane services between Enzeli (Pahlevi) and Teheran, Teheran and Bushire, Teheran and Khaniqin. A subsidy of three krans (1s. 2½d.) per kilometre is to be given for all mail flights on the above lines, plus all surcharges on letters, etc., up to 4,000 tomans (£666) a month after deduction of expenses. A regular service is to be maintained once weekly in each direction. Passenger rates will be fixed in consultation with Government. The attitude of the Mejliss to the measure is not yet clear, but the Bill is favoured by the Ministers concerned as a means of opening up rapid and regular communciation with adjacent countries.

The Eastern Transport Company's service is running regularly and most efficiently. The mail contract is not yet signed and approved by the Mejliss owing to objections raised against a clause granting a monopoly of passenger traffic to Khaniqin. The omission of the clause would naturally involve a raising of the amount required for the mail subsidy.

Miscellaneous News.

The hot weather is unusually severe this year; coupled with a great shortage of water, it has caused considerable damage to gardens and crops. The same conditions appear general in the provinces, and the crops are in many districts a partial failure. Temperatures of 106 degrees have not been infrequent in Teheran, as compared with a maximum of 102 degrees last year.

Teheran is preparing for the Mohurram holidays from July 30 to August 7, during which time all trade will be at a standstill. The celebrations of Mohurram are expected to be even more fervent than last year, despite the unfortunate murder by which they were then marred. All the more important families appear to be moving out of Teheran for a holiday in the hills or to more distant villages and towns.

BOOK REVIEW.

HISTORICAL ESSAYS ON SIND.

"SIND. A RE-INTERPRETATION OF THE UNHAPPY VALLEY." By J. Abbott. (London: Humphrey Milford. 7s. 6d. net.)

This is another product of the affection for the Province where he has spent much of his service which so often moves the Indian Civil Servant to make a study of its past history. It is a fine piece of work—not for the "general reader"—but it is not "a re-interpretation of the Unhappy Valley," as the sub-title claims. It is a collection of extremely interesting essays, correcting a number of serious errors incorporated in histories which deal with Sind. Its value to a future historian will be great, and it opens tantalising little vistas into the doings of long ago in this tract of country which even Mr. Abbott cannot convince us to be or ever to have been an attractive place of residence. C. S.-W.

LAND REGISTRATION IN EGYPT.

The advantages of an accurate system of registration of ownership and real rights over land are so patent that it is surprising that in no country had a workable scheme of the kind been evolved before the middle of last century. The principle reason lay in the fact that the building up of such a system is hedged about by very great difficulties, which are the more numerous and the more difficult to dispose of in proportion to the length of time that the land has been in close occupation. In other words, in a country blessed with a fertile soil, carrying a large and thickly settled population, where intensive husbandry has been carried on for hundreds, perhaps thousands, of years the multiplicity of holdings, right, privileges, ownerships and all the other incidentals to occupation of land, render the need for an accurate system of registration infinitely more pressing, while at the same time making it infinitely more difficult to initiate, than in a "new" country of virgin soil, broad acres and wide spaces, where survey and registration can begin often before, sometimes simultaneously with and in any event comparatively soon after, occupation. Freed from the complications of tradition, ancient but often vague rights, and possession accepted by custom but based on scanty recognisable proofs, the inauguration of a system of registration of title is in many countries a comparatively simple proceeding.

Egypt, in all essential respects where land tenure is concerned, is at the opposite pole from the young countries where obtain the conditions just mentioned. The cradle of civilisation, the Nile valley has been densely populated for countless centuries and to-day supports more persons to the square mile than almost any other portion of the surface of the globe. The extreme fertility of the soil bordering the Nile and forming the Delta has given Egyptian land a very high economic value and has resulted to a remarkable extent in the multiplication of holdings of very small size. When it is mentioned that the average size of an Egyptian holding is one and a half acres and that out of a total of 2,500,000 holdings recorded during the progress of the revenue survey, some 842,000, or one out of every three, were under half an acre in area, while the average value of land in the Nile Valley and Delta (excluding the outlying semi-cultivated areas) is £E150 per acre, it will be realised to what an extent the land is in the hands of very small cultivators, and how valuable to each occupier is every square metre of soil.

The above-mentioned conditions impose the necessity of extreme accuracy in defining and registering land ownership. To a man owning a large territory the reduction of his property by a few metres in width or length may be a matter of indifference, though when the quality of the land is good there are few persons who would complacently accept such restriction. To a man owning a strip under half an acre in area, the restriction of his boundary or the displacement of his property by even half a metre may involve real hardship. When to close sub-division is added high intrinsic value, the need for accurate fixation of boundaries is proportionately enhanced. A man may be indifferent about the exact position of the boundaries of his property if it is extensive or if it is unproductive; if it is a small and fertile plot, the smallest encroachment is apt to be jealously regarded. In point of fact, such encroachments are recognised as being a fruitful source of quarrelling and violence both in Egypt and elsewhere.

In this connection it is worth remembering that in well cultivated parts of Egypt a strip of land half a metre wide will support a row of cotton plants yielding three pickings of cotton, besides other crops in rotation. Accordingly, in considering the application of registration of title to the extremely fertile and closely sub-divided areas of the Central Nile Delta and Valley, it was almost impossible to borrow the standards of accuracy and methods of working of relatively unproductive and sparsely populated countries where systems of real estate registration had lately been introduced; in any case such standards and methods could only be borrowed after the closest scrutiny and most careful adaptation.

Egypt presented to the reformers who wished to put her system of registration of title upon a satisfactory basis, other, and in some instances, peculiar difficulties. The existence of the Capitulations, involving a multiplicity of jurisdictions and legalising, in the case of the Mixed Courts, the use of any one of four official languages, Arabic, French, English and Italian, the first of which presents great difficulties in the way of accurate and unambiguous rendering of names into or out of any of the other three, the peculiarities of the Moslem religion, with its religious courts, the fact that 93 per cent. of the population is illiterate and, therefore, unable either to write or read documents which are customarily drawn up by public writers quite unfitted for such work—these were some of the obstacles in the way of land registration reform. Another problem was that of identifying individuals in a country where family names are practically non-existent. Only a few Moslem families of the upper classes have adopted surnames, while among Copts the family name is placed first, a system almost as confusing to Western minds as the absence of surnominal appellation The difficulty with Moslems is increased by the very limited number of names in use. Not more than a dozen are commonly employed, with the result that there are hundreds of thousands of Mohammed Alis, and nearly as many Hassans, Ahmeds and Mahmouds. The confusion thus created was exemplified recently when, during a recent round-up of suspected Communist propagandists, the authorities in Cairo sent orders to the Port Said police to arrest and dispatch to Cairo "Mohammed Ali, a clerk employed by the Suez Canal Company." Ten of the company's clerks at Port Said were found to bear the name of Mohammed Ali, so all were arrested and despatched under escort to the capital.

An eminent French authority on political economy, discussing the operation in his country of the system, similar to that until recently obtaining in Egypt, under which any person may at any time acquire a right over any property without record except between the contract-

Digitized by Google

ing parties, brought out with considerable clearness some of the difficulties. "You want to know the position affecting a certain piece of land, and so you ask the registrar whether there are any charges on it. He replies 'I don't know the properties as such, I only know their proprietors.' Thereupon you give the actual name of the owner: Jean Bernard; the registrar then discovers half-a-dozen Jean Bernards, the properties of all of whom are subject to charges of various kinds, while if you make a slight error in the name of the owner you run the risk of being left in ignorance of any charges with which his property may be encumbered. Add to this that in deeds and records the property is customarily described by giving the names of neighbouring owners. When these owners change it is no longer possible to discover to what property the deed refers."

In Egypt, where the multiplicity of similar names is much greater, these observations have proportionately greater force.

Egyptian conditions have been indicated above, in order to give some idea of the country's peculiar and inevitable difficulties in the way of an efficient system of title registration. These complications were not lessened by the practice followed until the introduction of the recent reforms. Hitherto there have been one General Registry system attached to the Mixed Tribunals which dealt with 97 per cent. of the deeds presented for registration, and two special registry systems which jointly registered the remaining 3 per cent. Registration in the Mixed Courts is essential in order to make the deed concerned opposable to claims by a foreigner, while the importance of the two latter registry systems did not lie in the volume, but in the character of the work they specially performed, viz., in the case of the Mekhema Sharia (Moslem Religious Tribunals) the registration of transactions effected under the Sharia (Religious) Law, and in the case of the Native Tribunal the registration of orders or judgments of the court affecting land *inter alia*. The three registries did not co-operate, and a transaction might be registered in one of them regarding land the previous history of which, so far as it existed, was in one of the other registries.

The existence of these registries and the fact that a large number of transactions were recorded in them does not mean that all land transactions, or even, perhaps, the majority, were registered. Between the years 1876 and 1917 approximately three and a half millions of such transactions were registered, but the number of "occult" deeds was probably very much larger. Transactions would take place between two ignorant and illiterate peasants and would be recorded in documents drawn up by public writers, scarcely less ignorant, though more literate. Often almost illegible, still more frequently incomprehensible, omitting essential details, and giving no accurate description of the property involved, these documents often lay forgotten for years, until some dispute arose calling for their production which, owing to the defects enumerated, was of little or no assistance in deciding the points at issue. Registration itself, although making a deed opposable to third-party claims in the event of a dispute arising, had little real value. The Mixed Courts registered, upon payment of the fee, any document presented to them. It might record the sale, by one man to another, of the property of a third person who knew nothing of the supposed transaction; it might be an unintelligible farrago, or it might be a forgery, as quite a considerable number of deeds registered in Egypt are believed to be, "for registration has usually been resorted to by the forger, as it gives a spurious appearance of genuineness to a fabricated document." The system of registration followed was an incentive to forgery, since the original deeds (*sous seing privé*) were returned to the person requesting registration. The only record kept in the Courts was a hand copy kept in the court registries. In this way, of course, no proper record could be kept of signatures or seals, which latter are very commonly employed in Egypt, where so comparatively few people can write their names. Thus, having produced a false document, and secured its registration, a forger could go to the registry and ask for a copy, on the plea that he had lost the original. On payment of the fee, a copy would be given him, and he would then have what purported to be proof that other parties had attached their signatures to a document which, in fact, he had forged and then destroyed.

Nor was the system of recording in the registries a satisfactory one. Only one copy of deeds was made, this being done by hand, on a piecework basis. It is related that, on one occasion, a clerk astonished the superintendent by the tremendous speed at which he worked, compared with his colleagues. Eventually the superintendent declined to give the hurrying scribe more than a certain amount of work each day, whereupon the latter complained to the head of the department, who ordered the clerk's recent work to be closely inspected. It was then found that he was in the habit of missing out substantial portions of the deed given him for copying, so as to increase his daily output of folios.

Sufficient has been written of the system of land registration obtaining in Egypt hitherto, to show the necessity for reform. This need was recognised by the authorities more than twenty years ago, and in 1904 a sub-commission was set up to study the question by the International Commission on the Mixed Tribunals. After four years of discussions of a somewhat academic character which dealt exhaustively with the legal bearings of reform, but lacked an equal consideration of the practical application of reform to actual properties as they existed on the ground, the Commission issued a report. This had no sequel. In 1917 another sub-commission was formed as an offshoot of the Capitulations Commission. When changed political conditions rendered the work of the Capitulations Commissions supererogatory, the Sub-Commission was re-established, by decision of the Council of Ministers, as an independent Commission, charged to report direct to the Council. This Commission devoted a vast amount of time and energy to the subject, certain members paying two visits to Switzerland to study the system in force there, and produced a report on which were based the reforms in land registration now being put into operation.

The following article will describe those reforms and the methods employed in introducing them.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscriptions £1 per annum. Further particulars may be obtained of the Hon. Secretary, 74, Grosvenor St., W.1.

NEWS IN BRIEF.

At the forthcoming Church Congress at Eastbourne, India will be represented by Mr. Shoran Singha.

The will of Mr. Andrew Wallace, Indian Civil Service (retired), aged 73, of Alexandra Court, S.W. has been proved at £17,370 (personal estate in Great Britain).

The Synod of Indian Bishops having suggested that any bishop who felt the need might re-establish the permanent diaconate, the Bishop of Madras announces his intention to take such action.

The Little Entente Press Conference at Sinaia ended on August 17, and the delegates returned to Bucharest, where a series of receptions were given prior to their departure.

Sir Muhammed Habibullah, Education Member of the Government of India, has been granted three months leave. Sir Fazl-i-Hussain, Minister for Education for the Punjab, has been appointed to act for Sir Muhammed Habibullah during his absence.

PERSONAL AND GENERAL.

TO-DAY

August 27, 1925 (New Style).
August 14, 1925 (Old Style).
Saphar 7, 1344 A.H., of the Moslem Calendar.
Ellul 7, 5685, of the Jewish Calendar.

King Ferdinand of Roumania, who was born on August 24, 1865, celebrated his sixtieth birthday this week.

Ex-King George and Queen Elizabeth, of Greece, who have been staying in London, left on August 19 for Paris.

The Maharajah and Maharanee of Patiala have left the Savoy Hotel, London, for Geneva.

Sir George Lloyd, High Commissioner-designate of Egypt, left London last Friday for Inverness-shire.

Princess Marie of Greece and her husband, Admiral Ioannides, returned to London last Sunday night from Paris.

Tewfik Rushdy, Foreign Minister, will be the chief Turkish delegate at the next meeting of the League of Nations.

The Duchess of Atholl, M.P., and Viscount and Viscountess Willingdon will leave in September to attend the League of Nations Assembly at Geneva.

Mahomed Ali Maghrabi Pasha, Egyptian Minister to Brazil, was among the passengers who left Southampton last Friday in the Andes for Rio de Janeiro.

The Rev. C. J. Grimes, vicar of St. Matthew's, Westminster, has resigned the benefice, and will be returning to Calcutta in the autumn to resume his work there.

Colonel Birchell and Lieut.-Colonel Minchin, of Imperial Airways, Ltd., left Croydon last Friday to survey the first stage of the Empire air chain between Kantara and Karachi.

The King has appointed Mr. E. V. Gabriel, C.S.I., C.M.G., C.V.O., C.B.E., to be Gentleman Usher in Ordinary, in sucession to Mr. Horace West, M.V.O. (resigned).

The engagement is announced of E. N. Dawson, younger son of Mr. and Mrs. N. Dawson, of the Avenue, Northampton, and Serena, only daughter of Mr. and Mrs. R. van Sickle, of Ploesti, Roumania.

The will of Mr. George Henderson, of Palace Court, W., and of Messrs. Octavius Steel and Co., East India merchants, Fenchurch Avenue, E.C., Chairman of the Rungajaun Tea Co., and a director of the Badulipat Tea Co. and other tea companies (net personalty £87,570), has been proved at £89,595.

Four of the eight chiefs of the Anglo-Egyptian Sudan who are in London as the guests of the British Government—Hamad El Malek, Osman Saleh, Al-Tayib Badr, and Mohamed Bazara—last Friday visited the first London Mosque of the Ahmadiyyia Community of Islam at Melrose Road, Southfields, Wandsworth.

Dr. Charles Macpherson, organist at St. Paul's Cathedral, is leaving London to-morrow for a tour in India as examiner for the Associated Board of the Royal College of Music. Musical examinations are being begun in India by the Board on the same lines as they are now carried on in this country and other parts of the Empire.

King Faisal, owing to the state of his health, was much fatigued by his journey from Baghdad. Acting on the advice of his doctors, he remained in bed for the first few days of his visit to London. As soon as he has benefited sufficiently from the rest His Majesty, it is hoped, will be able to undergo the course of treatment that his malady requires.

The will of Mr. Charles Thomas Williams, 58, of Beechwood, Baring Road, Grove Park, Lee, S.E., late Indian Telegraphs has been proved at £2,369 (net personality £2,148).

The King and Queen of the Belgians, who are paying an unofficial visit to India, will join their steamer at Marseilles on August 29. Their Majesties will be accompanied by Lieutenant Goffinet, the King's orderly officer.

Captain W. H. Dye, R.A.M.C., has been awarded the North Persian Forces Memorial Medal for the year 1924 for the best paper on tropical medicine or hygiene published during the year by a medical officer of the services eligible for competition.

The King has given to Mr. James Serle Butler Peacock authority to wear the insignia of Officer of the Order of Ismail (Fourth Class), conferred on him by the King of Egypt, in recognition of valuable services rendered by him under the Egyptian Ministry of Public Instruction.

The Maharajah of Patiala placed on the Cenotaph last Thursday a wreath of arum lilies, inscribed "To the memory of gallant comrades and fellow-soldiers in the service of King and Commonwealth." He afterwards laid a wreath of roses on the grave of the Unknown Warrior in Westminster Abbey.

Mr. Alexander Falconer Wallace, O.B.E., of Candacraig, Strathdon, Aberdeenshire, and of Hyde Park Gardens, London, W., East India merchant, senior director of Messrs. Wallace Brothers and Co., Ltd., E.C., and late of Messrs. Wallace and Co., of Bombay, who died on January 24, aged 88, domiciled in England, left unsettled property of the gross value of £315,289, with net personality £299,909.

The Right Hon. Francis Wallace, 1st Baron Grenfell of Kilvey, Glamorgan, G.C.B., G.C.M.G., of Foresters, Windlesham, Surrey, a former Sirdar of the Egyptian Army, Governor and Commander-in-Chief of Malta, and Commander-in-Chief in Ireland, who saw service in various parts of Africa, and who died on January 27, aged 83, left unsettled property of the gross value of £46,778, with net personality £44,662.

General the Right Honourable Henry Seymour, Baron Rawlinson, G.C.B., G.C.V.O., K.C.M.G., of Trent, Dorset, lately Commander-in-Chief in India, who saw service in Burma, in Egypt, in South Africa, and in the Great War, and for a time a member of the Supreme War Council at Versailles, who died at Delhi on March 28, aged 61, left unsettled property of the gross value of £4,143, with net personality £3,902.

THE WEEK AT HOME.

London, Tuesday Morning.

Malthus Redivivus.

No dictum, one supposes, is more widely accepted in our pessimistic time than that which concerns the over-population of the British Isles. Prophets of woe abound, insisting now on the social, now on the economic, and occasionally on the religious aspects of the matter. It is the fashion to look admiringly back at Malthus, and, indeed, we have in the Dean of St. Paul's a new Malthus come to judgment.

Dean Inge has just invented the slogan (to beautify the tranquillity of our holiday time) that there is an optimum density of population for any country at any time, beyond which any increase means a lowering of the standard of living. This comforting doctrine has, of course, been avidly seized upon by our Imperialists who wish for a large, state-systematised scheme of emigration, and by our spineless sociologists whose cure for every ill is "Birth Control," a monstrosity alien alike to our traditions and to our temperament.

What there is in all this presaging of starvation, of the decline of the English race, and of its succumbing to foreign rivals, I do not know. One seems to remember that Malthus himself supplied the contradictions to his own arguments, that men like Kropotkin demonstrated the falsity of the over-population argument, and that Sir William Beveridge, in our own time, has stated that unemployment has little connection with over-population. Also, it is amusing to notice that those who believe in the method of restriction known as "Birth-Control" are generally those who assume, in their estimates of the future of nations, that France, which above all, I believe, practises this method, is a declining factor in human affairs. The truth is, of course, that no man knows what is coming, and that one can, therefore, act only in accordance with one's conscience, and not in accordance with what one thinks may be expedient. But the gloom of the Dean is impenetrable. Yet even he might sometimes remember that his chosen, adored Victorian era came very shortly after the enunciation of disaster by William Malthus.

Road Accidents.

If the present rate of slaughter upon the King's highway is allowed to continue unchecked, the Rev. William Inge need have little fear that the destiny of our race is to peter out in the confusion of self-multiplication. For the Ministry of Transport has just issued figures which show the death-dealing capacities of the modern motorist. The evidence of bad driving in this country is, literally, appalling. Last year over three thousand people were killed on the road, and nearly sixty-five thousand were injured.

There is, of course, much more traffic than there was a few years ago; the number of mechanically propelled vehicles, excluding tramcars, has, in fact, increased since 1921 by 52½ per cent. But there is no excuse for the facts that during that same period fatal accidents have increased by 44½ per cent., and non-fatal accidents by 75½ per cent. All sorts of experiments are, it is true, being tried, in the matter of warning lights and signs and noises, but it seems obvious that something more drastic than any of these will have to be adopted to check the reckless motorist—something, possibly, on the principle of the French *caniveau*.

Villages in History.

An excellent plan has just been formulated in Northamptonshire for the using of women's institutes for the compilation of the history of particular villages. Some such work as this is more essential to the historian of the future than might at first be believed. For in times past the historian could rely on the records of the village Church to supply him with at least an adequate reflex of village activity. Now, however, the villages of England, which for all our urbanisation have individual vitality and appeal, indulge in far more than ecclesiastical activity, and, just because they take their own activities so much as a matter of course, their history may be unrecorded. To use the local club, therefore, as a storehouse which county and national libraries may later plunder, or at least borrow from, is to work worthily for posterity, as well as to make fascinating demonstration of one's own local patriotism.

Lawless Hooligans.

Everyone knows that there are certain parts in our big cities in which it is not wise to stroll after dark, but one doubts whether recent history, at any rate, can show anything quite as bad as that which happened in Aldgate East last week, when about fifty men, belonging to rival race gangs, fought each other in the open streets with razors and knives—what time traffic was completely arrested! Nor is it very comforting to know that the police, when they were strong enough to disperse the combatants, were able to arrest only one man, and he a badly injured non-combatant! The fact is that round the race meetings there lurk gangs of men whose existence is inimical to any kind of claim by the Home Secretary that the "Bolshevists" of this country are the only law-nonabiding citizens. Most of these undesirable characters belong to a certain community—they are aliens; and there can be no one who will not whole-heartedly support the Home Office in its resolve to embark upon a resolute plan for their extinction.

The Purchase of Wembley.

Readers of these columns will be well aware that, from the financial point of view, the Wembley of 1925 has been even more disastrous than it was in 1924; and I have already noted some of the proposals that have been made for the future administration of its permanent buildings. Now, however, comes a proposal, from Colonel Harry Day, the variety agent, to turn half the British Empire Exhibition into model dwellings, and the other half into an amusement park. But so far the authorities at Wembley have made no sign that they are willing to sell. They feel—and it is difficult not to sympathise with them—that it would be a great "come-down" if buildings erected to an Imperial purpose were suffered to decline into dwellings at £60 a year and mere cheap amusement parks. But so much was lost in 1924, and so poor have been the attendances this year, that it is extremely doubtful whether Parliament could be induced to consent to the grant of yet another million or two. Yet what a fall: to have Wembley a new suburb of cheap villas!

Indian Affairs.

LORD READING'S ADDRESS.

The Viceroy's speech in opening the Session of the Legislative Assembly at Simla was, in its political aspect, largely a recapitulation of Lord Birkenhead's statement in the House of Lords. Lord Reading expressed his disappointment at the critical spirit in which Lord Birkenhead's speech had been received in India, where its importance and value had, in his opinion, been insufficiently appreciated. For himself, he looked upon it as a message of sympathetic encouragement to India, at least to those desirous of advancing to responsible self-government within the British Empire. He reiterated the Secretary of State's dictum that no special sanctity attaches to the year 1929, and said that, while the present moment would be a most inappropriate one to hold a statutory inquiry, the re-examination of the Indian Constitution might take place at any time not later than 1929, "when the British Government are persuaded that there has been genuine co-operation by responsible Indian political leaders in working the existing Constitution, and when sufficient experience of these new and largely untried conditions has been gathered to form the basis of a considered judgment and to enable proposals for the future to be made with some confidence." Speaking of the report of the Muddiman Committee of Inquiry into the working of the Reforms, Lord Reading said that, though he understood the impatience of the signatories of the Minority Report in their desire that the Constitution should be put on a permanent basis with provisions for automatic progress in the future, the issue between them and the Government really amounted to one of the moment when the Statutory Committee should be appointed; whereas the view of the signatories of the Majority Report, that the existing Constitution should be maintained and amended, where necessary, in order to remove defects in its working, was the only view that could, for the present, commend itself to the Government of India, who had therefore accepted that report in principle and were preparing to examine it in detail and to submit their conclusions for discussion by the Indian Legislature. In the matter of the organisation of the transferred services, the Viceroy reminded his audience that recruitment by the Secretary of State had already ceased for the Indian Educational, Agricultural, and Veterinary Services, for the buildings and roads branch of the Public Works Service, and for the Forest Service in Bombay and Burma; while the principle of establishing Provincial Medical Services had been accepted, subject to certain conditions that were still under consideration; so that Indian Ministers would now be able to start building up their own Provincial Services by new recruitment that would be in their own hands. As regards Lord Birkenhead's invitation to Indians to produce a Constitution of their own, Lord Reading said that the time which must necessarily elapse before the re-examination of the Constitution could not be better employed by public men in India than by devoting serious practical thought to this problem.

Lord Reading also referred at considerable length to economic questions, and, in speaking of the depression in Indian industries, in particular that of the Bombay cotton industry, announced that he had agreed to receive a deputation from the mill-owners in the immediate future. In addition, he made two important announcements—the appointment of a Royal Commission on Indian Currency and Finance, and the intention of his Government to set up an All-India agricultural organisation, which would help towards co-ordinating the activities of the various Provincial Departments of Agriculture, promote research, agricultural education, the work of co-operative societies, and other established aids to agriculture, and serve as the medium for agricultural propaganda throughout the country. The terms of reference of the Finance Commission are of the widest possible character, and their findings should exercise a great effect on the whole future course of Indian commerce. Of the many subjects that will present themselves for consideration, two of the most important will be the fixing of the rupee rate and the question of the assumption by the Imperial Bank of India of all the functions associated with a Central Bank, including the powers, at present exercised by the India Office, in currency management and the remission of sterling from India. In these connections, two appointments to the Royal Commissioin are of special significance: that of Sir Purshottamdas Thakurdas, whose strenuous advocacy of a low rate of exchange will ensure that this view of the question is not overlooked, and that of Sir Henry Strakosch, who was a colleague of Sir Basil Blackett, the present Finance Member of the Viceroy's Council, on the Currency Commission appointed by the International Economic Conference assembled at Genoa in 1922, whose report, which laid down definite principles that should guide the special duties of Central Banks, has received general acceptance. As regards the proposed All-India agricultural organisation, Lord Reading said that the proposal would be discussed at a meeting of the Board of Agriculture to be held at Pusa in December, which it was hoped that the Ministers of Agriculture of the various Provinces would be able to attend, and that the formulation of a definite scheme would be deferred pending the result of that discussion. He paid a tribute to the work of the Agricultural Institute at Pusa, whose researches, particularly in the matter of sugar and wheat, had within the last few years added crores of rupees to the wealth of the Indian peasant, and whose achievements pointed the way to still more wonderful possibilities. Incidentally, the Viceroy remarked that agriculture in India must, in the main, depend on cattle for its motive power, so that the problem of improvement in the quality—though not in the quantity—of Indian cattle was one of vital importance.

Lord Reading's address broke no new ground. Economically, its chief interest centred in its pronouncements about the Finance Commission and the proposed Central Agricultural organisation, both of which are likely to lead to most important results. It may, indeed, be hoped that the developments resulting from the latter will disprove Lord Reading's belief in the dependence of Indian agriculture on cattle for its motive power, and will, in time, teach the Indian peasant more up-to-date methods of transport and traction: a recourse to which should go far towards the recovery of the key industries that are at present suffering from depression, not only in India but in England as well. Politically, the speech amounts to a recapitulation of Lord Birkenhead's statement in the House of Lords and of his warning to Indian politicians that their only path to increased responsibility lies in co-operation in the working of the existing Constitution, the grant of which had its origin in British good will, not in any feeling of fear or opportunism, and whose extension is not to be brought about, as so many Indian publicists seem to imagine, by threats or by force. The Viceroy's invitation to public men in India to bend their energies to

thinking out their ideas of a permanent constitution implied the definite rejection of the "Indian Commonwealth" scheme; as he said, constitutional problems are not solved by a phrase, and account must be taken of unparalleled complexities and diversities of race, religion, intellectual development, and social organisation, which, with a rigidity unknown in any other great country, separate classes in India. It is noticeable that the address contained no reference to the position of Anglo-Indians under the Reforms—an omission which will doubtless be a disappointment to the deputation who so recently laid the case of their Community before the Secretary of State; nor to the question of the progress of Indianisation of the All-India Services, though it contained a passing mention of the "Indian Sandhurst" Committee, as well as what was obviously an oblique reference to the same subject, when Lord Reading remarked that it must always be remembered that the primary duty of Government was to preserve internal peace and external security.

LORD MILNER AND INDIA.

By JANUS.

The recent publication of Lord Milner's *Credo* has inevitably evoked protests in this country from the Indian point of view, and it is fairly safe to assume that, given the usual amount of distortion on the eastward journey, it will have caused pain and alarm to many of the best people in India. May I then try to put the matter in what I believe to be its true perspective? When Milner, who has always been one of my heroes, declared himself a race patriot, something more than a nationalist, that is, but decidedly less than a cosmopolitan, he made no new revelation, though his words may have been read in that sense by a generation which has forgotten the difference between a novelty and a "scoop." As anyone who has followed his career knows, the *Credo* reiterates a principle accepted consistently throughout a long life by a man who, starting far ahead of general opinion, tended to pass from Left to Right, and who, in the last phase, was behind rather than in advance of the movement of English opinion. To say that is not to assert either that Milner was wrong or that he was right; it is merely to summarise the actual position in the fewest possible words.

For some centuries the world has been spending itself in the long struggle to substitute nationalism for the older dynasticism and, as it slowly won success, it was, like Frankenstein, confronted with a monster of its own imagining. In the Victorian age people were realising that nationalities, if uncontrolled, might be nearly as bad as dynasties, and the idea of integration was gradually making way. While some people were already dreaming of the Commonwealth of Man, others, like Milner, fixed their eyes on the limited but more easily attainable objective of British Imperialism, something far ahead of the narrow, popular nationalism of those days, which took Jingo for its god, and the great Vance for its prophet. Before the War, that objective almost held the field in England, and the question of the non-British races within the Empire had scarcely been raised. The War which it is permissible to hope, marked the end of dynasticism, marked also the beginning of the end of uncontrolled nationalism; and, if the world had been fresh instead of stale, the peace discussions would have centred on the merits of the rival methods of integration—whether to federate the British, the Latin, the Slav, the German, and the rest, giving a few big units instead of a large number of little ones, or to attempt to unite all the little ones in a single commonwealth. Nobody emerged, however, to press the case for the more limited objective, and Woodrow Wilson, moved by the stark and terrible idealism of his Ulster forefathers, was able to impose the League of Nations on the world, though he failed to impose it on his own peculiar people. And so things stand to-day.

For Indians, the point of this brief disquisition is that the nations composing the British Empire have already gone beyond Milner's race patriotism, and are committed by solemn engagements to give a fair trial to the larger and vaguer integration as embodied in the League. The point does not admit of argument. It is an obvious fact: and, if people are too busy to read treaties and covenants, they have only to glance at the proceedings at Geneva, where India already ranks alongside of the nations of British race. That, as it seems to me, is the plain and sufficient answer to the forebodings voiced by the Aga Khan and other critics. So long as the League stands, there can be no question of an Empire organised on a purely racial basis, with the non-British elements tacked on as dependencies: the tendency must continue to operate in the direction of partnership between communities of different races, which is, I take it, the objective preferred by the critics whom I have in view.

It is true, of course, that the League may fly to pieces through internal stresses, in which case the world will be in such a mess that possibly a vigorous, though temporary, outburst of race patriotism may be needed to clean it up. It is, perhaps, rather more likely that the League may gradually develop into a gathering of racial groups, Latins showing a solid front against British, and Germans against both. In either case, the lesson will simply be that Woodrow Wilson tempted the world to try too big a jump: and, if the world has to fall back for a time on racial organisation, the position of India can scarcely fail to be affected. The danger is, however, hypothetical. The League is on its trial, and there is at present no reason to anticipate an unfavourable verdict. If it has achieved less than the optimists expected, it has already disappointed the pessimists by continuing to function. At the moment it is the strongest obstacle to the danger apprehended by the Indian critics of Milner's *Credo*: and, if I may offer them a suggestion, they will be well advised to throw their full weight on its side.

CURRENT TOPICS.

Indian Currency and Finance.

The appointment of a Royal Commission on Indian Currency and finance is announced, with the following terms of reference: "To examine and report on the Indian exchange and currency system and practice, to consider whether any modifications are desirable in the interests of India, and to make recommendations. The composition of the Commission is as follows:—Chairman, Lieut.-Commander Hilton Young, M.P. Members, Professor J. C. Coyajee, Professor of Political Economy and Philosophy at the Calcutta Presidency College; Sir M. B. Dadabhoy, Member of the Indian Council of State, cotton manufacturer; Sir R. A. Mant, Member of the Council of India and formerly Secretary, Indian Finance Department (the above three members all served on the Indian Fiscal Commission); Sir R. Mukerjee, head of the Calcutta engineering firm of Martin and Co.; Sir A. R. Murray, of Messrs. Jardine, Skinner, and Co., Calcutta; Mr. W. E. Preston, Chief Manager of the Chartered Bank of India, Australia, and China; Sir P. Thakurdas, Member of the Indian Legislative Assembly, and an unsparing critic of the Indian Finance Department; Sir N. H. Y. Warren, a Governor of the Imperial Bank of India.

A Swarajist Victory.

The Swaraj Party have not been long in avenging their defeat on the election of the President of the Bengal Legislative Council, for they have carried their candidate for the presidency of a more important body—the Legislative Assembly. The election of Mr. Patel, the Swarajist candidate, as the first elected President of the Assembly in succession to Sir Frederick Whyte, was achieved by a majority of only two votes over Mr. Rangachariar, the Independent candidate; and it appears to have been brought about by the secession of a number of Independents the suggestion being that this was due to disappointment felt at Lord Reading's speech at the opening of the Assembly. Mr. Patel is a prominent member of the Assembly, whose speeches have always been strongly anti-Government: at one time, though a Hindu, he used to wear a red fez in order to signalise his adherence to the idea of Hindu-Mohammedan unity. He has announced

Digitized by Google

his intention of observing scrupulous impartiality in the Chair; and it will be interesting to watch the process of so vigorous a fighter accommodating himself to the position of umpire when his own side is in the field.

Bribery in India.

A telegram from Rangoon reports an alleged attempt to bribe a European Judge of the High Court of Burma by the defendant in a case of criminal breach of trust in respect of jewellery valued at £28,000. The Judge's chauffeur had been approached by an Indian, giving the name of the defendant, who offered to buy the Judge's car for a larger sum than it was worth: and, after the defendant had won his case, the Judge was rung up on the telephone by a man, giving the same name, who said, "I am greatly obliged to you for dismissing my case and I will take your car."

It does not really follow that this was a genuine attempt at bribery: among the wiles of Indian suitors, a suggestion of bribery, carefully arranged so as to appear to emanate from the other side, is by no means unknown as a means of prejudicing the opponent's case before a European judge; for, although bribery, or attempted bribery, of Indian officials is unfortunately common, it is seldom that a European official is approached. The stock example of the Indian "just judge" is found in the well-known story of the man who accepted the bribe of both sides, decided the case on its merits, and then returned the bribe of the unsuccessful suitor; but it must be regretfully admitted that the European official's immunity from attempts at bribery is due not so much to belief in his incorruptibility as to the feelings that his price is likely to be too high for the enquirer's purse. The idea of what the European calls "illegitimate," and the Indian calls "customary," additions to the income of every official, is too firmly rooted in the Indian mind to be driven out even by repeated rebuffs. In this connection, a story is told of a "backwoods" native chieftan who, many years ago, attended a great official Durbar in the North of India. His followers began by eating the Pears soap which had been provided for them in their tents, with grateful acknowledgements of the thoughtful kindness of the Government that had supplied them with so appetising a sweetmeat: and, on the second day of the Durbar, the chief cast eyes of approval on the fair daughter of one of the European officials taking part in the Durbar. He sent for the Assistant Political officer in whose charge he was, and expressed his intention of buying the lady, the price offered being fifty camels—the chief staple of riches in his State. The scandalised political officer read him a lecture on the gross impropriety of the suggestion: to which the chief listened patiently and replied: "I will give sixty camels." The political returned to the charge with a further and much more forcible explanation of the heinousness of the Chief's proposal: whereupon the Chief sighed sadly, and said, "Alas, I am not a rich man: but I will give seventy camels."

Air Line to India.

It is announced that a provisional agreement has been arrived at between the Air Ministry and Imperial Airways Ltd., under which the company will operate an air service between Kantara, on the Suez Canal, and Karachi in India. An aerial survey is to be taken in hand forthwith, on the conclusion of which a detailed and formal agreement will be signed. There will be a weekly service both ways between Kantara and Karachi, the distance between which—2,450 miles—will be flown in two and a half days, thus shortening the journey between London and India by six days, even without night flying. The agreement with the Company is for five years, with an annual subsidy of £87,000. The service is expected to begin in the early summer of 1926: enquiries show that there is a big field for parcels and passengers to and from India, and there is solid reason for hoping that at the end of the five years, to which the subsidy is strictly limited, the enterprise will be self-supporting.

The inauguration of an air line to India will give a much needed fillip to aviation in India itself; which, as a country of vast distances, offers a great field for its employment. Some years ago, an attempt was made to start a regular aerial postal service between Karachi and Bombay, but this ended in failure. The air distance between the two places is only 500 miles, but at present the only method of communication is a two days' voyage by sea or a railway journey by a circuitous route involving three or four changes. The air distance from Bombay to Calcutta is just over 1,000 miles, and this is already covered by train in less than 48 hours; but another very obvious use of an air line is from Calcutta to Rangoon, with an air distance of about 600 miles, the only communication at present being a sea voyage of three days. The creation of such a task has been often discussed and often urged, but has never got any further. In view of the small European population of India, it is true that internal aviation would be most unlikely to pay at first; but, as its utility—and, it may be added, safety—became apparent, its employment by Indians would be likely to grow until it became a paying proposition. It must, however, be remembered that the Indian is, with very few exceptions, never in a hurry—when railways were first introduced into India, the scale of third-class charges had to be based on the ordinary length and expense of a day's trek, and was fixed at four annas for ten miles—if the Indian peasant could travel that distance in half an hour for the same expenditure as he would necessarily incur, in food and extras, in taking a day to walk it, he would use the rail; otherwise, he would prefer the old time method.

Indian Markets and British Producers.

The third of the articles by Mr. George Pilcher, on the above subject apeared in the *Financial News* of August 17. The writer says that next after the railways, which formed the subject of his second article, the most favourable fields for the employment of cheap British credit and British capital, to the mutual advantage of Great Britain and India, are irrigation and the adaptation of mechanical methods to the resources of the Indian cultivator.

The total capital hitherto invested in Government irrigation projects in India is about sixty millions, the net yield on which is nearly eight per cent., apart from the enormous accession of prosperity that has resulted from them. Three great schemes are now in process of construction—the Sukkur scheme in Sind, the Sutlej scheme in the Punjab, and the Sarda scheme in the United Provinces, costing between them some 28 millions; but every province has plans for irrigation improvement, the sanction of which would be completely justified, if the required capital were forthcoming. As an example, Mr. Pilcher quotes the Grand Trunk Canal scheme in Bengal, designed to link the rich jute-growing areas with Calcutta: the plans for which have been worked out to the minutest detail, and only await the necessary capital to be translated into construction, to the lasting benefit of the vast area that it would serve. Every such scheme involves the purchase of large supplies of material: and completion is calculated to give a continuous impetus to the demand for agricultural machinery and tools.

Apart from public works, the most hopeful sphere of State action in India exists in connection with the cultivator's slow awakening to the value of mechanical assistance as an adjunct to, and ultimately as a substitute for, his archaic methods of agriculture. Some thirty million ploughs, mostly of wood, are used in the cultivation of India's 200 million acres: cattle furnish the only lifting power for the great majority of India's 2½ million wells. Given standardisation and popularisation, it has been calculated that India could absorb two or three million iron ploughs annually: and, with the added assistance of public credit, not less than half a million small engines for water lifting and possibly 150,000 larger ones for other purposes. The channels for the distribution of agricultural machinery and tools do not need to be created, for they exist already in the shape of the 60,000 agricultural co-operative societies now existing all over India.

Mr. Pilcher suggests the formation, by the Government of India, of a Central Agricultural Council, and possibly a central fund, "for the popularisation of agricultural advance by intensive education and demonstration, on better lines than those whereon, perhaps a little unconvincingly, those processes have hitherto been pursued."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 6.

"Surrender Not!"

Death's blows are sudden in India and although the late Sir Surendra Nath Banerjea had reached the age of 77 he was almost as active as ever until yesterday; to-day at 1.30 he died from influenza and the shock to the Indian public is almost as great as when a few weeks ago the death of Mr. C. R. Das was announced. The contempt with which the Swarajists hounded the late Sir Surendra Nath from political life because he had dared to accept office under the new Reforms does not alter the fact that from every point of view, as a leader, a constructive thinker, and a patriot, his record will stand out in history as the greatest Bengalee of the early part of the twentieth century. He was always a fighter; from the time when in Queen's Bench he forced the Civil Service Commissioners to restore his name to the list of selected candidates for the Indian Civil Service, he was intolerant of blind authority, and it was not surprising that he left the service long before he had been able to make a mark in it. His record since has been one of aggressive work on behalf of what he considered to be the best interests of his nation and his country, and probably the crowning moment of his career, which has included a term in prison for comments on a case under trial, was his appointment as Minister for Local Self-Government under the Reforms Scheme. He was twice elected to the chair of the Indian National Congress and his other public activities are too numerous to mention; he did not take his defeat at the last elections lying down but quite recently entered his old profession again as the editor of the new Liberal group of papers. The recent publication in one of them of the inner history of the negotiations of Mr. C. R. Das with the "Satanic" Government was a vindication of the better judgment of a wiser and older leader. The record of his life is one of a career of constructive work, carried out often in the teeth of strongly entrenched privilege, and it is one of which any political leader might well be proud. He dies as he had lived, justifying the name given to him a generation ago by the European community which loves a sportsman and a fighter, "Surrender Not!"

Denials and Admissions.

Pandit Motilal Nehru has been forced into giving an unwilling admission that negotiations were in progress between Lord Lytton and Mr. Das, although his supporters claim that the statement which he has issued, as a result of the clamour raised by the Indian Press, is a denial. The Pandit has given a sketchy explanation of what took place, but this would have been more convincing had he published the full text of Mr. Das' letters; public opinion takes the line that since negotiations are admitted, the letters should be published. The position is not without its amusing side; *Forward*, in an article headed, "An Absolute Clincher," has worked itself into a frenzy of indignation at the impudence of casting reflexions on the integrity of Mr. Das; the *Bengalee*, which comes in for most of its abuse, retorts with several direct questions to which it demands straight answers; the *Amrita Bazar Patrika*, an extremist organ, pertinently asks why the Swarajists should be angry at the mere mention of the name of Mr. Das in connection with the negotiations. "Negotiations," it says, "are not to be condemned *per se* if carried on on a basis of mutual concessions." The Swarajist policy is clear; by a series of denials as carefully worded as the half-truths they accompany, it is hoped to create sufficient confusion to prevent anyone from having a clear idea of what the facts really are. It is doubtful whether the late leader could have avoided the split which seems inevitable between the wild men and the saner nationalists, who are tired of anarchy. The new leader appears to think that his safest line is to stir up the dead fires of racial hatred; it is the policy of a reckless weakling equally bankrupt of ideas and capacity to lead.

Civil Disobedience.

It is obviously with this end in view that the counter attraction of a revival of civil disobedience is being put forward. Mr. Sen Gupta, the new leader and Mayor of Calcutta, at a meeting largely attended by students, stated that the only reply to Lord Birkenhead's speech must be mass civil disobedience. He went on to refer to Mr. Das' speech at Faridpur and, although at the time this seemed to portend a change of mentality, if not Gandhi's favourite "change of heart," the present leaders are seeking to interpret it into instructions to prosecute a policy which C. R. Das had himself found futile. Gandhi has again changed his colours and instead of dying to co-operate now lives to advocate civil disobedience. In a letter to the *Statesman* he sets out to prove that the resuscitation of civil disobedience is really the quickest way to co-operation. He admits that his experiment in this direction came to a sudden and tragic end at Chauri Chaura but this was in the days when the movement was not worked properly. Once again the extremists have selected the villagers as their dupes, and have commenced a campaign for village reorganisation which includes a measure of education; how much may be judged from the fact that some sixteen workers have arrived in Calcutta during the week for instruction in their duties, and the Secretary hopes that they will be able to proceed to their respective centres in a few days. If this folly persists there will be trouble, and it will fall on the heads of those who least deserve it, the ignorant classes. The Swarajists again demonstrate their inability to govern; even were they successful in getting the masses to withhold their taxes, and even were the Government forced to retire from India as a result, would the masses, on the assumption of governing authority by the Swarajists, be willing to revert to the old system of paying taxes. There can be no compulsion in Utopia.

Protecting the Paper Industry.

The proposals of the Tariff Board in connection with the paper industry do not appear to be of a very far-reaching nature. The Indian Paper Pulp Company is the only concern that will receive a State subsidy if and when the recommendations of the Board are given effect to, and this will take the form of a ten lakh subsidy which should be raised either by mortgage on the fixed assets of the Company, or, alternatively, by the guarantee by Government of both principal and interest, on a public issue of debentures. The Tariff Board lean towards the latter course, as this would allow the immediate participation of Indian capital. In the event of the capital being raised entirely by Government, interest would be waived for the first two years, or, if the amount were raised publicly, the Government would undertake to pay interest irrespective of the ability of the Company to meet the charges. The case of the Carnatic Paper Mills has been considered, but it has been decided that nothing can be done for it until such time as it has been able to show reasonable prospects of the success of the manufacture of paper from bamboo by the soda process, when it too might be subsidised by Government in the same way as is proposed for the Indian Paper Pulp Company. Protection for all writing and printing papers, other than newsprint, containing 65 per cent. or more of mechanical pulp is recommended and this will be effected by a specific duty of one anna per pound as against 15 per cent. as at present. Concerns which manufacture paper from grass are not to be helped and, although this has given rise to criticism by the Indian press, the decision appears to be a wise one. With the exception of one district in the North of India, grass is none too plentiful and, even if it were, the manufacture of paper by this means is so expensive that it is certain that this branch of the industry would never be in a position to meet world competition unaided, and therefore does not come within the scope of the requirements of the Fiscal Commission.

Markets.

Little of interest in any of the markets has taken place since the last report owing to the intervention of the Mohurrum festival and, in addition, the closing of certai-

Digitized by Google

markets yesterday on account of the lunar eclipse. The jute market has ruled steady with sellers prepared to operate only on a small scale at the prevailing rates; they are no doubt influenced by the rates obtaining up-country which show rises in values; at the close there was a slight downward tendency, with sellers more in evidence. Gunnies have been better and a large business above last week's levels is reported, but the market is now quieter. There has been little movement in the tea market, the better qualities showing a slight rise in value and the cheaper qualities a similar decrease.

The share market opened stronger in jutes but eased later in sympathy with the commodity, the more speculative issues being most affected in this direction; a slight fillip has been given to coal shares by the rumour that certain concerns have secured forward contracts at satisfactory rates; this has caused a better feeling in the market with a consequent larger turnover in some items. The tea share market is neglected and has in no way reflected the somewhat improved position of the market for Indian tea. There is no inquiry for cotton shares, and Government stocks and rubbers are quiet at steady prices.

Money remains cheap, but there are indications that a tightening of rates may be expected when the requirements for financing the jute crop begin to make themselves fully felt. Exchange is very steady.

THE PRECIOUS METALS IN INDIA.

(By Our Bombay Correspondent.)

Bombay, August 7.

Some of the minor mills in Bombay have already issued notices that they will be forced to close down for a period from September 1, presumably as a formal notice on which they may or many not be obliged to act. The prospects of a general stoppage of work seem more remote than they did a few weeks ago, but the glut of stocks is serious, and those mills which have not ample finance must be finding it difficult to carry them.

Apart from the purely temporary help to Japanese competition afforded by the appreciation of the rupee in terms of yen, the serious charge against the Government's financial policy is that it has prevented the circulation of the precious metals which have been so freely imported into India in the past four years. Sovereigns, for which there used to be a free market at fifteen rupees, can be imported at the present exchange at about thirteen and a quarter rupees. Under the laws of 1919-20, which are naturally a dead letter, Government is prepared to buy sovereigns at ten rupees; and the result is that gold, at any rate (and, in the general uncertainty, silver follows in its wake) is nothing but a speculative commodity which can be bought and put away for a rise, but which has no effect whatever on the circulation of money in the country.

Indians have been charged with making a fetish of the one-and-fourpenny rupee. The only real argument in favour of that particular level is that it happens to have worked very successfully for twenty years. There is no reason why another level should not work just as well after the inevitable dislocation of business during the period of transition; and if eighteen pence is to be the eventual figure, the attendant discomforts of the transition are pretty well over by this time. Only, whatever rate be taken, the sooner it is linked up to the precious metals the better.

The balance of trade has never been so much in favour of India as it has been in the past four years, and it has been adjusted by enormous imports of bullion. Every peasant in the country, and more especially in the cotton districts, must have made money out of the price of cotton on a scale that was unheard of before the War, and his standard of living has not changed in the very slightest degree. He and his family live in the same hovel, wear the same rags, and eat the same food; only, somewhere in his possession, either in the shape of heavy silver ornaments, or in a buried treasure, are his savings.

If a quarter of the bullion imported yearly into India were put into circulation, the aggregate buying power of the Indian peasant would be enough to set the industries of the country on their feet. Here is a steady stream of abundance of wealth flowing year by year into the country in the form of hard cash. In any other country in the world, the standard of living would have risen; the farmers would be buying freely from the industrialists, the operatives would be buying freely from the shopkeepers, and the prosperity of the country would be assured on the solid foundation of a favourable balance of trade.

One cannot, by Act of Parliament, force people to improve their standard of living, or prevent them from keeping their savings in any form they choose; and it is quite certain that a very large proportion of the surplus of India's trade will always continue to be locked up in bullion, as it always has been. But, rightly or wrongly, many people consider that this permanent tendency is at the present moment magnified enormously by the absence of any ratio between gold and the currency of the country, and that the very first thing to be done is to establish again a basis on which the people of India may confidently regard their holdings of the precious metals as a form of currency, and not as an investment in a rather speculative commodity.

SIMLA LETTER.

(From Our Own Correspondent.)

Simla, August 6.

A Liberal View of Lord Birkenhead's Speech.
